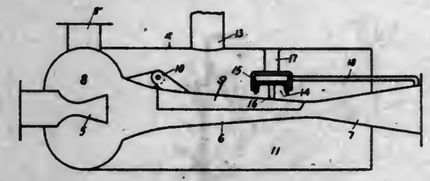
1. An apparatus of the class described for use in connection with the manholes of sewers, comprising a

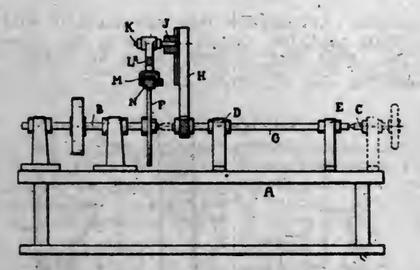
horizontally arranged piping, a plurality of depending pipes connected therewith and adapted to extend downwardly into a manhole adjacent to the walls thereof, said horizontal piping and depending pipes being adapted

to be detachably mounted in a manhole, means for supplying water to said horizontal piping, and means for discharging a plurality of sprays of water from each of said pipes into the central portion of the manhole.



1,457,798. POWDER PUFF. JULIUS SCHMID, Montgomery, N. Y. Filed Oct. 12, 1921. Serial No. 507,824. 2 Claims. (Cl. 132—78.5.)

1. In a powder puff, in combination, a non-porous, soft, pliable carrying member; two powder-carrying members attached to one face of the carrying member so positioned that the edges thereof will not abut upon each other when the device is in open position, the supporting member extending beyond the powder-carrying members, and means for fastening the powder-carrying members in face abutment position when the device is folded.



1,457,799. FLUID-TRANSLATING DEVICE. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 31, 1920. Serial No. 434,356. 5 Claims. (Cl. 162—1.)

1. An ejector comprising an inlet chamber, means for admitting fluid to be entrained to said chamber, a nozzle discharging a jet of motive fluid into said chamber, a convergent-divergent tubular member communicating with said inlet chamber and disposed to receive said jet of motive fluid and fluids entrained thereby, an overflow port in said tubular member, a valve member closing said port, and means responsive to the pressure of fluids at the outlet of said tubular member for holding the valve

closed during the normal operation of the ejector, whereby said tubular member constitutes a fluid-tight passage for the fluids during normal operation of the ejector.

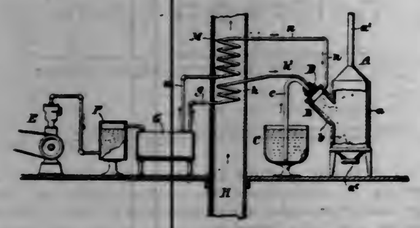
1,457,800. TESTING MACHINE. MOSES SPINDEL, Innsbruck, Austria. Filed Mar. 25, 1922. Serial No. 546,882. 12 Claims. (Cl. 73—51.)

1. A testing machine for the purpose described comprising, in combination: two co-axial shafts and means for supporting them, a tool supported by one of the said shafts and being adapted to act on the test-piece at right angles with respect to the axis of rotation of the said shafts and to be acted on by the test-piece; a rocking frame supported by the other shaft and being adapted to hold one of said two members; means adapted to make the other of said members rotate around the axis of rocking of said frame; and a dynamometer so arranged as to be adapted to measure by the pressure exerted upon it by the said frame the tangential force transmitted from the rotating piece to the piece held in the frame, as set forth.

1,457,801. COMMUTATOR SEGMENT AND METHOD OF PRODUCING THE SAME. CHARLES A. VAN DUSEN, Toledo, Ohio, assignor to The Toledo Standard Commutator Company, Toledo, Ohio, a Corporation of Ohio. Filed July 2, 1921. Serial No. 482,269. 9 Claims. (Cl. 29—155.5.)

1. The method of forming a commutator segment which comprises peening or striking up tang forming tongues on one side of a blank.

1,457,802. EXPOSURE METER. ERNST WANDERSLEB, Jena, Germany, assignor to The Firm of Carl Zeiss, Jena, Germany. Filed Aug. 29, 1921. Serial No. 496,728. 3 Claims. (Cl. 95—10.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



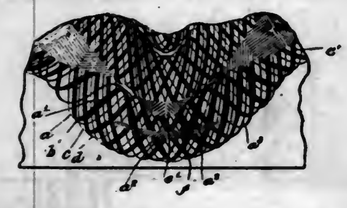
1. In an exposure meter a casing adapted to receive a piece of sensitive paper and having an opening for transmitting light to this paper, which casing contains a

field in the vicinity of this paper, coated with a comparison colour, and a reflector system for observing this paper and the said field, lying without the rays of light

which are to be transmitted to the paper, the said casing having an opening of inspection located in one of the sides of the casing, which does not contain the said light transmitting opening.

1,457,803. APPARATUS FOR SEPARATING SOLIDS FROM LIQUIDS. ALMON J. WHITE, San Antonio, Tex. Filed Sept. 2, 1920. Serial No. 407,671. 4 Claims. (Cl. 127—9.)

1. Apparatus for separating solids from liquids comprising desiccating chamber having an arm inclined downwards from its outer end toward the bottom of the chamber and constituting a concentrating chamber, an atomizer connected with and discharging into the outer end of said arm and with a source of compressed air and a liquid reservoir, and means associated with the desiccating chamber for conveying upwards the separated moisture and downwards the separated solids.

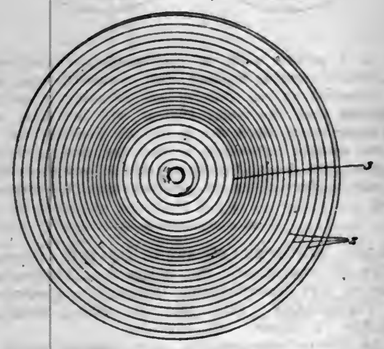


1,457,804. CONTACT BOWL. ALBERT WIGAND, Halle, Germany, assignor to the Firm of Carl Zeiss, Halle, Germany. Filed June 3, 1922. Serial No. 565,781. 1 Claim. (Cl. 88—5.)

Contact bowl consisting of celion and being coated on its front surface with a transparent lacquer.

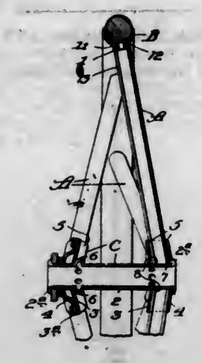
1,457,805. SAFETY-TINT PAPER. DANIEL E. WOODHULL, New York, N. Y., assignor to American Bank Note Company, a Corporation of New York. Filed July 15, 1921. Serial No. 485,031. 9 Claims. (Cl. 283—8.)

1. Safety tint paper having impressed thereon a line geometrical design of the general character of a machine-made design having the lines of some of the loops relatively wider than the lines of adjacent loops, whereby



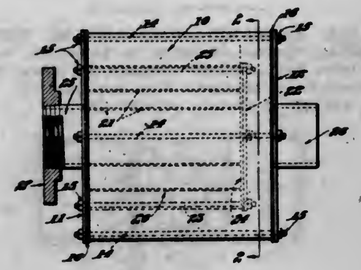
possibility of a mechanical reproduction of the design for counterfeiting purposes is minimized.

1,457,806. METHOD OR ART OF MAKING PLATES FOR PRINTING SAFETY TINTS. DANIEL E. WOODHULL, New York, N. Y., assignor to American Bank Note Company, a Corporation of New York. Filed July 15, 1921. Serial No. 485,032. 19 Claims. (Cl. 41—26.)



1. The method or art of making plates for printing safety tints consisting in mechanically creating a line geometrical design, photographically enlarging said design, modifying the characteristics of some lines in said design, whereby such lines are readily distinguishable from the mechanically produced lines, photographically reducing the modified design, and making a photo-engraving of the reduced design.

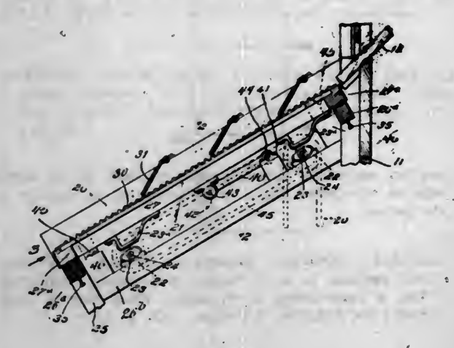
1,457,807. BUFFING WHEEL. HENRY L. ZUCKER, Matawan, N. J., assignor to A. P. Munning & Co., New York, N. Y., a Corporation of New Jersey. Filed Sept. 26, 1921. Serial No. 503,464. 5 Claims. (Cl. 51—193.)



1. A buffing wheel made up of fabric pieces, and means for binding the pieces together more closely at the inner region of the wheel than at the outer region thereof.

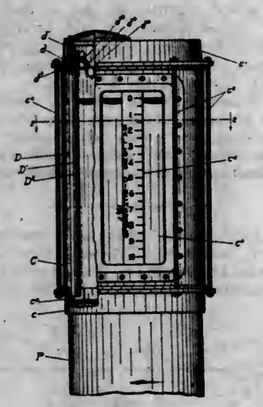
1,457,808. MANUFACTURE OF SPOKES. ARTHUR J. ADAMS, Bay City, Mich., assignor to The Fulton Company, Bay City, Mich., a Corporation of Michigan. Filed Feb. 17, 1921. Serial No. 445,617. 4 Claims. (Cl. 29—174.)

1. The method of making a tubular spoke which comprises providing one end of a flat strip of metal with a central concavity and chamfered corners, and then forming the strip into a tube, whereby said end of said spoke is provided with diametrically opposite concavities.



1,457,809. MUFFLER. GEORGE W. ALLEN, Hyde Park, Boston, Mass., assignor to B. F. Sturtevant Company, Hyde Park, Mass., a Corporation of Massachusetts. Filed Sept. 18, 1919. Serial No. 324,313. 4 Claims. (Cl. 137—160.)

4. A muffler comprising an outer casing, end plates for closing the casing, layers of sound absorbing material interposed between each of the end plates and the casing, tie bolts extending throughout the length of the casing for clamping the casing and end plates in assembled relation, and a scroll comprising a series of straigt passages held within the casing and extending partially throughout the length thereof.

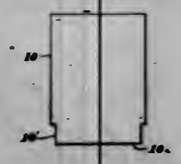


1,457,810. SCREENING APPARATUS. PAUL J. ALWART, Chicago, Ill. Filed Feb. 18, 1921. Serial No. 445,980. 4 Claims. (Cl. 83—56.)

1. In a screening apparatus, the combination of a stationary frame having a horizontal frame member, an inclined screen frame and a screen carried thereby, a cam shaft mounted on said stationary frame, screen agitating cams mounted on said shaft, and a plurality of resilient cushioning members spaced along and

mounted in and projecting upward and out from said horizotnal frame member under one end of said screen frame, and adapted to receive impact from the screen.

1,457,811. DISPLACEMENT ELEMENT FOR LIQUID CONTAINERS. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Nov. 10, 1919. Serial No. 337,004. 2 Claims. (Cl. 73—166.)



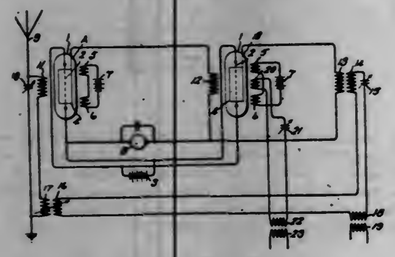
1. In combination with a dispensing measuring vessel having different cross sectional areas and having a standard scale to indicate the quantity of liquid therein; displacement means secured within the vessel and so shaped as to make the cross sectional areas thereof uniform and correct the reading on the scale.

1,457,812. PATCH POCKET. ALFRED C. BARROW, Lynchburg, Va., assignor to A. C. Barrow & Company, Lynchburg, Va., a Corporation of Virginia. Filed May 5, 1922. Serial No. 558,669. 3 Claims. (Cl. 2—134.)

1. The combination with a garment body, of a facing for forming a pocket therewith, stitching securing the sides and lower end of the facing to the said body, the

lower end of the facing being doubled over to form a reinforce for the bottom of the pocket, said doubled over

portion extending upwardly and stitched at its upper edge to the facing above the stitching at the bottom of the pocket.

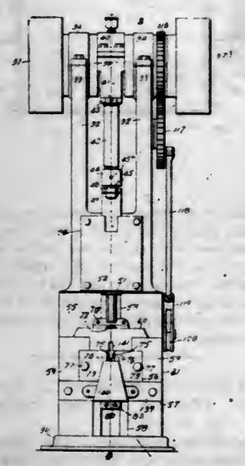


1,457,813. POCKET. ALFRED C. BARROW, Lynchburg, Va., assignor to A. C. Barrow & Company, Lynchburg, Va., a Corporation of Virginia. Filed May 5, 1922. Serial No. 558,670. 3 Claims. (Cl. 2—15.)

2. A pocket comprising two pieces of material overlapped and sewed together at one of their ends, said pieces being turned midway of said overlapped portion and sewed together along their adjacent side and bottom edges and also adjacent the bottom edge whereby a pocket with double bottom is formed.

3. The arrangement as in claim 2, characterized by each of said pieces having a pair of notches, one notch in each side edge, said pieces being turned on the line forming said notches, the sides of said notches being sewed and constituting the bottom corners of the pocket.

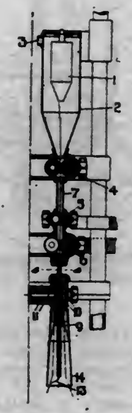
1,457,814. AMPLIFIER. HOWARD I. BECKER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 14, 1921. Serial No. 522,378. 7 Claims. (Cl. 179—171.)



1. The combination in an amplifying system of a device having two electrodes arranged in substantially circular symmetry to each other, means for producing an electron discharge between said electrodes, an input circuit for said device which comprises means for magnetically controlling the discharge between said electrodes, an output circuit in which the current carried by the discharge will flow, a second device similar to the first, means associated with the output circuit of the first device for magnetically controlling the electron discharge in the second device, an output circuit for the second device, and means for impressing upon the input circuit of the first device current variations produced in the output circuit of the second device.

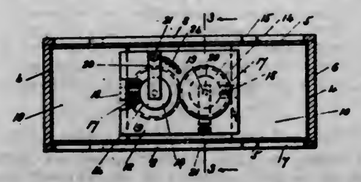
1,457,815. BRIDLE FOR BROOMS AND SIMILAR DEVICES. JOSEPH BERMAN, Baltimore, Md. Filed July 6, 1922. Serial No. 573,064. 8 Claims. (Cl. 15—170.)

1. A broom bridle comprising upper and lower bands, the upper band being adapted to encircle the broom head at the stitching thereof and the lower band being adapted to encircle the broom head below the stitching thereof, side strips connecting said bands, means on said upper band adapted to cooperate with the broom head stitching to hold the bridle in place on the broom head, and means associated with said lower band for clamping said lower band against the broom head.



1,457,816. COMBINED PUNCHING AND FORMING PRESS. WILLIAM H. BETTS, St. Louis, Mo., assignor to Betts Sole Protector Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 23, 1920. Serial No. 405,277. 7 Claims. (Cl. 153—2.)

1. A combined punching and forming press comprising a base, a frame secured thereto, a press head reciprocally



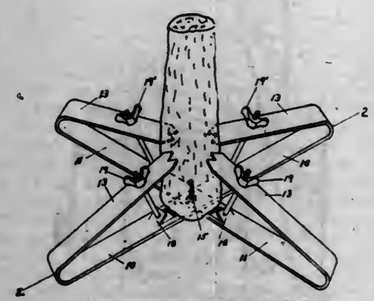
mounted in the frame, a punch head secured to the press head, a punch carried by the punch head, a die secured to the frame and beneath the punch, a pair of forming dogs secured to the frame and located beneath the die, and a mandrel for carrying the article punched past the forming dogs, said dogs adapted to sharpen and give the article its final shape.

1,457,817. TEXTILE SPINNING AND TWISTING PROCESS. WILLIAM BINNS, Bingley, England, assignor of one-half to Joseph Downing Mander, Bingley, York, England. Filed Dec. 21, 1921. Serial No. 523,860. 3 Claims. (Cl. 118—69.)

1. A textile spinning process comprising drawing a fibre sliver by rollers, leading said fibre sliver by means of an air stream down a coaxial tube and projecting it by centrifugal force within a hollow rotating cap.

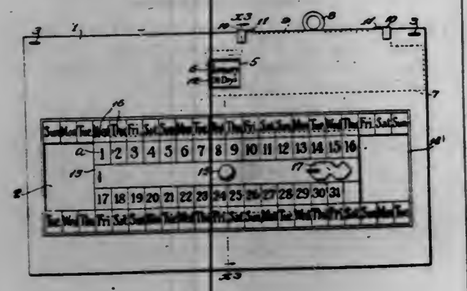
1,457,818. SIGNAL. CHARLES W. BROWN, Cleveland, Ohio. Filed Feb. 1, 1922. Serial No. 533,272. 2 Claims. (Cl. 177—329.)

1. In a signal, a casing provided with a front having direction indicators arranged one above another, said casing having also horizontal guides at its sides between the indicators, a plate of insulating material slidable on the said guides and provided with lamp holes, electric lamps having their sockets inserted in the said holes, means for grounding each lamp independently of the other, said lamps being arranged to project one above and the other below the said plate, and means for completing an electric circuit through each lamp to illuminate the indicator to which it pertains.



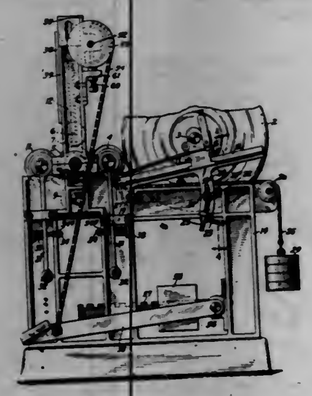
2. In a signal, a metallic casing provided with a front having direction indicators arranged one above another, said casing having also horizontal metallic guides at its sides between the indicators, a plate of insulating material having its ends slidable on the said guides, said plate having lamp holes in its middle portion and radial holes extending horizontally between its lamp holes and its ends, electric lamps having their sockets inserted in the lamp holes, helical contact springs arranged in the radial holes between the lamp sockets and the said guides, and means for completing an electric circuit through each lamp to illuminate the indicator to which it pertains.

1,457,819. SLACK-TAKE-UP FOR VALVE MECHANISM. EDWARD W. CAULFIELD, Taylor, Tex. Filed May 1, 1920. Serial No. 378,109. 11 Claims. (Cl. 123—90.)



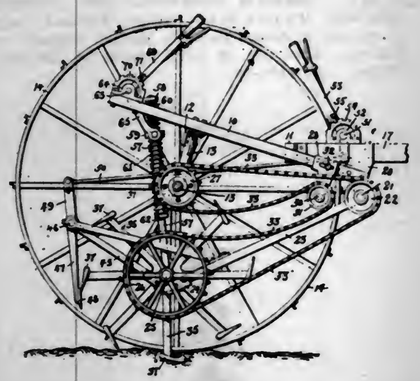
6. In an internal combustion engine, a valve actuating rod comprising portions longitudinally movable with relation to each other, a tapered cup on one of said portions, and a ball clutch interposed between said cup and the other portion of the rod, substantially as described.

1,457,820. TREE-HOLDING STAND. ERNEST E. CLEVELAND, Springfield, Mass. Filed Jan. 10, 1922. Serial No. 528,325. 1 Claim. (Cl. 248—38.)



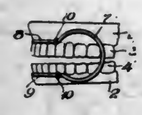
A Christmas tree holder comprising a pair of crossed members each formed from a single length of material and each bent on itself at its opposite ends to produce a pair of resilient arms, said arms extending upwardly and inwardly toward the center of the intersection of the members, said ends being provided with longitudinally extending terminal tree penetrating points, struck up lugs formed on the cross members, and clamping bolts disposed through the lugs and flexible arms for operation to flex the arms into biting engagement with a tree trunk.

1,457,821. CALENDAR. CLARA L. COOK, El Monte, Calif., assignor of one-half to Emmie T. Nolen, El Monte, Calif. Filed May 8, 1922. Serial No. 559,277. 3 Claims. (Cl. 40—109.)



2. A device of the character described having a body provided with an orifice open to one side thereof; indicia above and below said orifice representing the days of the week, the days of the week indicated by the indicia below the orifice being for different days, respectively, than the days indicated by the indicia directly above each day indicated by the lower indicia and disposed above the orifice; and a slide movable in said body and having indicia along its longitudinal edges representing the days of the month and adapted to cooperate with the indicia representing the days of the week for the purpose specified.

1,457,822. MACHINE FOR AND PROCESS OF PRODUCING ROLLS OF PAPER FOR TOWELS, TOILET PAPER, ETC. WILLIS S. CRANDELL, Elsmere, N. Y., assignor to Albany Perforated Wrapping Paper Company, Albany, N. Y., a Corporation of New York. Original application filed Dec. 16, 1918, Serial No. 266,862. Divided and this application filed July 10, 1920. Serial No. 395,276. 36 Claims. (Cl. 242—65.)



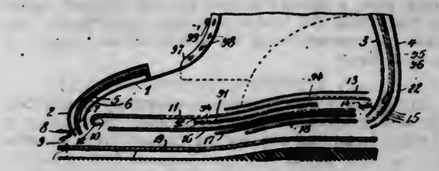
9. In a roll-forming machine, the combination of a drum, means for guiding a web of paper thereto, a shaft upon which said web is adapted to be wound, a roll adapted to press the roll being formed against said first-mentioned drum, a slide upon which said roll is mounted, means for driving said roll comprising a sprocket chain therefor and an adjustable guide parallel to the line of movement of said slide and adapted to hold said chain against said sprocket wheel, and means for driving said sprocket chain comprising a sprocket gear and a friction connection between said gear and said first-mentioned drum.

1,457,823. WHEELED WEEDER. IMMANUEL DAMMEL and THOS G. DAMMEL, Geraldine, Mont. Filed Mar. 13, 1922. Serial No. 543,468. 3 Claims. (Cl. 97—40.)

1. An apparatus of the class described comprising a supporting frame carrying traction wheels, radius bars swinging from said supporting frame, a drum device having weed severing elements and mounted upon said radius bars and rotative by contact with the ground, rods connected relative to said drum, collars slidably engaging said rods, springs attached to said rods and bearing against opposite sides of said collar, and operative means carried by said frame and attached to said collar.

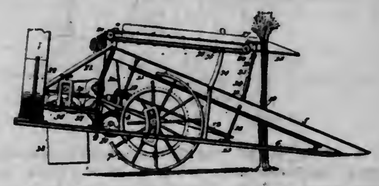
1,457,824. TOOTH HOLDER. GEORGE R. DE NISE, Rochester, Minn. Filed June 17, 1922. Serial No. 569,068. 6 Claims. (Cl. 32—4.)

6. A holder for teeth for the purpose set forth embodying an arcuate portion with resilient end members adapted to engage the cheeks of the wearer upon opposite sides of the jaw, said arcuate portion being continuous and uninterrupted from one end member to the other, said end members being enlarged vertically to extend above and below the upper and lower teeth.



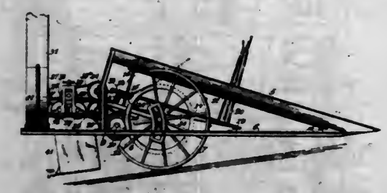
1,457,825. SCREW JACK. PAUL J. DEVAN, Windber, Pa. Filed May 16, 1921. Serial No. 469,923. 1 Claim. (Cl. 254—102.)

A hoisting jack comprising a hollow base member having an annular seat in its upper end and communicating with the interior of the base and provided with a laterally extending bearing, an externally threaded stock, an annular member having an external gear rack and internally threaded to engage the stock and mounted for rotation in said seat, said annular member having an annular outwardly opening seat in its upper face, a shaft mounted in said laterally directed bearing, a gear member carried by said shaft and engaging said gear rack, means for forcibly rotating said shaft to communicate



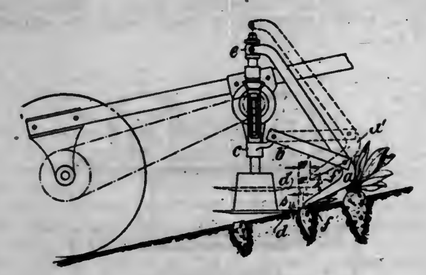
motion to said annular member, and an annular holding ring attached to said base and engaging in the seat of said annular gear.

1,457,826. PROCESS OF MAKING SHOES, BOOTS, ETC. HENRY C. EGERTON, Ridgewood, N. J. Filed Oct. 18, 1918. Serial No. 258,742. 22 Claims. (Cl. 18—59.)



1. The process of forming a stiffened footwear member which comprises simultaneously compressing and heating vulcanized rubber composition and fabric impregnated with phenolic condensation cementing material and a metallic reenforcement engaging said fabric to cure and stiffen said fabric and unite such elements.

1,457,827. HEAD-TOPPING ENSILAGE HARVESTER. IRWIN H. ERB, Lake Mills, Iowa, assignor of three-fourths to Claude C. Hobson, Ryan, Iowa, and Ota O. Hobson, Vinton, Iowa. Filed Mar. 24, 1921. Serial No. 455,005. 3 Claims. (Cl. 56—63.)

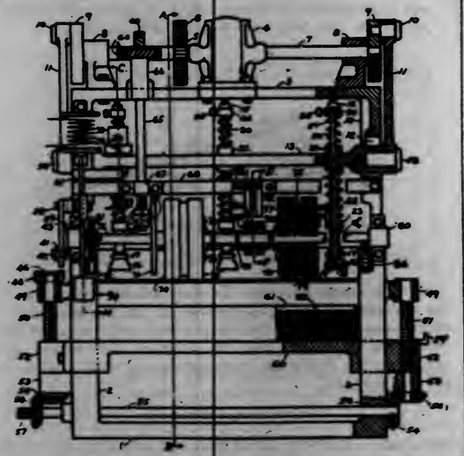


1. In a cane harvester having cutting mechanism to sever the stalks from the hills, means to convey the stalks backwardly, and means adapted to express the juice, a topper, comprising elevated cutters, actuating mechanism therefor, and conveying means to carry the seed-heads away in a course different from that of the stalks.

1,457,828. JUICE-EXTRACTING ENSILAGE HARVESTER. IRWIN H. ERB, Lake Mills, Iowa, assignor of three-fourths to Claude C. Hobson, Ryan, Iowa, and Ota O. Hobson, Vinton, Iowa. Filed Mar. 24, 1921. Serial No. 455,006. 2 Claims. (Cl. 56—61.)

1. In a silage harvester having feed-rolls for advancing the severed stalks, a chopper to cut the stalks into short pieces, a set of juice-expressing rolls disposed between the feed-rolls and the chopper, and means for actuating the feed-rolls, juice-expressing rolls and chopper concurrently.

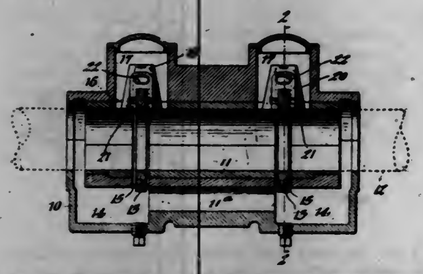
1,457,829. KNIFE CONTROL IN MACHINES FOR HARVESTING SUGAR BEETS. LUDWIG EAHARDT, Bernburg, Germany, assignor of one-half to W. Siedersleben & Co., Bernburg, Germany. Filed Dec. 15, 1921. Serial No. 522,495. 3 Claims. (Cl. 55—107.)



1. An improved knife control in machines for harvesting sugar beets comprising in combination with the feeler, the cutting knife, the knife spindle and the support for the knife spindle, a link connecting said feeler with said support, and an upwardly directed extension of the feeler hingedly connected with the knife spindle.

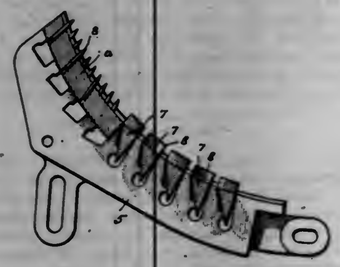
3. An improved knife control in machines for harvesting sugar beets comprising in combination with the feeler, the cutting knife, the knife spindle and the support for the knife spindle, a link connecting said feeler with said support, and a two armed lever hingedly connected at one end with the frame of the machine having slots, and hingedly and adjustably connected at the other end with the upper end of said feeler, a collar revolubly connected upon said knife spindle so that it cannot move in longitudinal direction and lateral studs of said collar engaging with the slots of said two armed lever.

1,457,830. AUTOMATIC WORK FEEDER. REGINALD B. GERHARDT, Sparrows Point, Md. Filed Aug. 18, 1921. Serial No. 493,480. 7 Claims. (Cl. 271—31.)



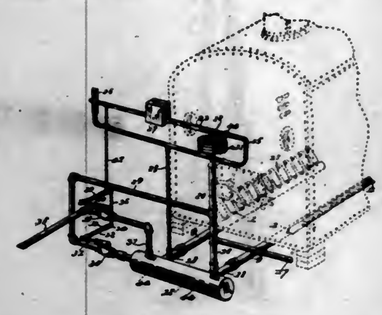
1. A sheet feeding and delivering machine comprising a frame, a vertically movable feed table, a plurality of picker elements, means on said frame for reciprocating said picker elements, rotary magnetic means for receiving sheets from said picker elements, adjustable means for releasing a sheet from said picker elements simultane-

ously with the receipt of said sheet by said rotary magnetic means, means for rotating said rotary magnetic



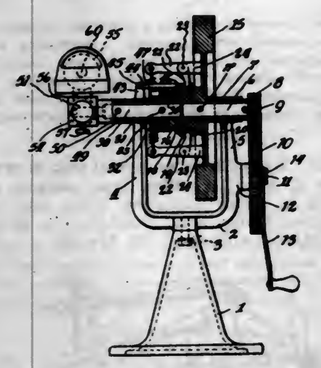
means whereby a sheet is moved horizontally, and pinch rolls adapted to remove said sheet from said rotary magnetic means.

1,457,831. SHAFT BEARING. JOHN I. GUETL, Buffalo, N. Y. Filed Jan. 3, 1921. Serial No. 434,462. 1 Claim. (Cl. 64—24.)



An oil distributing saddle for bearing boxes, comprising a plate having in its lower edge a notch for receiving an oil-elevating device, and provided in its side between said notch and the upper edge of the plate with a relief-passage extending through the plate.

1,457,832. COTTON OPENER. JAMES T. HALL, Albany, Ga. Filed Oct. 6, 1922. Serial No. 592,888. 1 Claim. (Cl. 19—95.)

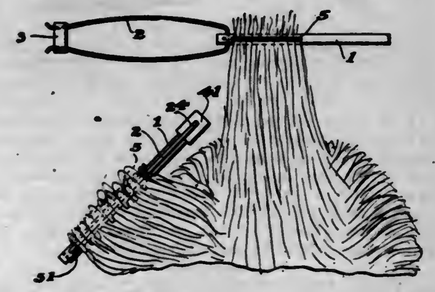


A grid for cotton openers consisting of a comb-board arranged at the entrance end of the grid and provided with rigid pointed spikes inclined against the direction of movement of the cotton, and a grid surface below said comb-board, said grid surface consisting of a plurality of spaced grid-bars carrying on their working faces a plurality of oppositely-inclined oblique deflecting ribs.

1,457,833. GAS BURNER. WILLIAM E. HANCOCK, Tulsa, Okla. Filed Mar. 18, 1922. Serial No. 544,936. 6 Claims. (Cl. 158—7.)

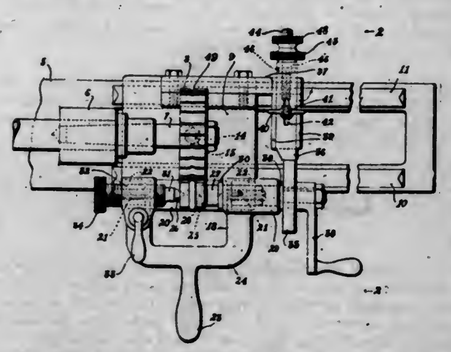
1. In a furnace fuel feeding apparatus, a header having branches, fuel feeding pipes connected thereto, burners radiating from the said pipes and extending obliquely with relation to the axis of the pipes, means for supplying gas to the header, a steam pipe extending into the header and having jets discharging through the branches of the header and mixing the steam and gas, a steam actuated element in communication with the steam supplying pipe, a member moved by said element, valves for controlling the steam and gas supply pipes, and means for communicating the motion of the member to the said valves.

1,457,834. CENTRIFUGAL CASTING MACHINE. JOSEPH D. HAMMOND, Jackson, Mich. Filed Dec. 5, 1921. Serial No. 520,053. 4 Claims. (Cl. 22—65.)



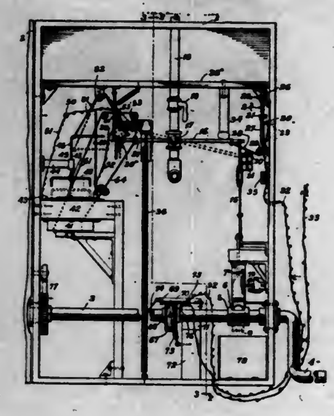
1. A device of the character described comprising a pouring instrumentality adapted to normally hold a molten metal, a flask adapted to receive metal from the pouring instrumentality, a beam, means for adjustably securing the poring instrumentality to the beam, means for adjustably securing the flask to the beam in adjusted position relative to the pouring instrumentality, a shaft connecting at its outer end with the beam intermediate the length of the latter, a shaft for driving the first named shaft, means for rotatably supporting the first named shaft and the drive shaft in co-axial alinement, cooperating means carried by said shafts at their adjacent ends for causing the operative engagement of said first named shaft by the drive shaft, and means for rotating the drive shaft.

1,457,835. PROCESS FOR PRODUCING CATALYTIC MATERIAL FOR HYDROGENATING UNSATURATED OILS AND FATS TO HARDEN THEM. JOHN P. HARRIS, Chicago, Ill., assignor to The Allbright-Nell Co., Chicago, Ill., a Corporation of Illinois. Filed July 3, 1920. Serial No. 393,871. 11 Claims. (Cl. 23—28.)



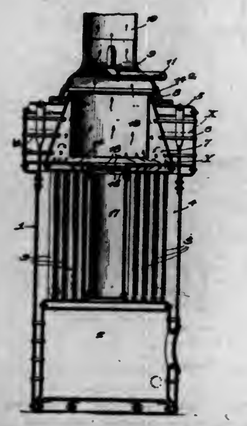
9. The process of forming catalytic material which includes grinding a mixture of a fatty acid salt, of a metal having catalytic properties suitable for use in hydrogenizing oils together with an inert comminuting material, mixing the comminuted salt with oil, and applying heat to the mixture to decompose the salt.

1,457,836. WAVER FOR HAIR. JOHN A. HARTVIG, Oakland, Calif. Filed Oct. 31, 1922. Serial No. 598,060. 9 Claims. (Cl. 132—33.)



1. A hair waver comprising a tube, a yoke pivotally secured to one end thereof, means for connecting together the free ends of the yoke and tube, a rod insertible within the free end of the tube, and means associated with the free end of said yoke for engaging the rod when inserted to prevent its accidental removal.

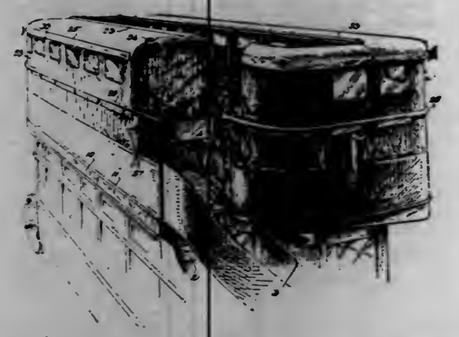
1,457,837. WORK-CONTROLLING ATTACHMENT FOR LATHES. HARRY N. HAYFORD, Concord, N. H., assignor to William B. Durgin Company, Concord, N. H., a Corporation of New Hampshire. Filed May 13, 1920. Serial No. 380,999. 11 Claims. (Cl. 90—13.3.)



1. A work-controlling attachment for use on a lathe provided with a rotary cutter having, in combination, a pattern wheel, a fixed templet with which the pattern wheel is adapted to cooperate to determine the shape imparted by the cutter to the work, means for rotatably supporting in fixed relation to each other the work and the pattern wheel constructed and arranged to permit manual movement of the work and the pattern wheel into and out of engagement with the cutter and the templet, respectively, and means for rotating the work and the pattern wheel while they are engaged by the cutter and templet, respectively.

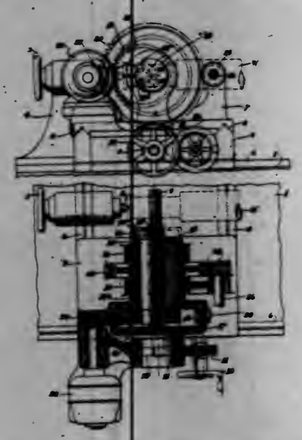
1,457,838. TIME SLOT METER. CHARLES PATTON HENRY, Fairfax, Va. Filed Aug. 16, 1921. Serial No. 492,811. 2 Claims. (Cl. 161—7.)

1. In a device of the class described, the combination of a support having a valve provided with a lever, means for manually shifting said lever in one direction, a catch plate on said lever, a latch plate pivotally carried by said support for engaging said catch plate for holding said lever in a set position, a solenoid engaging said latch plate, a fixedly supported inclined rod, a pivotally supported angle rod carried near said inclined rod, means electrically connecting said rods to said solenoid, and means for turning said angle rod to engage said inclined rod, as and for the purposes set forth.



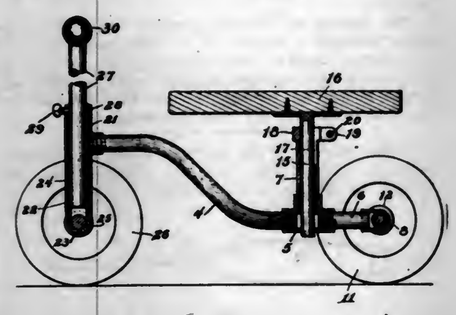
1,457,839. BOILER ATTACHMENT. GEORGE D. HUNTER, Bloomington, Ind. Filed Oct. 31, 1919. Serial No. 334,892. 3 Claims. (Cl. 110—97.)

1. A boiler of the character described having a plurality of vrtical flues, a tube disposed within said boiler



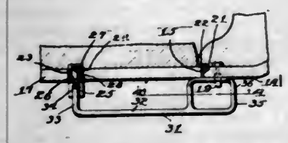
and above said flues, a baffle below said tube and spaced therefrom, the total of the circumferential area between said baffle and said flues being an area substantially equal to the cross sectional area of all of said flues covered by the baffle.

1,457,840. BUS. ALBERT E. HUTT, Detroit, Mich. Filed June 8, 1922. Serial No. 566,757. 4 Claims. (Cl. 296—28.)



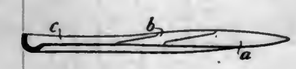
1. In a device of the character stated, a passenger carrying vehicle, having an upper deck provided with seats at opposite sides thereof, separated by a central aisle and laterally extending permanent, continuous upper deck roof sections projecting inwardly from the outer upper deck walls over said seats, and provided with a longitudinal opening in vertical alignment with and of about the same width as said central aisle extending from the front to the rear of said roof sections, the height of said roof sections from the upper deck floor being greater than the height of the seated passenger and less than the height of the average standing passenger, so that the head of the latter projects above said roof sections when standing in said central aisle.

1,457,841. TOOL FOR PULLING GEARS, ETC., FROM THEIR SHAFTS. ALFRED A. JOHNSON, Chico, Calif. Filed Feb. 10, 1921. Serial No. 444,020. 3 Claims. (Cl. 29—85.)



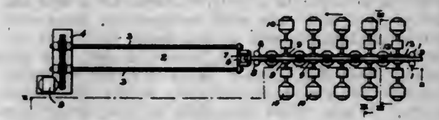
1. A device of the character described comprising a body member having a plurality of slots therein; hooked members arranged in said slots; a threaded member adjustably positioned in said body member and movable axially relative thereto for imparting axial movement to said hooked members and an auxiliary threaded member mounted within said first mentioned threaded member and movable axially relative thereto for imparting axial movement to said body member.

1,457,842. TOY VEHICLE. JOHN C. KASHMERE and JAMES K. ROBERTS, Wilkes-Barre, Pa., assignors to Walter C. Williams, Wilkes-Barre, Pa. Filed Feb. 23, 1922. Serial No. 538,685. 8 Claims. (Cl. 208—165.)



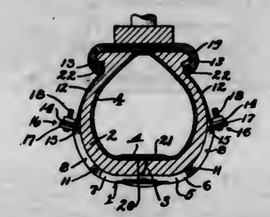
1. In a toy vehicle, a frame including a longitudinal bar, an axle carried at the rear end of the bar, rear wheels carried by said axle, a T-union at the forward end of the bar, a steering post rotatably mounted in said T-union, a second T-union at the lower end of said steering post, a front axle journaled in said second T-union, front wheels carried by said front axle, and handle bars carried by said steering post.

1,457,843. VEHICLE SEAT. ELIAS LASHER, Catskill, N. Y. Filed Mar. 5, 1921. Serial No. 449,994. 5 Claims. (Cl. 155—7.)



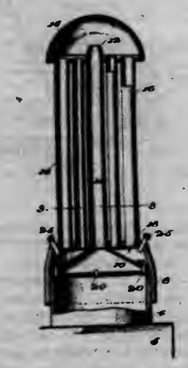
1. In combination with a vehicle body, a vehicle seat having a seat proper, a back, holding means thereon, a panel hinged to the back, a hand-rail carried by said panel, a looped handle on the hand-rail, and a lug on the handle engaging said holding means.

1,457,844. PRODUCTION OF METAL AIRSCREWS OR PROPELLERS. HENRY LEITNER, London, England. Filed Jan. 16, 1922. Serial No. 529,761. 1 Claim. (Cl. 29—148.2.)



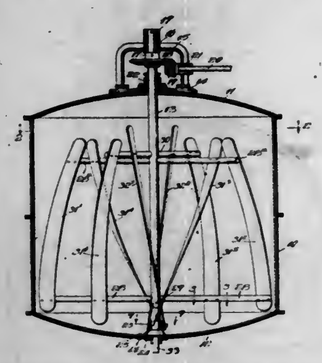
A method of constructing the hollow blades of metal air-screws or propellers of the kind hereinbefore referred to consisting in first cutting the outer sheath or sheet and the laminations for each half blade from flat sheet metal, then welding such outer sheet and laminations together at the edges, then subjecting such welded sheets to a temperature to enable them to be pressed between dies to the required curvature and finally securing the half blades together at their edges, substantially as described.

1,457,845. BAR-GRINDING MACHINE. JAMES S. LOCHHEAD, Pittsburgh, Pa. Filed Apr. 8, 1922. Serial No. 550,595. 1 Claim. (Cl. 51—112.)



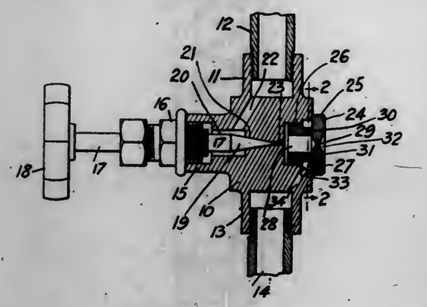
In a machine for grinding in a single traverse the surfaces of steel bars as they advance uninterruptedly through the machine the combination of a plurality of grinding disks arranged with their flat grinding faces extending in the opposite bounding planes of the pathway of bar advance, the said discs being rotatable on axes perpendicular to the line of bar advance, a pair of feeding rolls arranged on the intake side of the assembly of disks and adapted to engage a bar on opposite sides and impel it from behind along the pathway between said disks, and a tension device including bar-gripping jaws and a rotatable stem screw-threaded in a stationary block arranged on the delivery side of the assembly of disks and adapted to engage a bar and draw it from ahead along said pathway.

1,457,846. MEANS FOR PATCHING BLOW-OUTS IN PNEUMATIC TIRES. THOMAS HARVEY MCDONALD, Adelanto, Calif. Filed May 17, 1922. Serial No. 561,697. 3 Claims. (Cl. 152—24.)



2. In a device of the character set forth, a clamp comprising a bar adapted to engage the periphery of a tire; means pivotally connected at one end to one end of said bar and adapted at its other end to engage the rim of a wheel; a link pivotally connected to the other end of said bar; and an attaching member connected at one end to said link and adapted at its other end to engage the rim of a wheel for the purpose specified.

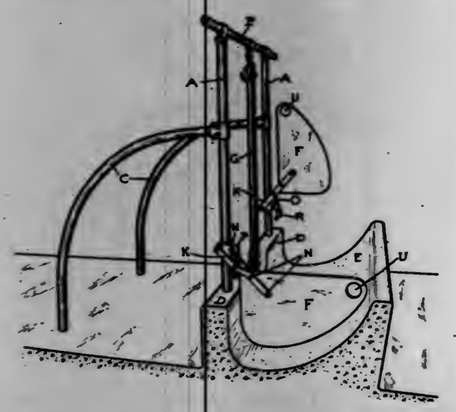
1,457,847. CONDENSER. LAWRENCE D. MCEWEN, Des Moines, Iowa. Filed June 19, 1922. Serial No. 569,528. 2 Claims. (Cl. 257—25.)



1. A condenser for automobile radiators comprising a cap having means whereby the same may be secured to the nipple of a radiator, a cone-shaped bottom wall arranged within said cap and having its outer edge secured to the cap at a point spaced intermediate the upper and lower ends of the same, the apex of the cone-shaped bottom wall being connected to the top of the cap, an outlet pipe having communication with the apex of said bottom wall and having its upper end formed with a nozzle, a header receiving the nozzle of said pipe, a plurality of return pipes connected to said header, the lower ends of said return pipes being connected to said cap.

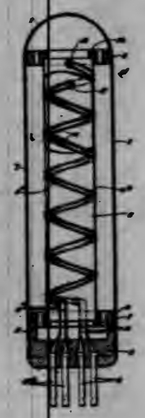
1,457,848. AGITATOR. TIMOTHY MOJONNIER, Oak Park, Ill., assignor to Mojonnier Bros. Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1920. Serial No. 362,403. 26 Claims. (Cl. 259—107.)

1. The combination with a tank, of an agitating mechanism therein including a first set of inclined blades extending in a general direction throughout the greater portion of the length of the tank near its outer wall and serving by their inclination to produce an outer current of the contents lengthwise of the tank in one direction, and a second set of inclined blades of substantially the same length as the first set and movable in a path just inward of and concentric and immediately adjacent to the path traversed by said first set and serving by their inclination to produce a lengthwise current in the opposite direction, the blades of the second set being located so as to alternate with the blades of the first set in passing a given point.



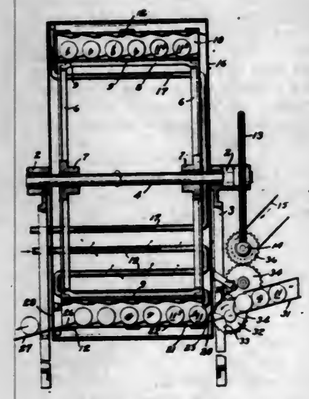
1,457,849. BURNER. ALBERT W. MORSE, Forest Hills, N. Y. Filed Sept. 23, 1920. Serial No. 412,120. 2 Claims. (Cl. 158—76.)

2. A fuel burner comprising in combination a body casing having a fuel connection at one end and an air connection at the other end, a fuel regulating valve interposed between the said connections, a discharge nozzle consisting of a single unit of substantially cylindrical shape screwed into the body casing and having an open



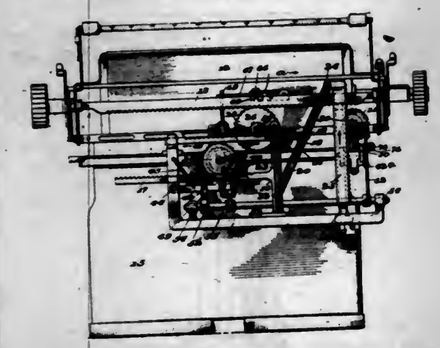
chamber at the end nearest the said regulating valve and a small outlet opening at its other end, orifices through the walls of the said chamber and substantially tangent to the walls thereof and in angular relation to its longitudinal axis, an annular chamber in the body casing surrounding the outer terminals of the said orifices, and a passage between the said annular chamber and the air connection.

1,457,850. DIVISION FOR ANIMAL MANGERS. ALBERT H. NELLER, Fairfield, Iowa, assignor to The Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed Feb. 9, 1922. Serial No. 535,173. 6 Claims. (Cl. 119—27.



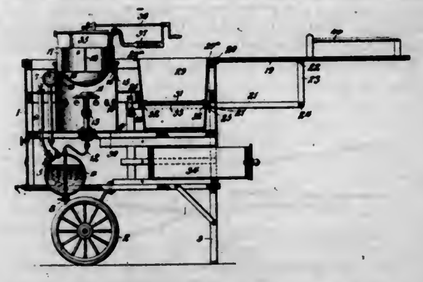
I. In manger divisions for animal stalls, the combination of a division member adapted to fit the transverse contour of the manger, said member being hinged to a portion of the stall frame, and adapted to be elevated and lowered thereon, and pivoted locking means to alternately and automatically lock the division member in elevated and in lowered position.

1,457,851. VOLTAGE REGULATOR. ARTHUR F. NESBIT, Wilkinsburg, Pa. Filed Aug. 27, 1921. Serial No. 495,992. 4 Claims. (Cl. 171—229.)



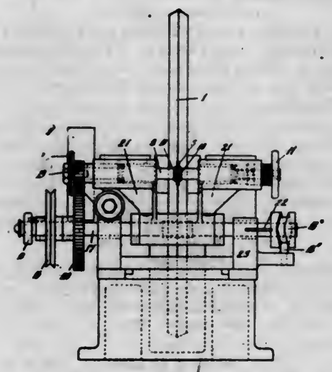
1. A voltage regulator comprising a hollow air tight body portion, a thin tubular insulating support rigidly mounted in said body portion, a metal resistance strip coiled around the interior surface of said support, a second metal resistance strip coiled around the outer surface of said tubular support, said strips having their convolutions arranged in a parallel course along said support so that said outer strip overlies said inner strip, said strips being formed of such metal that their conductivity will vary as they become heated, and said tubular insulating member being adapted to readily transmit the heat from one strip to the other, leads secured to said strips, and each of said strips being adapted to be connected to separate electrical circuits.

1,457,852. APPARATUS FOR TREATING PACKAGED GOODS. ELMER C. NORTHRUP, San Francisco, and EDWARD H. SPECHT, Oakland, Calif. Filed June 23, 1920. Serial No. 391,046. 27 Claims. (Cl. 126—272.)



1. An apparatus for treating packaged goods, comprising a runway for said packages, means for inverting the runway, and means stationary relative to the runway and operative by inversion of said runway for causing said packages to progress therethrough.

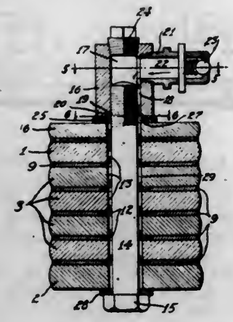
1,457,853. JUSTIFYING DEVICE FOR TYPEWRITERS AND THE LIKE. KENNETH C. O'BRYAN and JAMES WM. O'BRYAN, Washington, D. C. Filed Mar. 18, 1922. Serial No. 544,872. 14 Claims. (Cl. 197—84.)



13. A line justifying device for typewriters having a carriage and an escapement, and adjustable means between the escapement and the carriage controlling the extent of each movement of the carriage at each actuation of the escapement including an inclined controlling member whose degree of inclination controls the extent of each operative movement of the carriage, and means for adjusting the inclination of said member.

1,457,854. CORN POPPER. ROBERT D. PARKS, Lohrville, Iowa, assignor to W-M-P Manufacturing Co., Lohrville, Iowa, a Corporation of Iowa. Filed Feb. 3, 1919. Serial No. 274,688. 13 Claims. (Cl. 53—4.)

12. A corn popper comprising a cabinet, and a pan located at one end of the cabinet, within the same and having its top opening out at the top of the cabinet, and a hinged cover for the cabinet for closing the pan and movable to an open position at one side of the pan and then constituting a working table in substantially the same horizontal plane as the top of the cabinet, said corn popper being provided with supporting means including wheels, and a propelling handle movable into and out of the cabinet and when extended constituting a support for the open cover.

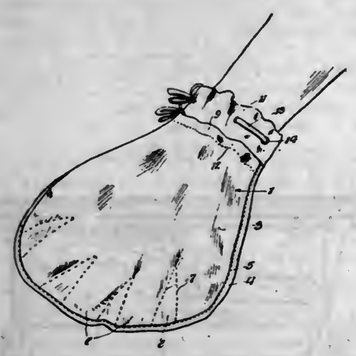


1,457,855. MACHINERY FOR BEVELING THE EDGES OF GLASS LENSES AND THE LIKE. SIDNEY RICHARDSON, Hatton Garden, London, England. Filed Apr. 4, 1921. Serial No. 458,494. 6 Claims. (Cl. 51—.01.)

1. An apparatus for beveling the edges of spectacle lenses and the like comprising, in combination, a grinding wheel having a V or double bevelled edge of male or projecting form, means for mechanically rotating said wheel, means comprising a rotatable swivelling spindle for supporting the lens, a rotary and reciprocatory driving spindle means for imparting rotation and reciprocation from said driving spindle to said lens-carrying spindle, means comprising a cam device for imparting a longitudinal reciprocating motion to said driving spindle, and means for regulating the distance between the axis of rotation of the grinding wheel and the axis of rotation of the lens during the rotation and reciprocation of said lens-carrying spindle.

1,457,856. SPRING STRUCTURE. CARLYLE W. ROGERS, Warren, Pa. Filed Mar. 1, 1922. Serial No. 540,283. 3 Claims. (Cl. 267—50.)

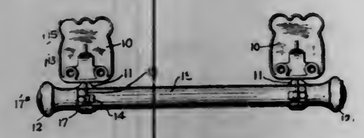
1. A spring-structure comprising superposed leaves; a spacer-element disposed between the facing surfaces of certain of the leaves, said spacer-element comprising a body shaped to conform approximately with the edge contour of one of the leaves between which it is placed and provided with an elongated cut-out portion having side and end walls and a centrally disposed enlarged portion for the reception of a bolt; a bolt of smaller external cross-sectional area than the centrally disposed enlarged portion of the insert members passing through the leaves and insert members in spaced relation thereto to constitute a channel between the outer surface of



the bolt and the walls of the opening through which the bolt passes and communicating with the elongated cut-out portion of the insert members; a head on one end of the bolt; a nut on the other end provided with a lubricant receiving and storing chamber; means, including a groove provided in one of the members, establishing communication between the lubricant receiving and storing chamber and the space between the bolt and spring leaves; and a cut-away portion of the nut, communicating with the groove, and constituting a distributing space for lubricant passing through the groove.

1,457,857. METAL POLISH. WILLIAM ALBERT RUDDELL, Asbury Park, N. J. Filed Dec. 28, 1921. Serial No. 525,446. 1 Claim. (Cl. 134—24.5.)

A polishing composition comprising a mixture of silver-potassium cyanide, potassium cyanide, potassium nitrate, borax, whiting, water and alcohol, in the proportions resulting from the ingredients named in the quantities herein specified.

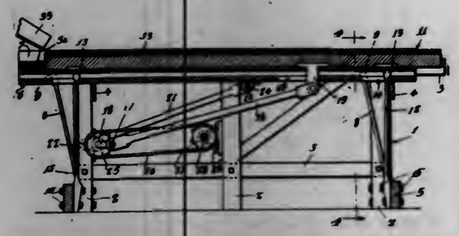


1,457,858. SWIMMING MITT. WILLIAM ALBERT RUDDELL, Asbury Park, N. J. Filed July 12, 1922. Serial No. 574,455. 1 Claim. (Cl. 9—21.)

A hand covering of the class described, comprising palm and back portions united to provide finger stalls and intervening webs, the portions at their minor ends being provided with a draw string whereby the said end of the

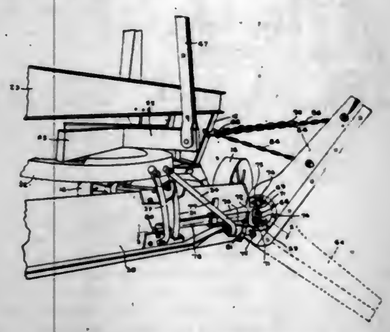
covering may be closed about the wrist, a wrist band within the said end of the covering, and means independent of the draw string whereby the wrist band may be closed about the wrist.

1,457,859. CASKET HANDLE. EDWARD R. SARGENT, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Filed Feb. 28, 1921. Serial No. 448,296. 13 Claims. (Cl. 16—112.)



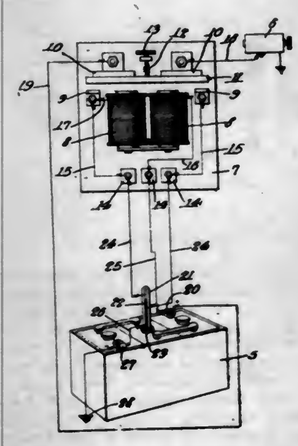
4. A casket handle, including a handle bar, an integral arm and tip for said bar, the end of the bar being adapted to be received within the arm and tip, and a lip struck up from said bar and embracing a portion of said arm to prevent separation of said parts.

1,457,860. SEWING CASE. BERTIE S. SCHWED, Far Rockaway, N. Y. Filed Nov. 2, 1921. Serial No. 512,215. 3 Claims. (Cl. 223—53.)



1. A sewing case consisting of a plurality of detachable sections resting one above the other, the bottom member of each section forming the top of the section underneath when the case is fastened together said member being provided with means to receive and contain sewing implments and accessories on the under side thereof.

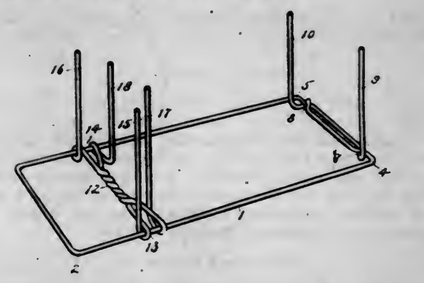
1,457,861. FRUIT CLEANER. FRED STEBLER, Riverside, Calif., assignor to Stebler Parker Co., Riverside, Calif., a Corporation of California. Filed Sept. 5, 1922. Serial No. 586,374. 9 Claims. (Cl. 146—14.)



8. In a fruit cleaner, the combination of a plurality of bars held against rotation and for reciprocation in a longitudinal direction, brushes fixed to the bars for engaging the fruit, and means for producing a relative longitudinal movement of the bars with respect to each other while engaging the fruit.

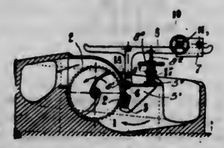
1,457,862. ROAD-GRADING MACHINE. CHARLES K. STOCKLAND, Minneapolis, Minn. Filed Oct. 17, 1921. Serial No. 508,067. 5 Claims. (Cl. 37—156.)

1. In combination with the main blade of a road grading machine, an auxiliary blade, a clamping member, means for securing said auxiliary blade to said clamping member, a lug on said clamping member adapted to engage the front surface of the main blade at one end thereof, and adjustable means carried by the upper and lower portions of said clamping member for engagement with the rear surface of the main blade whereby adjustment of said adjustable means causes the inclination of said auxiliary blade to be varied.



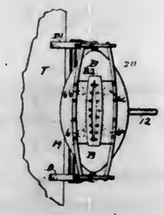
1,457,863. DEVICE TO CONTROL THE TEMPERATURE OF STORAGE BATTERIES IN AUTOMOBILES. WILLIAM A. STRAWMYER and VANE BEAMAN, Atlanta, Ga. Filed Nov. 4, 1920. Serial No. 421,800. 1 Claim. (Cl. 171—314.)

In a device for controlling the temperature of a storage battery, the combination with the storage battery and a generator electrically connected for charging the storage battery, of a circuit breaker in the circuit which connects the generator with the storage battery, said circuit breaker including an armature and an electro-magnet, a pair of normally disconnected contacts in position to be electrically connected by said armature and said electro-magnet the armature being adapted to break



the circuit between the generator and storage battery, a thermostat extending through the top of the storage battery from the interior to the exterior and including an upper and a lower and an intermediate electric contact, said thermostat also including an expansible element which is constantly in electric connection with the said lower and being movable into and out of electric connection with the said intermediate and upper electric contacts, an electric conductor connecting one of said normally disconnected contacts with the said intermediate contact, an electric conductor connecting the other one of normally disconnected contacts with the said upper contact of the thermostat, a conductor connecting one terminal of said electromagnet to one of said normally disconnected contacts, and a conductor connecting the other terminal of said electro-magnet with said storage battery, means being provided to automatically move the said armature away from said normally disconnected contacts into the position for closing the charging circuit between the said generator and storage battery, for the purpose specified.

1,457,864. PHOTOGRAPHIC-FILM HOLDER. HARRY C. STRIEKER, Cincinnati, Ohio. Filed July 19, 1922. Serial No. 575,944. 3 Claims. (Cl. 95—100.)

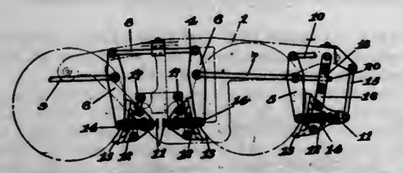


1. A photographic film holder comprising an open wire frame formed from wire with the end portions interlocked to form one end of the frame, and with the ends projecting upward to form posts, and a slide piece mounted on the frame to slide lengthwise thereof and provided with upright posts to co-operate with the frame posts for holding a web of film.

1,457,865. APPARATUS FOR COMMINUTING, REFINING, AND TRITURATING PAPER OR CARDBOARD PULPS. KRISTEN ANDREAS THORSEN, Grenoble, France. Filed Feb. 10, 1920. Serial No. 357,749. 4 Claims. (Cl. 92—24.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

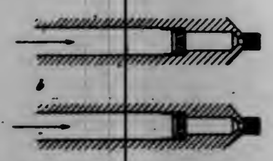
1. In a pulp engine, the combination of a relatively-fixed knife cylinder; a knife-plate cooperative therewith; a movable carrier for the knife-plate mounted to swing toward and from the cylinder, and beneath which carrier the stream of pulp is introduced and caused to flow to the point where it is engaged by the coacting knives of the cylinder and plate; a pivotally-mounted, angular lever; a counterweight slidably mounted on one arm of said lever; and means, including a spring, for transmitting the pressure exerted by the weighted arm of the lever to the carrier so as to force the latter and the knife-plate toward the cylinder.

1,457,866. BALL COMPRESSOR. PHILLIP H. WILLIAMS, Fresno, Calif. Filed Feb. 18, 1922. Serial No. 537,617. 3 Claims. (Cl. 100—57.)



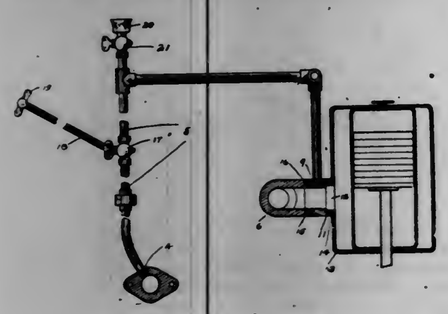
1. In a device for compressing balls of the character described, the combination of a base adapted to hold the ball in a fixed position, compression jaws curved to conform approximately to the curvature of the ball along the line of the opening in said ball, and means for moving said jaws toward each other and pressing said jaws downward simultaneously, substantially as described.

1,457,867. LINGUAL BAR. REGINALD V. WILLIAMS, Buffalo, N. Y., assignor to Williams Gold Refining Co., Buffalo, N. Y., a Corporation of New York. Filed Sept. 19, 1921. Serial No. 501,740. 9 Claims. (Cl. 32—4.)



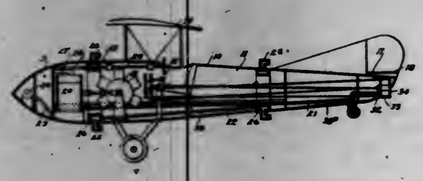
8. A lingual bar having an end portion provided along its margins with two series of substantially V-shaped depressions with their apexes facing inwardly, forming zigzag corrugations on the side of said end portion, said depressions increasing in depth toward the edges of said end portions and forming a series of teeth along each edge thereof.

1,457,868. BRAKE MECHANISM. KARL O. WINELL, Pittsburgh, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed July 7, 1921. Serial No. 483,042. 9 Claims. (Cl. 188—212.)



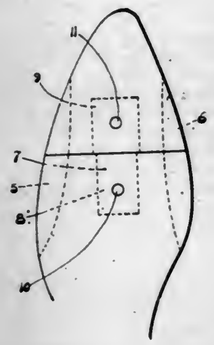
5. In a brake mechanism, a brake beam, a plurality of hangers for supporting each end of the beam, said hangers being connected with the opposite sides of the ends of said beam and adapted to maintain said beams in substantially its predetermined position as it is moved when the braking power is applied and when the braking power is released.

1,457,869. METHOD OF AND APPARATUS FOR PREVENTING THE BURNING OF GAS-PRESSURE-REDUCING VALVES. ERNST WISS, Griesheim-on-the-Main, Germany, assignor to the firm Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 18, 1921. Serial No. 485,763. 8 Claims. (Cl. 50—15.)



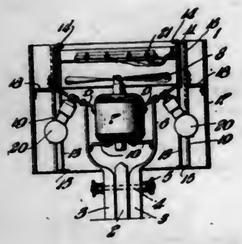
1. The method of preventing the burning of gas pressure reducing valves by producing in the gas which is under pressure a vertical motion prior to impingement thereof on the valve.

1,457,870. GAS-SAVING AND CARBON-ELIMINATING ATTACHMENT FOR AUTOMOBILE GAS ENGINES. JOHN HENRY ZURBORG, Covington, Ky., assignor of one-half to Jerome G. Wilde, Covington, Ky. Filed Sept. 1, 1920. Serial No. 407,421. 2 Claims. (Cl. 407,421. 2 Claims. (Cl. 123—180.)



1. In an automobile gas engine, an engine-casing, an exhaust-manifold, a carbureter, an intake-manifold, a tubular connection having a collar at one end adapted to be detachably inserted between and connected to the carbureter and intake-manifold and having at the other end a detachable insert connection adapted to fit between and connect said exhaust-manifold and engine-casing.

1,457,871. AEROPLANE CONSTRUCTION. MICHAEL BONSIAKOS, San Francisco, Calif. Filed June 20, 1921. Serial No. 481,292. 4 Claims. (Cl. 244—18.)

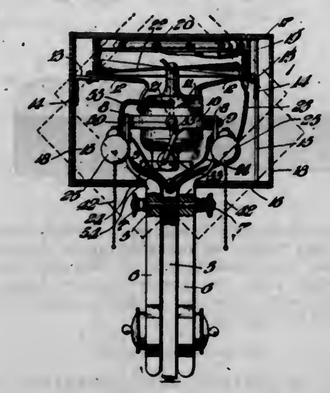


1. An aeroplane propulsion means comprising a plurality of rearwardly extending nozzles arranged in groups around the body of the aeroplane; a power plant; air compression means driven by said power plant; and controlling means between the compressor and the nozzles.

1,457,872. SHOE LAST. JOSEPH W. BROCKMAN, Cincinnati, Ohio, assignor to The Cincinnati Last Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 11, 1922. Serial No. 574,234. 1 Claim. (Cl. 12—133.)

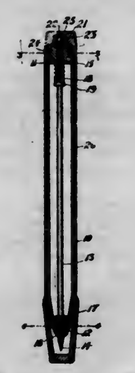
A shoe last comprising a body, a renewable toe portion, and means for securing the toe portion to the body portion, said means comprising a central dowel recessed into the body and toe portion, the wood of the body and toe entirely surrounding the dowel, and side dowels recessed into the sides of the body and toe.

1,457,873. HEAT-FOCUSING DEVICE FOR COMBINED ELECTRIC LAMPS, HEATERS, AND BLOWERS. WILLIAM A. BROWN, Philadelphia, Pa. Filed Sept. 14, 1922. Serial No. 588,106. 11 Claims. (Cl. 219—39.)



1. In a device of the character stated, a combined electric heater and blower, a guard in proximity to said heater and an outer shade member telescopically supported and longitudinally movable with respect to said guard.

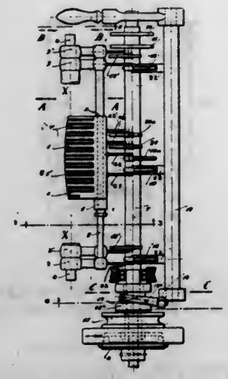
1,457,874. COUNTERBALANCING AND OSCILLATING DEVICE FOR ELECTRIC HEATERS AND LAMPS. WILLIAM A. BROWN, Philadelphia, Pa. Filed Sept. 14, 1922. Serial No. 588,107. 10 Claims. (Cl. 219—39.)



1. In a device of the character stated, an electric heater, an electric blower supported in proximity to said heater to diffuse the heated air, means for causing said electric heater and blower to oscillate to and fro as a unit, in combination with an elongated arm

pivotally supported, said arm carrying at one end said heater and blower, and counterbalancing devices on the

other end of said arm, whereby vibration of said blower is eliminated, and the weight thereof and its adjuncts is balanced.

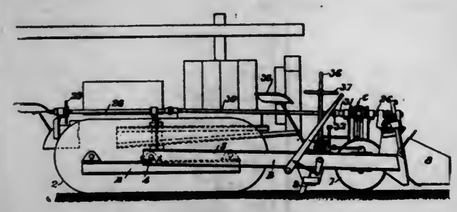


1,457,875. STYLOGRAPHIC FOUNTAIN PEN. NOEL H. COATES, Oakland, Calif. Filed Sept. 26, 1922. Serial No. 590,724. 6 Claims. (Cl. 120—45.)

1. A stylographic fountain pen comprising a barrel, a stylus, a spring-pressed stem on the stylus extending longitudinally of the barrel and guided in openings in the opposite ends of the barrel, a valve carried by the stem to control the opening in the bottom of the barrel, a vented cap fitted over the upper end of the barrel and a valve carried by the cap to control the opening in the upper end of the barrel, both of said valves being held normally closed by spring pressure and adapted to open when the stem is moved upwardly under the pressure exerted on the stylus in writing.

1,457,876. CIGAR-MAKING MACHINE. JEAN CORNELIS, Liege, Belgium. Filed Aug. 11, 1919. Serial No. 316,752. 6 Claims. (Cl. 131—5.)

6. In a cigar rolling machine in combination, means for rolling and shaping a cigar, a rotatable drive shaft for operating said means, and means for stopping the shaft, comprising a pair of similar cams disposed on the shaft out of phase with respect to each other, each cam having a point of maximum and minimum displace-

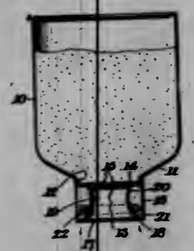


ment, and a pair of oppositely acting resilient members, one bearing on each cam and always seeking the point of minimum displacement.

1,457,877. RECOVERY OF AMMONIA. LEMAN E. DOTY, Elyria, Ohio. Filed Aug. 19, 1921. Serial No. 493,549. 5 Claims. (Cl. 23—21.)

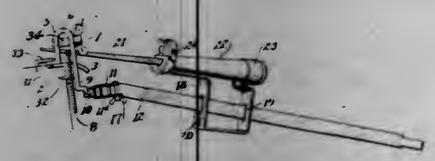
1. The improved process for recovering ammonia liquor from by-product coke oven gas, which consists in cooling the gases to form condensates of tar and ammonia liquor, collecting said condensates, separating the tar and ammonia liquor, removing the ammonia liquor from the circulating system, recirculating the tar through the gas mains, and adding fluid to said gases prior to cooling them to absorb the ammonia in said gases and form ammonia liquor.

1,457,878. LAND-LEVELING DEVICE. LEWIS D. HOPFIELD, Natoma, Calif. Filed Sept. 13, 1922. Serial No. 587,944. 9 Claims. (Cl. 37—145.)



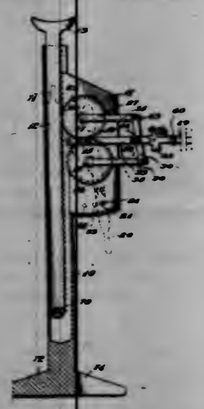
1. A land leveling device comprising a tractor, an auxiliary frame, a pivotal connection between one end of said frame and the tractor, wheels supporting the opposite end of the frame, a scraper carried by the auxiliary frame and operable when the tractor travels in one direction, and digging teeth carried by the auxiliary frame and operable only when the tractor is travelling in the opposite direction.

1,457,879. RECEPTACLE FOR HOLDING POWDERED MATERIAL OR THE LIKE. ARTHUR LINDENMAYER, Lansdowne, Pa. Filed Jan. 23, 1923. Serial No. 614,424. 8 Claims. (Cl. 221—62.)



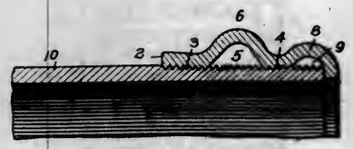
1. A receptacle comprising a body portion, a neck-element carried by the body portion and having its outer

end covered by an apertured plate, an inner plate mounted in the inner end of the neck-element and having an annular depression which is provided with an annular



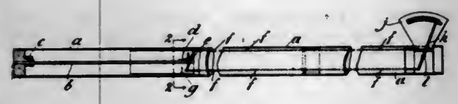
set of apertures, and a ring-valve mounted within the neck-element and adapted to enter the annular depression.

1,457,880. SAW-FILING DEVICE. FRANK H. MASOW, Berkeley, Calif. Filed June 1, 1921. Serial No. 474,074. 7 Claims. (Cl. 76—36.)



1. In a device of the character described, a clamping member for the reception of a saw, a guide rod secured to the said clamping member, an arm longitudinally movable freely on said rod, and a file supporting frame mounted for a free slidable and also a free rocking movement on the arm.

1,457,881. AUTOMOBILE JACK. JOHN PETER OWSIANEK, Ituna, Saskatchewan, Canada. Filed Apr. 26, 1922. Serial No. 556,903. 9 Claims. (Cl. 254—95.)



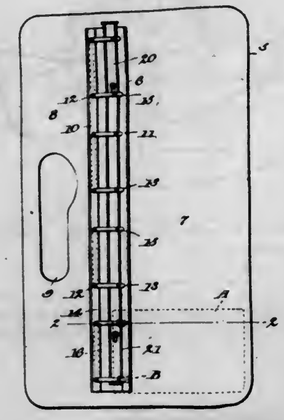
1. A lifting jack of the class described, comprising a hollow elongated body formed with a lateral hollow extension adjacent its upper end, a toothed rack slidably mounted within the hollow body, gears mounted in the extension, a lever designed to operate the gears, and means to control the position of the gears to raise, lower or lock the rack.

1,457,882. THREAD PROTECTOR. PETER J. SHRUM, Monaco Heights, Pa., assignor to Colona Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 9, 1919. Serial No. 302,952. 2 Claims. (Cl. 137—91.)

1. A thread protector comprising a rigid continuous annular blank having an inwardly turned retaining lip at one end, said blank having an outwardly bent rib thereon which forms an annular interior channel, and a relatively wide interiorly threaded portion adjacent each side of the channel.

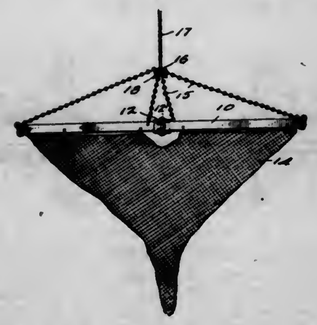
1,457,883. ANNEALING AND APPARATUS USED THEREIN. FRANK TWYMAN, London, England, assignor to Adam Hilger, Limited, London, England. Filed Sept. 7, 1921. Serial No. 499,117. 7 Claims. (Cl. 73—31.)

1. The method hereinbefore described of ascertaining the time of relaxation of a substance, which consists in subjecting to the annealing heat a piece of the same substance as that to be annealed, placing said piece under sufficient stress to deform it a definite amount, periodically removing the stress and measuring the spring back of the piece.



3. Apparatus for ascertaining the time of relaxation of a substance, comprising a piece of the substance to be annealed, means whereby stress may be temporarily applied to the piece and whereby the spring back of the piece may be measured.

1,457,884. SUSPENSION OF AUTOMOBILES AND OTHER VEHICLES. GEORGES HENRI ERNEST DE RAM, Paris, France. Filed Aug. 16, 1921. Serial No. 492,755. 7 Claims. (Cl. 267—19.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



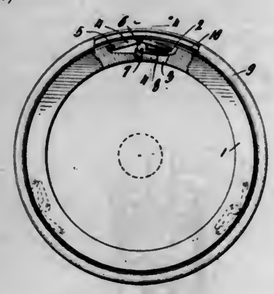
1. In a vehicle suspension, the combination with a chassis and a wheeled axle, of a couple connecting the two comprising said axle and connected extension members in quadrilateral formation diagonally divided and with the two parts mutually articulated coincidentally with the diagonal division therebetween, and means for connecting the chassis to the couple on opposite sides of the diagonal division thereof.

1,457,885. CARD HOLDER. WALTER F. DINSMORE, East Orange, N. J., assignor to R. L. Polk & Company, Inc., New York, N. Y., a Corporation of New York. Filed June 23, 1922. Serial No. 570,297. 4 Claims. (Cl. 129—1.)

3. A device of the character described, comprising a substantially rectangular board provided near one of its longitudinal edges with a hand hold, and a plurality of card-holding units detachably connected with said board between the sides thereof.

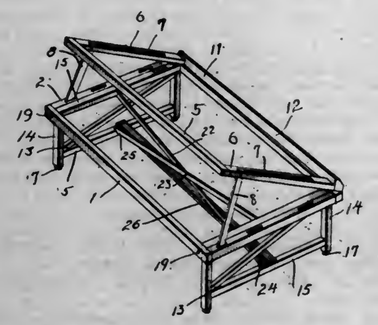
1,457,886. FISHING NET. JAMES K. DUKAS, Edwardsville, Pa. Filed Aug. 10, 1920. Serial No. 402,526. 1 Claim. (Cl. 43—12.)

A collapsible net frame comprising two pair of sections, the sections in each pair being pivoted to each other at adjacent ends, guard means for said pivot points, and U-shaped members to which are pivoted the other ends of the sections so that they may swing in a plane at right angles to the first plane.



1,457,887. BUTT HOOK. JESSIE F. GRAHAM, Standard City, Calif. Filed July 19, 1922. Serial No. 575,997. 1 Claim. (Cl. 24—242.)

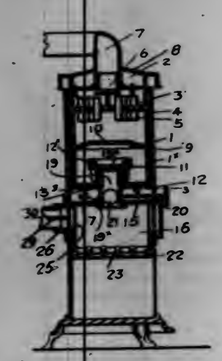
In combination, a hook, an intermediate member provided with a notch, means for pivotally mounting the hook upon the intermediate member, a trunnion extending from the intermediate member and having a flattened head, a sleeve swivelly mounted on the trunnion and



provided with diametrically opposed trunnions, and a clevis terminating in eyes receivable on the last mentioned trunnions.

1,457,888. DEMOUNTABLE RIM FOR VEHICLE WHEELS. LINDALL G. HACKWORTH, Ruble, Mo. Filed Dec. 31, 1921. Serial No. 526,173. 2 Claims. (Cl. 301—29.)

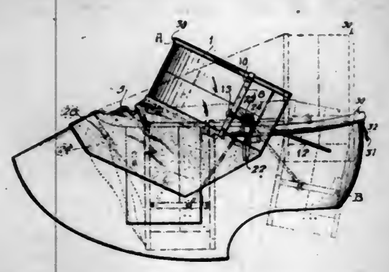
1. In combination, a wheel felly provided with a plurality of recesses in its outer periphery, a demountable rim provided with a groove on its inner periphery, a pair of arms pivoted in each recess and means for forcing the free ends of the arms into the groove of the demountable rim thereby locking the same in engagement with the felly.



1,457,889. DRAWING STAND. HENRY C. HINRICHS, New Orleans, La. Filed Mar. 24, 1920. Serial No. 368,362. 1 Claim. (Cl. 45—109.)

A portable and collapsible stand for drawing boards comprising a main frame including longitudinally ex-

tending front and rear bars and transverse end bars all disposed in the same plane, the transverse end bars having spaced notches in the upper face thereof, end leg frames for the main frame, each including a transverse cross bar having trunnions formed on the terminals thereof and corner standards, the longitudinal bars of the main frame having bearing openings therein adapted to receive the trunnions of the side bars of the leg frames, the leg frames being adapted to fold within the main frame and lie flush with the upper and lower surfaces thereof, removable cross braces adapted to extend from one leg frame to the other for holding the leg frames in a set-up position, and a drawing board frame of substantially the same size as the main frame including longitudinal front and rear bars and slotted transverse end bars, means pivotally connecting the front bar of the drawing board frame with the front bar of the main frame, and pivoted struts carried by the end bars of the drawing frame and adapted to be disposed within the slots thereof and to lie flush with the upper and lower surfaces of the drawing frame, when the frame is in its collapsed position, the free terminals of the struts being adapted to fit in any one of the notches of the main frame when the drawing board is in its set up adjusted position.

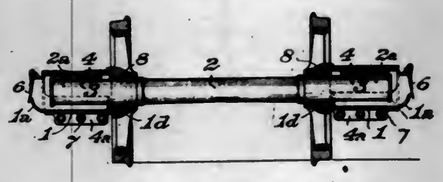


1,457,890. WATER HEATER. FREDERICK WILLIAM MAGEE, London, Ontario, Canada, assignor of one-half to Thomas William Baker, London, Ontario, Canada. Filed Nov. 25, 1922. Serial No. 603,363. 2 Claims. (Cl. 126—359.)

1. In a water heater, a chamber having a chimney outlet at its upper end and through which a multiplicity of streams of water is adapted to freely fall, a port at the lower end of the chamber, means for preventing the falling water passing through such port, a source of heat located beneath the chamber and adapted to use smoke emitting fuel, the products of combustion from which pass upward through said port to the aforesaid chimney outlet, means for preventing such products when smoke laden from passing upward, and a separate discharge for such smoke laden products extraneous to the aforesaid chamber.

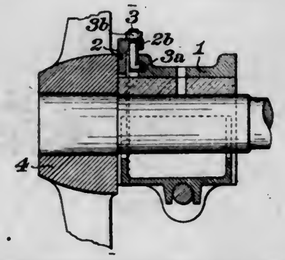
1,457,891. SHIELD FOR SIDE CARS. GUSTAV W. BERGER and CHRISTIAN JEDELE, Newark, N. J. Filed May 18, 1922. Serial No. 561,921. 13 Claims. (Cl. 296—84.)

1. A shield having a body portion adapted to extend transversely of a vehicle and free to tilt upon a line intermediate its opposite edges, and supporting means tiltingly connected to said body portion at points distant from its side and end edges and adapted to be connected to the vehicle sides, whereby the ends of the body portion may overlap the sides of the vehicle whichever way said body portion is tilted.

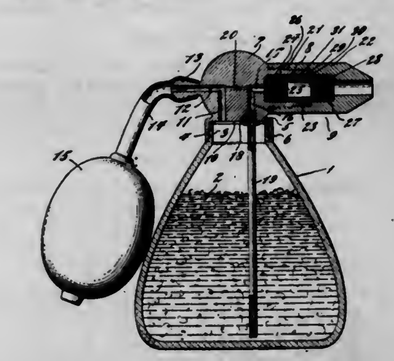


1,457,892. TIRE FABRIC. BERT R. BLACKWELDER, Laporte, Ind. Filed Oct. 14, 1921. Serial No. 507,713. 2 Claims. (Cl. 91—68.)

1. A tire fabric comprising a rubber sheet having embedded therein a reenforcing woven fabric, the warp of the reenforcing fabric including fabric strands only and the woof including wire strands only, the interstices of the reenforcing fabric being filled by and the wire strands being coated with portions of the rubber sheet material.



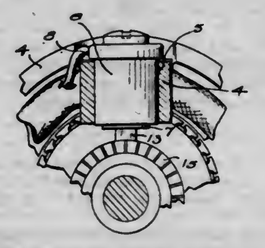
1,457,893. TRUCK-BOX CELLAR. JAMES G. BLUNT, Schenectady, N. Y. Filed Oct. 1, 1921. Serial No. 504,591. 1 Claim. (Cl. 64—24.)



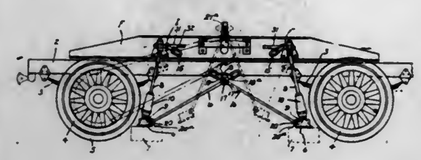
In combination with a journal box for locomotive trucks located outside the wheel, and entirely open at its outer end, of a truck box cellar consisting of an open topped casing, the rear end wall of which is recessed to fit the axle and carries a flange abutting the wheel hub, internal flanges at the bottom of said box on which the cellar is supported, a front plate integral with the collar casing closing the open outer end of the box and having a door through which packing material may be inserted, bolts passed through lugs on said front plate to secure the cellar to the box, and transverse bolts passed through depending flanges on the side walls of the box to clamp the cellar in place.

1,457,894. HUB LINER FOR RAILROAD VEHICLES. JAMES G. BLUNT, Schenectady, N. Y. Filed June 8, 1922. Serial No. 566,742. 4 Claims. (Cl. 64—25.)

1. The combination, with a journal box and a wheel and axle of a railroad vehicle, of a liner, interposed between the journal box and the wheel hub; means for connecting said liner adjustably to the journal box; and means for effecting vertical adjustment of said liner, relatively to the journal box.

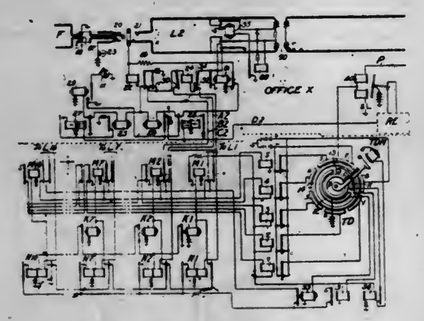


1,457,895. SANITARY LATHER-MAKING DEVICE. JOSEPH CAMPANELLA, New York, N. Y. Filed May 26, 1922. Serial No. 563,841. 7 Claims. (Cl. 299—96.)



1. In a lather-making device, a nozzle, and means for forcing a lather-forming liquid through said nozzle, said nozzle comprising a plurality of lather-forming foraminous members arranged face to face and in contacting relation through which the lather-forming liquid is forced in series.

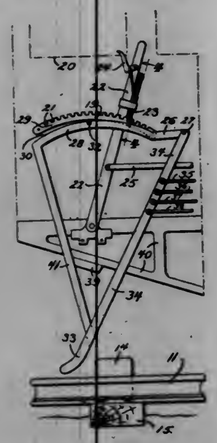
1,457,896. MOTOR BRUSH HOLDER. JOEL R. COOK, Cleveland, Ohio, assignor to Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 12, 1921. Serial No. 491,650. 10 Claims. (Cl. 171—324.)



2. In a motor brush holder having an annular shoulder formed therein, the combination of a brush having a rectangular cross section slidably mounted within the brush holder, a metallic cup member adapted to be maintained in positive contact on said shoulder by an insulating plug removably secured to one end of the holder, and an electrically conductive resilient member interposed between the inner surface of the cup member and the inner end of the brush.

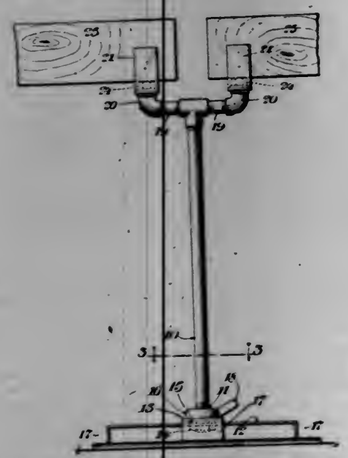
1,457,897. VEHICLE OUTRIGGER. EUGENE G. DEUCHER, Cleveland, Ohio, assignor to The Universal Crane Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 11, 1921. Serial No. 451,599. 10 Claims. (Cl. 212—145.)

1. In an outrigger mechanism for springed vehicles, the combination with a hoisting mechanism bed, a vehicle frame, said bed being normally carried on the said frame, wheels for the said vehicle, resilient spring means connecting the said frame and the said wheels, a plurality of brackets on the bed, a plurality of pier legs adapted to be secured each at one end to one of the said brackets, shoes for the lower ends of the pier legs, and tie means connecting each bracket to shoes of next adjacent pier legs.



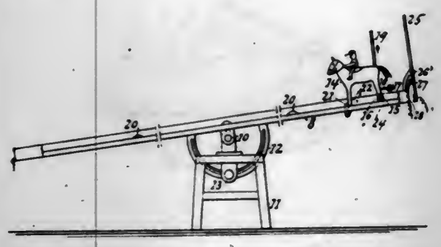
1,457,898. TELEPHONE SYSTEM. WILLIAM L. DODGE, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 19, 1919. Serial No. 312,069. 21 Claims. (Cl. 179—50.)

13. In a telephone system, in combination, a plurality of transmission circuits and a signaling path common thereto extending between two stations, means at one station for transmitting over the signaling path code signals individual to the different transmission circuits, a set of relays at the one station for each transmission line comprising a first relay for determining the code of the signal to be transmitted, a second relay for determining the order in which the code determining relays are energized, and a third relay controlling the energization of the first and second relays of this set, and means controlled by the third relay for preventing the simultaneous operation of two order determining relays.



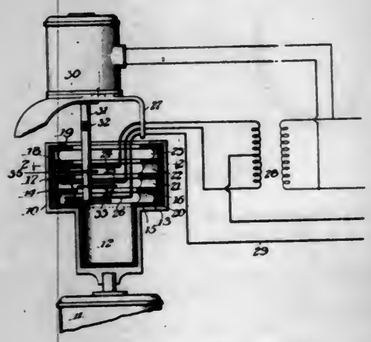
18. The method wherein an operator's signal is operated when a subscriber recalls which comprises delaying the operation of said recall signal until a predetermined time interval after the first operation of the switchhook for recall purposes.

1,457,899. TRAIN-STOPPING APPARATUS. LOUIS DUNN, St. Paul, Minn., assignor of two-thirds to Edmund L. Dunn, Millbourne, Pa., and one-third to A. V. Fabian, St. Paul, Minn. Filed Dec. 6, 1921. Serial No. 520,266. 10 Claims. (Cl. 246—186.)



4. The combination with a locomotive having a reverse quadrant provided with notches, a reverse lever, and a latch carried by said reverse lever for holding engagement within said notches when the reverse lever is moved out of neutral position, of stopping apparatus including a portion movable to move said latch out of said holding position and allow the reverse lever to return to its neutral position; substantially as described.

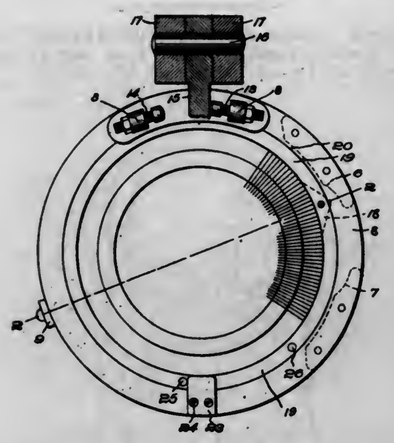
1,457,900. STANCHION FOR SUPPORTING BARRIER RAILS. JOHN JAMES FAIRBAIRN, Roosevelt, N. Y. Filed Apr. 14, 1922. Serial No. 552,733. 5 Claims. (Cl. 256—59.)



1. In a stanchion for the purpose described, a standard, and a supporting base thereon, said base comprising two bar sections superposed one on the other, the lower section being rigidly fixed intermediate its ends to the foot of the standard and the upper section being rotatably mounted intermediate its ends on the standard, and locking and releasing means for the rotatable section.

1,457,901. RACE GAME. ANDREW B. FOANS, New York, N. Y. Filed Apr. 25, 1921. Serial No. 464,134. 5 Claims. (Cl. 46—56.)

1. In a game the combination with an inclined platform, of a rockable carriage arranged on the platform, means carried by the carriage actuated by the impact of an object for rocking the carriage to propel it forward, and means for interrupting the movement of the carriage.

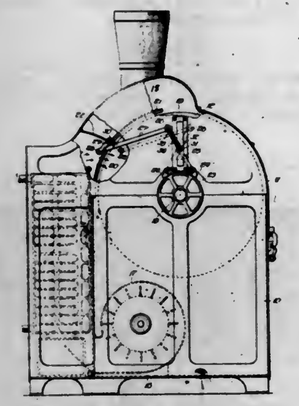


1,457,902. CURRENT RECTIFIER. CARL J. GARDEEN, St. Paul, Minn. Filed May 9, 1921. Serial No. 468,131. 12 Claims. (Cl. 175—364.)

3. In a current rectifier, the combination of a fluid container in which a conducting fluid is confined and a portion into which the fluid collects during rectification, contact making elements supported in said portion, means acting through the agency of centrifugal force on said fluid to cause said fluid to move into said portion and into engagement with said contact making elements, and means for driving certain of said contacts in synchronism with an alternating current supply.

1,457,903. WEB HOLDER CAM FOR KNITTING MACHINES. AUGUSTIN GAGNÉ, Central Falls, R. I. Filed May 7, 1920. Serial No. 379,487. 14 Claims. (Cl. 66—26.)

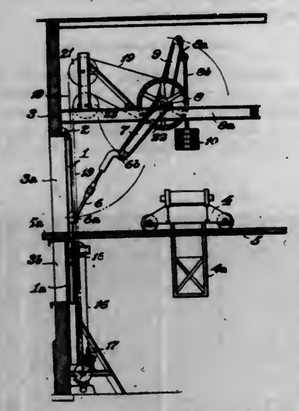
1. In circular knitting mechanism employing a circular series of sinkers, web holders or like instrumentalities and a bed ring receiving the same, a cap ring-like part for said instrumentalities adapted to overlie the latter and said bed ring, said cap ring-like part including relatively circumferentially movable inner and outer curved members, together providing a groove for the reception of the entire series of said instrumentalities, and advancing and



retracting cams carried by said curved members respectively to act upon said entire series of instrumentalities to advance and retract the same.

1,457,904. SHOULDER STRAP. HARRY GERSTEIN, Arverne, and FRANK GERSTEIN, New York, N. Y. Filed Nov. 22, 1921. Serial No. 516,918. 1 Claim. (Cl. 2—140.)

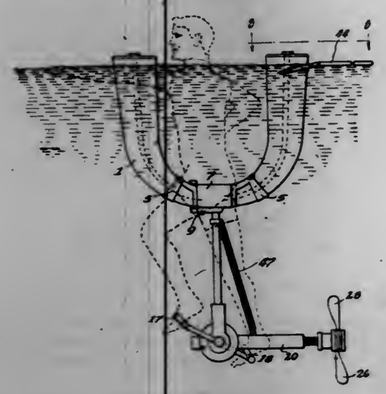
A shoulder strap comprising an inelastic flexible intermediate section, elastic tabs connected to said intermediate section at opposite ends thereof, a covering enclosing said intermediate section and having its longitudinal edges overlapped approximately at the longitudinal centre of the strap and a line of stitching passed through said overlapped edges, said intermediate section and said tabs thereby attaching said overlapping edges to each other, to said intermediate section and to said tabs, that portion of said covering enclosing said tabs being normally in a shirred condition to permit the elastic tabs to yield with respect to said intermediate section and relieve that portion of said covering which encloses said intermediate section of any undue strain when said tabs are extended under tension.



1,457,905. DRYROOM TUMBLER. WILLIAM R. HAGER, Chicago, Ill., assignor to Troy Laundry Machinery Co., Ltd., Chicago, Ill., a Corporation of New York. Filed Jan. 24, 1920. Serial No. 353,730. 6 Claims. (Cl. 34—5.)

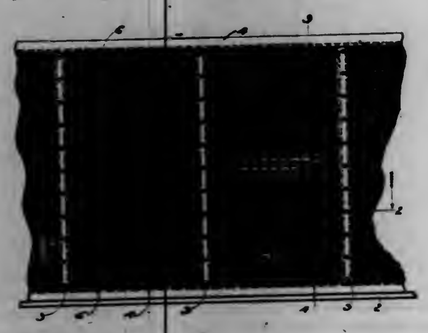
2. In a dryroom tumbler, the combination of a reversibly moving container for clothes to be dried, means directing a drying medium to said container, and means automatically changing the direction of said drying medium with changes in the direction of movement of the container.

1,457,906. [WITHDRAWN.]



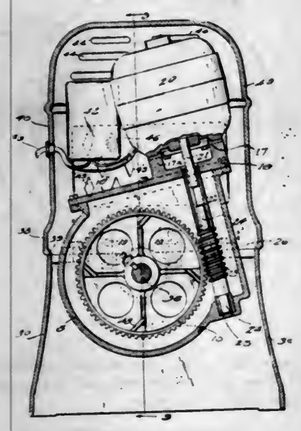
1,457,907. CRANE-DOOR-OPERATING MECHANISM. FREDERICK WM. HEISLER, Schenectady, N. Y. Filed Oct. 8, 1919. Serial No. 329,303. 3 Claims. (Cl. 268—9.)

1. The combination of a building having a crane doorway formed in the upper portion of its vertical walls, craneways adapted to support a crane passing through the doorway, a crane door hinged at its upper section to the vertical wall and adapted to close said doorway, a horizontal operating shaft disposed parallel to said vertical wall and supported by the building, means for rotating the shaft about its axis, pivoted links coupling the shaft to the lower section of the crane door and adapted to raise and lower said door and lock it in its upper open



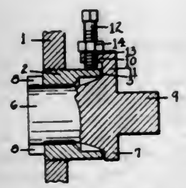
position to permit safe passage of the crane and to form an effective lock and wind bracing for the lower section of the crane door when in its closed position, a lower doorway adapted to permit the passage of a crane cage, an auxiliary door controlling the lower doorway, and means coupling said doors in a manner adapted to open or close them simultaneously.

1,457,908. SWIMMING DEVICE. ALEXANDER B. KUPSCHE, Chicago, Ill. Filed Sept. 16, 1921. Serial No. 501,165. 5 Claims. (Cl. 9—18.)



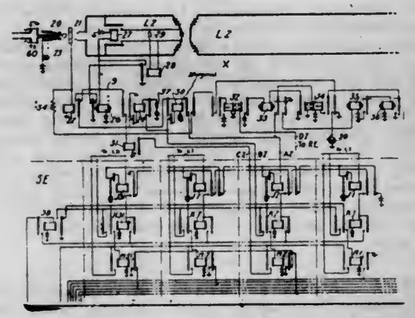
1. A device of the class described embodying therein, a buoyant element, a propeller mechanism, a support extending between the propeller mechanism and the buoyant element, means swingably joining the propeller mechanism and said support, means for locking said propeller mechanism in different angular positions, said means including a shaft, an element slidable thereon, and mutually interlocking pins and recesses on the propeller mechanism and said slidable element.

1,457,909. WALL COVERING. MARSHALL B. LLOYD, Menominee, Mich., assignor, by mesne assignments, to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed June 5, 1920. Serial No. 386,830. 11 Claims. (Cl. 20—15.)



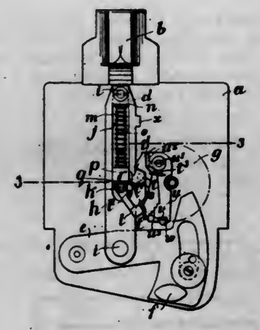
1. The herein described improvements in wall covering constructions, embodying therein a wall; a finishing covering therefor composed of a plurality of spaced stakes which in workable lengths have sufficient rigidity to be self-supporting and to resist forces tending to bend abruptly, and filler strands woven over and under said stakes in side by side contacting relation and being carried thereby; and means yieldably holding said covering against said wall.

1,457,910. ELECTRIC POWER MECHANISM. PAUL F. LOICHOT, Louisville, Ohio. Filed May 11, 1922. Serial No. 560,080. 9 Claims. (Cl. 74—7.)



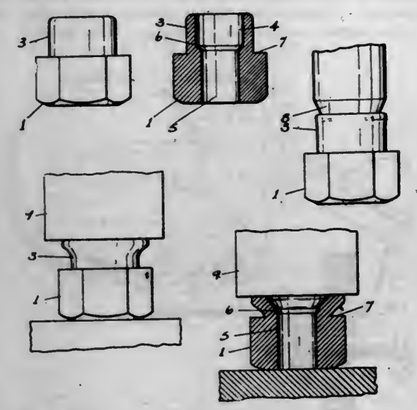
1. In a power device, an outer housing comprising a base member and a top member, an inner housing having a power shaft horizontally suspended in the housing, a motor supported on the housing and connected to said shaft for driving the same, the housing having integrally formed hubs extending therefrom through the side walls of the outer housing, and bearing members positioned within the hub portions for supporting said shaft, said hubs being adapted to receive engaging sleeves of devices driven by said power unit.

1,457,911. BOILER PLUG. PETER E. MCINTOSH and RUSSELL O'CONNELL, Kalamazoo, Mich. Filed Sept. 23, 1921. Serial No. 502,823. 6 Claims. (Cl. 220—24.)



1. In a structure of the class described, the combination of a screw bushing with a bearing seat at its outer end and an inner end divided into opposed symmetrical spiral surfaces with longitudinal slots leading thereto, a plug with a flanged bearing to fit the bearing at the outer end of the bushing and with longitudinally projecting opposed lugs adapted to pass through the longitudinal slots and engage the said spiral surfaces, a square projection on the plug for turning the same, a transversely projecting plate carrying a curved segment with a series of screw holes, a set screw for insertion through the said segment to lock the plug in closed position, and a lock nut for the set screw, as specified.

1,457,912. TELEPHONE SYSTEM. HUGH D. MACL'HERSON, Summit, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1919. Serial No. 348,611. 6 Claims. (Cl. 179—50.)

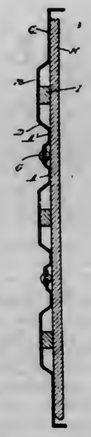


1. In a telephone system, the combination with a plurality of trunk lines and a signaling path common there to, of a train of relays common thereto for transmitting over the signaling path code signals individual to the different trunk lines, a set of normally inert relays individual to each line for determining the code of signals for its associated line, and means controlled by a change in condition of any one of the trunk lines for operating its set of relays.

1,457,913. REGISTERING TICKET PUNCH. FRANK MATHEWS, Croydon, and STANLEY DRUMMOND BLACK, London, England. Filed Oct. 14, 1921. Serial No. 507,695. 4 Claims. (Cl. 164—119.)

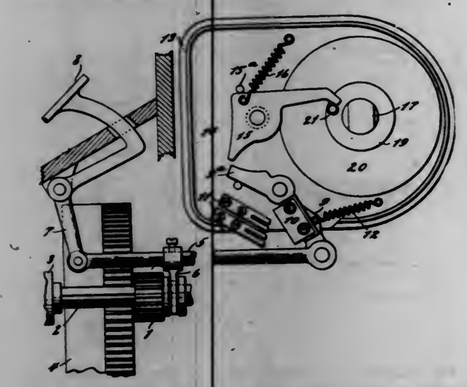
1. In a registering ticket punch of the kind hereinbefore referred to, the combination with the operating lever and the head slide carrying the punch proper of a slotted link pivoted to the said lever and slide, a block or abutment within the slot and held against movement in one direction longitudinally of the said slot and a spring arranged between the said abutment and one end of the slot to return the operating lever and punch after punching a ticket.

1,457,914. PROCESS OF MAKING FLANGED NUTS. GEORGE MELLING, Lansing, Mich. Filed Feb. 1, 1921. Serial No. 441,541. 1 Claim. (Cl. 10—86.)



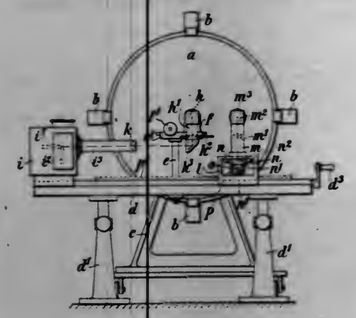
The method of making flanged nuts consisting of forming a body blank with a tubular extension at one end of a diameter less than the body, and expanding and upsetting the extension into a flange lying against the end of the body.

1,457,915. METHOD OF MAKING PAPER PULP. BERTRAND S. SUMMERS, Port Huron, Mich. Filed May 26, 1920. Serial No. 384,361. 2 Claims. (Cl. 92—11.)



2. The herein described process of reducing vegetable straw, which consists in first subjecting the said straw to a reducing agent with an acid re-action and subsequently subjecting the said straw to an oxidizing reagent in an alkaline bath substantially as described.

1,457,916. CAR END. WILLIAM D. THOMPSON, Detroit, Mich., assignor to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 20, 1922. Serial No. 602,091. 3 Claims. (Cl. 105—410.)

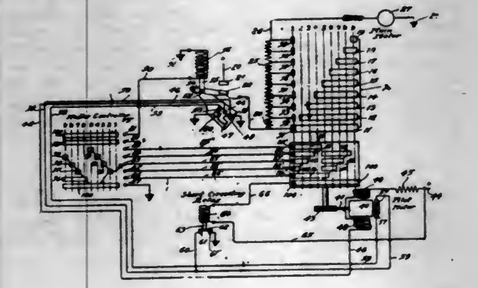


1. In a car body construction, a series of pressed sheet metal paneled plates having overlapping adjacent edge portions riveted to each other, said overlapping portions being laterally offset to provide clearance for the rivet heads.

1,457,917. LOCKOUT FOR AUTOMATIC STARTERS. RICHARD VARLEY, Englewood, N. J., assignor to Varley Duplex Magnet Company, a Corporation of New Jersey. Original application filed Sept. 18, 1919, Serial No. 324,450. Divided and this application filed Dec. 26, 1919. Serial No. 347,411. 7 Claims. (Cl. 74—7.)

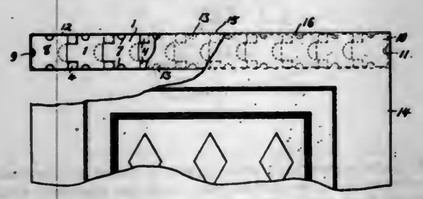
1. For an internal combustion engine including an automatic starter, an operating lever for the starter, a lock-out for the lever movable into and out of the path of the lever, a shaft connected to be rotated by the engine, and means mechanically connecting the shaft to the lock-out and operative by any rotation thereof to shift the lock-out to locking position.

1,457,918. ARRANGEMENT FOR THE EXAMINATION OF COLLECTIVE OPTICAL SYSTEMS. WALTER VILLIGER and ROBERT MECHAU, Jena, Germany, assignors to The Firm of Carl Zeiss, Jena, Germany. Filed Aug. 13, 1921. Serial No. 492,091. 4 Claims. (Cl. 88—14.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



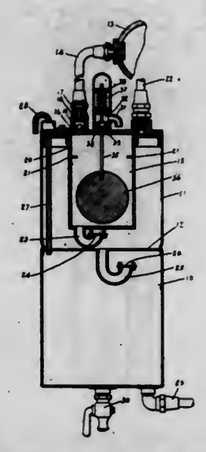
1. In an arrangement for the examination of optical collective systems adapted to deflect rays impinging on it a point-shaped source of light disposed in the focal plane of the system to be examined, a rectilinear guide approximately perpendicular to the optical axis of the said system, a carriage displaceable along the said guide, a device for selecting a pencil of rays out of the light deflected by the said system and uniting the rays of this pencil to form an image-point, which device is supported by said carriage, a sensitized plate disposed in the focus of the said device, and means for so coupling the said plate with the said carriage that any displacement of the latter results in a movement of the said plate in its plane.

1,457,919. ALARM CLOCK. ROBERT S. WATT, Brooklyn, N. Y. Filed Dec. 1, 1922. Serial No. 604,299. 1 Claim. (Cl. 58—16.)



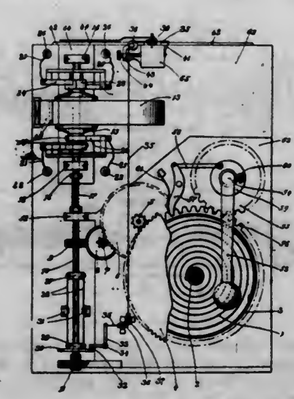
In alarm clock mechanism of the character designated, the combination with the alarm escapement wheel of a spring pawl formed with a detent shoulder for engagement with the teeth of said alarm escapement wheel and also with a detent tooth of greater projection than said detent shoulder, an alarm setting spindle having a feeler finger rigidly attached thereto, a cam wheel slidably and rotatably mounted on said alarm setting spindle and formed with a hub contacting with said spring pawl, and an annular cam on said wheel contacting with said feeler finger on the alarm setting spindle and formed with minor and a major cam depressions, for the purpose, and substantially in the manner set forth.

1,457,920. ELECTRIC-MOTOR CONTROL SYSTEM. THORSTEN ZWEIGBERGK, London, England. Filed Aug. 20, 1921. Serial No. 493,855. 17 Claims. (Cl. 172—179.)



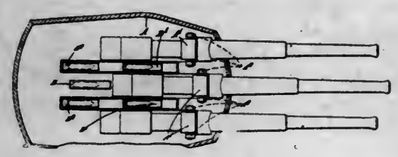
3. The combination of a controller, an auxiliary motor for actuating the controller, means for short circuiting said auxiliary motor to stop it, said means comprising a successively operated relay controlled by a plurality of contacts moved with the controller.

1,457,921. RUG REENFORCEMENT. OSCAR BRUNKA, Fort Wayne, Ind. Filed Apr. 14, 1922. Serial No. 552,652. 5 Claims. (Cl. 154—49.)



1. A reenforcement for rugs and the like, comprising a metallic strip made up of a series of sections, each section having a projecting tongue at one end and a pair of extensions at the opposite end thereof, there being a pocket on each side of the tongue for the reception of the extensions of the adjacent section and a pocket for the reception of the tongue of the section adjacent its opposite end, there being also a recess in each side of each section; and a fabric casing enveloping the strip and forming a web over each of said recesses.

1,457,922. VACUUM TANK. HENRY B. COATS, Veedersburg, Ind. Filed Apr. 8, 1922. Serial No. 550,866. 6 Claims. (Cl. 156—36.)



1. A tank for containing liquid having a passage therein, a valve for controlling said passage, a weighted controlling member heavier than the liquid contained in said tank to which said valve is connected, and means connected with said weight and valve for actuating the same and controlling said passage upon a portion of said member being submerged in the liquid contained by said tank.

1,457,923. METHOD AND APPARATUS FOR MEASURING ELECTRIC RESISTANCES AND THE LIKE. MAURICE COPPÉE, Mont-Sur-Marchienne, Belgium. Filed Nov. 12, 1921. Serial No. 514,643. 10 Claims. (Cl. 175—183.)

1. The method of measuring electric resistances and the like, consisting in connecting the element to be measured to the armature of an electric generator of constant field, subjecting said armature to a substantially constant couple and measuring the speed of rotation of said armature.

1,457,924. TURRET MOUNTING FOR HEAVY GUNS. ARTHUR TREVOR DAWSON, Westminster, London, and JAMES HORNE, Barrow-in-Furness, England, assignors to Vickers Limited, Westminster, London, England. Filed Sept. 4, 1920. Serial No. 408,321. 5 Claims. (Cl. 89—37.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat L., 1313.)

1. The combination with a gun turret, of three guns the middle one of which is arranged with its trunnion pins in front of the two outer guns and in the same horizontal plane as those of the two outer guns.

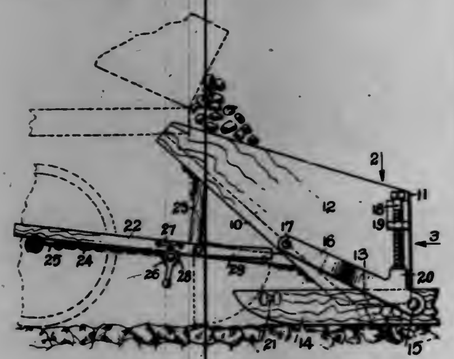
1,457,925. VANITY CASE. LAURENCE P. DICKEY, Mountain Lakes, N. J. Filed Apr. 22, 1922. Serial No. 556,046. 11 Claims. (Cl. 132—83.)

11. In a vanity box containing a mirror and means to carry cosmetics, an opening through the outer wall of said box and an insert supported in the case and exposed through the opening.

1,457,926. CASTING LURE. MILTON S. DUNKELBERGER, Dayton, Ohio. Filed July 1, 1922. Serial No. 572,141. 3 Claims. (Cl. 43—48.)

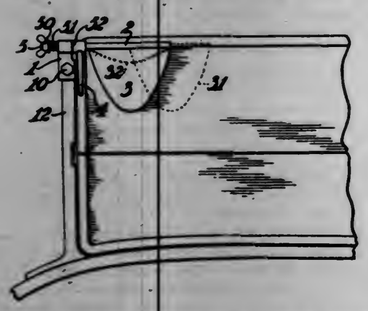
3. In a casting lure, the combination with a body having a horizontal groove in its front end, of a wing-piece adapted to be inserted in said groove, a hook whose shank projects longitudinally through said body, and having an eyelet end extending a short distance in front of said body, a bent wire having its free ends pivotally secured in the middle portion of said body, and a triangular portion on the front end of said wire adapted to be hooked over the eyelet end of the hook in front of the wing-piece in said groove.

1,457,927. HYDRAULIC MOTOR. FREDERICK EDWARD EBEL, New York, N. Y. Filed Apr. 29, 1921. Serial No. 465,467. 2 Claims. (Cl. 170—89.)



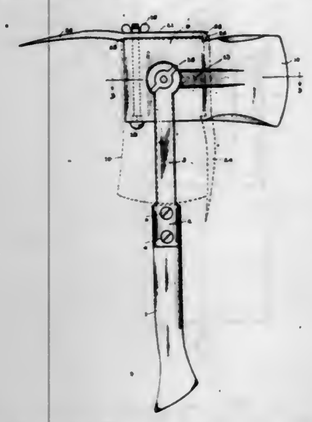
1. In a hydraulic motor, the combination with a source of water supply, of an inclined flume having side walls in upstanding relation to the bottom thereof, a driven member and an idler member, the diameter of the driven member exceeding that of the idler member, an endless carrier provided with friction rolls and with buckets or flights, said carrier being arranged for said friction rolls to travel upon said upstanding walls of the flume and

said carrier being supported for its bottom active lead to travel in the direction of flow of water within the flume, whereas the non-active lead of said carrier is



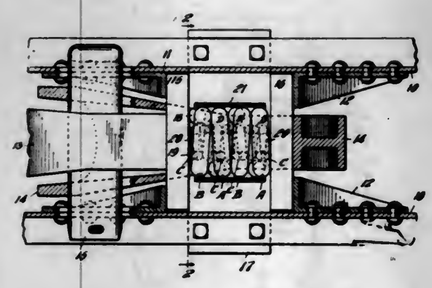
influenced partially by gravity in the movement of the non-active lead of said carrier towards the idler member, and rails upon which rest the rollers on the non-active lead of said endless carrier.

1,457,928. SPREADER FOR ROAD MATERIAL. JOHN A. JOHNSTON, Springfield, Mass. Filed Mar. 1, 1921. Serial No. 448,753. 12 Claims. (Cl. 94—44.)



10. In a road metal distributer including a hopper-shaped body entirely open at its bottom, road engaging supporting members operatively engaged with the body, the body and the road engaging supporting members being mounted for relative adjustment vertically.

1,457,929. GLARE SHIELD. CHARLES H. LIPPY, Snohomish County, Wash. Filed Jan. 25, 1922. Serial No. 531,652. 2 Claims. (Cl. 296—97.)

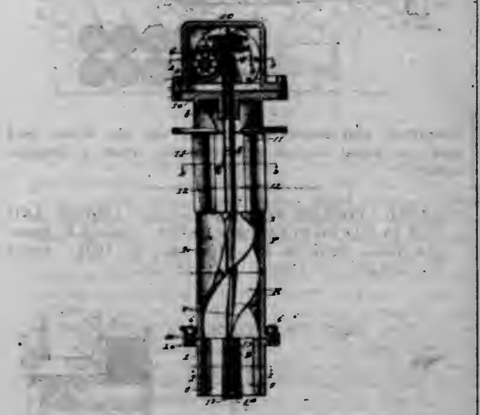


1. A glare shield comprising a tubular pivot bar slotted on one side and means to secure it to extend horizontally along the face of the windshield, a semi-transparent plate having a rolled edge adapted to slide into said tube and project through said slot, said rolled edge resiliently engaging the inner surface of said tube to yieldingly hold it against accidental sliding therein and to permit lengthwise adjustment, and means for holding said pivot bar and plate in adjusted angular position.

1,457,930. FOLDING HATCHET. CHARLES W. NELEMS, Birmingham, Ala., assignor of one-half to John W. Riddle, East Lake, Ala. Filed May 1, 1922. Serial No. 557,711. 7 Claims. (Cl. 145—2.)

1. In a folding hatchet, a handle having spaced blade supporting arms, a hatchet blade pivotally mounted between said arms, a clamp screw passing through a hole in the blade and engaging both arms to clamp the blade in position between them, and grooves radiating lengthwise and transversely of the blade from said hole and adapted to receive said arms.

1,457,931. HIGH-CAPACITY SPRING. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Jan. 31, 1921. Serial No. 441,128. 6 Claims. (Cl. 213—44.)



1. In a high capacity shock absorbing spring consisting of a plurality of like coil units arranged in abutting relation, said units being both right and left, each coil extending through an arc of 360°.

1,457,932. WATER METER. FRANK A. OLSEN, San Gabriel, Calif. Filed Nov. 5, 1919. Serial No. 337,223. 1 Claim. (Cl. 73—37.)

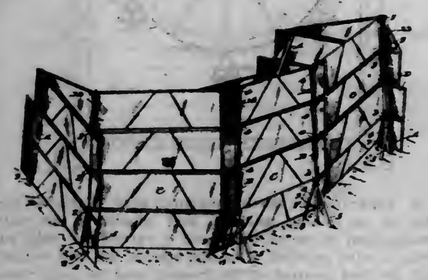
A water meter having an elongated cylindrical body having a web for closing the upper end of said body

and a flange extending outwardly from said web, an outlet portion below said flange having a plurality of elongated peripheral openings formed in the wall of the body, a nipple on the lower end of said body and forming a support therefor, a bearing being centrally formed in said nipple and a bearing also being formed in the web at the upper end of said body, a shaft held in said bear-

ings, a helically vaned rotor carried on said shaft and enclosed by the body, a meter housing attached to the flange on the upper end of said body and arranged to enclose a meter for operable connection with said shaft, said nipple serving as an inlet for the body, and the peripheral openings in said body serving as outlets therefor.

1,457,933. MECHANISM FOR TESTING PISTON RINGS. WALTER C. PETERSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 8, 1920. Serial No. 379,773. 2 Claims. (Cl. 73—51.)

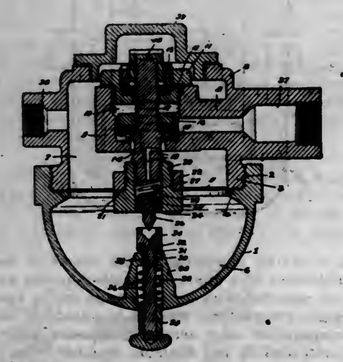
1. A piston ring testing machine comprising a supporting member, a plurality of pins slidably mounted therein and extending radially from the center of said member, levers actuating said pins, means for gradually moving said levers, and pressure indicating means disposed between said last named means and said levers.



1,457,934. METHOD OF MAKING PRECIPITATED BARIUM SULPHATE AND SODIUM SULPHYDRATE. JAMES B. PIERCE, Jr., Charleston, W. Va. Filed Oct. 8, 1921. Serial No. 506,336. 2 Claims. (Cl. 23—13.)

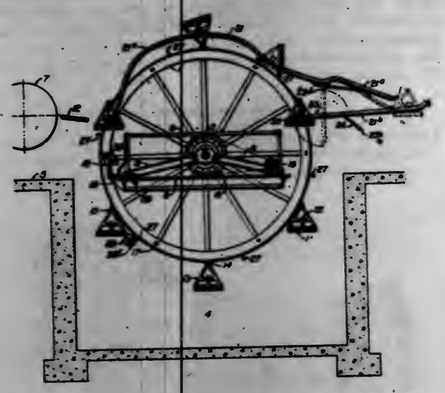
2. The method of making precipitated barium sulphate and sodium sulphydrate, which consists in effecting the double decomposition of barium sulphide and sodium sulphate, effecting the substantial neutralization of acid sodium sulphate with at least a portion of the resultant sodium sulphide and absorbing the resultant hydrogen sulphide in another portion of sodium sulphide obtained from the first reaction aforesaid.

1,457,935. METHOD OF MAKING PRECIPITATED BARIUM SULPHATE. JAMES B. PIERCE, Jr., Charleston, W. Va. Filed Oct. 8, 1921. Serial No. 506,337. 5 Claims. (Cl. 23—13.)



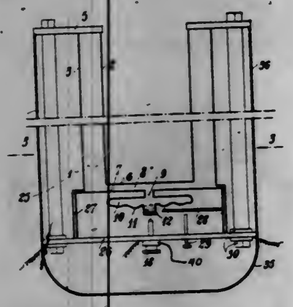
3. In the method of making precipitated barium sulphate, the steps which consist in effecting double decomposition between solutions of barium sulphide and sodium sulphate while maintaining the temperature of the mixture during the decomposition reaction between 50° C. and 100° C.

1,457,936. FRAME FOR STACKING GRAIN. SAMUEL W. PRIEBE, Wyaconda, Mo. Filed Oct. 8, 1921. Serial No. 506,455. 4 Claims. (Cl. 130—20.)



1. A frame for stacking grain, including a plurality of portable posts, rectangular frames engaging said posts and arranged in rows, the ends of said frames overlapping at each post, and means on the posts for removably supporting and engaging the overlapping ends of the frames.

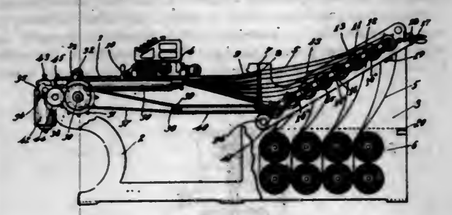
1,457,937. PRESSURE-REGULATING VALVE. JOY S. REYNOLDS, San Francisco, Calif., assignor to Reynolds Torch and Regulator Co., Seattle, Wash. Filed Oct. 24, 1921. Serial No. 509,818. 2 Claims. (Cl. 50—11.)



1. A pressure regulating valve comprising a housing, a flexible diaphragm dividing said housing into a service chamber and regulating chamber, means actuated by the movement of said diaphragm for controlling the inlet of fluid under pressure to said service chamber, a valve provided in said diaphragm, another valve provided in the wall of said regulating chamber, and means on the exterior of said housing for moving said last named valve into engagement with said valve in said diaphragm to open one or both of said valves.

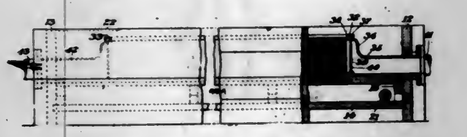
1,457,938. CARRIER APPARATUS. CHAMPLAIN L. RILEY, North Plainfield, N. J., assignor to Clark, Macmullen & Riley, Inc., a Corporation of New York. Filed Mar. 3, 1922. Serial No. 540,811. 30 Claims. (Cl. 104—91.)

5. Apparatus for moving prepared work to the feed position of an ironing machine, said apparatus comprising longitudinal work supports and a carrier for said supports moving between a loading station for said supports and the feed position of the ironing machine, said carrier moving said supports laterally in a path that clears the feed operators at the ironing machine.



1,457,939. THERMOSTATIC CIRCUIT CLOSER. JOSÉ CORDEIRO FERREIRA ROQUETTE, Paris, France, assignor to Manoel De Ortigão Burnay, Paris, France. Filed June 17, 1921. Serial No. 478,336. 2 Claims. (Cl. 200—140.)

1. In an alarm apparatus of the character described, the combination of a dilatable chamber having an extensible wall provided with an air escape orifice opening to atmosphere, a regulating member mounted on the frame of the apparatus and arranged opposite said orifice, means controlled by the dilatable chamber when the latter expands to close an electric circuit connected to the alarm proper, and an air expansion chamber communicating with the dilatable chamber.

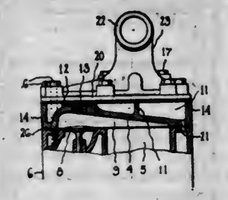


1,457,940. FLAT-BED MANIFOLDING MACHINE. JOHN Q. SHERMAN, Dayton, Ohio. Filed Apr. 19, 1921. Serial No. 462,677. 18 Claims. (Cl. 197—126.)

1. In a device of the character described, the combination with a flat platen, a pin wheel feed for drawing webs of paper over said platen, a storage element, pin wheel devices for withdrawing the webs of paper from said storage element, to supply them to the platen, said devices adapted to feed each web an equal distance at each

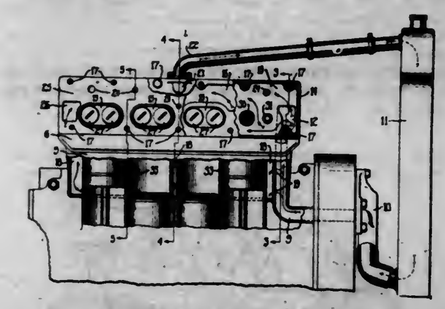
operation, and means for driving the pin wheel feed and pin wheel devices synchronously, from a common source.

1,457,941. COOLER FOR RECLAIMED LIQUOR AND GAS IN PAPER-PULP PROCESSES. GEORGE F. SHEVLIN, Glens Falls, N. Y. Filed Dec. 19, 1921. Serial No. 523,292. 3 Claims. (Cl. 92—11.)



1. A cooler for reclaiming liquor and gases in paper pulp processes comprising a tank, a vessel having a plurality of tubes extending therethrough, an inlet pipe, and means between the inlet pipe and the tubes in the vessel for preventing the liquor and gases from coming into direct contact with the said tubes upon entering the said vessel.

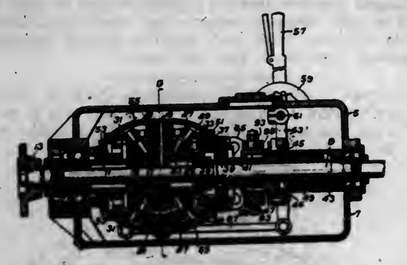
1,457,942. PNEUMATIC TIRE. WALTER E. SHIVELY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 26, 1920. Serial No. 406,255. 9 Claims. (Cl. 152—13.)



9. In a pneumatic tire casing including a fabricated carcass and a thread element, a plurality of superposed substantially crescent shaped cushion elements successively decreasing in resiliency and disposed between the carcass and the tread element, and side walls for the carcass comprising respectively superposed layers the outer edge portions of the side wall layers and the edge portions of the cushion elements being arranged in overlapping relation.

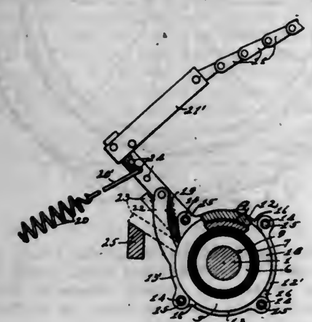
1,457,943. HYDROCARBON MOTOR. CHARLES REUBEN SHORT, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 24, 1919. Serial No. 292,323. 5 Claims. (Cl. 123—173.)

1. In a detachable head for internal combustion engine cylinders, a plate adapted to close the open end of an engine cylinder and having holes arranged along its periphery adapted to receive bolts for securing the head in place, a conduit through which water may flow from the water jacket of the cylinder into the interior of the head, a cover separate from said plate and resting thereupon and having holes arranged along its periphery and so located as to register with the holes at the periphery of said plate, and which cover co-operates with said plate to provide a water receiving chamber between the two, means independent of the bolts whereby the head is secured in place upon the engine cylinder for securing said plate and cover together, and a water outlet conduit through which water may flow from the interior of said head; the construction and arrangement of the parts being such that the act of tightening the bolts which secure the cover and plate to the cylinder forces the peripheries of said elements toward one another and secures a water tight joint between said parts at the peripheries thereof.



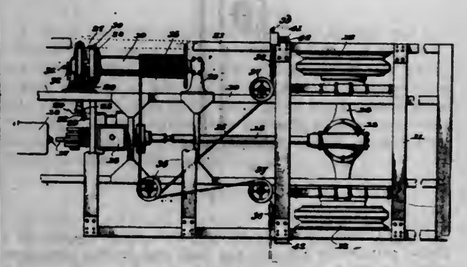
1,457,944. COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. CHARLES R. SHORT, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 2, 1920. Serial No. 355,576. 19 Claims. (Cl. 123—173.)

1. In an internal combustion engine, a cylinder block comprising a plurality of cylinders having a common jacket space or passage through which a cooling liquid may flow; a head for closing the upper ends of said cylinders and having also a jacket space or passage through which a cooling liquid may flow; and a single cooling liquid supply passage formed integrally with said block and communicating with both of said jacket passages or spaces and through which a cooling liquid may be simultaneously supplied to both of said jackets.



1,457,945. TRANSMISSION GEAR. SYDNEY A. SMITH, Boston, Mass. Filed Apr. 13, 1921. Serial No. 460,964. 12 Claims. (Cl. 74—34.)

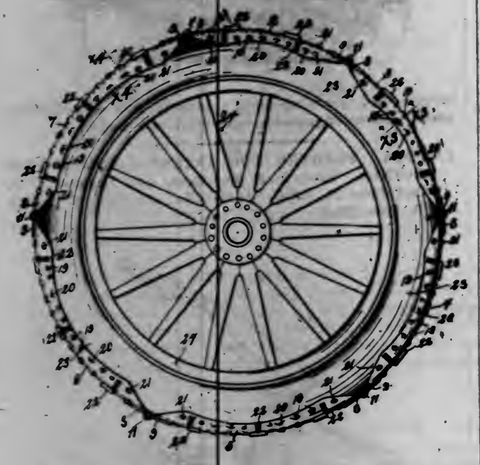
1. A mechanism of the class described comprising a train of gears including as an intermediate element thereof a rotary gear carrier and means at will to fix the carrier against rotation comprising a gear on the



carrier, idle gears meshing therewith and non-rotatable clutch means engageable with said idle gears.

1,457,946. STARTER FOR INTERNAL-COMBUSTION ENGINES. EDWARD P. SOMMERS, Los Angeles, Calif. Filed June 21, 1920. Serial No. 393,449. 7 Claims. (Cl. 123—185.)

1. A starter for engines comprising a friction band having a plurality of hingedly connected segments, a rotatable member common to said segment, two adjacent sections thereof having spaced extensions, a common operating member therefor pivoted to the extension on one of said members and to the adjacent member at a point spaced therefrom, and means for engagement with said other extension, for expanding said members relative to said rotatable member, when a back-fire occurs in the operation of the engine.

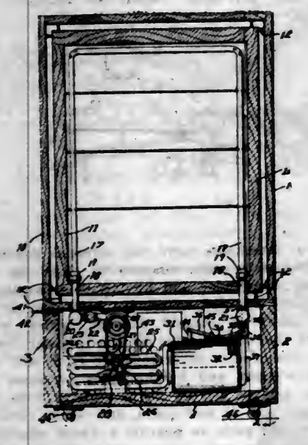


1,457,947. MOTOR VEHICLE. DUNCAN G. STANBROUGH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 17, 1919. Serial No. 345,521. 2 Claims. (Cl. 214—94.)

1. A loading device comprising, in combination, a motor propelled vehicle having a main frame, a motor carried

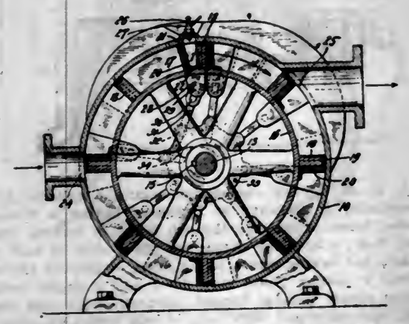
thereby and operatively connected to drive said vehicle, a platform frame mounted upon said main frame and overhanging the side thereof, a drum carried by said main frame and disposed beneath the overhanging part of said platform frame and operative driving connections between said drum and said motor.

1,457,948. FOLDING, NONSKID ARMOR EQUIPMENT FOR AUTOMOBILE TIRES. AUSTIN F. STOCKWELL, Los Angeles, Calif. Filed Feb. 12, 1923. Serial No. 618,543. 4 Claims. (Cl. 152—16.)



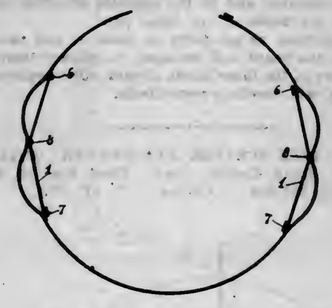
4. Armor for pneumatic tires comprising a band formed of concave links of resilient sheet metal hinged to encircle a tire, and being of different lengths to be folded together and having a removable hinge pin to allow the band to be removed and replaced.

1,457,949. VENTILATING WINDOW FOR PASSENGER CARS AND THE LIKE. HIRAM BRUCE TROUT, Mattoon, Ill. Filed Feb. 18, 1922. Serial No. 537,435. 12 Claims. (Cl. 20—36.)



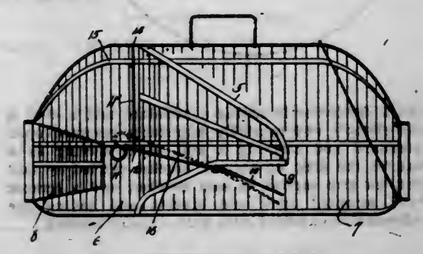
1. In a ventilator, the combination, with a sash, of a frame movable relative to the sash and having side openings adapted to be alternatively exposed by such relative movement, and means for locking the frame with one of the side openings exposed.

1,457,950. HOUSEHOLD REFRIGERATOR. AMEDEO L. UBERTO, Oakland, Calif. Filed Jan. 24, 1921. Serial No. 439,648. 1 Claim. (Cl. 62—4.)



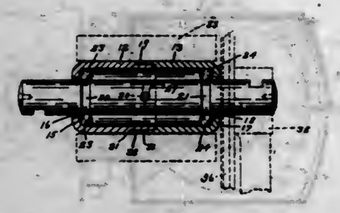
In a household refrigerator, the combination of a cooling compartment, an enclosure surrounding said cooling compartment and spaced therefrom, a working compartment below said cooling compartment, a liquid receiver in said working compartment, a pipe leading from the bottom of said receiver to a manifold, a valve in said pipe, a perforated plate in said manifold adjacent said pipe connection, cooling pipes leading from said manifold into said cooling compartment and returning to a second manifold, a pipe leading from the second manifold to a pump, and from said pump to a coil of cooling pipes connected to the top of said receiver, an electric motor, adapted to operate said pump and a fan simultaneously, air inlet and outlet openings in said working compartment, an electric circuit connecting said motor, a switch in said circuit, and means for controlling said switch and said valve simultaneously by the pressure in said receiver.

1,457,951. ROTARY ENGINE. JOSEPH VIGLIANO, New York, N. Y. Filed Jan. 23, 1920. Serial No. 353,434. 1 Claim. (Cl. 123—11.)



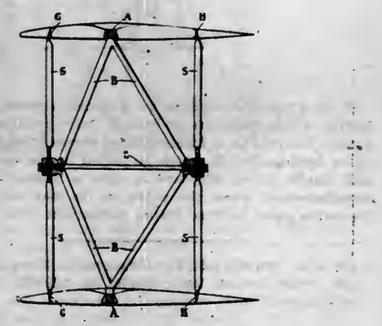
A rotary internal combustion engine, comprising a stationary cylindrical hollow body, a shaft centrally mounted thereon, a drum fixed to said shaft within said body and disposed concentrically therewith, fixed radial vanes on said drum having their outer ends in sliding contact with the inner face of said cylindrical body, a corresponding number of vanes carried by and slidably arranged on said drum, the outer ends of the last mentioned vanes being in contact with the inner face of said cylindrical body and their inner ends in contact with the outer face of said drum, said fixed and slidable vanes being arranged alternately and each slidable vane being provided with arc-shaped flanges on its ends, adjacent flanges on the slidable vanes being adapted to overlap and thus forming compartments in co-operation with said cylindrical body, drum and two sets of vanes, said cylindrical body being provided with an inlet port and an exhaust port, an ignition device between said ports, a lever engaging each sliding vane pivoted to said drum, a fixed cam co-operating with said levers for causing each sliding vane to reduce the size of its compartment after it has passed said inlet port, and means for preventing a backward motion, at the time of explosion, of each sliding vane, said fixed and sliding vanes moving always in the same direction.

1,457,952. GARMENT SUPPORTER. FRANK E. WILLIAMS, Hayward, Calif., assignor of one-third to Anthony L. Kelly and one-third to Frank S. Kelly, both of Hayward, Calif. Filed July 6, 1921. Serial No. 482,685. 1 Claim. (Cl. 241—9.)



A garment supporter including an elastic strap, button fasteners sewed to each end of the strap, each fastener having a hole therein whereby the same may be buttoned to the garment, an elastic strap secured by its ends to the inside of the waist band of the garment, the first mentioned elastic strap passing under the last mentioned strap.

1,457,953. RAT TRAP. WILLIAM W. WORCESTER, Baltimore, Md. Filed Mar. 24, 1922. Serial No. 546,310. 5 Claims. (Cl. 43—69.)

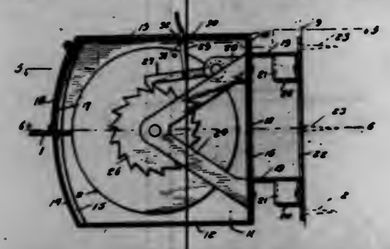


1. The combination with a trap having entrance and victim-receiving chambers, and a tiltable victim-operated gate establishing communication between said chambers; of a means for initially holding said gate in open position, said means operating to permit complete closure of the gate after the passage of the first victim into the victim-receiving chamber, and such closed position of the gate being thereafter its normal position.

1,457,954. ANTIFRICTION BEARING FOR BICYCLE CRANK SHAFTS, ETC. HUGH W. BATCHELLER, Worcester, Mass., assignor of one-half to H. F. Farrell, Worcester, Mass. Filed June 13, 1922. Serial No. 568,000. 6 Claims. (Cl. 64—36.)

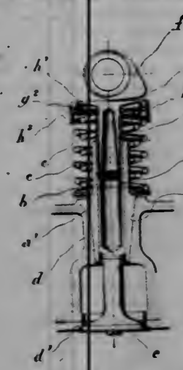
1. An antifriction bearing comprising an internally cylindrical case, composed of two independent sections having meeting inner end portions, formed to be interengaged to constitute a continuous case, and having inwardly projecting annular flanges at their outer ends, forming ball race elements; said flanges bounding end openings in the case, a cylindrical shaft extending through the case and through said openings, and provided with peripheral ball-engaging grooves spaced to conform to said flanges; and two series of balls, the diameter of which is such that they bear simultaneously on the groove surfaces, and on the internal surface of the case, and the arrangement being such that the balls are confined by the case in engagement with the grooves, and confine the shaft and case against relative endwise movement, the sectional construction of the case permitting the assemblage of the parts by successive operations, as shown and described.

1,457,955. VARIABLE-CAMBER AEROFOIL FOR AIRCRAFT. FRANCIS PERCY HYDE BEADLE, East Boldre, England. Filed Dec. 8, 1922. Serial No. 605,619. 3 Claims. (Cl. 244—12.)



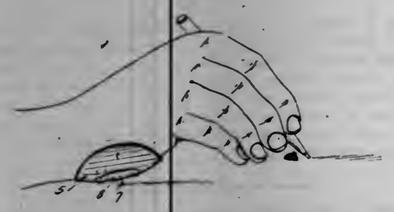
1. In a variable camber aerofoil mechanism for aircraft, a strut comprising a polygonal frame, a longitudinal spar fixedly supported by said frame at one of its angles, a series of fore and aft wing frame sections hingedly carried by said spar, and means for supporting the free edges of said wing frame sections and turning them about their hinges, said means being carried by said strut frame at other of its angles.

1,457,956. LAUNDRY HANGER. WOJCIECH BENCZALSKI, Hoquiam, Wash. Filed Mar. 9, 1922. Serial No. 542,282. 1 Claim. (Cl. 242—101.)



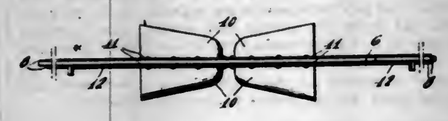
In a laundry hanger, a casing for receiving a clothesline reel, the same having its front forwardly curved between its upper and lower edges and having an opening

in the upper portion thereof, and a door for closing said opening hinged at its upper edge and adapted to swing outwardly at its lower edge and of less length than the opening so that when closed an opening is provided for



the passage of the clothesline, the edge portions of the door and front bordering upon the clothesline opening being thickened to prevent injurious contact with the clothesline.

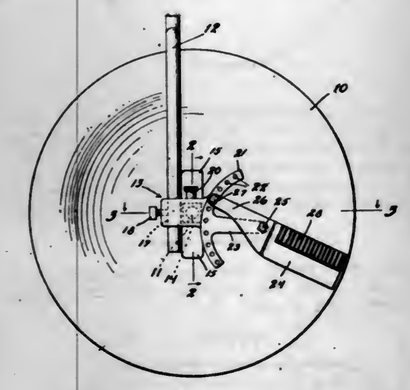
1,457,957. MACHINE PROVIDED WITH VALVES. MARC BIRKIGT, Bois-Colombes, France. Filed Jan. 10, 1921. Serial No. 436,210. 2 Claims. (Cl. 123—188.)



1. In a machine, such as an internal combustion engine having a removable frusto-conical valve guiding member, axially inserted in a frusto-conical recess in the engine, a valve having a stem which is guided in the said member and elastic means disposed in such a manner that they simultaneously press the valve on its seat and maintain the valve guide in close fitting connection with its recess.

1,457,958. HAND REST. CHARLES A. BOOKER, Minier, Ill. Filed Dec. 15, 1921. Serial No. 522,628. 2 Claims. (Cl. 120—54.)

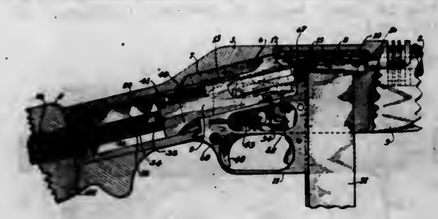
1. In a hand rest for use in writing, a body having an angularly disposed portion on each side of the center forming a cradle, a plate attached to the outer surface of the body at approximately the center thereof, the said plate having its central portion free from the body and curved outwardly to form a clearance between the plate and the body, an anti-friction member, a shank carried thereby, said shank extending through the plate, and an enlargement on the inner end of the shank located between the plate and the body.



1,457,959. VENTILATOR. WILLIAM B. BRAUCHER, Chicago, Ill. Filed Nov. 7, 1921. Serial No. 513,351. 2 Claims. (Cl. 98—22.)

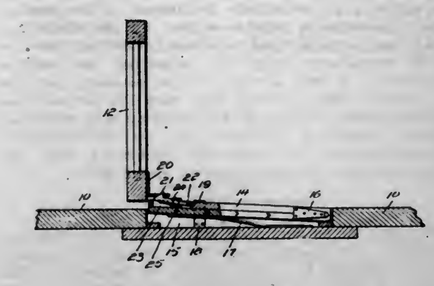
1. A ventilator comprising a board adapted to removably fit a window frame, said board having a pair of openings through the same, and a pair of hoods enclosing each opening, the hoods of each pair being located on the inner and outer sides of the board respectively, the mouths of the hoods of each pair being presented in the same direction and in the opposite direction to the mouths of the hoods of the other pair.

2. A ventilator as set forth in claim 1, and shutters pivoted to the board and swinging in contact therewith into and out of the inner hoods of said pairs respectively, and across said openings respectively.



1,457,960. DISK SCRAPER AND FENDER. FRANK S. BRITTEN, South English, Iowa. Filed Apr. 10, 1922. Serial No. 551,204. 5 Claims. (Cl. 97—223.)

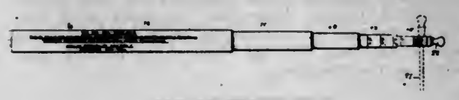
1. In a cultivator including a standard and a disk, a member slidably and rotatably adjustably mounted upon the standard and carrying a stub shaft serving as a journal for the disk, an arcuate bracket carried by said member, an arm carried by said member, and a scraper pivotally mounted upon said bracket and having one end adjustably connected with said arcuate bracket.



1,457,961. FIREARM. JOHN M. BROWNING, Ogden, Utah. Filed Apr. 13, 1921. Serial No. 460,907. 50 Claims. (Cl. 42—16.)

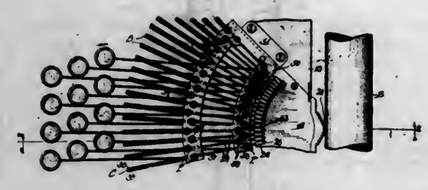
1. A firearm comprising a receiver, a barrel connected with the receiver, the receiver having a chamber the rear portion of which is diagonal to the axis of the barrel and the forward portion of which is coincident with said axis, an inertia-block located in the rear portion of the chamber, a breech-block coupled to the inertia-block and occupying when in its forward position

the forward portion of the chamber, and means for checking the retractive movement of the breech-block between the ends of its stroke.



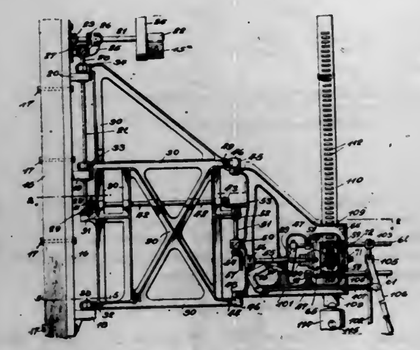
1,457,962. DOOR OR GATE LATCH. ARTHUR B. CHAMBERS, Memphis, Tenn. Filed Oct. 8, 1921. Serial No. 506,347. 5 Claims. (Cl. 292—94.)

1. In a latch device as characterized, a lock board hingedly mounted within a recess formed in the floor of a building, spring means normally tensioning said lock board in normally and forwardly inclined position, a latching element pivotally mounted on said lock board for latching a door or gate in a normally closed position, and spring means normally tensioning said element in its operative position, said lock board being operable by the weight of a person stepping thereon for effecting the release of said element whereby the door or gate may be moved from its normally closed position in the predetermined direction.



1,457,963. [WITHDRAWN.]

1,457,964. RECORD APPLIANCE. HARRY DOTY, Caldwell, N. J. Filed Jan. 5, 1920. Serial No. 349,592. 8 Claims. (Cl. 33—169.)

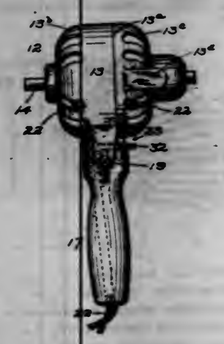


1. A record appliance comprising a collapsible, sectional chart bearing a measuring scale, and associated charting spaces for personal record entries at different ages, for the purpose specified.

1,457,965. TYPEWRITING MACHINE. LEO J. DU MAIS, Chicago, Ill., assignor to Garbell Typewriter Corporation, Chicago, Ill., a Corporation of Delaware. Filed Nov. 1, 1920. Serial No. 420,886. 13 Claims. (Cl. 197—25.)

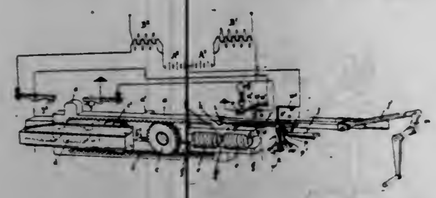
7. In a typewriting machine, the combination with a platen and an endwise movable type bar; of bottom supporting and guiding means for the type bar; a bridge plate located above and spaced from the top of the type bar; and a guide, individual to the type bar, depending from said bridge plate and having means cooperable with the type bar to guide the latter against vertical upward movement and lateral movement.

1,457,966. WOOD-SPLITTING MACHINE. WATSON EASTMAN, Portland, Oreg., assignor to Western Cooperage Company, Portland, Oreg., a Corporation of Oregon. Filed Feb. 25, 1920. Serial No. 361,315. 15 Claims. (Cl. 144—193.)



1. In a wood splitting machine, a support having a plurality of brackets spaced apart, a vertical power driven shaft passed through two of said brackets, a hinged frame having a plurality of supporting arms resting upon said brackets, a separate pivot connecting one of the arms with one of the brackets, the other arms turning on said shaft, wedge driving means mounted upon said frame, and means including said shaft for elevating said driving means.

1,457,967. MOTOR HANDLE AND SWITCH. OSCAR P. EBHARDT, West Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Original application filed Feb. 26, 1918, Serial No. 219,258. Divided and this application filed Mar. 8, 1919. Serial No. 281,498. 5 Claims. (Cl. 200—157.)

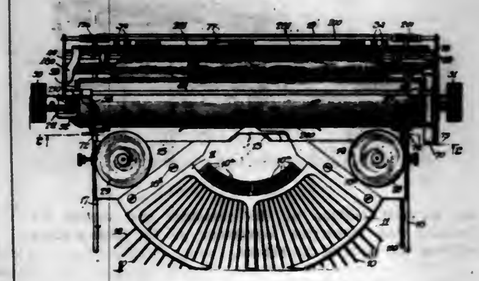


3. In a combined electric switch and handle for portable devices, a handle member having one end surface transverse to the longitudinal axis of said handle, a switch mounted upon said surface, said switch comprising a longitudinally slidable contact plunger, a con-

tact plate above said plunger with which the plunger is adapted to engage, and a laterally swinging controlling

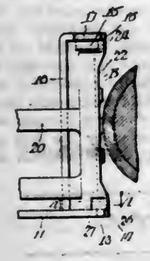
member movable across and in contact with said end face between said plunger and said contact plate to break the contact thereof.

1,457,968. CONTINUOUS-ACTION SYNCHRONIZER. ROBERT ESNAULT-PELTERIE, Paris, France. Filed July 12, 1921. Serial No. 484,266. 8 Claims. (Cl. 123—1.)



1. A continuous action synchronizer comprising two members adapted to move in opposite directions and means interposed between said members for constantly drawing the mean centre of gravity of the two members towards and into a normal position.

1,457,969. CLOTHES PIN. WILLIAM O. GADD, San Antonio, Tex. Filed July 5, 1922. Serial No. 572,764. 1 Claim. (Cl. 24—139.)

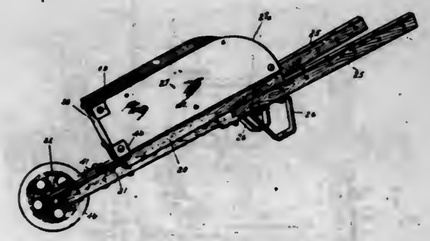


A clothes pin constructed from a single blank of resilient wire bent midway of its length to form a central eye consisting of a plurality of coils, arms projecting in opposite directions from said eye and having return bends to form loops having closed ends spaced from the eye, the closed ends of said loops being deflected to form line engaging seats, the arms being yieldingly held in position to have the line engaging seat bear transversely upon a line extending through the eye, said arms consisting of the terminal portions of the blank with the extremities of the blank provided with hooks for engaging the coils of the eye, and said arms normally occupying a position in a plane below the axial line of the eye.

1,457,970. TYPEWRITING MACHINE. MAX GARBELL, Chicago, Ill., assignor to Garbell Typewriter Corporation, Chicago, Ill., a Corporation of Delaware. Filed Feb. 24, 1920. Serial No. 360,598. 14 Claims. (Cl. 197—72.)

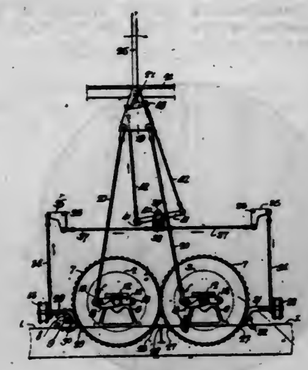
1. In a typewriting machine, the combination with a main frame; of a platen; a platen carriage comprising a platen frame on which the platen is rotatably supported and a sub-frame upon which the platen frame is mounted to reciprocate lengthwise of the platen; means providing a slidable support for the platen carriage on the main frame to adapt the carriage for case shift movements; means for imparting case shifting movements to said carriage; means normally operative to connect said carriage and case-shift-movement-imparting-means; and means for rendering said connecting means inoperative, whereby said case-shift-movement-imparting-means is completely disengaged from the platen carriage to permit removal of the latter.

1,457,971. TYPEWRITING MACHINE. MAX GARBELL, Chicago, Ill., assignor to Garbell Typewriter Corporation, Chicago, Ill., a Corporation of Delaware. Filed Nov. 1, 1920. Serial No. 420,892. 5 Claims. (Cl. 197—43.)



1. In a typewriting machine, the combination with a platen and an endwise movable type bar; of type bar centering guiding means adjacent the platen; and a type block mounted on the type bar, said block having cylindrical pin-like projections cooperable with said means, the axes of said pin-like projections coinciding with a line flush with the edges of the printing characters on the type block.

1,457,972. TOY. ALFRED C. GILBERT, New Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Filed Mar. 11, 1919. Serial No. 281,970. 7 Claims. (Cl. 280—87.5.)

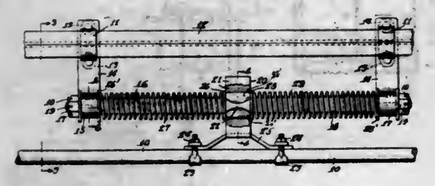


1. A toy vehicle construction, including a body member, a plurality of interchangeable substantially identical

elongated pieces secured to the body member some of them serving as yoke members and others as handle members, straps carried on the ends of said yoke mem-

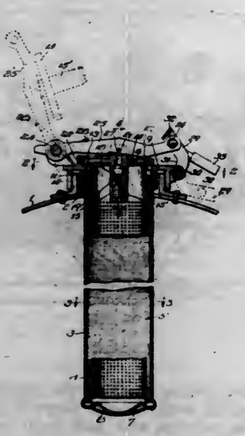
bers, a ground engaging device supported by said straps, and means for detachably connecting said yoke members and said handle members to the body member.

1,457,973. BRAKE AND CLUTCH OPERATING MECHANISM FOR HOISTS. WILLIAM E. HALE, Fort Washington, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 30, 1922. Serial No. 591,520. 2 Claims. (Cl. 192—17.)



1. The combination in a power driven hoist, of two drums; means for driving the drums including clutch mechanism; brake mechanism for each drum; and a single operating means controlling the clutch mechanism and the brake mechanism so that, when one clutch is moved to couple the drum to the power driven mechanism, the brake of said drum will be automatically released.

1,457,974. PROCESS FOR MAKING WOOD EVERLASTINGLY FLEXIBLE. MAX HANEMANN, Munster, Germany. Filed Apr. 24, 1920. Serial No. 376,427. 1 Claim. (Cl. 144—309.)

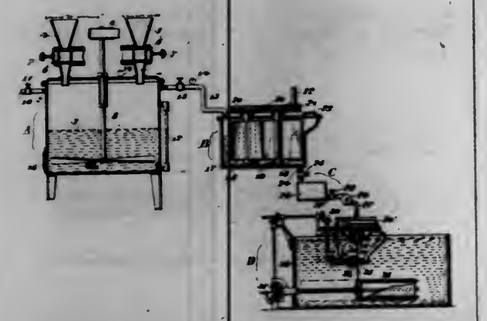


The process of making wood lastingly flexible, which consists in softening wood by heat and moisture, as by boiling or steaming, and while so softened compressing it endwise of the longitudinal fibres so as to crinkle or corrugate the latter but without distortion of the piece of wood as a whole, or sufficient side pressure to laterally interlock the said fibres.

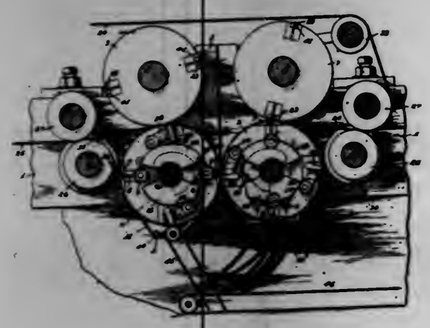
1,457,975. STEERING STABILIZING DEVICE. JOSEPH HOFFMAN, Philadelphia, Pa. Filed Apr. 11, 1922. Serial No. 551,703. 1 Claim. (Cl. 280—94.)

An attachment for the steering gear of an automobile, a spring holding rod disposed between the drag link and front axle, said rod being provided between its ends with stop ribs integral therewith, means for attaching the ends of said rod with the front axle, washers on the rod upon opposite sides of the ribs, coil springs upon the ends of the rod engaging the washers, and a forked element embodying an off-set base secured to the drag link and a pair of spaced ears to engage between the washers.

1,457,976. FILLER TUBE. LOUIS KESSLER, Chicago, Ill. Filed Nov. 12, 1921. Serial No. 514,837. 12 Claims. (Cl. 220—86.)



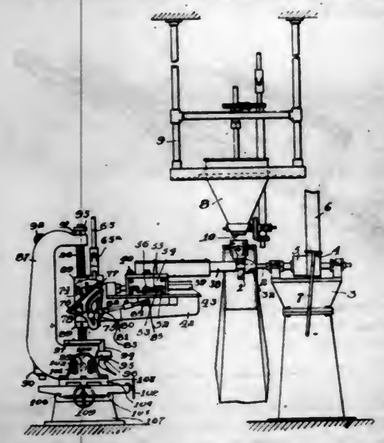
1. A filling tube of the kind described, comprising a pair of spaced inner and outer tubes perforated in their side walls, and a closure cap for the open end of both of said tubes, said inner tube resting on the bottom of the outer tube.



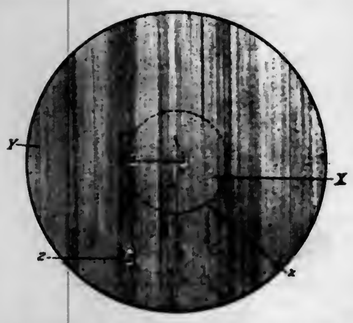
1,457,977. PRODUCING ARTIFICIAL SILK. ISIDOR KITSEE, Philadelphia, Pa. Filed Oct. 25, 1921. Serial No. 510,248. 6 Claims. (Cl. 18—54.)

4. In the production of artificial silk the improvement which consists in converting with the aid of nascent ammonia gas in conjunction with copper, cellulose fibers

into a viscous mass, and coagulating and spinning said coagulated mass into required threads through the operation of devices comprising one working unit and without allowing the atmospheric air to contact with the products during the different stages of production.



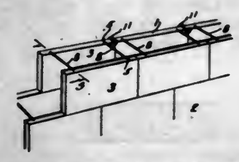
1,457,978. PAPER INTERFOLDING MACHINE. WILLIAM T. LAZAR, Appleton, Wis. Filed Nov., 3, 1921. Serial No. 512,569. 11 Claims. (Cl. 270—39.)



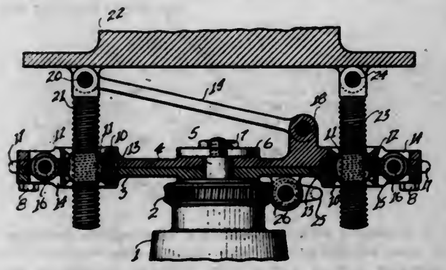
1. In a paper folding machine the combination with folder rolls having longitudinally disposed slots therein and cutter rolls coacting with said folder rolls to sever sheets of paper from a plurality of continuous webs, supplied to said rolls, of means for forming tabs upon the severed ends of the sheets; to extend across the slots in the folder rolls.

1,457,979. METAL SURFACING OR ABRADING MACHINE. SETH H. LEAVENWORTH, Rochester, N. Y. Filed Nov. 13, 1920. Serial No. 423,970. 26 Claims. (Cl. 51—105.)

1. In a metal surfacing machine, the combination with an abrading element and a rotary support for a work piece, of means for imparting to the rotary support simultaneously with the rotary movement, a bodily movement at a variable speed to correspond with the distance that the point being surfaced is situated from the axis of rotation of the work piece so that the abrading element operates upon each portion of the surface, a substantially equal amount notwithstanding the distance of the portion from the center of rotation of the work piece.

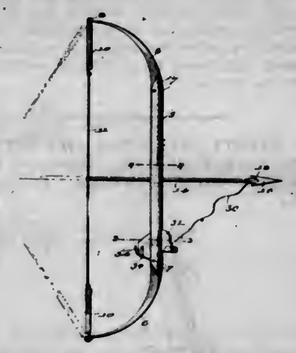


1,457,980. HEADLIGHT LENS. WALTER B. MCMASTERS, Wheeling, W. Va. Filed Jan. 12, 1921. Serial No. 436,757. 2 Claims. (Cl. 240—48.4.)



1. A headlight lens having one face prismed vertically, the prisms being of diminutive width and correspondingly numerous, the outer lens area thereof having the prisms thereof formed with blunt apexes and the central area having sharper apexes.

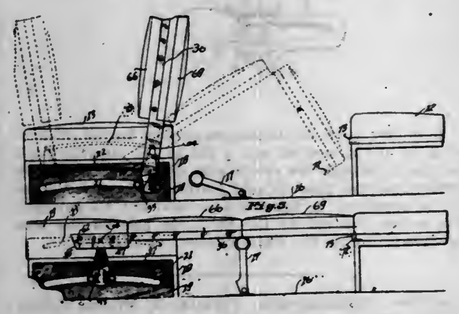
1,457,981. BUILDING CONSTRUCTION. JOSEPH NEWTON MACDONALD, Arlington, Mass. Filed Oct. 6, 1921. Serial No. 505,836. 4 Claims. (Cl. 72—44.)



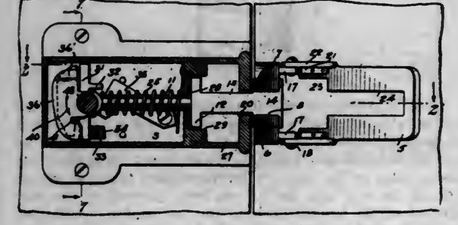
3. In a wall construction, a series of superimposed slabs, fastener elements retaining said slabs in vertical alinement, each element comprising a U-shaped member having the extremities of its arms bent into ring-shape.

1,457,982. CAMERA SUPPORT. DAVE MAKOWER, San Francisco, Calif. Filed Jan. 7, 1922. Serial No. 527,733. 3 Claims. (Cl. 45—110.)

1. A device of the character described comprising a pedestal, a gear rigidly secured on said pedestal, a support rotatably mounted above said gear, said support comprising plates superimposed one upon the other, annular recesses formed in said plates, orifices formed in said plates concentric with said annular recesses, bearings mounted within said orifices, a gear formed on each of said bearings, said gears being adapted to lie within said annular recesses, internally threaded members mounted within said bearings and adapted to oscillate with respect to the vertical adjustment of said bearings, means for causing said members to rotate with said bearings, threaded standards having engagement with said internally threaded members, a support mounted on said standards, and means for rotating said bearings.



1,457,983. FISHGIG. IRA EARNEST MALONE, Beeville, Tex. Filed Apr. 18, 1922. Serial No. 555,190. 5 Claims. (Cl. 124—7.)



1. The combination of a bow having curved terminal members, tensioning springs connected to said curved terminal members, a flexible element connecting said springs, an arrow associated with said flexible element, said bow consisting of a pair of half round body strips, arranged in spaced relation and secured to opposite sides of said bow, a cord connected to the bow, an arrow movable between and guided by said body strips, said cord being connected to said arrow, and a cup carried by said bow and supporting said return cord, the forward side of said cup being open for the free discharge of the cord.

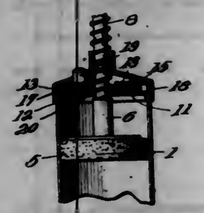
1,457,984. FOLDING AUTOMOBILE BED. CARL MANDEL, San Francisco, Calif. Filed May 1, 1922. Serial No. 557,632. 2 Claims. (Cl. 155—7.)

1. In an automobile bed, the combination of front and rear seats, slotted plates secured to the sides of said front seat, supports mounted in said slots and having roller engagement therewith, a brace extending between said supports, back supports pivoted on said movable supports, sliding bolts normally locking said back supports to said movable supports in alignment therewith, a frame hingedly secured to said back supports at their upper extremities, means for holding said frame in parallel alignment with said back supports and means for releasing said back supports thereby permitting movement of the latter and said frame into substantially the same plane as said seats.

1,457,985. LOCK. JULIUS MANN, New York, N. Y. Filed July 29, 1921. Serial No. 488,439. 6 Claims. (Cl. 70—14.)

2. A lock comprising a keeper, a locking bolt, said bolt being provided with an abutment having a projection, a manually actuated thumb member, and an actuator connected with said thumb member, said acutator being provided with a notch and a pressure portion, said pressure portion acting to actuate said bolt, said notch receiving said projection of said abutment and thereby locking the bolt against movement permitting the bolt being unlocked only by the thumb operating actuator.

1,457,986. METHOD OF PREPARING INNER TUBES FOR VULCANIZATION. MELVON A. MARQUETTE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Sept. 19, 1919, Serial No. 324,845. Renewed Jan. 9, 1923. 6 Claims. (Cl. 18—56.)

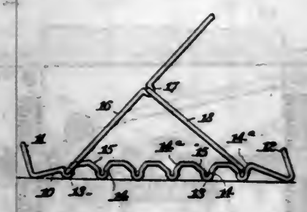


1. The method of preparing rubber tubes for vulcanization consisting in mounting the tube upon the mandrel, wrapping the tube with a strip of fabric, subjecting the tube with the wrapping thereon to a preliminary warming, and removing the wrapping.

1,457,987. SAFETY LOCK FOR LOGGING HOOKS. OLE MICKELSON, Hoquiam, Wash. Filed Nov. 1, 1922. Serial No. 598,406. 2 Claims. (Cl. 24—241.)

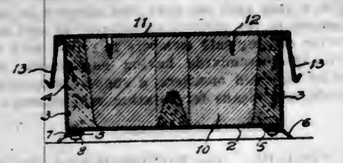
1. A butt hook for logging apparatus having a shank with an eye at one end and a bill at the other, a pintle to extend through the eye in said shank, and a disk-like locking member fixed to said pintle and having a recess in its periphery to register with said bill for releasing the article engaged by the hook, the pull on the hook operating to hold the pintle against turning.

1,457,988. GREASE GUN. CHARLES R. MILLER, Collinsville, Tex., assignor to Kellogg Manufacturing Co., Rochester, N. Y. Filed Oct. 12, 1921. Serial No. 507,226. 5 Claims. (Cl. 221—79.)



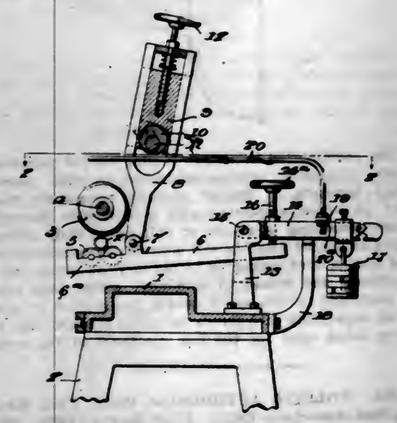
1. In a device of the character described the combination with a cylinder having at one end a transversely extending support, a threaded rod passing through the end of the cylinder, two transverse levers located at opposite sides of the rod, the levers pivoted together at one side of the rod, one end of one lever pivoted to the said support at the opposite side of the rod, and an oscillating cap connected to the other end of the lever whereby the oscillation of the cap will cause the levers to engage and disengage said rod.

1,457,989. MIXING DEVICE FOR INTERNAL-COMBUSTION ENGINES. MICHAEL S. MONKS, Pittsfield, Mass. Filed Nov. 10, 1921. Serial No. 514,303. 1 Claim. (Cl. 48—180.)



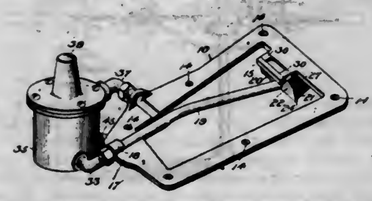
An atomizing device for internal combustion engines comprising a plate for insertion intermediate the carbureter and intake manifold of the engine, said plate having an aperture to register with the carbureter opening and the manifold, one wall of said aperture having a priming chamber to receive and retain condensed gas, and a helical flat metal spring mounted in said aperture and arranged edgewise with the edges in the direction of the flow of the gases, said spring having an opening for the passage of the condensed gas.

1,457,990. DISPLAY STAND. EDWARD CUTLER MORGAN, New York, N. Y. Filed Aug. 27, 1921. Serial No. 495,997. 5 Claims. (Cl. 211—24.)



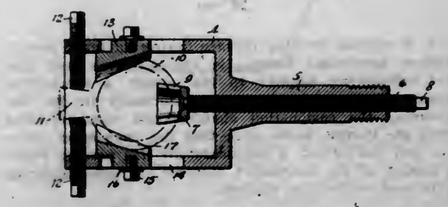
3. A display stand embodying a substantially rectangular base having parallel side bars, a superstructure including a support and a prop pivotally secured to the support and means included in the side bars for detachably gripping the support and removably receiving the prop of the superstructure.

1,457,991. MOLD FOR TILES OR BLOCKS OF CONCRETE. MERRILL MOORE, Creston, Iowa. Filed Apr. 18, 1922. Serial No. 554,744. 7 Claims. (Cl. 25—121.)



1. A mold of the character described comprising sides and a bottom member, and end members each formed with an open folded portion beneath the bottom, said folded portions terminating in an inclined downwardly and outwardly extended inclined portion forming a seat for said mold, and means for yieldingly securing the end members to the bottom.

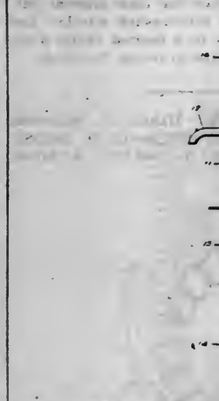
1,457,992. SAFETY DEVICE FOR PIPE-CUTTING MACHINES. HACKLEY MORRISON, Richmond, Va. Filed May 25, 1921. Serial No. 472,456. 10 Claims. (Cl. 164—60.)



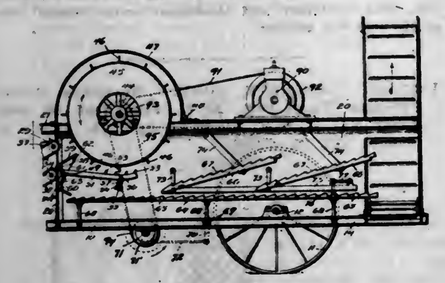
1. In a pipe cutting machine, the combination with supporting rolls and a cutter disc, of power operated means for moving the one toward the other, in a path passing through the axis of the disc, to effect a cut, and manual means for regulating at will during the cutting operation, the pressure on the work held between the rolls and cutter disc.

1,457,993. LUBRICATING SYSTEM FOR AUTOMOBILES. GIRARDUS G. NAUGLE, York, Pa. Filed Jan. 30, 1922. Serial No. 532,818. 10 Claims. (Cl. 184—11.)

6. In a lubricating system for automobiles, a transmission case having an opening therein, an oil receiving trough supported within said case and to one side of said opening, a discharge pipe leading from said trough to a point outside of said case, a sight feed connection secured to said discharge pipe at a point in proximity to said transmission case, and means for returning oil to the transmission case from the sight feed connection through two passageways of different lengths.



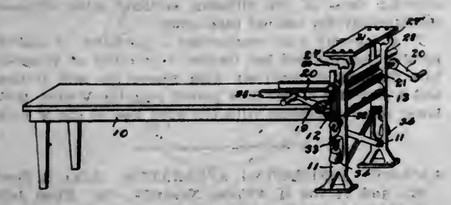
1,457,994. CHUCK. IVAN T. NEDLAND, Hillsboro, N. Dak. Filed Sept. 11, 1922. Serial No. 587,419. 1 Claim. (Cl. 279—55.)



A chuck for holding a finger ring to present the mounting boss of the ring to a cutting tool including the combination of adjustable means for engaging and centering the boss, and means adjustable lengthwisely of the chuck for engaging the ring proper, the means last-mentioned including a forked holder within the chuck for embracing the ring-proper, and also including a sliding dog on the chuck for engaging the ring proper intermediate the forked holder and the boss engaging means.

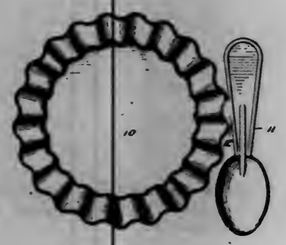
1,457,995. WATER-ELEVATING DEVICE. PETER T. NELSON, Gem, Kans. Filed Jan. 24, 1922. Serial No. 531,513. 1 Claim. (Cl. 103—194.)

In a means for elevating water from a well comprising a cylinder arranged in the well, a pump head in communication with the cylinder, a pipe carried by the pump head, a T interposed between the ends of said pipe, a cylinder supported by the T, means to force the water to the pump head, the pipe, and last mentioned cylinder, respectively, and said pipe having its free end closed forming an air compression chamber therein to assist the water to the last mentioned cylinder and means to force the water from the last mentioned cylinder to a predetermined destination.



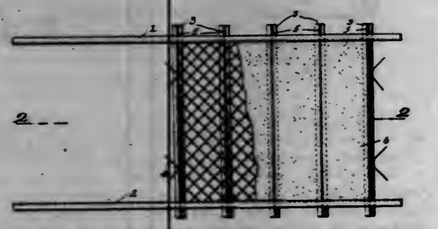
1,457,996. GRASS ERADICATOR. STEVEN C. NELSON, Finley, N. Dak. Filed Apr. 7, 1922. Serial No. 550,458. 5 Claims. (Cl. 97—10.)

1. In a machine of the class described, a slatted cylinder mounted for rotation, a concave device having alternating slots and retarding fins coacting with the slats of the cylinder, means for swingingly supporting said concave device at one end, means for yieldably supporting said concave device at the other end, means for feeding material to the cylinder and concave device, and a baffle member yieldably supported between the feeding means and the cylinder.



1,457,997. PLAITING APPARATUS. MAX NOEL, Washington, D. C. Filed May 11, 1921. Serial No. 468,702. 8 Claims. (Cl. 223—39.)

1. In a plaiting machine of the character described, the combination of a table element, a roll in close rela-

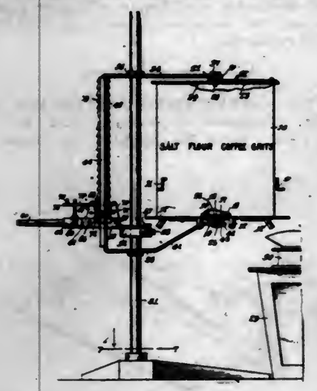


tion thereto, a winding drum mounted in yielding bearing upon the roll, means to secure patterns and fabric to the drum to feed thereto from the table element pattern sheets shaped to fold in intermeshed relation and coact to hold interposed goods to a desired shape when wound upon the drum, and means to rotate the drum.

1,457,998. TABLE ARTICLE. HARRY G. NORWOOD, Baltimore, Md. Filed Aug. 12, 1920, Serial No. 402,981. Renewed Nov. 8, 1922. Serial No. 599,725. 4 Claims. (Cl. 65—15.)

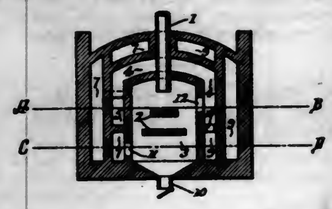
1. A new article of manufacture comprising a container and an implement, such as a fork, spoon or the like, said container and implement being formed integrally with one another.

1,457,999. CONCRETE FORM. WALDEMAR JULIUS PEDERSEN, Floral Park, N. Y. Filed Sept. 20, 1920, Serial No. 411,653. Renewed Apr. 21, 1923. 10 Claims. (Cl. 25—12.)



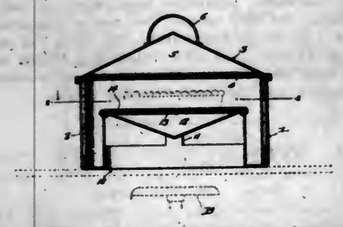
1. A concrete structure comprising a plurality of separate sections disposed adjacent each other, connections extending between the sections, the portions of abutting faces of adjacent sections being angularly disposed with respect to each other, and other portions of abutting faces of the adjacent sections being disposed substantially flat against each other.

7. A concrete form comprising a plurality of spaced, parallel, longitudinal bar frames, a plurality of V-shaped bars disposed transversely with respect to said frames, and a plurality of flat bars placed over the V-bars, their lower edges coinciding with the apex line of the V bars.



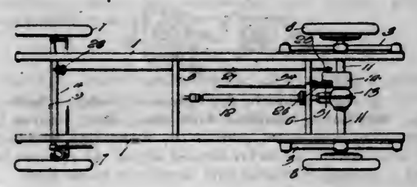
1,458,000. DISPENSING APPARATUS. ALVA R. POWELL and VICTOR H. FUTCH, Nashville, Ga. Filed July 6, 1922. Serial No. 573,229. 6 Claims. (Cl. 211—9.)

1. A dispensing apparatus comprising a standard, a vertically adjustable and swinging dispensing bin or receptacle, a supporting bracket mounted on the standard and provided with a rack bar formed with two rows of



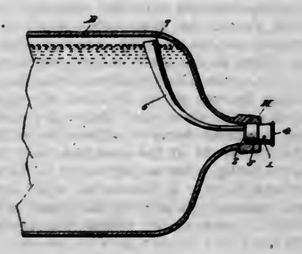
teeth, a lever and pawl mechanism supported from the standard and associated with said rack bar for elevating the bracket carrying the bin therewith.

1,458,001. METHOD OF BURNING SULPHUR. ARTHUR T. PRENTICE, Somerset West, Cape of Good Hope, South Africa. Filed June 8, 1922. Serial No. 566,780. 3 Claims. (Cl. 23—1.)



1. A sulphur burning furnace having an inner central burner, superposed hearths in the burner, a feed pipe for introducing sulphur to the burner, a combustion chamber surrounding the burner, a primary air flue surrounding the combustion chamber and communicating with the burner, ports connecting the combustion chamber and the burner, a secondary air flue passing round a portion of the combustion chamber and communicating with said combustion chamber.

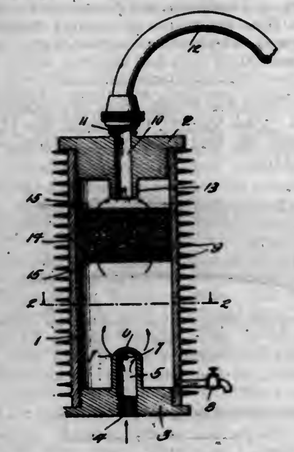
1,458,002. PORTABLE OVEN. CLYDE H. REDDIG and HARRY A. BARRETT, Lincoln, Nebr. Filed Apr. 15, 1921. Serial No. 461,708. 2 Claims. (Cl. 126—275.)



1. An oven of the class described comprising a hood with top and side walls equipped with heat insulators, and an inverted cone-shaped hollow vacuum chamber forming the food supporting member.

1,458,003. TRANSMISSION ATTACHMENT. GEORGE R. RICHARDSON, Greene, N. Dak. Filed July 27, 1922. Serial No. 577,977. 8 Claims. (Cl. 180—54.)

1. A structure of the character described comprising a driven axle, a sleeve loose on said axle, means actuated by a vertically moving vehicle chassis for imparting rotary movement to the sleeve while the vehicle body is moving vertically in one direction and retarding movement of the chassis in the said direction, and manually controlled means movable into and out of position for permitting transmission of rotary movement from said sleeve to said axle.

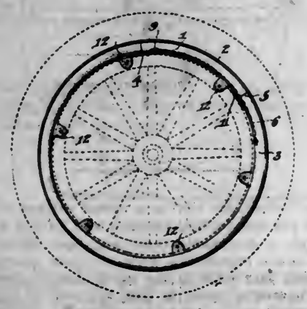


1,458,004. FLUID-DISCHARGE MEANS FOR BOTTLES. BENJAMIN E. ROBINSON, Sallyards, Kans. Filed Feb. 21, 1921. Serial No. 446,619. 4 Claims. (Cl. 215—79.)

1. A bottle closure comprising a hollow shell fitting the mouth of the bottle, and an air tube in one piece with the shell and curving toward one side of the bottle in an upward direction and gradually expanding toward that end remote from the shell with the wide end terminating close to the inner wall of the bottle when the latter is substantially horizontal.

1,458,005. AIR-PURIFYING DEVICE FOR MOTOR-DRIVEN TIRE PUMPS. DANIEL ROHRER, Spokane, Wash. Filed Mar. 24, 1921. Serial No. 455,180. 2 Claims. (Cl. 183—48.)

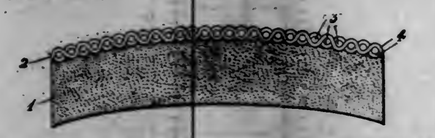
1. An air purifying and cooling device for motor driven tire pumps, comprising a vertically elongated cylinder closed at both ends and provided between its end walls with openwork partitions extending uninterruptedly across its interior and air filtering material between said partitions, the lower end wall of said cylinder having a central air inlet port for communication with the air outlet of a motor driven tire pump, said lower end wall having an integral tube around said inlet port extending upwardly into the cylinder and provided with a perforated dome-like closure at its upper end, said tube serving to prevent return of oil through said air inlet port, the upper end wall of said cylinder being formed with a vertical air outlet port and an external nipple through which it extends, said nipple being



threaded for engagement with a hose connection by means of which an inflation hose may be connected to the cylinder.

1,458,006. PROCESS OF MAKING PLUGS. FREDRICK J. RUNSER, Cleveland, Ohio, assignor to The Byrne Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 20, 1922. Serial No. 578,394. 1 Claim. (Cl. 10—10.)

The herein described process of forming barrel plugs or like articles which consists in cutting a bar of metal into sections, then in forging each section into a blank having a shank and a head with an annular shoulder on the under side of the head, and finally in finishing each blank and cutting away a portion of the shoulder to form a gasket seat around but spaced from the under face of the head.

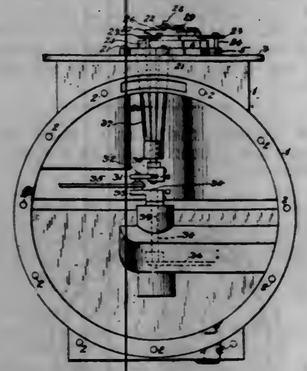


1,458,007. DEMOUNTABLE RIM. MACK SEED, Billett, Ill. Filed Aug. 1, 1922. Serial No. 578,957. 3 Claims. (Cl. 301—32.)

1. A demountable rim having a circumferentially incomplete section hinged at one end to the adjacent end

of the rim, a latch on the other end of the rim for connecting the latter to the hinged section, and a spring connected to the second named portion of the rim at the end remote from the hinge and resisting displacement of the incomplete section from circumferential continuity with the rim.

1,458,008. FILLER FORM. ROY W. SEXTON, Wytheville, Va. Filed Mar. 26, 1915, Serial No. 17,145. Renewed Mar. 26, 1921. Serial No. 455,982. 6 Claims. (Cl. 2—147.)



1. A washable filler form embodying an embroidery design adapted to be completely covered by embroidery threads, and comprising a flexible form body of felted fibers combined with an outer layer of inextensible crossing threads firmly attached to the felted body to lock the same against distortion and bunching.

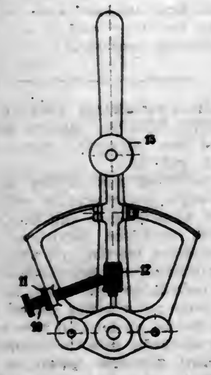
1,458,009. SPLICE. BENJAMIN F. SPARLING, Unionville, N. Y. Filed Apr. 13, 1922. Serial No. 552,366. 2 Claims. (Cl. 245—12.)

1. In combination with strands, a splicing element of sinuous shape, said strands being interwoven with said splicing element and with each other, and said strands being secured together.

1,458,010. GAS METER. HENRY H. SPRAGUE, Bridgeport, Conn., assignor to The Sprague Meter Company, Bridgeport, Conn. Filed July 14, 1921. Serial No. 484,549. 2 Claims. (Cl. 73—1.)

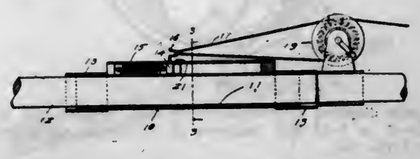
1. A gas meter body having a raised surface to form a floor for a gas distributing chamber and having gas ports therethrough, a detachable valve seat base having raised seats and ports registering with the floor ports, valves for the seats, said floor having an opening therethrough, said base having a curb for said opening, a bracket located within the curb and detachably secured to the base, and a crank shaft operatively connected to the valves and journaled in the bracket.

1,458,011. GAS METER. HENRY H. SPRAGUE, Bridgeport, Conn., assignor to The Sprague Meter Company, Bridgeport, Conn. Filed July 14, 1921. Serial No. 484,550. 2 Claims. (Cl. 73—1.)



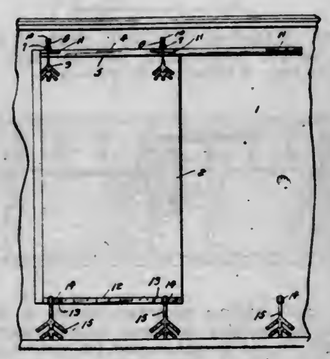
1. In a gas meter of the character described having a gas distributing chamber with crank shaft, valves and the worm and worm gear of the registering mechanism located therein, a bracket secured within the chamber having a housing enclosing said worm and worm gear.

1,458,012. GRATE. JOHN A. STACKHOUSE, Dover, N. J. Filed Apr. 8, 1922. Serial No. 550,912. 2 Claims. (Cl. 126—170.)



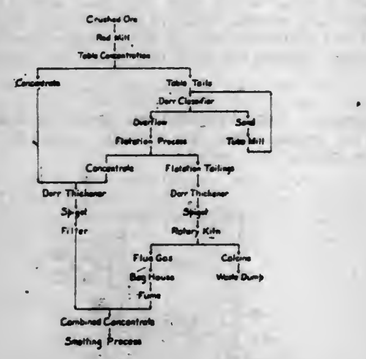
1. In a device of the class described, a plate having a depending sleeve, the sleeve being provided with circumferentially elongated openings, and the plate having notches communicating with the openings; and a grate within the sleeve, the grate being supplied with trunnions located in the openings and movable therein to permit a tilting of the grate and a circumferential oscillation of the grate, the trunnions being insertable into the openings by way of the notches, the upper edges of the openings being flush with the under surface of the plate, the trunnions being of substantially the same diameter as the height of the openings, and the thickness of the grate being substantially equal to the diameter of the trunnions, thereby to dispose the upper surface of the grate in a common plane with the lower surface of the plate, whereby none of the combustible material on the grate will come into contact with the sleeve.

1,458,013. OPERATING HANDLE FOR CONTROL OR OTHER MECHANISM. RENÉ JEAN CAMILLE TAMPIER, Boulogne-sur-Seine, France. Filed Mar. 23, 1921. Serial No. 454,923. 5 Claims. (Cl. 74—89.)



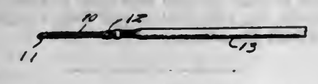
1. The combination of a support, a swinging handle pivoted thereon, a stop carried by the support and adjustable to vary its position with relation to the handle, and a member carried by the handle for engagement with the stop during the movement of the handle in one direction, to limit said movement; said stop and member constituting companion parts, one of which is movable to a position to avoid such engagement and thereby permit the handle to swing beyond the stop.

1,458,014. SELF-REGISTERING SCALE FOR FISHING RODS. LEONARD A. WAILES, New Orleans, La. Filed Apr. 11, 1921. Serial No. 460,407. 1 Claim. (Cl. 265—63.)



A fishing rod scale comprising a slit sleeve expansible and contractible to adapt it to be applied to fishing rods of various diameters, rings engaging the ends of said sleeve to hold it against accidental displacement, a member arcuate in cross section secured at its longitudinal edges to the upper side of the sleeve and adapted in conjunction with the sleeve to provide a casing having a longitudinal slot in its upper side, a follower within said casing, a hook carried by said follower and extending through said slot and adapted to have running engagement with a fishing line, a coil spring connected at one end to said follower, blocks closing the ends of said casing, said coil spring connected at its other end to one of said blocks, an indicator within said casing and independent of and in the path of movement of said follower, said indicator having frictional contact with the walls of said casing and adapted to be moved by said follower when the follower is moved by tension applied to a fishing line, said indicator adapted to be left in indicating position when the follower is returned to normal position by said spring, whereby the indicator will indicate the extent of movement of said follower, and said indicator having a portion extending through said slot whereby the position of the indicator is readily ascertainable.

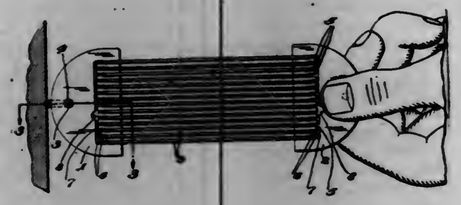
1,458,015. DOOR HANGER. EARL E. WHALEY, Tacoma, Wash. Filed Aug. 2, 1921. Serial No. 489,190. 1 Claim. (Cl. 20—23.)



Means for mounting a sliding door, the same comprising a track mounted above the door opening and having an overhanging portion and upwardly extending and depending flanges along the outer edge of the overhanging portion, said depending flange serving to prevent outward displacement of the door, said upwardly extending flange forming a track and being provided with a plurality of equally spaced inwardly deflected portions, a reinforcing strip at the outer lower edge of the door, said reinforcing strip being provided with outwardly deflected portions spaced the same distance apart as the inwardly deflected portions of the upwardly extending flange, hangers carried by the door and having rollers operating on the upwardly extending flange, brackets mounted below the door and in vertical alignment with the inwardly deflected portions of the track, said brackets extending outwardly and upwardly and carrying rollers at their free ends, said rollers adapted to engage the outwardly deflected portions of the reinforcing strip when the rollers of the hangers engage the inwardly deflected portions of the upwardly extending flange, whereby said deflected portions cooperate with each other and with the hangers and brackets to keep the door close to the structure on which it is mounted when it is either in open or closed position.

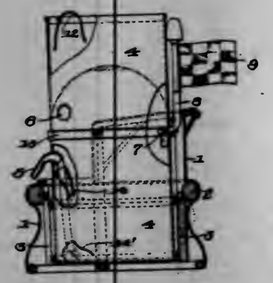
1,458,016. METHOD OF TREATING SILICIOUS ORES. GEORGE H. WIGTON, Eureka, and SAMUEL M. SEDDON, Salt Lake City, Utah. Filed Aug. 5, 1922. Serial No. 579,883. 8 Claims. (Cl. 75—64.)

4. The method of treating silicious ores containing oxidized lead, silver, and gold which consists in removing the coarse heavy minerals by gravity concentration, removing the remaining natural sulphides together with native precious metals by a flotation process; feeding the remaining oxidized minerals as a slurry to a temperature of from 1700° F. to 2500° F. in an oxidizing atmosphere; collecting the fume, and in smelting the combined concentrates.



1,458,017. SHOE-LACE TIP. CHARLES S. WOLF, Sr., Houston, Tex. Filed Aug. 10, 1921. Serial No. 491,232. 1 Claim. (Cl. 24—143.)

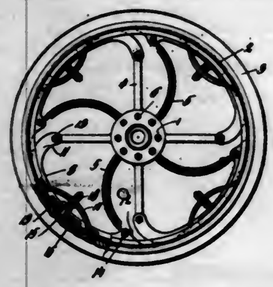
A lace tip consisting of a plurality of strands twisted together to form the body of the tip and with each strand formed into an eyelet at one end of the body, said eyelets being of substantially the same width as the body and in flat contact whereby a lace may be passed through both



of the eyelets and fastened about the same without undue increase in the cross-sectional area of the lace and with the strain equal on each strand.

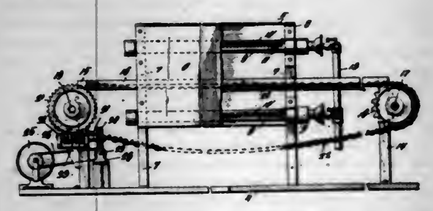
1,458,018. COMB CLEANER. ARNE O. ALSAGER, Willow Creek Township, Lee County, Ill. Filed Dec. 31, 1921. Serial No. 526,379. 1 Claim. (Cl. 132—29.)

As a new article of manufacture, a comb cleaner comprising a pair of carrier plates each having a transverse slot formed therein, and a plurality of recesses projecting to one side from said slots and forming tongues, and a plurality of strings engaged in said recesses and about said tongues and extending from one carrying member to the other, said recesses being dove tail in shape having their wide ends remote from said slots, said carrying members provided with enlargements on said transverse slots to facilitate the insertion of the strings through the slots and about said tongues.



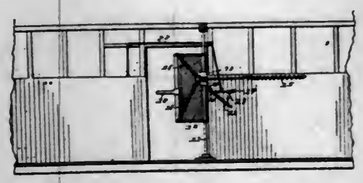
1,458,019. LIFE PRESERVER. TOKUJIRO AOKI, Tokyo-Fu, Japan. Filed July 9, 1921. Serial No. 483,639. 6 Claims. (Cl. 9—12.)

1. A life preserver comprising a chair provided with a seat, the portion of the chair arranged beneath the seat forming a chamber, a water-proof sack normally occupying said chamber and capable of being opened out to permit a person to occupy the same, a buoyant belt extending around said chair, windows covered with transparent material arranged in said sack, a hoop connected to the sack, means for fixing said hoop to the chair back in order to hold said hoop in raised position, and a ventilating tube fixed to said hoop and adapted to be raised with the same.



1,458,020. RESILIENT WHEEL. GEORGE C. ATKINSON, Georgetown, Tex. Filed Mar. 22, 1922. Serial No. 545,909. 2 Claims. (Cl. 152—49.)

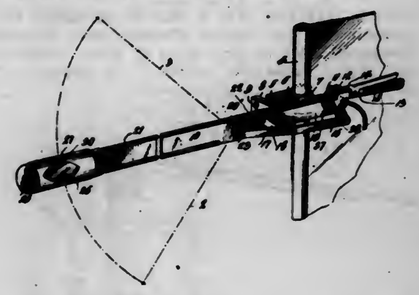
2. A resilient wheel comprising a hub, spokes radiating therefrom, a plurality of members, one pivoted to each spoke and curved to form a separate felly section, springs connecting the free ends of the members to the hub, an encircling rim supported by said members and resilient



means disposed intermediately of each member and tensioned to hold the members in frictional engagement with the rim.

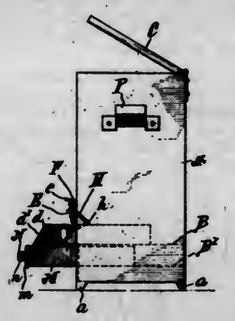
1,458,021. TOASTING MACHINE. FRANK LIVINGSTONE BAMFORD, Detroit, Mich. Filed Apr. 9, 1920. Serial No. 372,495. 2 Claims. (Cl. 126—41.)

1. A toasting machine comprising an oven, a foraminous conveyor having its upper run passing through the oven, a pair of horizontally disposed burners arranged above and below the said upper run of the conveyor, each pair of burners being arranged in spaced parallel relation to each other and the sides of the oven, the pair of burners which are arranged below the upper run of the conveyor being disposed between the runs of the conveyor and a heat radiating plate supported upon each pair of burners and extending from end to end and side to side of the oven to evenly distribute heat above and below the upper run of the conveyor.



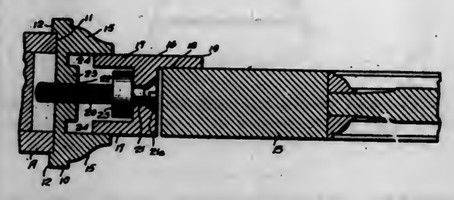
1,458,022. MAIL-BAG CATCHER. WILLIAM F. BECHTEL, Lehigh, Iowa. Filed Nov. 15, 1921. Serial No. 515,302. 2 Claims. (Cl. 258—20.)

1. A mail catching apparatus having a receptacle mounted for swinging movement in a horizontal plane to project an end thereof beyond the vertical plane of the side of a car, a return spring connected with the inner end of the receptacle for swinging the latter to its normal position within the car, and means, releasable by a jar applied rearwardly to the exposed end of



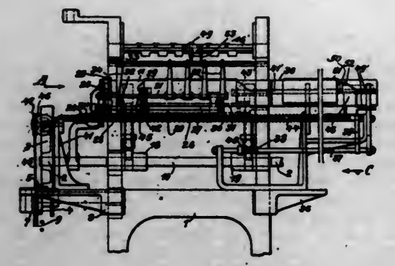
the receptacle for holding the latter in its mail receiving position in opposition to said return spring, the receptacle being provided with a grip or handle for swinging the same to its receiving position, and an operating cord being connected with said locking means for moving the latter to the receptacle engaging position.

1,458,023. SIGNAL FOR VEHICLES. EDWARD BEDNARS, Everett, Wash. Filed July 13, 1922. Serial No. 574,703. 6 Claims. (Cl. 116—54.)



1. In combination, a supporting arm including a head having a plurality of notches arranged thereon, a bell crank lever pivoted on the head and provided with a spring pressed dog engageable with said notches, a semaphore pivoted on the supporting arm, and a rod connecting the semaphore with the bell crank lever in the manner and for the purpose specified.

1,458,024. COAL BOX. WADE ETHEL BENSON, Baton Rouge, La. Filed Jan. 18, 1923. Serial No. 613,475. 1 Claim. (Cl. 126—283.)



A coal box comprising a casing having a removable cover through which to admit the coal and provided with two bottoms, one spaced above the other, the front wall of the receptacle at and near said bottoms being substantially vertical and having openings at each of the bottoms, drawers slidably fitted through said openings and resting upon said bottoms, the upper drawer adapted to receive the coal put in through the removable cover, said upper drawer having its entire front portion left open and having substantially triangular projecting portions at the front of its sides adapted to extend beyond the substantially vertical wall of the casing said substantially triangular projecting portions being enlarged laterally to engage the sides of the opening in the casing, the outer edges of said triangular portions being inclined from the top downwardly and outwardly, a hinged door above the upper drawer and upon the front wall of the casing adapted to extend down in the diagonal position across the open front of the upper drawer and adapted to rest against the inclined face of said triangular portions, said door having a flange on its lower end adapted to extend beneath the bottom of the upper drawer.

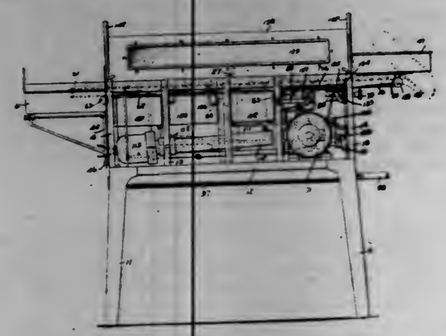
1,458,025. ADJUSTABLE JAMB UNIT. CARL F. BIELE, Montclair, N. J. Filed Jan. 20, 1921. Serial No. 438,789. 2 Claims. (Cl. 20—12.)

1. A jamb unit comprising a back bar presenting a depressed rear surface adapted to lie against the edges of an opening in a wall, there being vertical side members at the sides of said depressed surface to overlie the side surfaces of said wall, said bar having vertical side flanges at the front, a front bar having side flanges snugly accommodated between the flanges of the back bar, said back bar having channels adjacent to the flanges thereof to receive the edge portions of the second mentioned flanges, and adjusting screws passing transversely through said front and back bars to vary the effective width of the unit, said screws being held to the front bar against axial movement.

1,458,026. LAYING-ON APPARATUS FOR BOOK-FASTENING MACHINES. ULRICH BISCHOF, Horgen, Switzerland, assignor to Gebr. Staubli, Horgen, Switzerland. Filed Dec. 13, 1920. Serial No. 430,358. 6 Claims. (Cl. 112—21.)

4. In a book fastening machine, a movable machine table, a stationary auxiliary table, a slide block slidable over both tables, a stationary rod on which the slide block is slidably mounted, a compression spring mounted on said rod, a flexible tensile device, grooved rollers for guiding the tensile device, a rocking lever with antifriction roller, and a cam for operating said rocking lever, one end of the tensile device being connected to the slide block, and its other end being connected to the rocking lever.

1,458,027. CONTAINER CAP. PAUL EMILE BODY, Walkerville, Ontario, Canada. Filed Apr. 15, 1922. Serial No. 553,302. 1 Claim. (Cl. 215—38.)

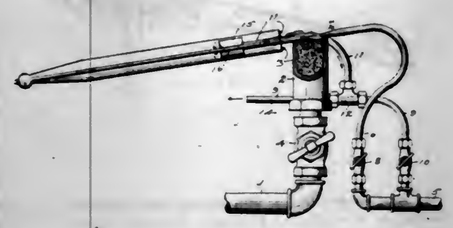


A container cap comprising a conical shaped member having its widest portion flared inwardly and extended

downwardly therefrom to fit the neck of a bottle, a metallic rim arranged above the flared portion and soldered to the inner sides of said conical shaped member, a

rubber gasket pressed into said metallic rim for holding the conical shaped member in an upright and firm position upon the top of a bottle.

1,458,028. GLASS-WASHING MACHINE. FRED T. BURNHAM, Newton Center, Mass. Filed July 16, 1921. Serial No. 485,224. 7 Claims. (Cl. 141—3.)



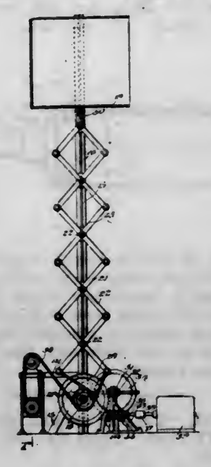
1. A washing machine of the character set forth including a plurality of upwardly directed spray heads, superposed means for conveying the articles to be washed thereover, a water supply means directly connected with the first and last spray heads for supplying and discharging water therefrom, independent means respectively connected with the water supply and with the second spray head and the next to the last spray head for respectively mixing a cleansing and a sterilizing agent with the water received thereby to supply and discharge cleansing and sterilizing solutions from the second spray head and the next to the last spray head respectively, a means of connection between the water supply and the central spray head having a heating means interposed therein for supplying and discharging hot water from said central spray head, and means for receiving and conveying the waste water from the first, central and last spray head away from the machine.

1,458,029. SAFETY PIN. JAMES H. CARGILL, Jersey City, N. J. Filed July 7, 1922. Serial No. 573,274. 1 Claim. (Cl. 24—159.)

A safety pin comprising a pair of legs having hinged connection with each other at one of their ends, said hinged connection operating to normally effect relative separation of the opposite free ends, a hooked pointed terminal at the free end of one leg and a complementary looped terminal at the free end of the opposite leg having a bight portion adapted to engage under and embrace the hooked pointed terminal of the other leg for maintaining the free ends of the legs in closed relation, one of the leads of said looped terminal being disposed over the pointed terminal for covering and protecting the same.

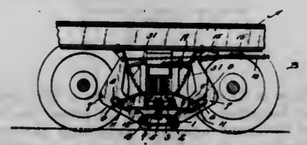
1,458,030. GAS JET. LEE F. CHANEY, Springfield, Ohio, assignor to The Cheney Manufacturing Company, Springfield, Ohio, a Corporation of Ohio. Filed Nov. 12, 1920. Serial No. 423,657. 13 Claims. (Cl. 49—53.)

4. The combination with a burner of a supply conduit for air under pressure, a branch conduit leading therefrom discharging across the burner to afford a jet flame, a second branch conduit discharging to atmosphere, exhaust conduit extending into proximity with the point of operation of the jet flame and communicating with the last mentioned branch conduit, an injector fitting at the intersection of said exhaust conduit and the branch conduit whereby the discharge of air to atmosphere thru the branch conduit will induce a suction thru the exhaust conduit to withdraw heated air and gases from the point of operation.



1,458,031. SECTIONAL TIRE-CARRYING RIM. JAMES C. COOPER and JOHN J. SIGRIST, Altoona, Pa., assignors of one-fifth to Frank E. Shaffer, Altoona, Pa. Filed Nov. 7, 1921. Serial No. 513,435. 1 Claim. (Cl. 301—35.)

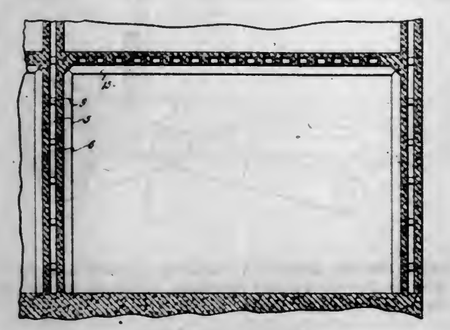
A two part demountable rim, each part being endless and having a base portion and a tire retaining flange, the base portion of one part being rabbeted externally, the rabbet having alternating notches and projections, the other part being rabbeted internally and the rabbet being provided with alternating notches and projections, the



two inner parts being thus made to permit the base portions to overlap and the inner free edges of each base portion being provided with notches and projections fitting the said structure of the rabbeted portions, and means to secure the parts together.

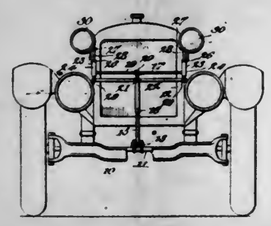
1,458,032. ELEVATOR. JOSEPH G. CORNELL, Brooklyn, N. Y. Filed July 1, 1922. Serial No. 572,171. 16 Claims. (Cl. 187—18.)

5. An elevator, comprising a frame, a lazy tongs system and a cage mounted in the frame, a flexible member attached to each of the lower bars of the lazy tongs system, a weight carried by the flexible members serving as a balancing means, equalizers attached to the flexible members to take up the differences in length of the same, and means for operating the lazy tongs system through the flexible members.



1,458,033. AIR BRAKE. HARVEY L. CULLISON, Baltimore, Md. Filed Oct. 19, 1920. Serial No. 417,936. 3 Claims. (Cl. 188—41.)

1. A brake mechanism for railway cars comprising the combination with a car truck including a stationary crossbar, cross arms at each end of the crossbar, an angular lever supported at each end of the cross arms and having both a pivotal and sliding movement laterally thereon, track-engaging brake shoes pivotally suspended from between the lower adjacent terminals of the said levers, and actuating means connected with the upper terminals of the said levers.

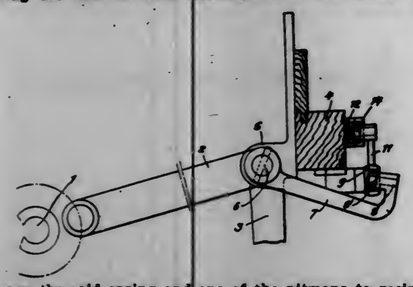


1,458,034. MOLD. MICHAEL JAMES DAVIN, Danville, Ill. Filed Dec. 9, 1922. Serial No. 605,899. 1 Claim. (Cl. 25—131.)

A building form consisting of inner and outer pairs of sections having their inner pairs spaced apart to form an air space and the inner sections having inclined corners to make the corners of the building of great thickness, means for tying the two parts of each wall together, such means consisting of tie members having enlarged ends which are embedded in the walls, said

members having nut members therein and tie rods having threaded parts engaging the nut members for tying the outer forms in place.

1,458,035. AUTOMOBILE LIGHT. MAGGIE THOMPSON DAVISON, Nashville, Tenn., and CHARLES WILES THOMPSON, Chicago, Ill. Filed Dec. 6, 1921. Serial No. 520,378. 2 Claims. (Cl. 240—62.)

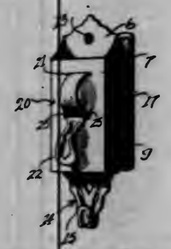


1. In a device of the class described, the combination with a steering rod, a link secured thereto, an offset rod having one end freely operable by said link, said offset rod being vertically adjustable, a forwardly extending rod connected to said offset rod and operable thereby, a transverse bar connected to the front of said forwardly extending rod, rearwardly extending rods connected to the ends of said transverse rods and having a portion bent upwardly for the reception of lamp holders, the said lamp holders operable by said bar, a radiator, brackets secured to said radiator and having bearings for freely supporting said lamp holders and auxiliary lamps adjustably supported by said lamp holders.

1,458,036. DEVICE FOR RELEASABLY LOCKING THE LOOSE REEDS OF POWER LOOMS. RUDOLF DERRER, Ruti, Switzerland, assignor to Maschinenfabrik Rüti, formerly Caspar Honegger, Ruti, Zurich, Switzerland. Filed Apr. 5, 1922. Serial No. 549,764. 5 Claims. (Cl. 139—77.)

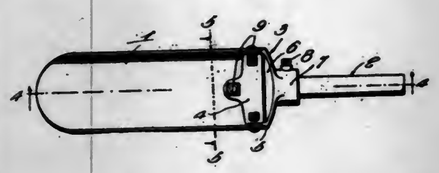
1. In a power loom, in combination, a lay, means for oscillating the lay including a plurality of pitmans, a loose reed capable of being locked, a reciprocating bar on the lay, a pivotally mounted bar for clamping the loose reed to the lay, bolts carried by the clamping bar and passing transversely through the lay for coupling the clamping bar to the lay, means carried by the reciprocating bar and cooperating with the bolts to secure the same

in the coupling position, a spring acting upon the reciprocating bar and the said securing means, and means be-



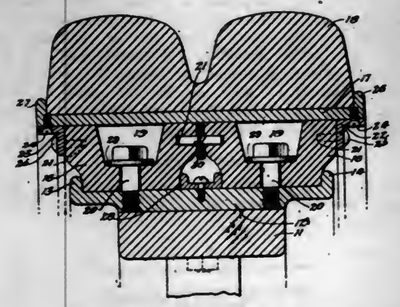
tween the said spring and one of the pitmans to reciprocate the bar in opposite directions, substantially as and for the purposes set forth.

1,458,037. WRENCH. ORVILLE H. DICKEY, Williamstown, Mo. Filed Dec. 7, 1921. Serial No. 520,516. 5 Claims. (Cl. 81—151.)



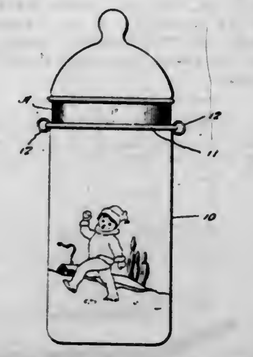
1. In a device of the class described, the combination of a handle including a jaw rigid with said handle, a movable jaw, a lever pivotally connected to said handle for movement in a plane transversely of the plane of movement of said movable jaw, and adjustable interlocking means on said movable jaw and lever, said lever being so positioned within said handle as to lie within the outer hand engaging surfaces thereof.

1,458,038. SMOKER'S APPLIANCE. GEORGE S. EARDLEY, San Jose, Calif. Filed Sept. 7, 1921. Serial No. 499,061. 4 Claims. (Cl. 206—30.)



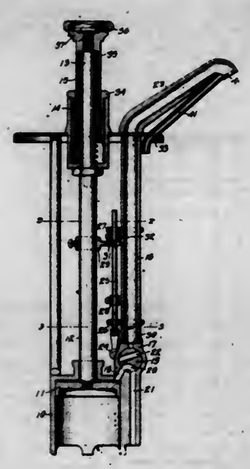
1. A device of the class described comprising, a match holder having a back with means for hanging the device from a supporting structure, a match scratching surface along one side of the holder, a clamping device mounted to the front of the holder and a hook at the bottom of the device, said holder, match scratching surface and hook being formed from a single piece of light sheet metal with ears struck from the thickness of the face of the holder to provide a pivoted mounting for the clamping device substantially as described.

1,458,039. BORING SPADE. WILLIAM EIERMANN, Brooklyn, N. Y. Filed Jan. 20, 1921. Serial No. 438,700. 3 Claims. (Cl. 294—55.)



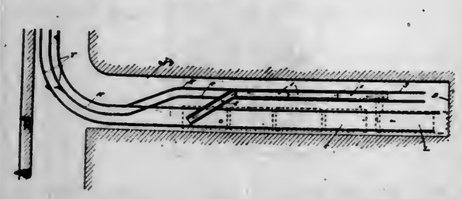
1. A tool of the class described comprising a substantially channel-shaped shovel blade, and a connector for a handle including a transversely curved attaching flange with which one end of the blade is detachably connected, and an integral angularly disposed portion extending across one end of the blade and constituting a back, whereby to form a scoop.

1,458,040. TIRE. CHARLES ESCHER, Jersey City, N. J. Filed Apr. 21, 1922. Serial No. 555,815. 8 Claims. (Cl. 152—36.)



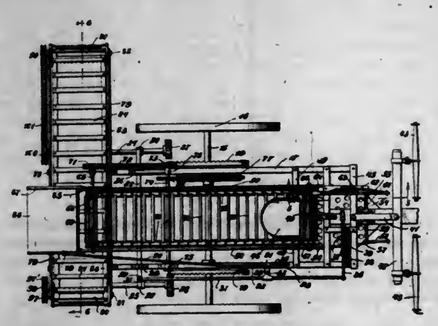
8. As a new article of manufacture, a tire assemblage of the class described, comprising an inner rim having a plurality of threaded openings extending through it, a tire for mounting on said inner rim comprising a plurality of annular cushions having side walls flaring outward from the inner face and having a plurality of countersunk openings extending radially therethrough, screw bolts projecting through said countersunk openings and engaging in said threaded openings in the inner rim attaching the cushions to said rim, an annular channel member mounted on said inner rim between the bases of said annular cushions for spacing them, and an annular ring mounted between the inner edges of said annular cushions, studs carried by said annular ring engaging said annular cushions to prevent movement of one relative to the other, an outer rim mounted on said cushions, annular flange members removably attached to said outer rim for retaining said rim from lateral movement with respect to the cushions, and means in conjunction with said annular flange members for engaging the cushions to prevent circumferential movement of the outer rim on said cushions, and a tread carried by the outer rim.

1,458,041. NURSING-BOTTLE COVER. PHILOMENE FERRIS, Westwood, Calif. Filed Feb. 3, 1922. Serial No. 533,907. 4 Claims. (Cl. 215—11.)



1. A protective covering device for nursing bottles comprising a pouch of flexible material closed at one end and having its other end open and formed with a bead providing reinforcing means, and a storage pocket upon one side of the pouch.

1,458,042. SIRUP PUMP. JOHN B. FLETCHER, Louisville, Ky., assignor, by direct and mesne assignments, of one-eighth to John D. Fletcher, one-fourth to Lee Lewis, one-sixteenth to L. M. Fletcher, and one-sixteenth to Minnie L. Fletcher, all of Louisville, Ky. Filed Aug. 30, 1921. Serial No. 497,013. 4 Claims. (Cl. 221—103.)

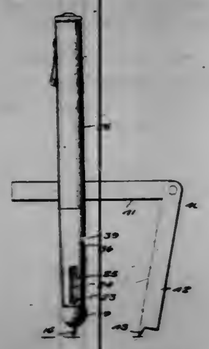


1. A sirup dispensing pump for fountain and such like uses comprising a cover for a sirup container, a depending annular flange on the cover fitting closely to the top of the container, depending members rigidly secured to the cover, a cylinder at the lower end of said members and rigid therewith, an outlet passage in one of said members leading out through said cover, a piston in the cylinder, an inlet passage in the wall of the cylinder, and in line with said outlet passage, a lateral passage connecting them with the interior of the cylinder, a rotary valve at the intersection of said passages, and means on the cover for operating the piston and the valve, substantially as set forth.

1,458,043. METHOD OF AND APPARATUS FOR LOADING MATERIAL. FRANK S. FOLLANSBEE, Grant Town, W. Va. Filed Nov. 26, 1921. Serial No. 517,958. 4 Claims. (Cl. 198—92.)

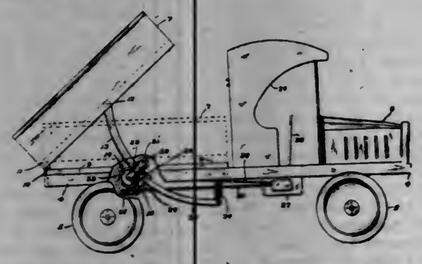
1. A conveyor comprising a plurality of line sections arranged to deliver material from one to another, the delivery end of one section being positioned above the receiving end of the next adjacent section in line, each of said sections embodying an endless conveyor belt and means for imparting travel thereto, side plates extending longitudinally of the conveyor stretch of the belt, the delivery end of one section being spaced from the adjacent ends of the side plates of the other section to permit of relative displacement of said sections in a lateral direction, and plate sections slidably associated with the side plates and adjustable to position spanning the space between the delivery end of one section and the side plates of the next section.

1,458,044. PEANUT HARVESTER. WILLIAM W. FORD, Avinger, Tex. Filed Jan. 10, 1920. Serial No. 350,659. 1 Claim. (Cl. 55—135.)



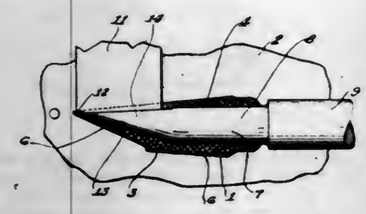
In a peanut harvester, a wheeled frame, an inclined endless elevator supported thereby and operated by the wheels of the frame, a shovel at the forward end of the elevator, a conveyor arranged right angularly with respect to the elevator, disposed therebeneath and supported at the rear of the frame, said conveyor having one of its ends disposed a further distance away from the elevator than its other end, means operated by the wheels of the frame for imparting motion to the conveyor in either of two directions, means controlling the direction of travel of the conveyor, a chute having a cut-out portion to provide projecting sides which are hingedly supported on the frame of the elevator and whereby nuts and vines raised by the elevator may be delivered through the said cut-out portion of the chute on to the conveyor, means supporting the chute in such position, and means for swinging the chute to a downward inclination to receive thereon the nuts and vines from the elevator to deliver said nuts and vines to the rear of the conveyor, and means sustaining the conveyor in such position.

1,458,045. CALCULATOR. WILLIAM MORRISON FRASER, Perth Amboy, N. J. Filed Apr. 15, 1922. Serial No. 553,136. 3 Claims. (Cl. 235—88.)



1. In a calculator, a disk ruled to provide a plurality of concentric graduated circles, a radially disposed indicating arm ruled with transverse arcuate lines coinciding with the circles, said arm adapted to be read simultaneously upon the graduations of the two outer circles, and the graduations of any one of the inner circles to indicate on the inner circle the equivalents in weights and measures of a liquid when its density is indicated on the outer circles.

1,458,046. COMBINATION INSTRUMENT. DANIELE GARLATTI, Iroquois Falls, Ontario, Canada. Filed Dec. 6, 1921. Serial No. 520,375. 7 Claims. (Cl. 33—158.)

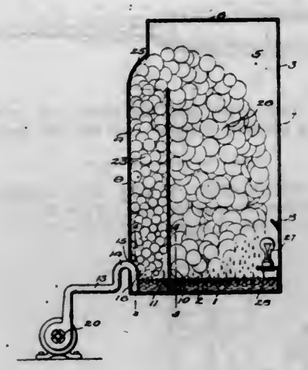


1. A combination instrument embodying a pencil unit, a beam carrying unit, means whereby a compass or caliper beam may be adjustably secured to the beam carrying unit and means for removably securing the pencil and beam carrying units together.

1,458,047. DUMP WAGON. JOSEPH GASSER, Trenton, N. J., assignor to New Jersey Twin Hoist Company, a Corporation of New Jersey. Filed Jan. 6, 1922, Serial No. 527,413. Renewed Apr. 19, 1923. 6 Claims. (Cl. 298—21.)

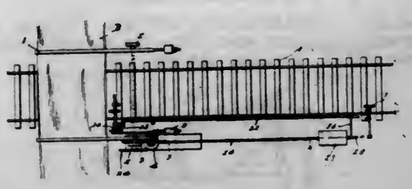
1. The combination with a vehicle understructure and a superposed body hinged to the rear end thereof of an arcuate rack pivoted beneath and intermediate the ends of said hinged body, an arcuate guide supported from the vehicle, a gear housing member, an arcuate guide supported on said gear housing in which said rack is adapted to telescope, means for moving said arcuate rack for effecting the inclination of said hinged body to dumping position and vice versa, and means for locking said racks as the hinged body reaches the limit of its upward movement.

1,458,048. MOLD FOR FORMING SAXOPHONE MOUTHPIECES. ARCHIBALD P. GRAHAM, Elkhorn, Wis. Filed June 10, 1922. Serial No. 567,312. 4 Claims. (Cl. 18—5.)



1. The combination with a die cast mold for forming saxophone mouthpieces, of a metal core removably inserted into said mold and being shaped to provide the interior configuration of a saxophone mouthpiece, said core having a reduced throat forming end, and a metal plunger adapted for insertion into said mold and for resting upon said reduced end to provide the throat opening.

1,458,049. SWING. EUGENE GRIESHABER, Ridgewood, N. Y., assignor of one-half to Michael Scheckenbach, Ridgewood, N. Y. Filed Mar. 24, 1922. Serial No. 546,394. 1 Claim. (Cl. 155—59.)

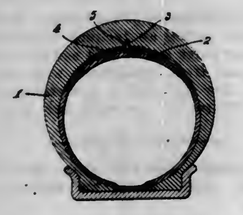


A device of the character described comprising a frame, a swing pendently mounted in the frame, a stud fixed to the frame and projecting outward, a curved spring arm having a depending elongated loop integral with it mounted on said stud, a crank arm having a stud fixed thereto, said stud making sliding engagement with the elongated loop, and a spring motor for operating the crank arm to operate the spring arm.

1,458,050. ADVERTISING DEVICE. FRANK R. CHESTER, Asbury Park, N. J. Filed Aug. 28, 1922. Serial No. 583,758. 7 Claims. (Cl. 40—126.)

6. In an advertising device, in combination, a tank, a bubble chamber open at the top supported therein, an opening at the lower end of the bubble chamber below the water level in the tank, means for forcing air under pressure into the bubble chamber below the water level therein, and means adjacent the lower end of the bubble chamber for bursting the bubbles in the tank.

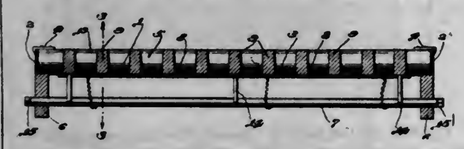
1,458,051. AUTOMATIC GRADE-CROSSING BLOCK. WILLIAM LEE GRIFFIN, Dallas, N. C. Filed Sept. 16, 1922. Serial No. 588,672. 3 Claims. (Cl. 246—272.)



1. In combination with a barrier for a railroad crossing, a cylinder, a piston therein connected with the barrier, a cylinder placed at each side of the crossing, pipes connecting the cylinders together, said cylinders containing a fluid, a piston in each of the other cylinders, a spring for forcing each of said pistons forwardly, latch means for holding the pistons in retracted position, means on the train for releasing the latch means so as to permit the springs to force the pistons forwardly and thus expel the oil from the track cylinder into the gate cylinder and means located adjacent the crossing and actuated by the train for returning the parts to normal position.

1,458,052. HAIR CURLER. WALTER C. GRUSS, Pittsburgh, Pa. Filed Oct. 16, 1922. Serial No. 594,920. 10 Claims. (Cl. 132—41.)

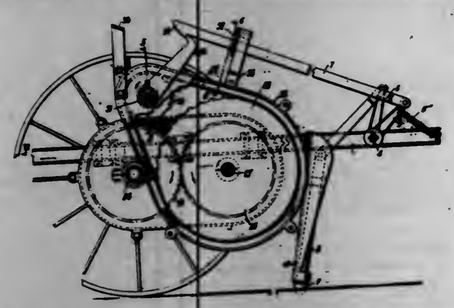
10. A hair curler of the character described comprising a plurality of independent curlers arranged in end to end relation, said curlers being slightly spaced apart, flexible connections between the adjacent curlers, each curler including a tubular body portion, a clamping bar pivoted at one end of the body portion and designed to partly embrace the latter when arranged parallel therewith in clamping position, and resilient extensions projecting from said clamping element and designed to engage the body of the curler to hold the parts fixed relatively when in use.



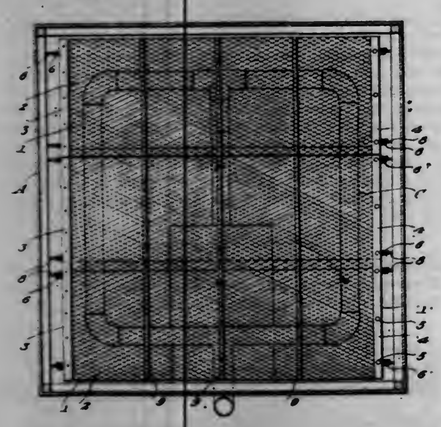
1,458,053. PATCH. WILLIAM G. HANDLY, St. Albans, Vt. Filed Feb. 20, 1922. Serial No. 538,031. 1 Claim. (Cl. 152—24.)

A self-vulcanizing boot for tire casings comprising a flexible member which is arcuate in both longitudinal and transverse section, thickest at its center and feathered at its ends and edges, said boot being made up of layers of self-vulcanizing rubber material and having embedded between the layers the heads of pointed elements, said elements passing through the outer layers and being disposed in spaced relation at the center of the boot, and the outermost layer of the boot being centrally formed with a longitudinally extending rib through which the pointed elements pass and said rib being of a less length than that of the boot.

1,458,054. MOLD FOR CORNCRIB STAVES. ALVIN HEMPHILL, Joliet, Ill. Filed Dec. 13, 1921. Serial No. 522,072. 6 Claims. (Cl. 25—41.)



1. In a mold for forming concrete building blocks or staves, a body including a bottom provided with a plurality of longitudinally spaced openings, a plurality of cores for insertion through said openings, means for connecting said cores, and means for synchronously moving the cores into or out of said mold, strips extending longitudinally along the edges and within said mold, one of said strips provided with a concave inner surface and the other being provided with a convex inner surface.



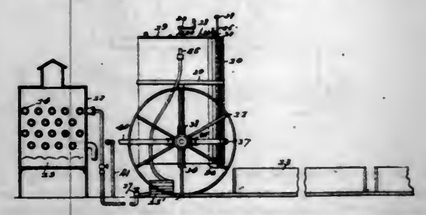
1,458,055. CHECKROW CORN-PLANTER ATTACHMENT. THOMAS HIGGINS, Davenport, Iowa. Filed Dec. 15, 1919. Serial No. 345,048. 2 Claims. (Cl. 111—30.)

1. In a check row planter attachment, the combination with a frame, a rock shaft supported thereby, marking mechanism adapted to be actuated by said rock shaft, an

operating bar carried by said rock shaft and extending substantially longitudinally of said frame, said bar provided with a curved outer end, and having an offset portion constituting an abutment, a trip arm mounted upon said frame, means for swinging said trip arm, said trip arm adapted to engage the outer end of said bar for moving the same longitudinally of said frame, an upstanding releasing member having an inclined upper face for engaging the curved outer end of said bar and automatically releasing the same from engagement with said trip arm when said bar has travelled a predetermined distance, and means to return the operating bar to an operative position.

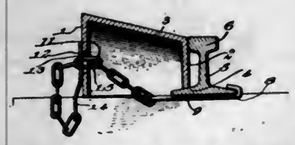
1,458,056. SCREEN. JONAS N. HILL, Deep Run, N. C. Filed July 22, 1921. Serial No. 486,916. 1 Claim. (Cl. 34—19.)

A shield for the heating pipes of tobacco barns comprising a section of wire mesh, superimposed strips having the ends of each section secured therebetween, bolts passing through the strips of one end, whereby the screen may be adjustably associated therewith, coil springs carried by the strips for securing the sections at the side walls of the barn and to provide a cushioning means for the falling tobacco leaves, cross strips secured to each section to prevent sagging of the screen and hooked rods connected with some of said cross pieces and the cross beams of the barn respectively.



1,458,057. FISHING ROD. WILLOUGHBY F. HOLLISTER, Cowen, W. Va. Filed Jan. 16, 1922. Serial No. 529,637. 2 Claims. (Cl. 43—23.)

1. A fishing rod butt comprising an elongated tube serving as a socket within which the larger end of a rod is secured, a sleeve secured externally upon said tube and formed with a reel seat and a reel securing ring, a receptacle secured within and projecting beyond the open end of the sleeve and having one side open, and a handle



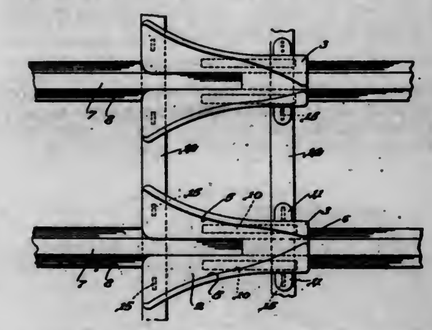
having one end closed and the other end open and threaded and normally engaged upon the free end of the sleeve.

1,458,058. STOCK-FEED MIXER AND DISPENSER. HENRY HOPPES, Wilsonville, Nebr. Filed Dec. 17, 1920. Serial No. 431,520. 1 Claim. (Cl. 119—51.)

A stock feed dispensing apparatus embodying a portable tank, means for introducing a heated moistening agent into the latter, said means comprising an inlet connection disposed adjacent the top of the tank and formed with a terminal discharge mouth, a float valve operatively disposed with reference to said discharging mouth to close the latter upon the attainment of a certain level of the moistening agent, an agitator disposed adjacent the bottom of the tank, exposed manually operating means for said agitator, and a valve controlled discharge in the bottom of said tank.

1,458,059. CAR-REPLACING DEVICE. WILLIAM A. HUBBARD, Hoquiam, Wash. Filed Jan. 13, 1923. Serial No. 612,522. 4 Claims. (Cl. 104—265.)

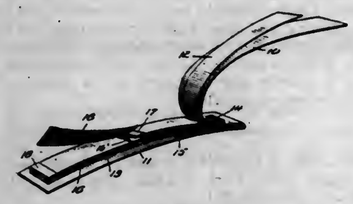
1. A car replacing device comprising a replacer body comprising segmental shaped vertical side walls and an arcuate top connecting said side walls, one of said side walls being of less height than the other and terminating at its lower edge at a higher level than the horizontal plane of the lower edge of the second side wall, whereby the first side wall is adapted to rest upon one side of the base flange of a rail when the second side wall rests upon a tie upon which the rail is supported, the said second side wall having an opening formed therethrough, and means engaging with the base flange of the rail at the side thereof remote from the body and extending transversely of said body through the opening in the second side wall for holding the body clamped against the rail.



1,458,060. MINE ALARM INSTRUMENT. CHARLES W. HUAL, Nanty Glo, Pa., assignor to Miners Supply and Equipment Company, Johnstown, Pa., a Common Law Trust Estate. Filed Dec. 6, 1921. Serial No. 520,245. 5 Claims. (Cl. 116—67.)

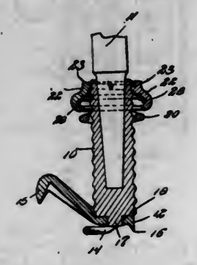
5. A device for the purpose set forth comprising a standard, a laterally disposed arm carried thereby, a sounding element secured to said arm, a bell crank lever pivoted to said standard and including a vertical and a horizontally disposed arm, said horizontally disposed arm sufficient in proximity to and adapted when shifted to actuate said sounding element, a pressure exerting member

carried by the vertical arm of said lever and adapted when pressure is applied thereto to shift said lever causing thereby the operation of the sounding element by the horizontal arm of the lever, means to provide for the adjusting of said pressure operated element, and means to provide for adjusting the length of said standard.



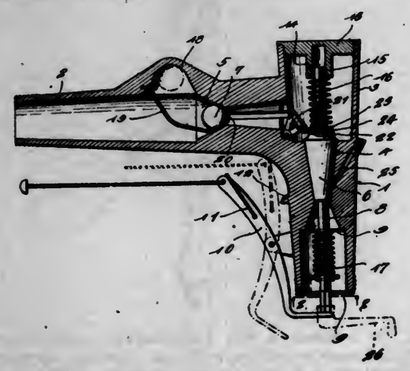
1,458,061. RERAILER. ELMER G. JACKSON, Elmhurst, Ill. Filed Nov. 8, 1921. Serial No. 513,774. 1 Claim. (Cl. 104—270.)

A rerailer comprising a body having its top provided with compound curved edges merging into a depression at the head end of the body, flanges projecting laterally from the body at a point below said depression, said flanges having a flat top surface horizontally disposed, and spurs projecting downwardly from the bottom surfaces of said flanges, said flanges adapted to rest upon a tie and said spurs to be forced into the tie by striking against the top surface of the flanges.



1,458,062. DENTIST'S ARTICULATING PAPER. FREDERICK W. KEITH, Belfast, Me., assignor to S. H. Reynolds Sons Co., Boston, Mass. Filed June 17, 1921. Serial No. 478,327. 4 Claims. (Cl. 282—28.)

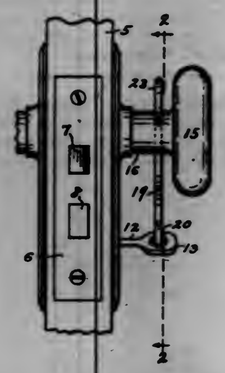
1. An impression sheet or strip for dental work, comprising a length of prepared carbon paper, and finger tabs of a non-carbon paper secured on opposite sides of the length of carbon paper, one of said tabs being disposed at the transverse center of the latter and the other at



one end of the same, the length of carbon paper being adapted to be severed immediately adjacent the centrally disposed tab at the side thereof nearest the tab at the end of the length of carbon paper.

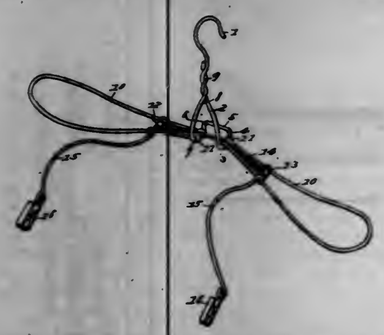
1,458,063. MOP HOLDER. CHARLES E. KOESTER, Jr., Koester, Mo., assignor of one-half to Edwin A. Darrow, St. Louis, Mo. Filed Apr. 29, 1921, Serial No. 465,441. Renewed Apr. 21, 1923. 3 Claims. (Cl. 15—153.)

1. A mop holder comprising a handle-receiving ferrule, a guide bar at one end of the ferrule, a gripping member slidable in guide openings formed in said guide bar to provide a clamp, a grooved nut threadedly engaging the said ferrule, and a ring loosely encircling the said ferrule and having outstanding projections, certain of which are connected to the said gripping member and certain others engaged in the groove in the said nut whereby the ring is swiveled to the latter.



1,458,064. BLOW-OFF VALVE. ANTON KUSHLAN, Brownsville, Pa. Filed Nov. 22, 1920. Serial No. 425,812. 8 Claims. (Cl. 277—27.)

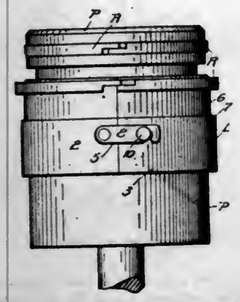
5. A blow-off valve for the purpose set forth comprising a body including two communicating passages having valve



seats therein, check valves for co-action with these seats, said valves being adapted to be unseated by the water when filling the boiler, and adapted to be manually unseated when draining the boiler or relieving it of excessive steam, a rod carried by one of the valves, and means between said rod and other valve for unseating the latter, said means being effective when draining the boiler or relieving it of steam and having detachable connection with said rod to permit said one valve to be removed from the body for making repairs.

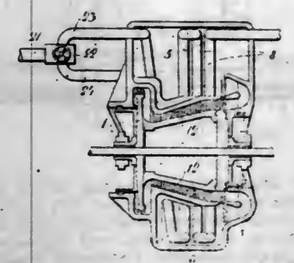
1,458,065. KEY FASTENER. EMIL H. LARKINS, Cleveland, Ohio. Filed Mar. 2, 1922. Serial No. 540,439. 2 Claims. (Cl. 70—65.)

1. A key-fastener consisting of a single piece of wire which has a bowed and resilient central portion arranged to embrace the upper portion of and seat on the shank of a door-knob and has one end portion thereof arranged below said shank-embraceable portion and bent to form a hook arranged to extend under and thence upwardly through the bow or handle of a key to be fastened, said piece of wire having its upper or opposite end portion bent to form a handle arranged largely above and extending in the main circumferentially of the aforesaid shank-embraceable portion.



1,458,066. COAT ADJUSTER. EDWARD P. LE COMPTE, Park City, Utah. Filed June 14, 1922. Serial No 568,113. 4 Claims. (Cl. 45—13.)

1. The combination with a coat hanger having a vertically arranged suspending hook and oppositely extending substantially horizontal support members adapted to be placed within the shoulder portions of a coat, of forwardly extending arms having their rear ends connected to the oppositely extending support members and provided at their forward ends with fastening members adapted to detachably engage the lapels of a coat supported by said hanger.



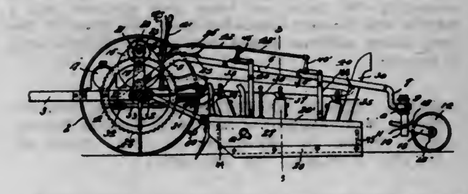
3. A combination as claimed in claim 1 in which the oppositely extending support members are pivotally connected to the suspending hook, and resilient means connecting said support members and adapted to yieldingly maintain the same in a substantially horizontal position.

1,458,067. PISTON-RING TOOL. MICHAEL S. LINTON, Memphis, Tenn. Filed Oct. 13, 1921. Serial No. 507,446. 2 Claims. (Cl. 29—86.4.)

1. A piston ring tool comprising a hollow cylindrical body formed with two outer diameters thereby providing a shoulder intermediate the end of said body and further providing said body with a reduced portion, that part of said body of smaller diameter forming a piston ring receiving portion and said shoulder limiting the rearward movement of the rings with respect to said body when mounted on said portion of smaller diameter, said body portion formed of two semi-cylindrical sections hinged at one side and detachably connected together at the other side and with the edges of one section abutting throughout against the edges of the other section.

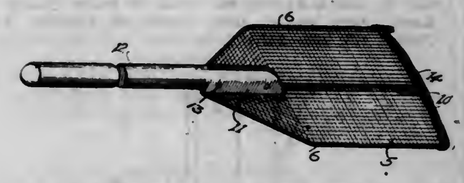
1,458,068. MEANS FOR PREVENTING FORMATION OF RUST IN TURBINES BEING AT REST. FREDRIK LJUNGSTRÖM, Brevik, Lidingon, Sweden. Filed Mar. 23, 1921. Serial No. 454,950. 9 Claims. (Cl. 253—1.)

1. In combination a turbine and its casing, and a heating element placed within the casing and arranged to heat the gaseous medium in the turbine, so as to prevent the formation of rust.



1,458,069. FASTENER FOR AUTOMOBILE CHAINS. WILLIS LONDON, Franklin, Ky. Filed Feb. 14, 1920. Serial No. 358,771. 3 Claims. (Cl. 24—230.5.)

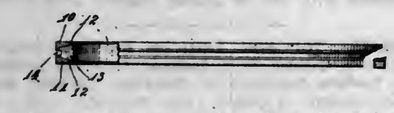
1. A fastener for chains comprising a body portion having a circuitous slot extending inwardly from one edge thereof, a hook projecting laterally into said circuitous slot, and a shoulder extending outwardly from the end of the body portion in opposite direction from the hook, in combination with a link which is less in



length than the distance between the ends of the oppositely disposed hook and shoulder, whereby the link is prevented from passing the ends of the hook and shoulder at the same time.

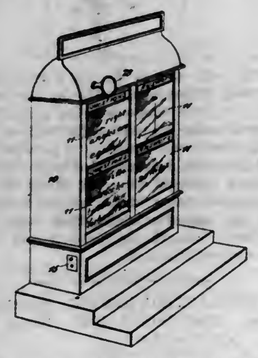
1,458,070. INSECT EXTERMINATOR. WILLIS C. LONG, CHARLIE P. LONG, and JOSEPH M. STEPHENS, Hastings, Okla. Filed Jan. 24, 1922. Serial No. 531,437. 7 Claims. (Cl. 43—144.)

5. In an insect exterminator, a wheeled frame designed to pass over growths containing insects and their larva, a burner carrying sled supported from the frame and arranged directly over the growth, the runners of the sled being hollow and having knife edges, means for delivering a fuel to the burners which, when ignited is directed downwardly between the runners of the sled, means for forcibly delivering currents of air through the runners and the top of the sled, means confining the flame between the runners, and means for extinguishing the flame during the passage of the sled over the burning growth.



1,458,071. INSECT-DESTROYING DEVICE. MITSUTARO NAKAMURA, Chico, Calif. Filed Dec. 31, 1921. Serial No. 526,221. 1 Claim. (Cl. 43—137.)

A device of the character described comprising a flat rectangular frame, an upstanding fold formed in said rectangular frame, said fold causing a tapering of said frame throughout the length of the fold, a reenforcing strip contacting said fold throughout the length of said fold and continuing in contact with the flat portion of said frame to its opposite extremity, and a bifurcated handle engaging said fold and said strip, substantially as and for the purpose described.



1,458,072. PISTON RING. CHESTER OHLER, Sugar Creek, Mo. Filed Nov. 22, 1921. Serial No. 516,957. 1 Claim. (Cl. 74—109.)

A piston ring of the character described comprising a body section wedge shaped in cross section and having its inner periphery of greater width than the outer, an upper and lower section having their opposed faces beveled to converge outwardly and designed to engage the inclined faces of said body section in a manner so

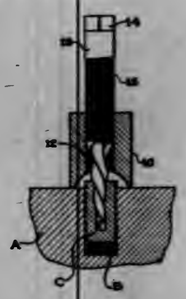
that the outer periphery of the body section and upper and lower sections are all disposed in the same plane, the body section being heavier and larger than the upper and lower section and having its small periphery provided with an annular groove for the purpose specified.

1,458,073. DISPLAY DEVICE FOR ADVERTISING AND EDUCATIONAL PURPOSES. RAFAEL PADILLA, New York, N. Y. Filed Mar. 11, 1921. Serial No. 451,610. 7 Claims. (Cl. 40—93.)

1. In a device of the class described, the combination of reversely driven shafts, a main driving shaft, clutch mechanism for effecting driving of said main driving shaft by either of said reversely driven shafts, a plurality of rolls driven by said main driving shaft, a flexible strip operable by said rolls, and means supported in said rolls and controllable by said flexible strip to effect operation of said clutch mechanism.

1,458,074. TOOTHBRUSH. ABRAHAM PIKOOS, Baltimore, Md. Filed Mar. 22, 1922. Serial No. 545,810. 1 Claim. (Cl. 15—167.)

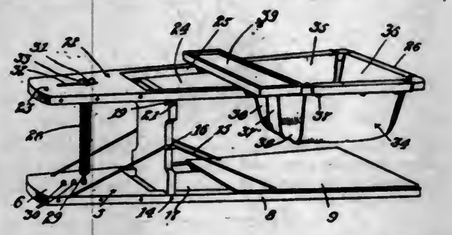
In a tooth brush, parallel heads each having bristles, a central and end spacing element integrally formed on one of the heads and interengaging the other head, means



on the last mentioned head engaging one of said spacing elements for connecting the heads, and a short handle pivoted on the central spacing element and in the path of contact with the end spacing elements.

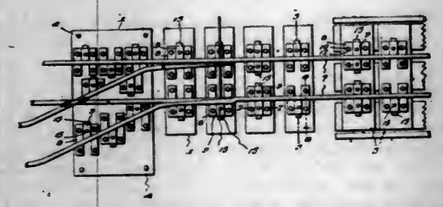
1,458,075. TOP FOR VEHICLE BODIES. CHARLES P. POND, Camden, N. Y., assignor of one-half to George L. Traffarn, Camden, N. Y. Filed Sept. 13, 1921. Serial No. 500,366. 4 Claims. (Cl. 296—23.)

1. A vehicle body open at the top, a separate roof therefor, transversely disposed supports for the front and rear ends of the roof, said supports being permanently hinged at their lower ends to said body and at their upper ends to said roof for permitting a parallel longitudinal raising and lowering movement of said roof; and additional supports beneath the roof along the sides, said additional supports being hinged at one longitudinal edge and free at the opposite longitudinal edge, to swing to a folded position beneath the lowered roof or to upright positions to support the roof.



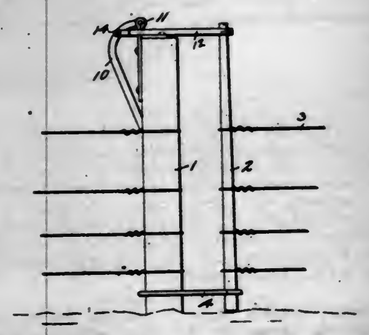
1,458,076. EXTRACTING DEVICE. CLIFTON W. POTTS, Plano, Tex. Filed June 3, 1922. Serial No. 565,529. 2 Claims. (Cl. 81—71.)

1. A tool of the character described comprising a nut member having an angular portion engageable by a turning tool, said nut member having a right hand threaded bore, a right hand threaded shank screwed through said bore and formed with an angular portion engageable by a turning tool, and a left hand cork screw like reamer at the free end of said shank member.



1,458,077. BABY JUMPER. ALBERT T. REID, Leavenworth, Kans. Filed Nov. 29, 1922. Serial No. 604,078. 1 Claim. (Cl. 155—18.)

In a baby jumper, a lower stationary frame embodying a body portion having spaced arms extending longitudinally from one end of said body portion and forming an opening between said arms, an upright provided at its lower end with a tongue extending between said arms within said opening, said upright being provided at its top with a rounded head and spaced substantially vertical slots and an opening extending longitudinally through said rounded head and passing through said slots, a transverse pin passing through said tongue and arms of the lower frame, an upper frame similar to the lower frame and embodying a body portion carrying spaced longitudinal arms at one end thereof, said arms forming an opening therebetween of sufficient width for the reception of a child, the arms of the upper frame resting upon said rounded head, eye-bolts depending from the

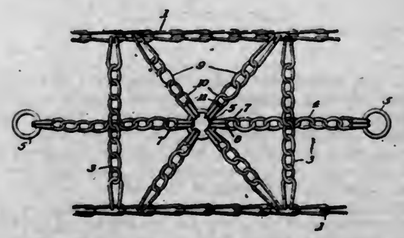


arms of the upper frame and arranged within said slots, a pivot element passing through the longitudinal opening in the head and through said eye-bolts, braces connecting the upright and lower frame, a yielding element connecting the upper and lower body portions, and a flexible seat element suspended from the arms of the upper frame, said last named arms constituting the sides of the seat.

1,458,078. TRACK CONSTRUCTION. JOHN ROBERTS, Elmira, N. Y., assignor of one-half to Carolina Roberts, White Haven, Pa. Filed Oct. 22, 1921. Serial No. 509,470. 2 Claims. (Cl. 238—290.)

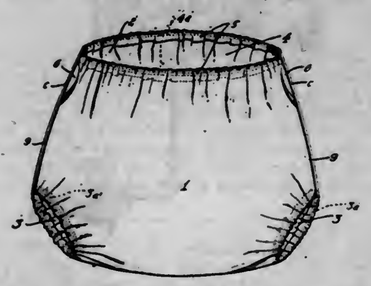
1. In combination with a tie plate having spaced slots therein, a casing having outwardly extending base flanges mounted over the slots, a bolt mounted in the casing adapted to engage a track rail, and means securing said casing to the tie through the slots therein.

1,458,079. GATE FASTENER. CECIL P. RUPPE, Oakley, Kans. Filed Mar. 3, 1921. Serial No. 449,413. 1 Claim. (Cl. 292—247.)



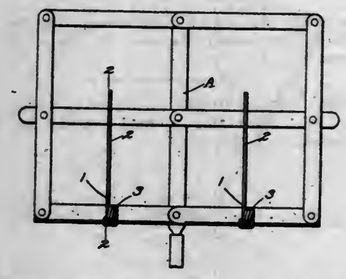
In combination, a fence post, a gate post, a strap comprising a plate having a slot therein and curved adjacent the slot so as to form spaced journals and a retaining ear, means for attaching the retaining ear and the plate to one of the posts, a lever pivotally mounted at one end to the journals of the strap, and a loop pivotally attached to the lever intermediate its ends and adapted to engage the other post.

1,458,080. BRAKE-SHOE SPREADER. EDWARD F. SHIMER and RAYMOND I. FREY, Phillipsburg, N. J. Filed Feb. 6, 1922. Serial No. 534,526. 3 Claims. (Cl. 188—78.)



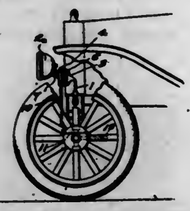
3. As a new article of manufacture a brake shoe spreader for automobile brake operating cams consisting of an elliptical sleeve having a longitudinal V-shaped slot therein whereby said sleeve is adapted for ready expansion onto a brake operating cam and secure retention thereon.

1,458,081. AUTOMOBILE TIRE CHAIN. HARRY SMITH, Scioto Mills, Ill. Filed Feb. 13, 1922. Serial No. 536,240. 1 Claim. (Cl. 152—14.)



In an anti-skid chain for pneumatic tires, side chains, a circumferential tread chain around the tire disposed centrally between the side chains, said central tread chain being constructed of sections, rings at the confronting ends of the sections, and the end links of the said sections being bent around the rings and projected outwardly to provide calks, angularly arranged pairs of cross chains having their outer links connected to the side chains and their inner links bent around the respective rings and outturned to provide calks, and cross chains overlying the central tread chain and disposed centrally between the opposed pairs of angularly arranged cross chains.

1,458,082. VENTILATED SANITARY GARMENT. JACOB STEIN, New York, N. Y. Filed Dec. 12, 1922. Serial No. 606,456. 5 Claims. (Cl. 128—288.)



1. A garment comprising a trunk-like body having waist and leg openings, said garment having an opening in each of its side portions, reinforcing strips secured to said body of the garment and extending in a general lengthwise direction across said openings in the sides of the garment.

1,458,083. ATTACHMENT FOR MUSIC STANDS. SPENCER H. STEPHENSON, Center Point, Iowa. Filed July 26, 1922. Serial No. 577,658. 1 Claim. (Cl. 45—61.)

A device of the class described comprising a single piece of material bent to form a straight part, a coil at one end thereof and a double loop connected with the coil and forming a pair of jaws, said loop consisting of a U-shaped part and parts parallel to the legs of the U-part, one parallel part being connected with the coil.

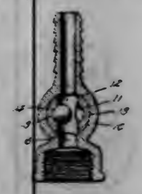
1,458,084. MOVABLE HEADLIGHT. MYRON BURNHAM STROUT, Poland, Me. Filed June 21, 1922. Serial No. 569,905. 1 Claim. (Cl. 240—62.)

In combination with a motor vehicle and its head lamps, a pair of castings carried at the front of the car, a vertically arranged bolt in each casting, a casting connected with each head lamp and having a vertically arranged opening therein for receiving a bolt, a projection arranged on each casting of the lamps and extending into the space within the first mentioned casting, a link having its ends engaging said projections, a rod having its upper end connected with said link and its lower end bent to extend under the vehicle, a plate connected with said bent end, turn buckles connected with the plate, clamps on the steering arms and links connecting the turn buckles with said clamps.

1,458,085. POTATO GRADER. MILTON B. TABOR, Swanton, Vt. Filed Sept. 6, 1918. Serial No. 252,880. 1 Claim. (Cl. 193—31.)

In a potato grader, the combination of a pair of spaced hoppers, means for delivering potatoes of various sizes thereto, an angularly disposed inclined chute secured to the bottom of one of said hoppers, a valve controlling the outlet of said chute, a depending chute secured to the second hopper, a door pivotally secured centrally and longitudinally of the last mentioned chute dividing the same into two parts, means for operating the door to hold the outlets of the chute wholly opened,

partly opened or to close either of the said outlets and to serve as a directing means to the outlet of the other



compartment, and a retarding means for the door operating means for holding the door in any of its several positions.

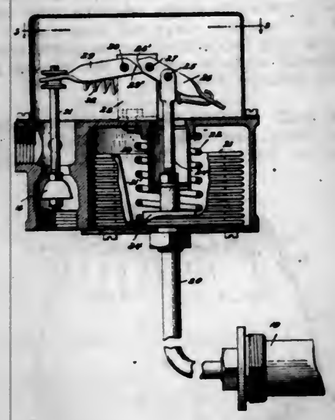
1,458,086. CHAIN HOOK. IGNATIUS L. THIEL, Derrick City, Pa. Filed July 1, 1922. Serial No. 572,143. 2 Claims. (Cl. 24—239.)

1. A chain hook comprising a shank adapted to have one end secured to one end of a chain, a rigid jaw formed on the opposite end of the shank, spaced link receiving seats provided in the rigid jaw and a spring actuated jaw slidingly mounted upon the shank for preventing accidental removal of the link from either seat.

1,458,087. SAFETY VALVE. ROY P. TOOLEY and CHARLES W. JOHNSON, Wichita Falls, Tex. Filed July 8, 1922. Serial No. 573,550. 1 Claim. (Cl. 67—115.)

A valve comprising a valve casing, a rotary valve plug operating therein and having a transverse bore reduced at both ends, a ball valve arranged to operate within the bore, and closing the upper end thereof to prevent the escape of gas when the valve is casually opened, said valve having diametrically opposed recesses communicating with and merging into the bore of the valve and adapted to receive said valve and hold the latter in an out of the way position when the valve is opened, one of said recesses receiving the ball when the plug is turned to a closed position, and each recess being slightly less than one-half of the diameter of the ball in depth for the purpose specified.

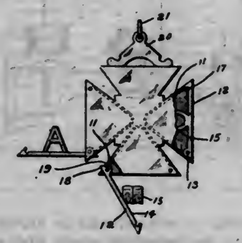
1,458,088. SHOE LACE. LEROY F. UNNOLD, Brooklyn, N. Y. Filed May 19, 1922. Serial No. 562,178. 5 Claims. (Cl. 24—143.)



1. For a lace-shoe, an elastic lace, and a device at one end of said lace having an attaching part which grips the lace and lace crimping means for the securement of the free end of the lace to said device.

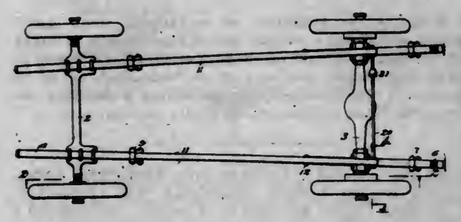
1,458,089. SCALE ATTACHMENT. FRANK RUSH WAINWRIGHT, Jersey City, N. J. Filed Oct. 7, 1921. Serial No. 506,021. 3 Claims. (Cl. 40—28.)

1. The combination with a weighing scale, of an attachment therefor comprising a casing having a window opening, a rotary drum in said casing, a strip having indicia inscribed thereon secured at one edge of and wound upon said drum, a weight at the free lower edge of said strip, and means operable upon movement of the actuating mechanism of the weight indicating element for rotating said drum in a direction to effect the unwinding of the strip for the display of certain of the advertising indicia through the window opening.



1,458,090. WATER-HEATING APPARATUS. HAROLD EDWARD WALDRON, Highland Park, Mich. Filed Dec. 14, 1921. Serial No. 522,351. 9 Claims. (Cl. 236—48.)

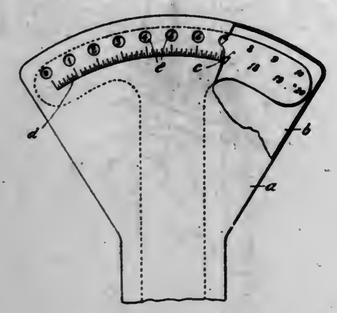
1. In a storage water heater apparatus, in combination, a storage tank, a water heater connected thereto, a thermostat responsive to the temperature in the storage



tank, means for supplying gaseous fuel to the water heater including a control valve, and connections between the thermostat and valve whereby the valve is given in closing an initial slow movement and a final quick movement to closed position and is given in opening a quick movement to full open position.

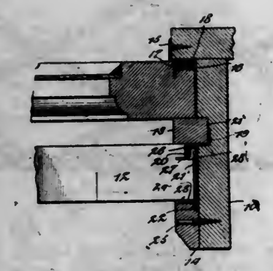
1,458,091. BADGE. EDWARD L. WEED, Providence, R. I., assignor to Potter & Buffinton Company, Providence, R. I., a Corporation of Rhode Island. Filed July 14, 1921. Serial No. 484,742. 3 Claims. (Cl. 40—1.5.)

1. A badge comprising a pair of oppositely-disposed plates shaped to represent the desired insignia and secured together in spaced-apart relation to form a chamber between them, a movable symbol-carrying member for closing the opening between said plates and adapted to be manipulated to expose its symbol and back to house the same in said chamber, a stop for limiting the swinging movement of said member, and a hook carried by said member adapted to engage a pin which connects the spaced arms to secure the said member in closed position, said badge being adapted to be attached to a support.



1,458,092. VEHICLE FRAME SUSPENSION. THOMAS WILSON, Indio, Calif. Filed Mar. 27, 1922. Serial No. 547,061. 5 Claims. (Cl. 280—124.)

1. In a vehicle suspension of the character described, a pair of suspension bars, means for connecting the front of the rear spring of a vehicle and the rear end of the front spring of a vehicle to said bars intermediate their length, means for pivotally connecting the front ends of said bars in a fixed position with relation to the front spring, and means for swingingly connecting the rear ends of said suspension bars in respect to the rear spring.



1,458,093. DIAL FOR SCALES. SÖREN WISTOFT, Copenhagen, Denmark. Filed Oct. 7, 1921. Serial No. 506,127. 2 Claims. (Cl. 265—36.)

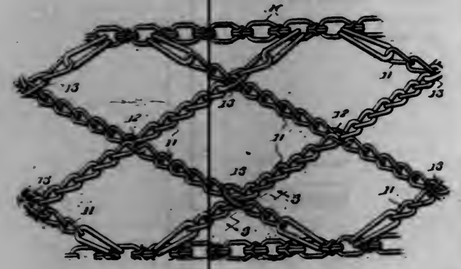
1. In a scale of the kind on which weighing is possible either from 0–p kilograms or from p to 2p kilograms, a dial, consisting of a front wall, bearing division marks and window holes corresponding therewith, and a rear wall, a movable plate member between the said walls, said member adapted to be moved vertically up and down, on the scale being set to the one or the other of the said weighing modes, on said movable member two rows of figures, corresponding to the said two weighing

modes, said rows of figures so arranged that, when the scale is set for the one mode of weighing, the figures of the one row are visible in said window holes in the front wall whilst the other row of figures is covered, and vice versa, when the scale is set for the other mode of weighing, and the said movable member is in the one or the other of its positions, respectively.

1,458,094. WEATHER STRIPPING. JOSEPH YASSENOVSKY, New York, N. Y. Filed June 17, 1921. Serial No. 478,390. 3 Claims. (Cl. 20—69.)

1. A window construction comprising a window frame, a sash, a window stop, a parting strip, a metal slide secured to said sash and formed with a laterally extended finger, and a member secured to said window frame by said window stop and said parting strip and provided with a run-way for receiving the finger of said slide, said member having tensioning means engageable with said sash irrespective of the changes in size of the same.

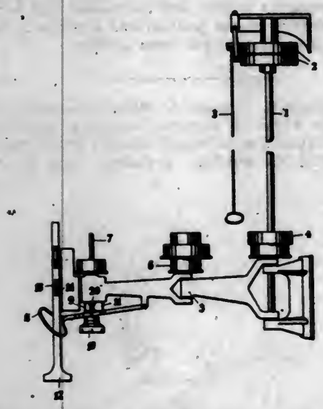
1,458,095. BROOM HEAD. GUY DRAKE, Whitman, Nebr. Filed May 24, 1921. Serial No. 472,204. 5 Claims. (Cl. 15—171.)



1. A holder for broom heads comprising a socket member provided with piercing prongs thereon adapted to extend into the broom head, a yoke member extending from the socket member, the legs of said yoke member being adapted to lie at opposite sides of the broom head,

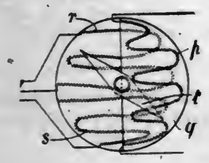
a securing band consisting of a pair of members hingedly connected at one of their ends and each adapted to lie

on opposite sides of the broom head and over the ends of said yoke member, and means for securing the ends of said band together tightly about the broom head.



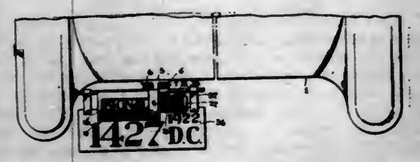
1,458,096. CHAIN. EMERSON E. GARRETT, Wallace, W. Va. Filed Nov. 6, 1922. Serial No. 599,341. 1 Claim. (Cl. 152—14.)

A non-skid chain embodying side chains, diagonally arranged oppositely disposed crossed chains connecting the side chains and arranged in substantially diamond-shaped formation, said crossed chains meeting at spaced points, means for positively connecting the crossed chains at their central meeting points and means connecting said crossed chains at points upon opposite sides of their positively connected points to permit of relative movement upon one another.



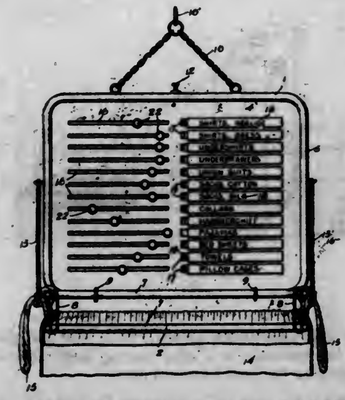
1,458,097. STONE AND LIKE WORKING MACHINE. KARL RUDOLF HAERTING, Berlin, Germany. Filed Mar. 28, 1921. Serial No. 456,137. 2 Claims. (Cl. 25—41.)

1. A radial stone and like working machine, comprising a vertically reciprocating ram, a horizontal operating shaft, a sector mounted on said shaft so as to engage and raise the ram by friction and then let it drop, an acceleration shaft rotating in opposite direction from the operating shaft, pivoted arms holding said acceleration shaft, a friction wheel connected to said latter shaft, tappets connected to the operating shaft so as to co-operate with said arms for rocking the same so as to apply the friction wheel to the ram at the moment it



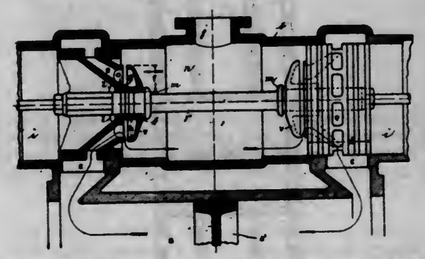
is about to drop, a vertical axially adjustable driving shaft geared to the operating shaft, and a hand lever controlling said driving shaft.

1,458,098. METHOD OR MEANS FOR AMPLIFYING OR OTHERWISE INDICATING SMALL MECHANICAL EFFECTS. ERNEST SYDNEY HEURTLEY, London, England. Filed Apr. 11, 1919. Serial No. 289,337. 12 Claims. (Cl. 175—320.)



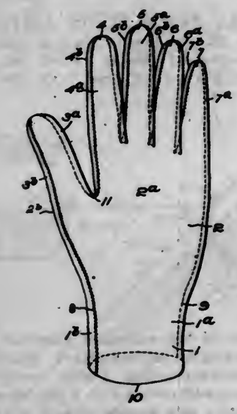
3. Means for indicating or magnifying small movements comprising a current heated conductor, a plurality of juxtaposed electrically conductive wires, and means to vary the relative positions of the conductors so as to produce a difference of potential across a receiving instrument in an additive or cumulative manner.

1,458,099. SIGNAL SYSTEM FOR VEHICLES. WILLIAM WALTER KNIGHT, Birmingham, Ala. Filed Apr. 12, 1922. Serial No. 551,824. 5 Claims. (Cl. 116—43.)



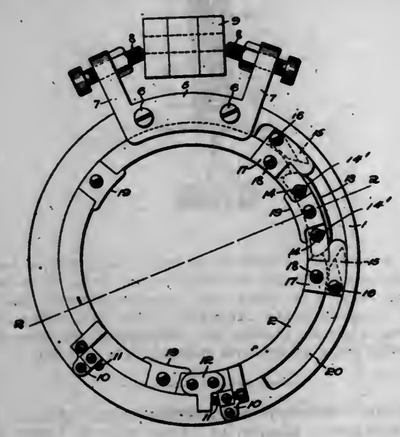
1. In a signal system, a device for giving a plurality of visible signals, and means for operating the signal device to present the visible signals selectively and to actuate a device for producing audible signals coincidentally with the presentation of the visible signals and in such manner that the extent of the audible signal produced varies with the visible signal presented.

1,458,100. LAUNDRY-BAG SUPPORT. ERNEST RUDOLF KNOPF, Greenwich, Conn. Filed Apr. 8, 1921. Serial No. 459,793. 4 Claims. (Cl. 40—28.)



1. A laundry bag support comprising a frame provided with an indicator, a second frame hinged at its lower end to the lower end of the first frame to swing into vertical and horizontal positions, said second frame being provided with a member to which the mouth of a laundry bag is adapted to be secured, and means for holding said frame in a vertical position, whereby when the frame is in a vertical position, the first frame will be concealed by the bag and the articles prevented from falling out of said bag.

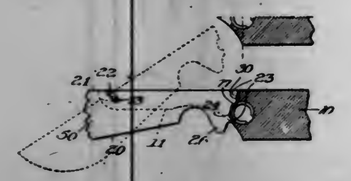
1,458,101. PRESSURE-EQUALIZING VALVE FOR PISTON VALVES. HEINRICH KOCH, Hamm, Germany. Filed Nov. 25, 1921. Serial No. 517,769. 1 Claim. (Cl. 121—134.)



In a steam engine, a valve casing communicating with an exhaust pipe at its ends and having an inlet chamber, a piston valve having two spaced valve bodies connected by a rod, each valve body of the piston valve being provided with passages communicating with the engine cylinder and the inlet chamber of the valve casing, hubs formed on the valve bodies and encircling the connecting rod in spaced relation thereto to afford an annular space between said hubs and the connecting rod, pressure equalizing valves loosely mounted on said connecting rod and coacting with said piston valve bodies to normally close the passages therein, hubs formed on said pressue equalizing valves and being guided in the annular space between the hubs of the valve bodies and the connecting rod, and shoulders on said connecting rod for limiting the opening movement of the pressure equalizing valves, said pressure equalizing valves being automatically opened by the differential action of the pressures in the engine cylinder and the inlet chamber when the pressure of the engine cylinder exceeds that in the inlet chamber of the valve casing and also being automatically opened by the differential action of the pressures in the exhaust pipe and the inlet chamber when a vacuum is formed in the engine cylinder, whereby both ends of the engine cylinder are put into communication with each other and the pressures therein are equalized.

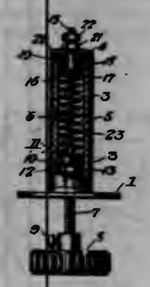
1,458,102. KNITTED GLOVE AND METHOD OF MAKING THE SAME. GEORGE P. BOSWORTH, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed May 20, 1919. Serial No. 298,458. 17 Claims. (Cl. 66—4.)

1. A knitted glove characterized by the formation from distinct yarns of a tubular blank composed of two sections of fabric united during the knitting thereof by suture seams composed of interknitted terminal loops of said sections, each of said sections of fabric including integrally knitted substantially co-extensive areas of the thumb and digit coverings of the glove.



1,458,103. SINKER OR WEB-HOLDER CAM MECHANISM FOR KNITTING MACHINES. GEORGE P. BOSWORTH, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Original application filed Oct. 1, 1920, Serial No. 414,085. Divided and this application filed Mar. 30, 1922. Serial No. 548,160. 10 Claims. (Cl. 66—26.)

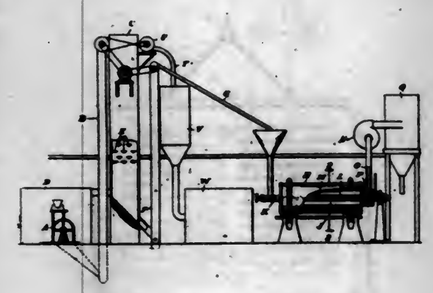
1. In circular knitting mechanism employing a circular series of sinkers, web holders or like instrumentalities, and



a bed ring receiving the same, a cap ring for said instrumentalities adapted to overlie said instrumentalities and bed ring and including relatively movable inner and outer curved members together providing a groove for the reception of the entire series of instrumentalities, advancing and retracting cams carried wholly by one of said members, means to permit predetermined relative movement between said inner and outer members, and means to permit a predetermined shogging movement of said ring.

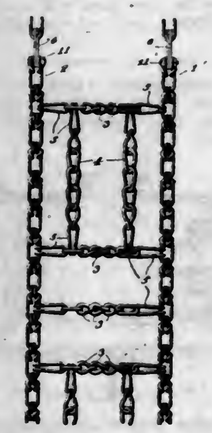
1,458,104. DETACHABLE-BLADE KNIFE. HAROLD BRIX, Chicago, Ill., assignor to Sharp & Smith, Chicago, Ill., a Corporation of Illinois. Filed Jan. 20, 1922. Serial No. 530,598. 10 Claims. (Cl. 30—9.)

1. In a device of the character described, a handle comprising a hand-grip portion and a blade-supporting portion, the blade-supporting portion comprising two parallelly arranged stiff prongs with a slot between adapted to accommodate a thin flexible blade, a pin joining the prongs near their ends, a thin flexible blade adapted to fit in the slot between the prongs, a notch in the upper edge of the blade adapted to embrace the pin joining the ends of the prongs, and a notch at the back end of the blade adapted to engage with spring means in the handle.



1,458,105. RHEOSTAT. SOLOMON RITTER HIPPLE, Williamsport, Pa., assignor to D. X. Instrument Company, Harrisburg, Pa., a Corporation of Delaware. Filed Sept. 6, 1922. Serial No. 586,433. 4 Claims. (Cl. 219—50.)

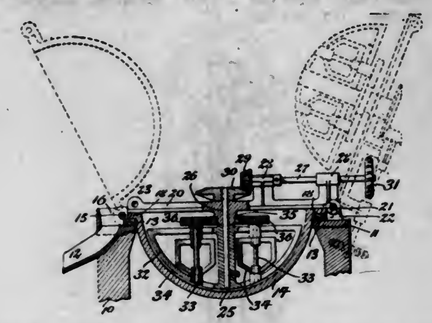
1. A rheostat comprising an insulating casing, a body of granular conductive material therein, terminals in said casing adapted to engage said granular material, one of said terminals being adjustable within the casing and having a piston thereon for compressing the granular material and a tapered end engaging said material.



1,458,106. METHOD OF MAKING FUEL. WILSON L. MCLAUGHLIN, Decatur, Ill. Filed Mar. 26, 1919. Serial No. 285,324. 1 Claim. (Cl. 83—11.)

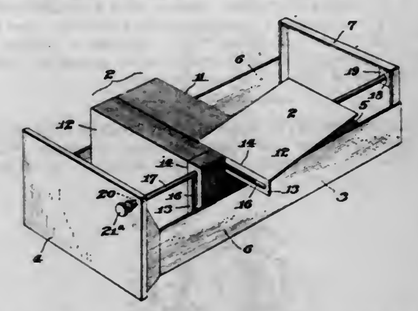
The method of commercially reducing fuel to impalpability which consists in comminuting the fuel, then removing substantially all the moisture therefrom, then pulverizing the material to an impalpable powder, then

removing the impalpable powder from the crusher by carrying the material in a slow moving body of air and then separating the fuel from the air.



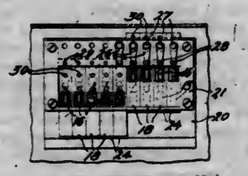
1,458,107. ANTISKID CHAIN. JAMES ALBERT SINCELL, Grafton, W. Va. Filed Jan. 27, 1923. Serial No. 615,252. 5 Claims. (Cl. 152—14.)

2. An anti-skid chain for tires, comprising circumferentially arranged side chains, transversely and circumferentially spaced circumferentially extending chains located between the side chains, transversely extending chains connected to the side chains and to the terminals of the circumferentially spaced chains and other transversely extending chains arranged between the circumferentially spaced chains.



1,458,108. MOUNTING FOR FUSION KETTLES. OLIVER S. SLEEPER, Buffalo, N. Y., assignor to Buffalo Foundry & Machine Company, Buffalo, N. Y., a Corporation of New York. Filed Nov. 10, 1919. Serial No. 336,801. 2 Claims. (Cl. 259—102.)

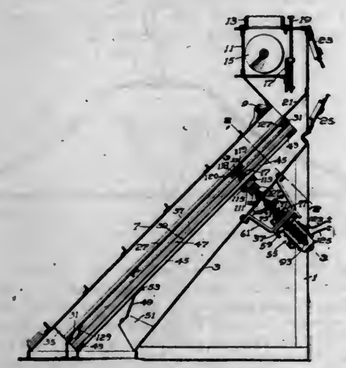
1. A supporting frame provided with a spout, a saddle mounted on said frame and capable of being tilted toward said spout, a kettle mounted on said saddle and arranged normally within said frame but movable with said saddle, and means for stirring the contents of said



kettle mounted on said frame and capable of being raised independently of said kettle and saddle so as to clear the same.

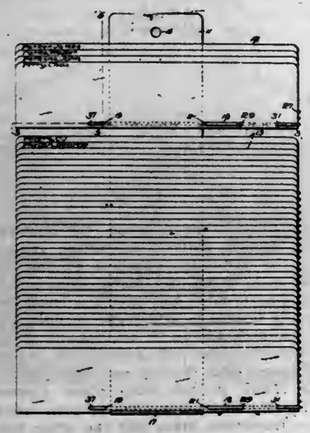
1,458,109. RECORD-FILING DEVICE. THOMAS SPENCE, Philadelphia, Pa., assignor of one-half to Carleton E. Davis, Philadelphia, Pa. Filed Mar. 15, 1922. Serial No. 543,963. 3 Claims. (Cl. 129—16.)

3. A filing card comprising a main body portion and a narrower vertically extending edge portion hingedly connected thereto and having substantially a vertically extending slot therein for the reception of a retaining rod.



1,458,110. COMPUTING MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Mar. 5, 1921. Serial No. 449,810. 28 Claims. (Cl. 235—60.)

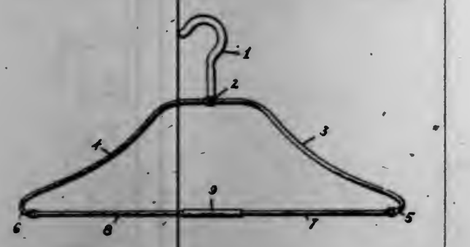
1. In an algebraic computing machine, the combination with number-wheels having digits to represent positive values and other digits to represent negative values, of means to indicate a row of positive digits from which positive results are to be read and two rows of negative digits from which negative results may be read, partly from one row and partly from the other, and a series of



individual shutters overlying the respective number-wheels, each of said shutters having an aperture of sufficient size to expose a single digit, said shutters being movable to positions to expose the digits of the positive-reading row when positive results are to be read, and to expose negative digits in the negative-reading rows when negative results are to be read.

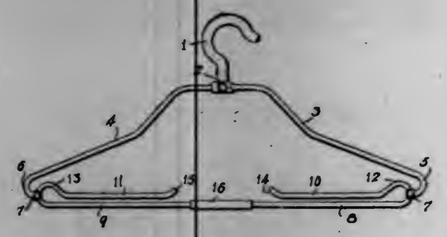
1,458,111. ELECTRICALLY-VIBRATED SCREEN. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 28, 1922. Serial No. 557,109. 15 Claims. (Cl. 83—56.)

1. A separator for grading materials, comprising, in combination, a support, a screen resting on, but not connected to said support, and electro-magnetic means for imparting vibrations of minute amplitude to said support and through the support to the screen in a direction transverse to the plane of the screen the latter being free to vibrate on and relatively to said support.



1,458,112. FILING EQUIPMENT. JOHN T. QUIGLEY, Boston, Mass., assignor to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 13, 1920. Serial No. 358,455. 17 Claims. (Cl. 129—16.)

1. In a file, the combination of a sheet-support, a series of overlapping sheets overlying one side of said

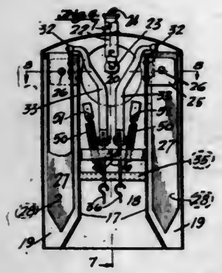


support and having means overlying the other side of said support attached to the sheet in such position as to predetermine the minimum exposure of the overlapping margins of said sheets, and having provision for detaching the same from said supoprt without disturbing the remaining sheets.

1,458,113. GARMENT HANGER. JOHN L. SOMMER, Newark, N. J., assignor to J. L. Sommer Manufacturing Co., a Corporation of New Jersey. Filed Dec. 19, 1918. Serial No. 267,442. 3 Claims. (Cl. 211—13.)

1. In a folding garment hanger, the combination of a suspending member, garment supporting arms pivotally connected to said suspending member so as to swing in a plane common to said arms and suspending member, a bar section for each of said arms pivotally connected at one end thereto to swing in the said common plane, and means for separably holding the free ends of said bar sections in alinement to maintain the said arms in extended position, whereby the arms and bar sections can be made rigid and each moves independently of the others in folding the hanger.

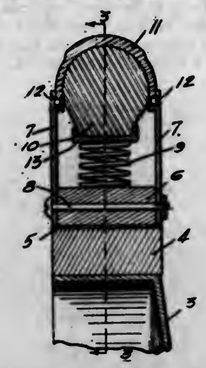
1,458,114. GARMENT HANGER. JOHN L. SOMMER, Newark, N. J. Filed Aug. 9, 1919. Serial No. 316,307. 3 Claims. (Cl. 211—13.)



1. In a folding garment hanger, the combination of a suspending member, garment supporting arms each comprising a rod pivotally connected to said suspending member so as to swing in a plane common to said arms and suspending member and having a lower end portion bent laterally inward in said plane, doubled bar sections in said plane each having its doubled end pivoted to one of said inwardly bent end portions of the supporting arms and spaced from the adjacent supporting arm so as to swing freely in the same plane therewith, said doubled bar sections having two of their arms adapted to form a transverse brace and the other two forming trousers clamps, and means for separately holding the free ends of said brace arms in alinement to maintain the garment supporting arms in extended position.

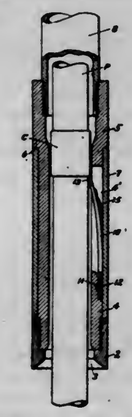
1,458,115. HOUSING FOR FLEXIBLE SERVICE TUBES AND CABLES. WILLIAM T. CALDWELL, Glendale, Calif. Filed Oct. 1, 1921. Serial No. 504,824. 7 Claims. (Cl. 299—77.)

1. A housing for flexible service tubes and cables comprising an elongated housing provided with an opening through which a contained flexible member is adapted to pass, and separable antifriction rollers arranged within said housing adjacent to said opening.



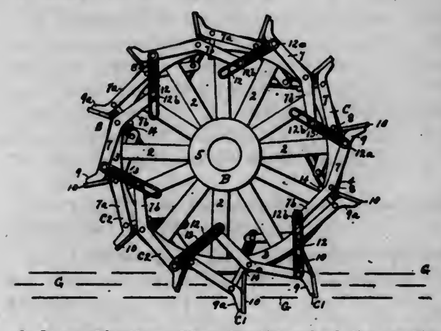
1,458,116. TRAFFIC SIGNAL FOR MOTOR VEHICLES. GEORGE DOOSE and CARL GARTNER, Pasadena, Calif. Filed Oct. 6, 1921. Serial No. 505,714. 11 Claims. (Cl. 116—36.)

1. The combination with a motor vehicle, and the steering mechanism associated with the front wheels thereof, of a signal device located on the rear portion of the body of the vehicle, a pair of signalling arms forming a part of said device, connections from said signalling arms to parts of the steering mechanism associated with the front axle, whereby said signalling arms are actuated to correspond with the movement of the actuated parts of the steering mechanism, and means connected to a part of the vehicle operating means for simultaneously actuating both of the signalling arms.



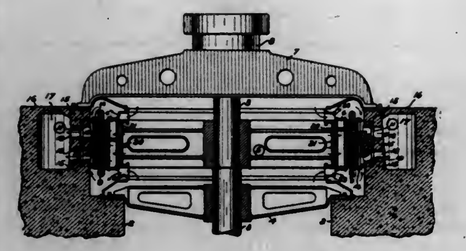
1,458,117. SPRING TIRE. TILLMAN H. GAMMON, Los Angeles, Calif. Filed Sept. 22, 1921. Serial No. 502,320. 1 Claim. (Cl. 152—8.)

A spring tire comprising an annular series of circumferentially spaced compression springs adapted for positioning upon the rim of a wheel, a ring formed of two semi-circular sections surrounding and engaging said springs, a tire core surrounding and supported on said ring, a tire casing embracing the core, and means for



securing the tire casing to said rim and in embracing position with respect to the core.

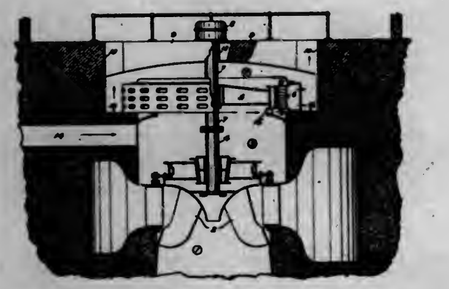
1,458,118. CUTTING OVERSHOT. JOSEPH A. PLANTE, San Pedro, Calif. Filed Aug. 25, 1922. Serial No. 584,265. 3 Claims. (Cl. 81—180.)



2. An overshot fishing tool having, in combination, spring hooking bars having pipe engaging ends provided with cutting means.

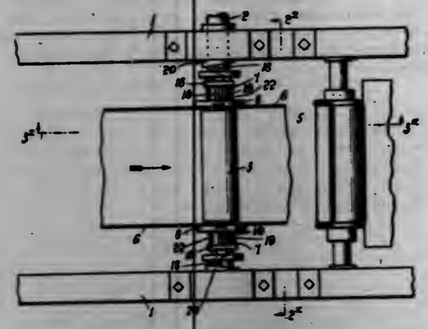
1,458,119. GROUTER FOR WHEELS. JOHN F. ROBERTS, Fresno, Calif. Filed May 3, 1921. Serial No. 466,427. 2 Claims. (Cl. 301—48.)

2. In combination with a traction wheel the combination of a grouter attached to arms pivoted to the rim of the wheel, the pivots permitting the grouter to be held adjacent to the periphery of the wheel or moved a spaced distance therefrom, an extension attached to said arms, and a link pivoted at one end to one of the arms, and the opposite end of the link being pivoted to said extension, said extension and link being adapted to move the grouter adjacent to the link toward the periphery of the wheel when the grouter attached to the arms is moved away from the wheel, and a spring normally adapted to hold the grouters adjacent to the periphery of the wheel.



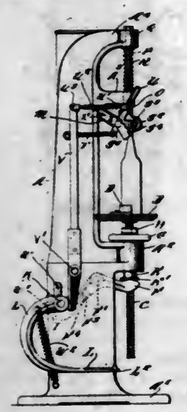
1,458,120. MAGNET AND DYNAMO-ELECTRIC-MACHINE STRUCTURE. ROBERT B. WILLIAMSON, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed June 8, 1918. Serial No. 239,327. 22 Claims. (Cl. 171—252.)

6. A dynamo-electric machine, comprising a concrete supporting structure having air passages, a core supported by said structure having air passages cooperating with the passages in said structure.



7. In a stator for dynamo-electric machines, a concrete structure having a core receiving opening, means for sustaining said core including substantially annular means within said opening provided with means for engaging said core and means associated with said annular means embedded in said concrete structure.

1,458,121. DYNAMO-ELECTRIC MACHINE. ARTHUR J. BROWN, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 29, 1918, Serial No. 252,275. Renewed Nov. 10, 1922. Serial No. 600,188. 7 Claims. (Cl. 171—252.)



1. In combination, a dynamo-electric machine having a rotor and a stator, a base for said stator, a thrust bearing for said rotor above said machine and a bridge or arch supported by said base for supporting said bearing.

1,458,122. SHEET-CUTTING MACHINE. ARTHUR CHEETHAM, Toronto, Ontario, Canada, assignor of one-half to Fred M. Bawden, Toronto, Ontario, Canada. Filed Nov. 5, 1920. Serial No. 421,926. 15 Claims. (Cl. 164—64.)

1. In a device of the class described, means for the notching of the margin of a moving sheet, said means comprising a notched member over which said margin travels, a punch complementary to the notch in said member rotary means adapted to carry said punch into and out of juxtaposition with the margin of said sheet, said punch practically agreeing in speed and direction of movement with the said sheet when juxtaposed therewith, and means effecting the passage of said punch through said sheet and out of the path of the said sheet during such juxtaposition.

1,458,123. SEMIAUTOMATIC BOTTLE-CAPPING MACHINE. EDMUND A. HEY, La Grange, and JOHN G. LEPERE and LYLE K. WEBBER, Decatur, Ill., assignors to The Williams Sealing Corporation, Decatur, Ill., a Corporation of Connecticut. Filed May 3, 1919. Serial No. 294,572. 8 Claims. (Cl. 226—81.)

1. In a bottle capping machine, the combination with a movable bottle support and a chuck adapted to receive a cap having a lever, of a lever turning finger, a pivoted member adapted to actuate said lever turning finger and springs connected to the opposite ends of said pivoted member, one of said springs being connected to a fixed support and an actuating lever connected to the opposite end of the other spring.

Patents Nos. 1,458,124 to 1,458,922.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 311—No. 2. TUESDAY, JUNE 12, 1923. Price—$5 per year.

[PUBLISHED JUNE 12, 1923.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Trade-Mark Index.

Beginning with the issue of June 5, 1923, the index of titles of trade-marks published for opposition will be arranged by classes, taking the place of the alphabetical list of trade-mark titles published for opposition, and the index of titles of trade-marks registered will be arranged by classes, taking the place of the alphabetical list of trade-marks registered.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,343,462, E. A. Mellinger, Telephone-exchange automatic switching system, decided Apr. 27, 1923, claims 55, 56, 58, 60, 61, 67, 69, 75, 76, 77, and 79.

Pat. 1,382,571, H. Terhune, Steam-hammer guide, decided Mar. 3, 1923, claim 1.

Pat. 1,429,933, A. H. De Voe, Attachment for sewing machines, decided Apr. 30, 1923, claims 2, 5, 6, and 14.

Pat. 1,436,252, R. A. Heising, System for producing modulated waves, decided May 5, 1923, claims 9 and 18.

Pat. 1,439,991, L. E. Barringer, Molded material and method of preparation, decided May 5, 1923, claims 1 and 2.

Interference Notices.

U. S. PATENT OFFICE, *Washington, May 14, 1923.*

Walter F. McCaleb, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the patent granted April 20, 1920, No. 1,337,844, to Walter F. McCaleb, Federal Reserve Bank, Dallas, Tex., and an application for patent filed by William S. Gubelmann, 773 Richmond Avenue, Buffalo, N. Y., and a notice of such declaration sent by registered mail to said McCaleb at the said address having been returned by the post office undeliverable, notice is hereby given that unless said McCaleb, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

U. S. PATENT OFFICE, *Washington, May 11, 1923.*

Harry Paul Senay, his assigns or legal representatives, take notice:

An interference has been declared by this Office between the application of The Reese Chemical Company, 1945 East 97th Street, Cleveland, Ohio, for registration of a trade-mark and trade-mark registered November 3, 1914, No. 101,015, to Harry Paul Senay, 601 H Street NE., Washington, D. C. The Office having been unable to secure service upon said Senay, notice is hereby given that unless said Senay, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

Amendments.

In order to insure the prompt delivery of amendments to the proper examining division, applicants are requested in their actions on applications to give the division number and the room number appearing on the last Office letter, as well as the date of such letter.

Drawings.

Attention is called to paragraphs *g* and *i* of Rule 52 of the Rules of Practice of the Patent Office, and inventors and attorneys are directed to omit from the space outside of the marginal line of the drawings any marks of identification, inasmuch as the space referred to is reserved for the use of the Patent Office. Such identifying-marks should be placed upon the back of the drawings.

Condition of Applications Under Examination at Close of Business June 1, 1923.

(Total number of applications awaiting action, excluding Trade-Mark Division, 73,230: Trade-Mark Division, 3,972. Oldest new case, June 9, 1922; oldest amended, June 6, 1922. The dates given are 1922 except where * indicates 1923.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

PUPIN AND ARMSTRONG *v.* MEISSNER.

No. 1,541. Decided February 5, 1923.

1. INTERFERENCE—PRIORITY—DILIGENCE.

Where P. and A. made a sketch March 16, 1915, which contained a full disclosure of every count of the issue and there was nothing to be done thereafter except to continue their experiments with a view to perfecting their invention to a point where its commercial utility would be assured, but the length of time required for the completion of this auxiliary work does not definitely appear, *Held* that the interval between June 2, 1915, the filing date of M.'s application, and November 1, 1915, when P. and A. directed the filing of an application, was too long.

2. SAME—SAME—PUBLICATION OF INVENTION.

The publication of a booklet in September purporting to have been read in March before the Institute of Radio Engineers can not change the result, for at most it constitutes but cumulative evidence of a disclosure as of the date of the reading and did not amount to a constructive reduction to practice.

Mr. W. H. Davis for Pupin and Armstrong.

Mr. Octavius Knight for Meissner.

Before ROBB and VAN ORSDEL, Associate Justices, and Judge SMITH, of the U. S. Court of Customs Appeals, sitting in place of Chief Justice Smyth.

ROBB, *J.:*

Appeal from concurrent decisions of the Patent Office tribunals in an interference proceeding in which priority of invention was awarded the patentee Meissner, whose patent was granted prior to the filing date of Pupin and Armstrong. Therefore it is incumbent upon the junior parties to prove their case beyond a reasonable doubt.

Meissner's application was filed June 2, 1915, and the claims of the issue, four in number, were taken from his patent. In the oath accompanying his application he refers to two German applications involving the same subject matter and filed there on April 9th and May 30th, 1914. The Patent Office found it unnecessary, as do we, to determine whether Meissner is entitled to constructive reduction to practice on these German applications, under the provisions of the International Convention.

The invention is of a highly technical character and relates to a device for receiving radiosignals in the form of high-frequency oscillations. The receiving device includes an amplifying relay of the vacuum-tube repeater type, with means for superimposing upon the high-frequency oscillations audible low-frequency impulses. Under certain conditions the low-frequency impulses interfere with the reception of the high-frequency signals in telephone receivers, and the purpose of this invention is to prevent or at least minimize such interference. One way of securing this result is to interpose in the circuit, between the relay and the telephone receivers, an auxiliary device permitting the transmission of the high-frequency oscillations but restraining or preventing the transmission of the low-frequency impulses. It is unnecessary to repeat the claims here, since there is no serious question as to their meaning.

Professor Armstrong, an instructor in electrical engineering and radiotelegraphy in the Hartley Research Laboratory at Columbia University, testified that the "complete conception (of the invention) occurred some time prior to the middle of February, 1915"; that immediately thereafter he tested his system and prepared a paper entitled "Some Recent Developments in the Audion Receiver," which "was delivered in New York on March 3, 1915." Before reading this paper he submitted it to Professor Pupin, his superior and co-inventor, with whom it was discussed. The particular feature of this discussion was—

> a difficulty which had arisen in the operation of this receiver which had theretofore prevented the reception of trans-Atlantic signals by this method. This difficulty was due to the production of a continuous tone in the telephone receivers by the low frequency current circulating in the circuits of the modulating tube. * * * Professor Pupin made various suggestions regarding the elimination of this difficulty, and as a result of this discussion I evolved and tried a circuit for reducing this disturbance. This circuit is illustrated in a sketch which I made on March 16, 1915. The circuit here shown gave a great improvement in the reduction of this residual tone.

The witness further stated that there still remained a residual tone—

> which was troublesome on very weak signals, particularly if a low frequency amplifier was used in connection with the detector.

Acting upon the suggestion of Professor Pupin, an artificial line between the modulating tube and the detecting apparatus was designed, but the length of time required for the completion of this auxiliary work does not definitely appear. It does appear, however, that the work was done in the laboratory. In response to a question calculated to elicit the information, the witness said:

> I am unable to recall this date definitely, but it was some time during the summer of 1915.

He further stated that he and Professor Pupin were engaged in other investigations during this time, resulting in the filing of three applications for patent by Professor Pupin on September 11, December 11 and December 31, 1915, and three applications by Pupin and Armstrong jointly, in addition to the one in interference, the dates being September 17 and October 1, 1915, when two were filed. The witness further testified that he believed it was "some time in the end of October, 1915" when he and Professor Pupin instructed their attorneys to prepare a patent application, which was filed on February 10, 1916.

Professor Pupin's testimony is even less specific than that of Professor Armstrong. After testifying that the March 3, 1915, paper was submitted

to and reviewed by him, he was asked whether Professor Armstrong discussed the alleged defect with him, and answered:

Well, I don't recollect the discussion, but it would be the most natural thing to discuss with him, and undoubtedly I did discuss it.

In response to the question as to what, if any, suggestions were made by him, he said:

I don't know when I discussed with him the desirability of a better filter, but I certainly discussed it with him some time after that date when I first saw the manuscript of the paper of March, 1915, and considerably prior to our filing the application.

Asked why no application was filed until February of 1916, the witness replied:

Because we were not successful in suppressing the local modulating low frequency until we introduced a satisfactory pilot conductor.

Two other witnesses, Professor Cushman and a Mr. Liebowitz, a mechanical and electrical engineer, who worked in the laboratory during the period here involved, and who witnessed the Armstrong sketch of March 16, 1915, identified that sketch, but neither witness was asked as to the activity of the junior parties to this interference during that period.

There also was offered in evidence a booklet or quarterly publication, bearing date of September, 1915, and purporting to contain the "proceedings of the Institute of Radio Engineers." In this publication is an article entitled "Some Recent Developments in the Audion Receiver," with a footnote reading as follows:

Delivered before the Institute of Radio Engineers, New York, March 3, 1915, and before the Boston Section, April 29, 1915.

[1, 2] The Patent Office found, and we concur in the finding, that the sketch of March 16, 1915, contained a full disclosure of every count of the issue. Indeed, the testimony of Professor Armstrong is to that effect, and in their brief counsel for appellants go even further when they there contend that the conception of the invention was complete on March 3, 1915, and that thereafter—

there was nothing to be done except to continue their experiments with a view to perfecting their invention to a point where its commercial utility would be assured.

We agree with the tribunals of the Patent Office that there is no evidence in the record warranting a finding of diligence on the part of appellants between the date of the March 16th sketch and November 1st, when the preparation of an application was directed. It is significant that the two witnesses who were in a position to know what was done during that period were not questioned as to the activity of appellants. The application of Meissner was filed on June 2nd and appellants' inactivity continued for several months thereafter. In the circumstances of the case, this was too long an interval. The publication in September of the paper purporting to have been read in March can not change the result, for at most it constitutes but cumulative evidence of a disclosure as of the date of the reading. Counsel for appellants evidently appreciated this, for in their brief they state:

The sketch of March 16, 1915, itself is accompanied by brief explanatory notes referring to different portions of the circuits. By means of this sketch and the March 3, 1915 Institute publication anyone skilled in the radio art would be able to set up and operate the invention defined in *all of the counts* of this interference.

In other words, counsel here recognize that the publication, standing alone, did not amount to a constructive reduction to practice. Moreover, that publication was three months subsequent to the filing of the Meissner application. We repeat that appellants have failed to sustain the burden of proof, and we therefore must affirm the decision of the Patent Office.

Affirmed.

Court of Appeals of the District of Columbia.

STANDERWICK *v.* KANE.

No. 1,555. Decided April 3, 1923.

CLAIMS—CONSTRUCTION OF.

Held that in claims which originated in S.'s application, and therefore are to be interpreted with particular reference to his disclosure, the words "substantially constant" mean "sufficiently constant for satisfactory operation"; in other words, that it was a practical and not a theoretical question.

Mr. A. G. Davis and *Mr. A. E. Bobst* for Standerwick.

Mr. G. F. De Wein and *Mr. Jno. J. Kane* for Kane.

Before ROBB and VAN ORSDEL, Associate Justices, and SMITH, Judge U. S. Court of Customs Appeals.

ROBB, *J.*:

Appeal from a decision of the Patent Office in an interference proceeding awarding priority of invention to the party Kane, whose application was filed five days prior to that of Standerwick.

The invention relates to turbine-driven dynamos, primarily intended to be mounted on locomotives, to furnish the current for headlights, classification lights and cab lights. In this sort of an apparatus, a suitable regulator to control the speed of the turbine under various conditions is necessary. Of these conditions the most common are increase in steam pressure above normal and decrease in the load of the generator, brought about either by failure of some of the lights or the turning out of some of them. It is obvious that an increase in the speed of the generator would raise the voltage of the current produced. The lights used with such an apparatus being of the incandescent type, a marked increase in the voltage of the current supplied above their rated voltage is destructive. The object of this invention was to supply a regulator to meet these conditions. The issue is expressed in four counts, of which the 2d and 3d are sufficiently illustrative, as follows:

2. In combination, an electric generator, a supply current connected thereto, a variable load connected to said supply circuit, and a magnetic drag for the generator comprising a winding connected across the supply circuit and shunt to the generator for maintaining substantially constant voltage on said supply circuit.

3. In combination, an electric generator, a supply circuit connected thereto, a variable working load connected to said supply circuit, and a magnetic drag comprising a winding connection across the supply circuit and in shunt to the generator for applying to the shaft of the generator an artificial load which varies inversely as the working load.

Early in May of 1914 Standerwick, an engineer employed by the General Electric Company, his assignee here, was set to work to develop a turbine-generator headlight set, with a suitable regulator. In a comparatively short time, the shunt-coil regulator forming the subject matter of the issue was conceived and a headlight set embodying it was subjected to various shop tests at Lynn, Mass., prior to the latter part of June, 1914. The result of these tests led to the installation of such a set, about June 25, 1914, on a Boston & Maine Railroad locomotive, running between Boston and Portland, Me. This set was in continuous operation for over fourteen months. On June 2, 1914, the engineers of the company authorized the building of a second machine for test purposes and there also was authorized the building of five more machines to be sent out to various railroads. The building of these additional machines commenced immediately. Early in September Standerwick was directed to visit Schenectady, N. Y., there to advise with Dr. Steinmetz, chief consulting engineer of the company. The result was the conception of a patentable improvement in the Standerwick regulator, comprising an addition to the shunt-coil brake winding. Upon Standerwick's return to Lynn, this addition was incorporated in the Standerwick device and its value demonstrated. Thereupon this improvement was added to the machine then under construction. The building of these machines was followed by the building and sale of many others.

To cover the above improvement of Steinmetz and Standerwick, a joint application was filed concurrently with the application here involved. This joint application was placed in interference and heard in the Patent Office concurrently with the present interference. Each of the tribunals below ruled that Kane was entitled to no earlier date than October 20, 1914, on any of the counts, and therefore awarded priority to the joint inventors. That decision we affirmed on January 2, 1923. (*Kane* v. *Steinmetz and Standerwick*, Patent Appeal No. 1510.)

In the present case, the Examiner awarded priority of invention on all the counts to Standerwick, on the ground that he was the first to conceive and first to reduce to practice, and on the further ground that, irrespective of the question of reduction to practice, his conception was followed by due diligence. The Examiners in Chief sustained the Examiner as to counts 1, 3, and 4, but reversed him as to count 2, on the ground that Standerwick's device is not capable of maintaining "the substantially constant voltage" required by this count; in other words, that he could not make that claim. The board, however, directed attention to the fact that the subject matter of the count was disclosed in the joint application. The Assistant Commissioner, holding that there had been no reduction to practice of the Standerwick invention, reversed the decision as to counts 1, 3, and 4 and affirmed as to count 2, without however passing upon the question of diligence.

The Patent Office tribunals have all ruled that counts 1, 3, and 4 contain patentable subject matter and that they read upon the early Standerwick device. We are clearly of the view that Standerwick has proven reduction to practice as to those counts. Without going into detail, it is sufficient to say that the evidence is to the effect that the structure disclosed by those counts is capable of materially reducing the speed variation attendant upon a change of load by supplying a drag responsive to such change, and that the shop tests and fourteen-months' use on a locomotive engine demonstrated this. When Kane entered the field Standerwick was diligently testing his device, and the period between that time and the filing date of Standerwick was filled with activity on the part of Standerwick.

As to count 2, the Assistant Commissioner was of the view that the words "substantially constant voltage" have the same import as the words "within the limitations necessary for satisfactory operation," and hence—

that in reality a satisfactory degree of regulation is involved in all four of the counts.

Since these claims originated with Standerwick's application, and therefore are to be interpreted with particular reference to his disclosure, we are of the view that "substantially constant," as held by the Assistant Commissioner, is a relative term and means "sufficiently constant for satisfactory operation;" in other words, that it was a practical and not a theoretical question. We agree with the Examiner of Interferences that the evidence discussed by him demonstrates that Standerwick's regulator does maintain a voltage sufficiently constant for satisfactory operation.

The decision therefore is reversed as to all the counts and priority awarded Standerwick.

Reversed.

PATENT SUITS.

[Notices under section 4921, Revised Statutes, as amended February 18, 1922.]

803,684, J. A. Fleming, Instruments for converting alternating electric currents into continuous currents; 841,387, L. de Forest, Device for amplifying feeble electric currents; 879,532, same, Space telegraphy, suit filed Sept. 20, 1922, U. S. D. C., S. D. N. Y., Doc. E 24/333, *Radio Corp. of America* v. *A. Emerson and Others.* Motion to dismiss bill of complaint denied and plaintiff granted leave to file an amended bill.

ADJUDICATED PATENTS.

(U. S. C. C. A. Ohio.) Klocke patent, 955,173, *Held* invalid as to claims 1, 2, and 3, and valid and infringed as to claims 4, 5, 6, and 7. *Toledo Machine & Tool Co.* v. *E. W. Bliss Co.*, 287 Fed. Rep., 443.

(U. S. D. C. N. Y.) Fuller patent, 1,101,268, claims 1, 2, 6–16, 19, 20, and 23–27, for a stencil sheet, *Held* operative and infringed. *A. B. Dick Co.* v. *Barnett*, 287 Fed. Rep., 573.

(U. S. C. C. A. Md.) Riley patent, 1,152,222, claims 3, 9, and 10, for underfeed stokers, *Held* valid and infringed. *Frederick Iron & Steel Co.* v. *Sanford Riley Stoker Co.*, 287 Fed. Rep., 495.

(U. S. C. C. A. Ohio.) Wright patent, 1,303,753, *Held* invalid. *Continental Fibre Co.* v. *Formica Insulation Co.*, 287 Fed. Rep., 455.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 12, 1923.

[PUBLISHED JUNE 13, 1923.]

[VOL. 311. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 134,467. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THOMAS E. FORSTER, doing business as T. E. Forster & Co., Neosho, Mo. Filed July 1, 1920.

Particular description of goods.—Cleaning Preparation for Bathtubs, Sinks, Porcelain, Marble, Enameled Ware, Pots, Kettles, Tinware, Crockery, Oilcloth, Linoleum, Floors, Painted Walls, and Woodwork.
Claims use since Feb. 20, 1920.

Ser. No. 138,330. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) MATTH. HOHNER AKT. GES., Trossingen, Germany. Filed Oct. 15, 1920.

Applicant disclaims the exclusive right to the use of the words "Wien, Ulm, Stuttgart, Philad., Gr. Bronce, den Verdienste, Gesetzlichgeschutzt" and "Trade-Mark Registered" apart from the mark as shown.
Particular description of goods.—Mouth Harmonicas.
Claims use since 1886.

Ser. No. 140,766. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) AMERICAN OPTICAL COMPANY, Southbridge, Mass. Filed Dec. 8, 1920.

Forty Five

The mark consists of the words "Forty Five."
Particular description of goods.—Spectacles, Eyeglasses, and Ophthalmic Lenses.
Claims use since Nov. 16, 1920.

Ser. No. 144,290. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) LYON & HEALY, Chicago, Ill., assignor to Lyon & Healy, Inc., Chicago, Ill., a Corporation of Illinois. Filed Mar. 3, 1921.

Particular description of goods.—Musical Instruments, Merchandise, and Goods.
Claims use since 1864.

Ser. No. 153,715. (CLASS 38. PRINTS AND PUBLICATIONS.) THE DELTA SIGMA PHI FRATERNITY, New York, N. Y. Filed Oct. 4, 1921.

DELTA SIGMA PHI

Particular description of goods.—Quarterly Publication.
Claims use since January, 1899.

Ser. No. 156,860. (CLASS 35. PRINTS AND PUBLICATIONS.) D. RELENVALEN, Cleveland, Ohio. Filed Dec. 17, 1921.

Color is not an essential feature of this trade-mark, and the lining of said trade-mark is merely for shading.
Particular description of goods.—Advertising Literature—Namely, Post Cards, Posters, Broadsides, Folders, Printed Signs; Completely-Printed Labels, Tags, and Cards; Novelty Died-Out Tickets, Booklets, Pamphlets, and Catalogues.
Claims use since November, 1921.

Ser. No. 157,016. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) THE AKRON-SELLS COMPANY, Akron, Ohio. Filed Dec. 22, 1921.

TASCO

Particular description of goods.—Liquid Gauges.
Claims use since Jan. 1, 1917.

Ser. No. 157,500. (CLASS 38. PRINTS AND PUBLICATIONS.) DUPUIS-RICHMAN ENGRAVING & EMBOSSING CO., Chicago, Ill. Filed Jan. 6, 1922.

AMERICAN BEAUTY GREETING CARDS

The words "Greeting Cards" are hereby disclaimed apart from the mark shown.
Particular description of goods.—Greeting Cards.
Claims use since Jan. 1, 1921.

Ser. No. 157,922. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE GRASSELLI CHEMICAL COMPANY, Cleveland, Ohio. Filed Jan. 14, 1922. Under ten-year proviso.

Brilliant Alizarine Blue

Particular description of goods.—Dyes and Dyestuffs.
Claims use since about July, 1893.

Ser. No. 159,048. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) NATIONAL HAIR GOODS CO., Chicago, Ill. Filed Feb. 8, 1922.

NATCONET

Trade-mark consists of the word "Natconet."
Particular description of goods.—Hair Nets.
Claims use since July 9, 1921.

Ser. No. 159,120. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) THE SALT'S TEXTILE MANUFACTURING COMPANY, Bridgeport, Conn., and New York, N. Y. Filed Feb. 9, 1922.

ROYAL LADY

The trade-mark consists of the words "Royal Lady."
Particular description of goods.—Fabrics in the Piece Made Wholly or in Part of Wool, Worsted, Mohair, Alpaca, Jute, Cotton, Silk, and Artificial Silk.
Claims use since Jan. 5, 1922.

Ser. No. 160,076. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) NEW PROCESS CORK COMPANY, Brooklyn, N. Y. Filed Mar. 2, 1922.

Nepro

Particular description of goods.—Bottle Closures of the Crown Type.
Claims use since August, 1914.

Ser. No. 160,316. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) VOSS & STERN, New York, N. Y. Filed Mar. 7, 1922.

VOILE SUPERBE

No claim being made to the word "Voile" apart from the mark shown in the drawing.
Particular description of goods.—Cotton Piece Goods.
Claims use since Feb. 14, 1921.

Ser. No. 160,332. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE H. J. BROWN MEDICINE COMPANY, Cleveland, Ohio. Filed Mar. 8, 1922.

Nicotol

Particular description of goods.—Remedies for Tobacco Habit, Compositions for Alleviating the Injurious Effect of Nicotine, and Tonics for the Human System.
Claims use since February, 1919.

Ser. No. 160,898. (CLASS 32. FURNITURE AND UPHOLSTERY.) NEWARK TORTOISE SHELL NOVELTY CO., Newark, N. J. Filed Mar. 18, 1922.

EBON-IVOR

Particular description of goods.—Hand Mirrors and Picture Frames.
Claims use since January, 1922.

Ser. No. 161,066. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) THE STANDARD PARTS COMPANY, Cleveland, Ohio. Filed Mar. 22, 1922.

PS

Particular description of goods.—Vehicle Springs.
Claims use since 1907.

Ser. No. 163,503. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NATIONAL BISCUIT COMPANY, Jersey City, N. J., and New York, N. Y. Filed May 9, 1922.

Trade-mark consists of the word "Gaiety." The representation of a cooky is disclaimed apart from the other features of the trade-mark as shown in the drawing.
Particular description of goods.—Biscuit.
Claims use since May 4, 1922.

Ser. No. 164,462. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) S. STEIN & CO., New York, N. Y. Filed May 24, 1922.

DREADNAUGHT

Particular description of goods.—Woolen Cloths in the Piece, Intended for Suitings, Etc.
Claims use since Mar. 9, 1922.

Ser. No. 164,559. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) THE STAR RUBBER COMPANY, Akron, Ohio. Filed May 26, 1922.

RESILIOCORD

Particular description of goods.—Elastic Vehicle Tires Composed Wholly or in Part of Rubber and Inner Tubes for Pneumatic Tires.
Claims use since on or about Mar. 4, 1922.

Ser. No. 164,564. (CLASS 39. CLOTHING.) SEIBERLING RUBBER COMPANY, Akron, Ohio. Filed May 26, 1922.

Particular description of goods.—Soles and Heels for Boots and Shoes Composed Wholly or in Part of Rubber.
Claims use since about Dec. 29, 1921.

Ser. No. 166,736. (CLASS 32. FURNITURE AND UPHOLSTERY.) DURARD DESK MFG. CO., Los Angeles, Calif. Filed July 11, 1922.

The Executive
ROLL - TOP - FLAT

No claim is made to the exclusive use of the descriptive words "Roll-Top-Flat," appearing in its trade-mark apart from the mark shown.
Particular description of goods.—Desks.
Claims use since June 1, 1921.

Ser. No. 167,361. (CLASS 38. PRINTS AND PUBLICATIONS.) LAURA NELSON-KIRKWOOD, trustee of the Estate of William R. Nelson, deceased, Kansas City, Mo. Filed July 25, 1922. Under ten-year proviso.

THE KANSAS CITY STAR.

Trade-mark consists of the words "Kansas City Star."
Particular description of goods.—Newspapers.
Claims use since Sept. 18, 1884.

Ser. No. 167,567. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) ALEXANDER HERZ, doing business as The Hygeia Antiseptic Tooth Pick Co., New York, N. Y. Filed July 29, 1922.

SIPPERS

Particular description of goods.—Drinking Straws.
Claims use since about March, 1905.

Ser. No. 167,917. (CLASS 39. CLOTHING.) THE J. L. HUDSON COMPANY, Detroit, Mich. Filed Aug. 7, 1922.

No claim made to the exclusive use of the words "Arch Aid" apart from the rest of the mark shown in the drawing.
Particular description of goods.—Men's, Women's, and Children's Shoes Made of Leather, Fabric, and Combinations Thereof.
Claims use since July 1, 1922.

Ser. No. 167,922. (CLASS 37. PAPER AND STATIONERY.) NEW YORK & PENNSYLVANIA COMPANY, Castanea Township, Clinton County, Pa., and New York, N. Y. Filed Aug. 7, 1922.

CLARION

Particular description of goods.—Book Paper in Sheets and Rolls—Namely, Antique Laid, Supercalendered, Machine Finish, End Sheet and English Finish for General Printing and Publishing Work; Alkali Proof—Namely, for Soap Wrappers and Like Purposes; Lining, Machine-Finish Lithograph, Superlithograph, Eggshell Book, Wall Paper; Machine-Finish Offset, Title Stock, Soda Pulp, and Sulphide Pulp.
Claims use since 1890.

Ser. No. 167,973. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) WILLIAM H. COLE & CO. LTD., Painswick, England. Filed Aug. 9, 1922.

No claim made to the exclusive use of the words "Cole's Snap Stud" apart from the mark as shown in the drawing.
Particular description of goods.—Notions and Small Wares—viz, Hairpins and Pins of Base Metal, Hooks and Eyes, Hair Wavers, and Snap Fasteners.
Claims use since Nov. 2, 1921.

Ser. No. 168,348. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) ARTSILK KNITTING MILLS, West New York, N. J. Filed Aug. 17, 1922.

TRICOSHAM

Particular description of goods.—Silk and Silk and Cotton Goods in Piece and Artificial-Silk Goods in the Piece.
Claims use since Mar. 21, 1922.

Ser. No. 168,383. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) STEHLI SILKS CORPORATION, New York, N. Y. Filed Aug. 17, 1922.

FEUTRELLA

Particular description of goods.—Broad Silks in the Piece and Silk and Cotton Piece Goods.
Claims use since Mar. 16, 1922.

Ser. No. 168,894. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) KLEINSCHMIDT ELECTRIC CO., INC., Long Island City, N. Y. Filed Aug. 30, 1922.

Particular description of goods.—Telegraph Apparatus—Namely, All Apparatus Used in Printing-Telegraph Systems, Morse Telegraph Systems, Line-Telegraph High-Frequency Systems, and Radiotelegraph Systems.
Claims use since Nov. 17, 1913.

Ser. No. 169,139. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SILVEIRA, CARMO & COMPANHIA, Lisbon, Portugal. Filed Sept. 6, 1922.

Particular description of goods.—Sardines in Oil.
Claims use since March, 1920.

Ser. No. 169,580. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) FERGUSON AND LANGE FOUNDRY COMPANY, Chicago, Ill. Filed Sept. 18, 1922.

Particular description of goods.—Water-Heating Apparatus and Parts Thereof Used in Conjunction with Heating Boilers.
Claims use since June 9, 1921.

Ser. No. 169,766. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) LACE-NET IMPORTING CO., New York, N. Y. Filed Sept. 21, 1922.

MARJOLAINE

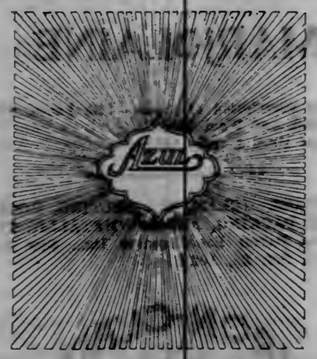
Particular description of goods.—Silk Laces, Silk and Fiber and Silk and Wool Laces.
Claims use since March, 1921.

Ser. No. 171,083. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) IRON CLAD PATCH LABORATORIES INC., New Orleans, La. Filed Oct. 23, 1922.

We disclaim the word "Patch" as a part of the mark.
Particular description of goods.—Adhesive Patches for Automobile Tires and Inner Tubes.
Claims use since Jan. 1, 1919.

Ser. No. 171,250. (CLASS 39. CLOTHING.) NATHAN BARGSTEIN, Brooklyn, N. Y. Filed Oct. 27, 1922.

Purity



Trade-mark consists of the word "Purity."
Particular description of goods.—Ladies' Underwear Made of Textile Fabrics.

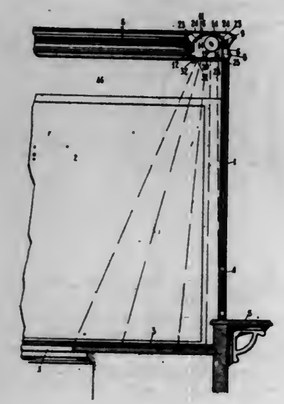
REISSUES.

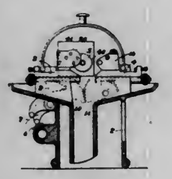
JUNE 12, 1923.

15,623. EXCITING SYSTEM FOR PHASE CONVERTERS. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 29, 1919. Serial No. 348,185. Original No. 1,281,955, dated Oct. 15, 1918, Serial No. 113,457, filed Aug. 7, 1916. 16 Claims. (Cl. 171—238.)



7. The combination including main and auxiliary induction machines having their secondaries rotating respectively in forward and backward directions and at corresponding speeds with respect to their respective primaries, and connections between the secondary windings of the two machines.

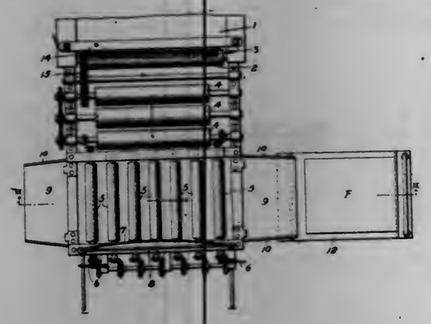
11. The combination with an alternating-current system, of a phase-converter of the rotary type having its primary winding connected thereto, a substantially two-to-one frequency converter, and connections for inserting said frequency converter between said system and the secondary winding of said phase-converter, whereby said secondary winding is supplied with exciting current of substantially twice the frequency of said system.



15,624. ILLUMINATING DEVICE. WILLIAM H. SPENCER, New York, N. Y., assignor, by mesne assignments, to I. P. Frink Inc., New York, N. Y., a Corporation of New York. Filed Apr. 21, 1923. Serial No. 633,569. Original No. 1,007,498, dated Oct. 31, 1911, Serial No. 599,470, filed Dec. 27, 1910. 5 Claims. (Cl. 240—4.)

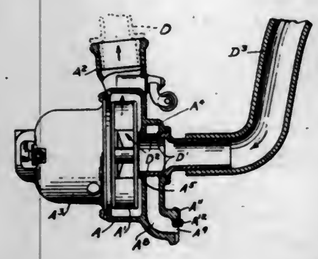
4. In banking or counting house furniture the combination of a main vertically and longitudinally extending partition or screen, with another partition extending transversely thereto, counters on the inside of the main partition and on both sides of the transverse partition, cornice casings, substantially U-shaped, above said partitions with the longitudinal opening directed downwardly toward the counters, lighting units supported in said cornice casings, in line with the transverse partition and on the inside of the longitudinal partition, a reflector device in each cornice casing, above the lighting units, facing the bottom opening of its respective casing, diffusing members covering the openings of the casings, the reflector device in the transverse casing being arranged to receive rays and direct them on both sides of the partition to illuminate the counters, and the reflector device in the

longitudinal casing being arranged eccentrically with relation to the lighting units to direct all the rays received by it to the counter on the inside of the longitudinal partition.



15,625. THREAD CUTTER. CHARLES H. TAYLOR, Toronto, Ontario, Canada, assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 12, 1920. Serial No. 358,123. Original No. 1,276,445, dated Aug. 20, 1918, Serial No. 83,104, filed Mar. 9, 1916. 49 Claims. (Cl. 10—154.)

9. In a screw-cutting machine, the combination with a rotary stock carrier and a slide, of a milling screw-cutting attachment comprising a frame mounted upon the slide; an annular member rotatably mounted upon said frame, the perimeter of said member having uniformly circumferentially spaced toothed multiple pe-

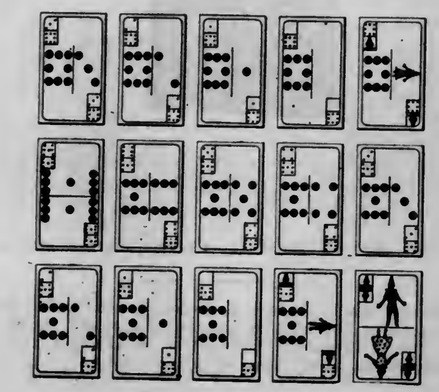


ripheral threads, means for rotating said annular member, said means including an internal gear, and gears adapted to impart rotation to the internal gear when the slide is shifted.

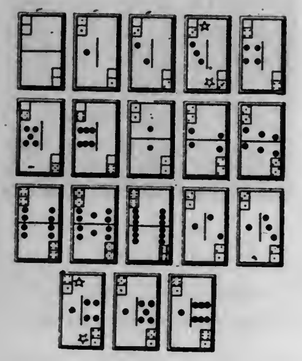
15,626. CONVEYER FOR SHEET MATERIAL. JOHN PLONKA, Woodlawn, Pa. Filed May 2, 1923. Serial No. 636,259. Original No. 1,432,086, dated Oct. 17, 1922, Serial No. 543,550, filed Mar. 14, 1922. 4 Claims. (Cl. 198—78.)

4. Conveyer apparatus for sheet material including two transfer tables, each consisting of positively driven rollers, the two tables being arranged angularly the one to the other, the second table lying beyond and extending across the delivery end of the first, its component rollers affording a skidway to material advancing from the first, and an abutment arranged on the side of the second table remote from the delivery end of the first table and affording an increasing resistance to a sheet advancing from the first table across the second.

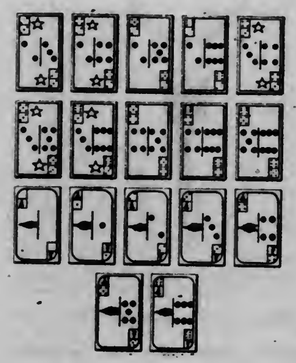
15,627. VACUUM CLEANER. GEORGE CLEMENTS, Chicago, Ill., assignor, by direct and mesne assignments, of one-half to Clements Mfg. Co., Chicago, Ill., a Corporation of Illinois, and one-half to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Apr. 30, 1923. Serial No. 635,712. Original No. 1,392,624, dated Oct. 4, 1921, Serial No. 633,011, filed June 14, 1911. 18 Claims. (Cl. 15—9.)



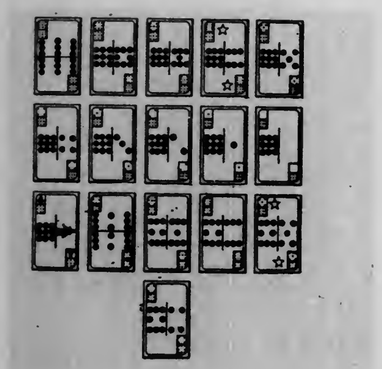
14. A vacuum cleaner comprising a motor, a fan driven thereby, a fan casing therefor provided with an air inlet opening, a suction nozzle in operative connection with said opening, a replaceable suction hose attachment member, and means for securing it to the wall of said pump chamber in connecting relation with said air inlet opening.



DESIGNS.

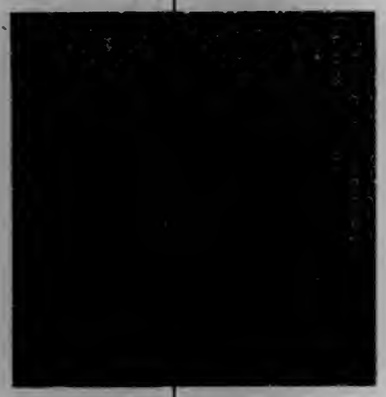


JUNE 12, 1923.



62,466. SET OF PLAYING CARDS. BENJAMIN BERNARD BLEY, Waco, Tex. Filed June 7, 1922. Serial No. 2,560. Term of patent 14 years.

62,466



The ornamental design for a set of playing cards, as shown.

62,467. TEXTILE FABRIC. JOHN S. BOYD and THOMAS F. BOYD, Williamstown, Mass., assignors to John S. Boyd Co. Inc., Williamstown, Mass., a Corporation of Massachusetts. Filed Dec. 12, 1922. Serial No. 4,569. Term of patent 14 years.

The ornamental design for a textile fabric, as shown.

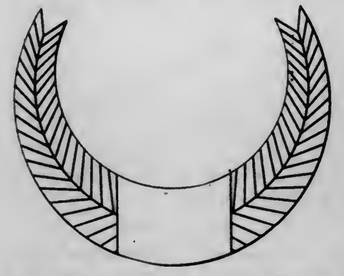
62,468. TEXTILE FABRIC. JOHN S. BOYD and THOMAS F. BOYD, Williamstown, Mass., assignors to John S. Boyd Co. Inc., Williamstown, Mass., a Corporation of Massachusetts. Filed Jan. 9, 1923. Serial No. 4,843. Term of patent 14 years.

The ornamental design for a textile fabric, as shown.

62,469. TEXTILE FABRIC. JOHN S. BOYD and THOMAS F. BOYD, Williamstown, Mass., assignors to John S. Boyd Co. Inc., Williamstown, Mass., a Corporation of Massachusetts. Filed Jan. 9, 1923. Serial No. 4,844. Term of patent 14 years.

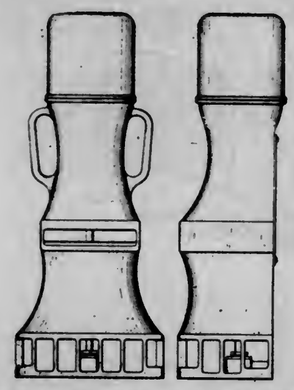
The ornamental design for a textile fabric, as shown.

62,470. RING. ERNEST E. BROSS, Detroit, Mich., assignor to The Traub Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 6, 1922. Serial No. 4,506. Term of patent 7 years.



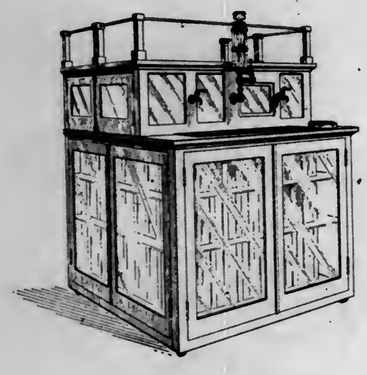
The ornamental design for a ring, as shown.

62,471. FLOWER HOLDER. KATHRYN R. BROSSMAN, New York, N. Y. Filed Jan. 30, 1923. Serial No. 5,031. Term of patent 7 years.



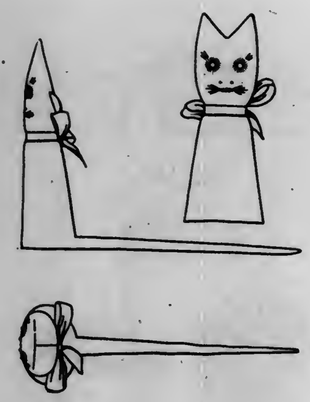
The ornamental design for a flower holder, as shown.

62,472. PIN OR BADGE. ROBERT B. BRYANT, Gaffney, S. C. Filed Oct. 19, 1922. Serial No. 4,036. Term of patent 3½ years.



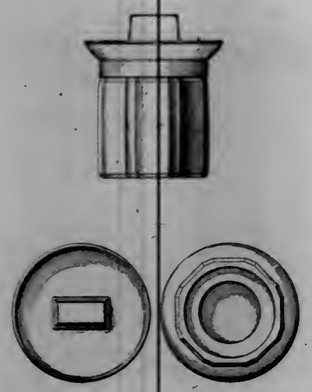
The ornamental design for a pin or badge, as shown.

62,473. DISHWASHING-MACHINE CASING. HARRY F. CAVANAUGH, THEODORE S. HALL, and ALBERT L. OLIVER, Oakland, Calif., assignors to Wonder Portable Dish Washer Company, Emeryville, Calif., a Corporation of California. Filed Oct. 4, 1922. Serial No. 3,876. Term of patent 3½ years.



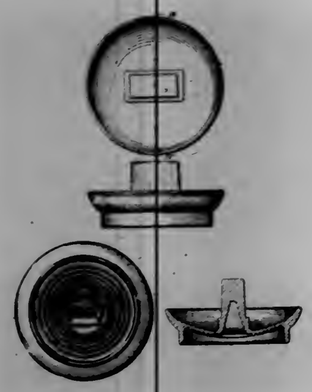
The ornamental design for a dishwashing machine casing, as shown.

62,474. DISPENSING CABINET. JOHN H. CHARBENEAU, Mount Clemens, Mich. Filed Aug. 18, 1922. Serial No. 3,436. Term of patent 3½ years.



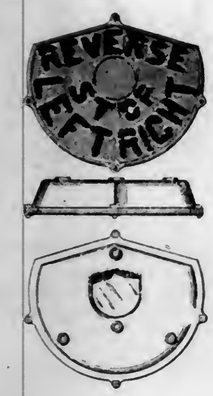
The ornamental design for a dispensing cabinet, as shown.

62,475. ANIMAL FIGURE OR SIMILAR ARTICLE. LILLIAN CHARTERIS, New York, N. Y. Filed Sept. 7, 1922. Serial No. 3,643. Term of patent 3½ years.



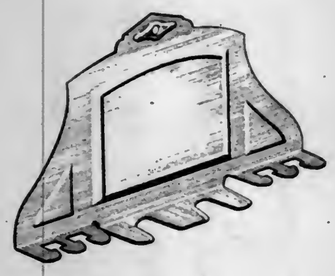
The ornamental design for an animal figure or similar article, as shown.

62,476. COMBINED HUMIDOR AND ASH TRAY. IRA M. CLARKE, New Martinsville, W. Va., assignor to New Martinsville Glass Manufacturing Co., New Martinsville, W. Va., a Corporation of West Virginia. Filed May 31, 1922. Serial No. 2,479. Term of patent 7 years.



The ornamental design for a combined humidor and ash tray, as shown and described.

62,477. COMBINED ASH TRAY AND JAR COVER. IRA M. CLARKE, New Martinsville, W. Va., assignor to New Martinsville Glass Manufacturing Co., New Martinsville, W. Va., a Corporation of West Virginia. Filed June 10, 1922. Serial No. 2,622. Term of patent 7 years.

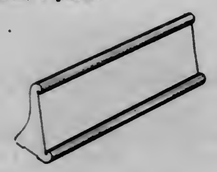


The ornamental design for a combined ash tray and jar cover as shown and described.

62,478. CASING FOR SIGNALING DEVICE FOR VEHICLES. WILLIAM CHARLES DIERKER, Peoria, Ill., assignor of one-half to Charles Thornton, Peoria, Ill. Filed Mar. 4, 1922. Serial No. 1,018. Term of patent 3½ years.

The ornamental design for the casing for a signaling device for vehicles as shown.

62,479. COMBINED TOOTHBRUSH AND PASTE HOLDER. ERNEST R. ERICKSON, Des Moines, Iowa, assignor to C. E. Erickson Company, Inc., Des Moines, Iowa. Filed May 15, 1922. Serial No. 2,255. Term of patent 7 years.

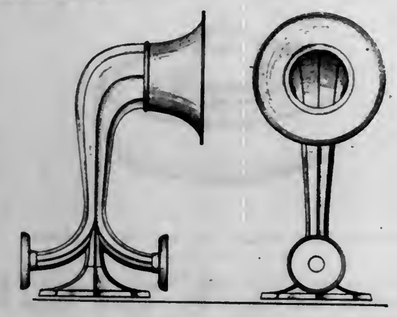


The ornamental design for a combined toothbrush and paste holder, as shown and described.

62,480. TEXTILE FABRIC. GUSTAVE M. FAUSER, Ardsley, N. Y., assignor to The Pennsylvania Textile Mills Inc., Glenriddle, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 4,685. Term of patent 3½ years.

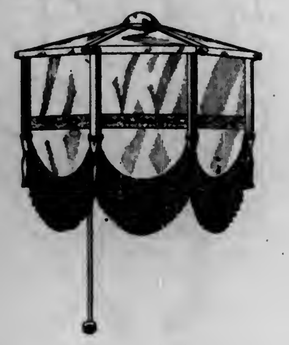
The ornamental design for a textile fabric substantially as shown.

62,481. HOLDER FOR SIGNS. WILLIAM J. FOGARTY, Dayton, Ohio. Filed May 28, 1921. Serial No. 473,409. Term of patent 7 years.



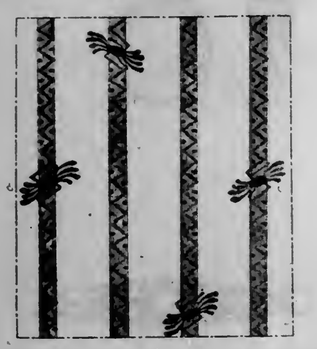
The ornamental design for a holder for signs as shown.

62,482. PLAITED FABRIC. HARRY FRISCHER, New York, N. Y. Filed Dec. 12, 1922. Serial No. 4,577. Term of patent 14 years.



The ornamental design for a plaited fabric, as shown and described.

62,483. RADIO HORN. MAX GOLDFARB, New York, N. Y. Filed June 7, 1922. Serial No. 2,561. Term of patent 3½ years.

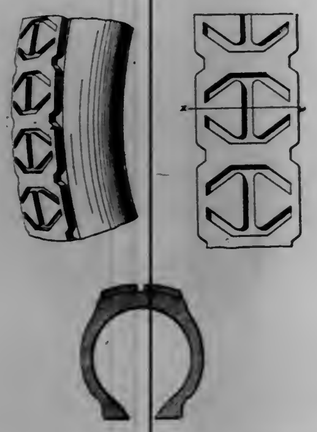


The ornamental design for a radio horn as shown.

62,484. LAMP SHADE. ANDREW L. GRENTZ, Van Nuys, Calif. Filed May 5, 1922. Serial No. 2,101. Term of patent 3½ years.

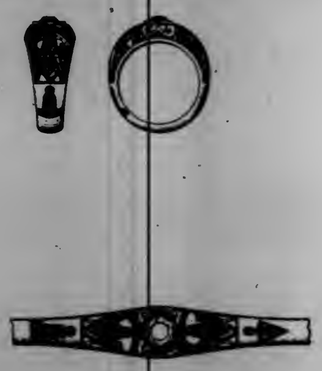
The ornamental design for a lamp shade as shown.

62,485. TEXTILE FABRIC. DIEDRICH HARTGENS, Union Hill, N. J., assignor to R. A. Tuttle Company, Boston, Mass., a Corporation of New York. Filed Jan. 11, 1923. Serial No. 4,863. Term of patent 14 years.



The ornamental design for a textile fabric, as shown.

62,486. NUT BOWL. WILLIAM M. HUMBERT, Eastside, Oreg. Filed Mar. 31, 1922. Serial No. 1,475. Term of patent 14 years.



The ornamental design for a nut bowl as shown.

62,487. AUTOMOBILE TIRE. ROBERT H. KRATON, San Francisco, Calif. Filed Nov. 24, 1920. Serial No. 426,298. Term of patent 3½ years.

The ornamental design for an automobile tire, as shown.

62,488. MASONIC RING. LEOPOLD KRAUSS, Indianapolis, Ind. Filed Apr. 26, 1922. Serial No. 1,975. Term of patent 14 years.

The ornamental design for a Masonic ring, as shown.

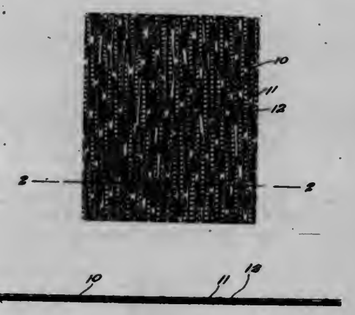
62,489. DOLL. HILDUR C. LANGE, New York, N. Y. Filed Apr. 8, 1922. Serial No. 1,648. Term of patent 3½ years.

The ornamental design for a doll, as shown.

62,490. COMBINED LEATHER AND METAL FABRIC WATCH BRACELET. SIGMUND L. LEDERER, Providence, R. I. Filed Aug. 1, 1922. Serial No. 3,264. Term of patent 7 years.

The ornamental design for a combined leather and metal fabric watch bracelet, as shown.

62,491. COMBINED LEATHER AND METAL FABRIC WATCH BRACELET. SIGMUND L. LEDERER, Providence, R. I. Filed Aug. 8, 1922. Serial No. 3,316. Term of patent 7 years.



The ornamental design for a combined leather and metal fabric watch bracelet, as shown.

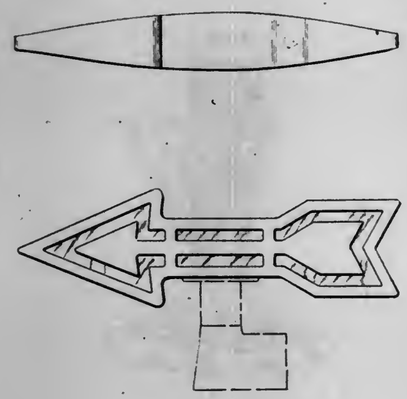
62,492. DOLL. RUTH A. LE GRAND, Wilkes-Barre, Pa. Filed Mar. 1, 1922. Serial No. 954. Term of patent 3½ years.

The ornamental design for a doll as shown.

62,493. LEATHER. LOUIS M. MUSLINER, New York, N. Y. Filed June 28, 1922. Serial No. 2,857. Term of patent 7 years.

The ornamental design for leather, as shown and described.

62,494. CHANDELIER. BARNET NEWLAND, New York, N. Y. Filed Dec. 9, 1921. Serial No. 521,259. Term of patent 3½ years.



The ornamental design for a chandelier as shown.

62,495. CHANDELIER. BARNET NEWLAND, New York, N. Y. Filed Dec. 8, 1921. Serial No. 521,037. Term of patent 3½ years.

The ornamental design for a chandelier as shown.

62,496. DIRECTION INDICATOR. RAY E. PARMENTER, Longmeadow, Mass. Filed Nov. 25, 1921. Serial No. 517,793. Term of patent 7 years.

The ornamental design for a direction indicator, substantially as shown.

62,497. LAMP OR OTHER PEDESTAL. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed June 28, 1922. Serial No. 2,860. Term of patent 7 years.

The ornamental design for a lamp or other pedestal, as shown.

62,498. LAMP OR OTHER PEDESTAL. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed June 28, 1922. Serial No. 2,861. Term of patent 7 years.

The ornamental design for a lamp or other pedestal, as shown.

62,499. LAMP OR OTHER PEDESTAL. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed June 28, 1922. Serial No. 2,862. Term of patent 7 years.

The ornamental design for a lamp or other pedestal, as shown.

62,500. LAMP OR OTHER PEDESTAL. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed June 28, 1922. Serial No. 2,863. Term of patent 7 years.

The ornamental design for a lamp or other pedestal, as shown.

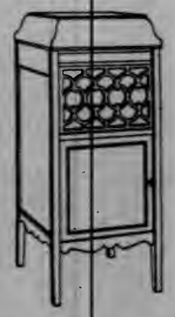
62,501. LAMP OR OTHER SHADE. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed June 28, 1922. Serial No. 2,864. Term of patent 7 years.

The ornamental design for a lamp or other shade, as shown.

62,502. LAMP OR OTHER PEDESTAL. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed June 28, 1922. Serial No. 2,865. Term of patent 7 years.

The ornamental design for a lamp or other pedestal, as shown.

62,503. LAMP OR OTHER PEDESTAL. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed June 28, 1922. Serial No. 2,866. Term of patent 7 years.



The ornamental design for a lamp or other pedestal, as shown.

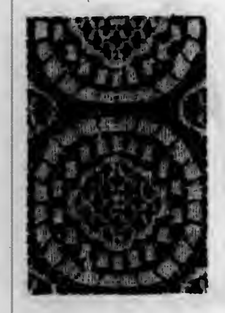
62,504. PIN, BUTTON, BADGE, EMBLEM, OR ARTICLE OF SIMILAR NATURE. NORMAN L. ROULET, Toledo, Ohio. Filed Jan. 29, 1923. Serial No. 5,020. Term of patent 3½ years.

The ornamental design for a pin, button, badge, emblem, or article of similar nature substantially as shown.

62,505. PHONOGRAPH CABINET. OTTO J. HAARLANDER, South Orange, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Oct. 25, 1922. Serial No. 4,092. Term of patent 14 years.

The ornamental design for a phonograph cabinet as shown.

62,506. PHONOGRAPH CABINET. OTTO J. HAARLANDER, South Orange N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Oct. 25, 1922. Serial No. 4,093. Term of patent 14 years.



The ornamental design for a phonograph cabinet as shown.

62,507. LACE. HANS SEEL, Hopkinton, R. I., assignor to Richmond Lace Works, Alton, R. R. I., a Corporation of Maine. Filed July 19, 1922. Serial No. 3,131. Term of patent 7 years.

The ornamental design for lace, as shown.

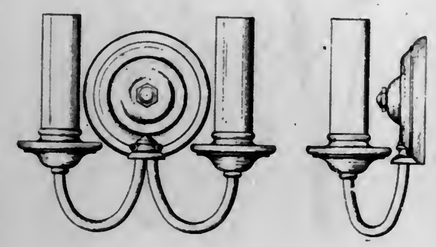
62,508. LACE. BARNET SHAPIRO, Seagate, Brooklyn, N. Y. Filed Oct. 26, 1922. Serial No. 4,101. Term of patent 7 years.

The ornamental design for a lace as shown.

62,509. TOY MONKEY. JANE GRAY STOKES, New York, N. Y. Filed Nov. 27, 1922. Serial No. 4,418. Term of patent 3½ years.

The ornamental design for a toy monkey, substantially as shown.

62,510. TREAD FOR AUTOMOBILE TIRES. RAMFORD G. TAYLOR, Seattle, Wash. Filed Dec. 30, 1921. Serial No. 526,081. Term of patent 3½ years.

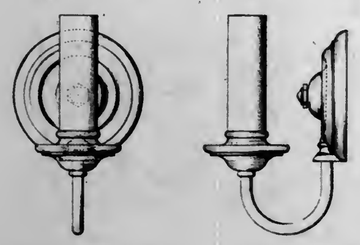


The ornamental design for a tread for automobile tires, as shown.

62,511. STOCKING DOLL. MARY A. THOMSON, New York, N. Y. Filed Oct. 9, 1922. Serial No. 3,921. Term of patent 7 years.

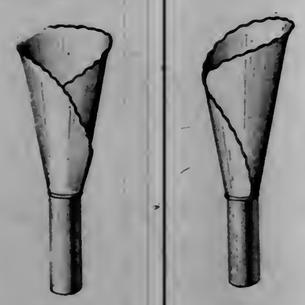
The ornamental design for a stocking doll, as shown.

62,512. LIGHTING FIXTURE. JAMES WILLIAMSON, Chicago, Ill., assignor to R. Williamson & Company, Chicago, Ill., a Corporation of Illinois. Filed July 14, 1922. Serial No. 3,086. Term of patent 7 years.



The ornamental design for a lighting fixture, as shown.

62,513. FINGER RING. ALBERT WERNER, New York, N. Y., assignor to Werner Bros., New York, N. Y., a firm composed of A. Morton Werner, Gerson Werner, Peretz Werner, and Albert Werner. Filed Jan. 18, 1923. Serial No. 4,924. Term of patent 3½ years.

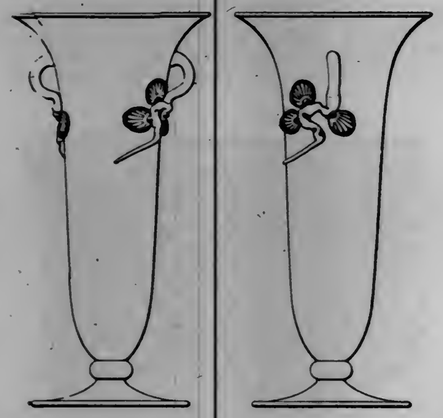


The ornamental design for a finger ring, as shown.

62,514. LIGHTING FIXTURE. JAMES WILLIAMSON, Chicago, Ill., assignor to R. Williamson & Company, Chicago, Ill., a Corporation of Illinois. Filed July 14, 1922. Serial No. 3,087. Term of patent 7 years.

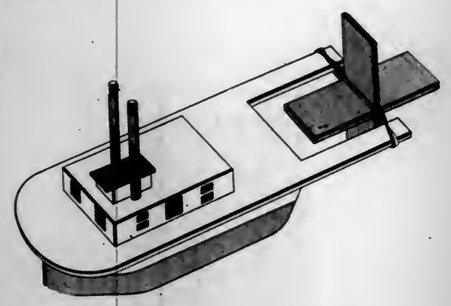
The ornamental design for a lighting fixture, as shown.

62,515. ICE-CREAM CONE. EARL W. WOOD, Long Beach, Calif. Filed Oct. 12, 1922. Serial No. 3,954. Term of patent 14 years.



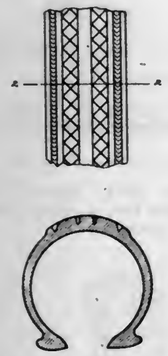
The ornamental design for an ice cream cone, as shown.

62,516. COMBINATION REAR LIGHT AND SIGNAL FOR AUTOMOBILES. ALOIS ZIMMERMANN, Yakima, Wash. Filed Feb. 27, 1922. Serial No. 917. Term of patent 3½ years.



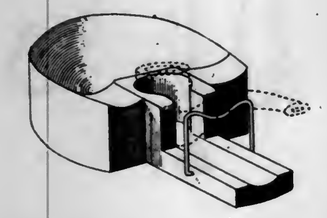
The ornamental design for a combination rear light and signal for automobiles, as shown.

62,517. VASE. FREDERICK CARDER, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed May 11, 1922. Serial No. 2,185. Term of patent 3½ years.



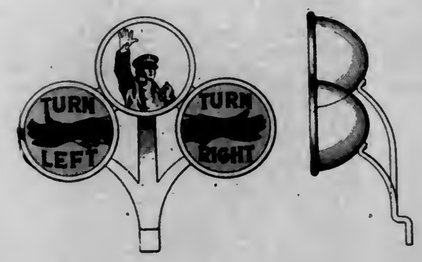
The ornamental design for a vase, as shown.

62,518. TOY BOAT. JAMES R. CLARK, Cicero, Ill. Filed Sept. 16, 1922. Serial No. 3,739. Term of patent 7 years.



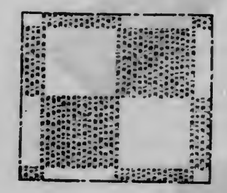
The ornamental design for a toy boat, as shown.

62,519. TIRE TREAD. ARTHUR M. ELLIOTT, Oakland, Calif. Filed Feb. 9, 1922. Serial No. 617. Term of patent 3½ years.



The ornamental design for a tire tread, as shown.

62,520. COMBINED ASH TRAY AND PIPE REST. EDWIN GEORGE FORBES, Berkeley, Calif. Filed Sept. 5, 1922. Serial No. 3,626. Term of patent 3½ years.

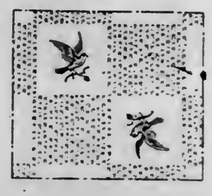


The ornamental design of a combined ash tray and pipe rest, substantially as shown.

62,521. AUTOMOBILE SIGNAL-LIGHT CASING. LEONARDO GUARDINO, Brooklyn, N. Y. Filed Mar. 25, 1922. Serial No. 1,381. Term of patent 14 years.

The ornamental design for an automobile signal light casing, as shown.

62,522. TEXTILE FABRIC. CHARLES W. HOWARD, Greenwich, Conn., assignor to Consolidated Textile Corporation, New York, N. Y., a Corporation of Delaware. Filed May 2, 1923. Serial No. 6,031. Term of patent 7 years.

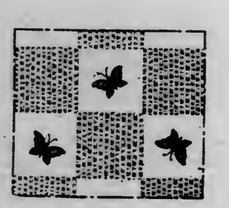


The ornamental design for a textile fabric, substantially as shown and described.

62,523. TEXTILE FABRIC. CHARLES W. HOWARD, Greenwich, Conn., assignor to Consolidated Textile Corporation, New York, N. Y., a Corporation of Delaware. Filed May 2, 1923. Serial No. 6,032. Term of patent 7 years.

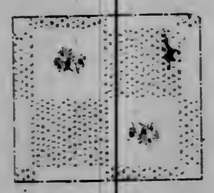
The ornamental design for a textile fabric, substantially as shown and described.

62,524. TEXTILE FABRIC. CHARLES W. HOWARD, Greenwich, Conn., assignor to Consolidated Textile Corporation, New York, N. Y., a Corporation of Delaware. Filed May 2, 1923. Serial No. 6,033. Term of patent 7 years.



The ornamental design for a textile fabric, substantially as shown and described.

62,525. TEXTILE FABRIC. CHARLES W. HOWARD, Greenwich, Conn., assignor to Consolidated Textile Corporation, New York, N. Y., a Corporation of Delaware. Filed May 2, 1923. Serial No. 6,034. Term of patent 7 years.

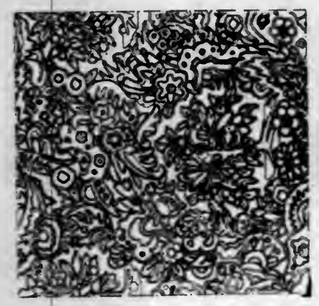


The ornamental design for a textile fabric, substantially as shown and described.

62,526. TEXTILE FABRIC. CHARLES W. HOWARD, Greenwich, Conn., assignor to Consolidated Textile Corporation, New York, N. Y., a Corporation of Delaware. Filed May 2, 1923. Serial No. 6,035. Term of patent 7 years.

The ornamental design for a textile fabric, substantially as shown and described.

62,527. TEXTILE FABRIC. CHARLES W. HOWARD, Greenwich, Conn., assignor to Consolidated Textile Corporation, New York, N. Y., a Corporation of Delaware. Filed May 2, 1923. Serial No. 6,036. Term of patent 7 years.



The ornamental design for a textile fabric, substantially as shown and described.

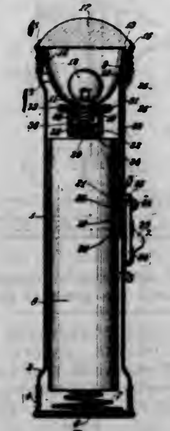
62,528. TEXTILE FABRIC. CHARLES W. HOWARD, Greenwich, Conn., assignor to Consolidated Textile Corporation, New York, N. Y., a Corporation of Delaware. Filed May 2, 1923. Serial No. 6,037. Term of patent 7 years.

The ornamental design for a textile fabric, substantially as shown and described.

62,529. TEXTILE FABRIC. CLARENCE V. KOZLAY, New York, N. Y., assignor to S. Stroock & Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 6, 1923. Serial No. 4,828. Term of patent 7 years.

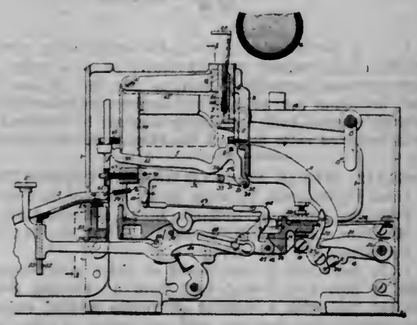
The ornamental design for a textile fabric as shown.

62,530. CAMERA CASING. JOHN A. ROBERTSON and CHARLES F. SPEIDEL, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 16, 1922. Serial No. 723. Term of patent 14 years.



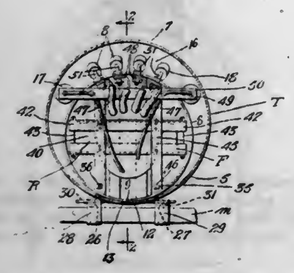
The ornamental design for a camera casing, as shown and described.

PATENTS



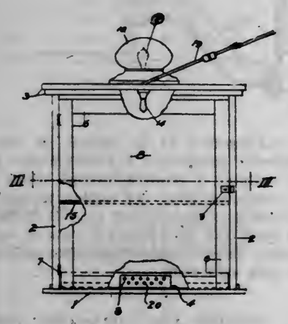
GRANTED JUNE 12, 1923.

1,458,124. BATTERY HANDLAMP. ERNEST ALSCHULER, St. Louis, Mo., assignor to United States Electric Manufacturing Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1919. Serial No. 269,704. 15 Claims. (Cl. 240—8.5.)



15. In a battery hand lamp having a battery-receiving casing a battery and a reflector provided with a nipple adapted to receive a lamp, a shock absorbing device, comprising, an insulating element adapted for mounting on the nipple, a metallic casing on said element for engaging and contacting with the battery terminal, and a yielding contact mounted within and directly connected with said casing and adapted to engage the lamp terminal.

1,458,125. TYPEWRITING MACHINE. EDWIN E. BARNEY, New Rochelle, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Nov. 5, 1921. Serial No. 513,112. 16 Claims. (Cl. 197—22.)

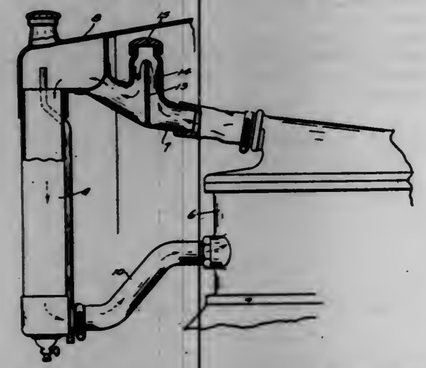


1. In a front strike typewriting machine, the combination of a pivoted type bar, a key lever, and jointed connections therebetween, the type bar being mounted or arranged to hang unsupported in normal position.

1,458,126. TRANSFORMER. ROBERT V. BINGAY, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Oct. 1, 1920. Serial No. 414,147. 8 Claims. (Cl. 175—361.)

1. In a transformer structure the combination with a tank having a lower circular portion and an upper enlarged portion eccentrically overhanging the lower portion, of a transformer in said lower portion, and leads from the winding of said transformer passing downward through the overhang between said upper and lower portions.

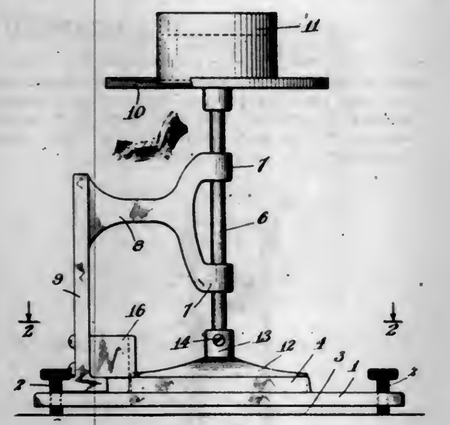
1,458,127. ELECTRICALLY-HEATED DISPLAY CABINET. WILLIAM L. BROWN, Wichita, Kans. Filed Apr. 8, 1921. Serial No. 459,567. 1 Claim. (Cl. 34—21.)



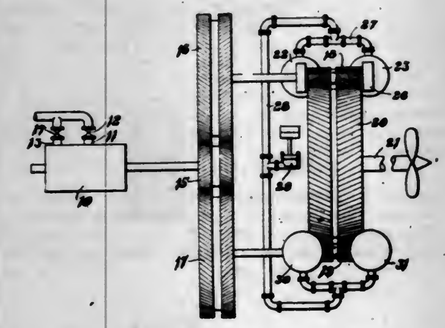
In a display and heating cabinet for nuts and the like, a rectangular closed structure provided with a plurality of glass walls, a top and a bottom; a metal heating-plate covering a relatively large portion of said bottom; an electric heating element mounted with its heating surface in direct contact with said plate; a perforated shield enclosing said element; a door in said cabinet; and a shelf extending half-way across the cabinet at a height about midway between the top and bottom thereof substantially as described.

1,458,128. RADIATOR. EDWARD T. CURRAN, Detroit, Mich. Filed Oct. 13, 1919. Serial No. 330,319. 4 Claims. (Cl. 257—130.)

1. A radiator for vehicles comprising in combination, a series of spaced water tubes, and interposed corrugated perforated sheet metal plates providing air passages inclined to their direction of movement with the vehicle.



1,458,129. WATER-CIRCULATING SYSTEM. EDWARD T. CURRAN, Detroit, Mich. Filed Oct. 29, 1919. Serial No. 334,191. 9 Claims. (Cl. 123—174.)



8. The combination of an engine, a water cooling system therefor comprising a radiator and a reservoir above the radiator, a conduit through which the heated water is conducted from the engine to said reservoir, and an obstructing wall in said conduit projecting above the water level and by which the flow of water is prevented except under a propelling force sufficient to lift the water over said wall.

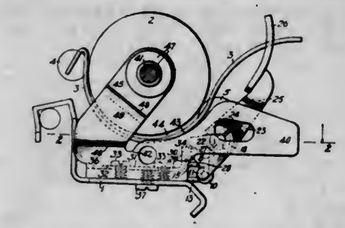
1,458,130. PROCESS AND APPARATUS FOR CLASSIFYING FOOD PRODUCTS. CLARKE E. DAVIS, Douglaston, N. Y., assignor to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 6, 1921. Serial No. 459,207. 6 Claims. (Cl. 73—51.)

1. A process for testing the shortening values of different shortening ingredients in baked food products, which comprises making a series of cakes of identical composition under identical conditions, making another series of cakes under the same conditions as the first series, and with the same composition, except that a different shortening agent is used, in the same proportion as the shortening agent in the cakes of the first series, breaking cakes of each series by dropping increasing weights thereon from a height until the cakes break, and accurately measuring the force required to break the cakes of one series in comparison with the force required to break the cakes of the second series.

1,458,131. PRESSURE-DISTRIBUTING DEVICE FOR DOUBLE-PINION DRIVES. DAVID C. DAVIS, Chester, Pa., assignor to Westinghouse Gear and Dynamometer Company, a Corporation of Pennsylvania. Filed May 12, 1921. Serial No. 469,014. 17 Claims. (Cl. 74—7.)

1. In a transmission gearing, the combination with a divided and reunited gearing train, of a plurality of fluid-actuated supporting devices, one for a gear in each branch of said train, and fluid-pressure transmitting means between said supporting devices to maintain a predetermined ratio between the thrusts exerted thereby.

1,458,182. METAL AND EYE MEMBER CONNECTION. JOHN DE GLOPPER, Holland, Mich., assignor to Federal Stamping Company, Holland, Mich., a Corporation of Michigan. Filed Mar. 7, 1922. Serial No. 541,880. 5 Claims. (Cl. 254—195.)

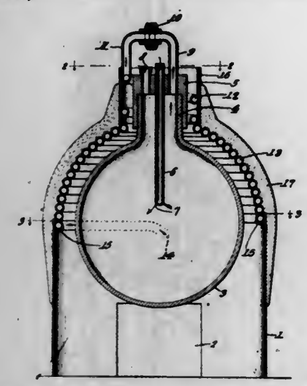


1. In combination, two pieces of sheet metal located side by side and formed each with an opening therethrough and with a circular outwardly pressed embossing around the opening, said embossing at one side being pressed into a radially extending portion of relatively small diameter, a member having a circular eye and a projecting shank, said eye being located between the sheet metal pieces and received in the recesses made by said embossings and the shank extending outwardly through the opening left by said radial embossings, and

a tubular member passing through the openings in the sheet metal pieces and the eye and having its ends

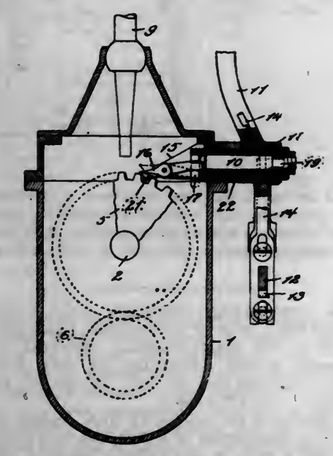
enlarged to make a permanent connection of the pieces and eye, substantially as described.

1,458,133. TYPEWRITING MACHINE. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Feb. 3, 1922. Serial No. 533,945. 7 Claims. (Cl. 197—127.)



1. In a typewriting or like machine, the combination of a carriage, a cylindrical platen, and a platen frame comprising end plates at least one of which is made of sheet metal and at its rear portion terminates at the upper edge before it reaches lines coincident with the cylindrical surface of the platen and at its front portion crosses said lines to form a support for the platen shaft, the said front portion being bent outwardly at and near the said crossing to form a recess through which a side edge of paper extending beyond an end of the platen may pass as it is advanced with the platen.

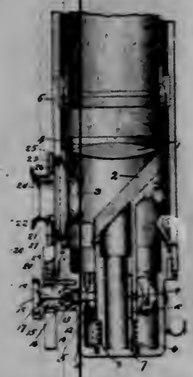
1,458,134. SECTIONAL VESSEL. PAUL ARMAND JEAN MARIE CONSTAN, Mengam, near Brest, France. Filed June 8, 1918. Serial No. 239,035. 6 Claims. (Cl. 114—235.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A navigable unit comprising in combination a hull element provided with a substantially vertical groove-like opening in one end thereof, a substantially T-section vertical channel communicating with said groove-like opening, and a second hull element provided with one end suitably shaped for co-operating with said groove-like opening to nest therein and carrying substantially T-shaped hooking tenons, and means also carried by said second hull element for engaging locking and tightening said hooking tenons in said channel to jam together and immovably connect the two hull elements to form a rigid unitary vessel.

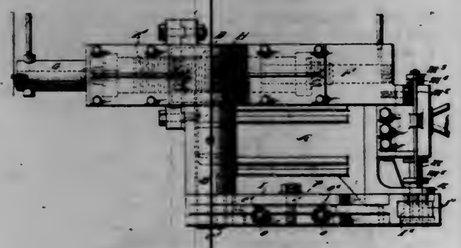
1,458,135. DOUBLE-HEATING COMBINATION BOILER. MICHAEL B. KATO, Duquesne, Pa. Filed Feb. 16, 1921. Serial No. 445,523. 4 Claims. (Cl. 122—250.)

1. In an apparatus of the class described, the combination of a boiler, a series of pipe coils, a conduit for the supply of water directly into the boiler, a second conduit for the discharge of steam or hot water from the boiler into a series of pipe coils, the major portion of said coils being in a compact relation to one another, and forming a truncated conoid or cone shaped series of pipe coils gradually expanded downward to form a circular ridged wall around the upper half of said boiler but in a spaced relation to said boiler, a cylindrical cap-coupling to function as a means by which the boiler and conduits are connected onto one another and securely held in position by same, and a jacket supporting the aforesaid pipe coils and functioning in conjunction with the pipe coils to retain the heat used in heating the boiler and coils.



1,458,136. RELEASING MECHANISM FOR AUTOMOBILE HAND BRAKES AND THE LIKE. VALENTINE C. KLOEPPER, St. Louis, Mo. Filed May 16, 1921. Serial No. 469,780. 7 Claims. (Cl. 74—88.)

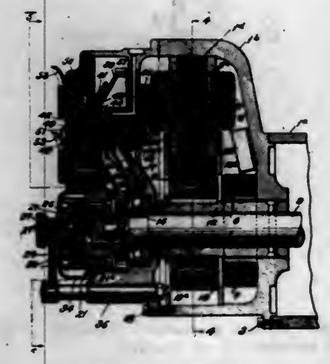
1. In an automobile, a pivoted brake-lever, means for locking the brake in set or braking position, and the



transmission, in combination with means for automatically effecting a release of the brake-lever from set or braking position upon movement of the transmission.

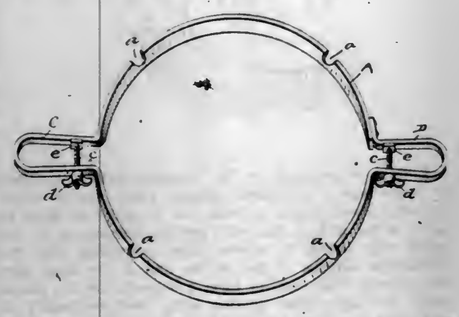
1,458,137. OPTICAL INSTRUMENT. FREDERICK L. G. KOLLMORGEN, Mountain Lakes, N. J. Filed May 2, 1919. Serial No. 294,147. 5 Claims. (Cl. 88—1.)

1. In a focusing device for optical instruments, the combination of a tube, an eye-piece sealed within said tube, said eye-piece comprising an eye lens, a window in said tube opposite the eye lens of the eye-piece, and focusing means exterior of the tube for moving the eye-piece relatively to the tube and to said window.



1,458,138. CLAMP FOR WELDING-MACHINE ATTACHMENTS. HARRY W. KRANZ and JOHN LUKES, Cleveland, Ohio, assignors to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 24, 1920. Serial No. 383,701. 6 Claims. (Cl. 219—17.)

1. In a device of the kind described, a pneumatically operated oscillating arm adapted to maintain a rim end in proper position while welding, together with fluid operated means for locking said arm in said holding position.

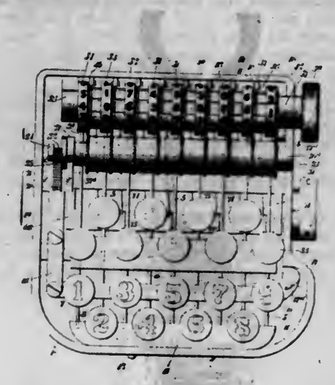


1,458,139. COMBINED IGNITION AND LIGHTING GENERATOR. LEON J. LE PONTOIS, Lakewood, Ohio, assignor to The Teagle Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 23, 1917. Serial No. 187,787. Renewed Oct. 25, 1922. Serial No. 596,895. 7 Claims. (Cl. 171—209.)

1. In apparatus for generating high tension ignition currents, the combination of a field structure comprising a stator and a rotor, a field exciting means, a high tension generating winding mounted on the stator in inductive relation to the exciting means and having a coarse section and a fine section, the stator, rotor and generating winding in operation being maintained in homopolar relation to each other, an angularly adjustable flux shifter between the stator and rotor, and means for

opening and closing the circuit through the coarse section of the generating winding comprising an actuating cam on the rotor and separable electrodes carried by and adjustable with the flux shifter.

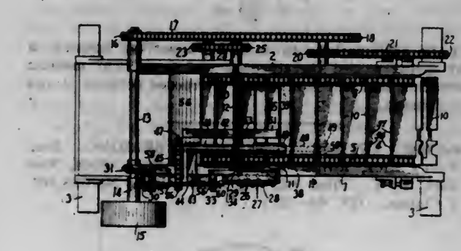
1,458,140. AUTO HEADLIGHT WRENCH. WILLIAM A. LEWIS, Wooster, Ohio. Filed July 24, 1922. Serial No. 577,228. 1 Claim. (Cl. 81—64.)



An auto-headlight wrench, comprising in combination, a pair of opposite semi-circular bands adjacent to each other; a pair of handles opposite each other on said bands; said handles projecting outwardly from the adjacent terminals of said bands, respectively; each handle comprising a pair of slightly spaced apart resilient members which unite outwardly in a bend thereof, and are inwardly joined to the adjacent terminals of said bands, respectively; and means for positively drawing said spaced apart members toward each other, and means for relaxing them by their resilience, substantially as set forth.

1,458,141. ADDING MACHINE. HUBERT MEREDITH-JONES, New York, N. Y., assignor of one-half to Arthur Caverno, New York, N. Y. Filed May 5, 1916. Serial No. 95,527. 30 Claims. (Cl. 235—82.)

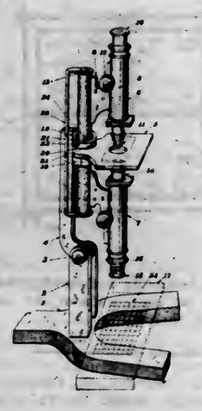
1. An adding machine having a plurality of number keys and totalizing devices adapted to be actuated by said number keys, comprising a lever adapted to be moved distances varying according to the number keys, said number keys being located at distances from the pivot of said lever proportional to the numerals corresponding respectively thereto, column keys, and means controlled



by said column keys for directing the movement of said lever to the desired column.

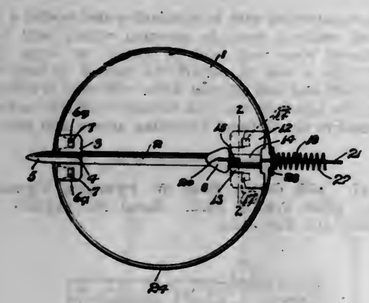
5. An adding machine having a plurality of number keys, and a plurality of column keys, and disengageable means whereby amounts each including a plurality of figures may be progressively registered merely by manipulation of the number keys.

17. An adding machine having means for adding progressively by registering one amount after another, comprising a plurality of column keys, a plurality of number keys, means for depressing the column key of the column next to be computed by the depression of the number key and releasing the previously depressed column key, and means for adding in columns.



1,458,142. BUTT-REMOVING DEVICE. SAMUEL E. MORRAL and WILLIAM W. MORRAL, Morral, Ohio. Filed June 16, 1922. Serial No. 568,712. 25 Claims. (Cl. 146—84.)

1. In a machine of the character described, a butt removing device, a conveyor to move an ear of corn toward said butt removing device, means to move said ear of corn transversely to said conveyor, a gaging bar to engage the butt end of the ear and position the same with relation to said butt removing device, and a spiral roller to engage the butt end of the ear and advance the same during the butt removing operation.

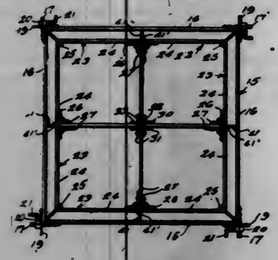


1,458,143. OPTICAL METHOD AND APPARATUS. HERMANN J. MULLER, New York, N. Y. Filed June 8, 1920. Serial No. 387,286. 16 Claims. (Cl. 88—24.)

1. The method of reversed microscopy which consists in projecting light from a source of the character described through a compound microscope, in the reverse direction upon a microscopic object lying in the objective

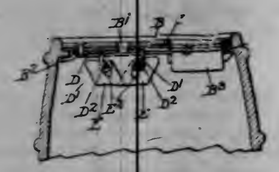
plane, with the resultant superposition upon the microscopic object of a greatly reduced image of the source of light.

1,458,144. DAMPER AND DAMPER-CLIP CONSTRUCTION. THOMAS OLINGER, Holland, Mich., assignor to Federal Stamping Company, Holland, Mich., a Corporation of Michigan. Filed Oct. 16, 1922. Serial No. 594,835. 8 Claims. (Cl. 126—292.)



1. In combination, a disk of sheet metal, a sheet metal clip attached at one side of the disk, comprising two sides bent to lie one at each side of the disk, said clip and disk being formed for the passage of one end of an operating member between them, and interengaging means on the clip and disk and on the inner end of the operating member for detachably securing them together, substantially as described.

1,458,145. MOLDING APPARATUS. JOHN F. PARSONS, Pullman, Mich. Filed Dec. 16, 1921. Serial No. 522,826. 4 Claims. (Cl. 25—128.)



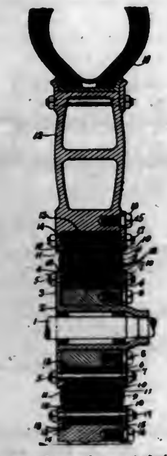
1. In molding apparatus of the character described, an outer casing, a collapsible core adapted to be arranged therein, said core embodying a plurality of sides, each side comprising a pair of sections, the outer ends of the sections of one side being hinged to the outer ends of the section of the adjacent sides hinged leaves connected with

the inner ends of the sections of each side and extending inwardly, a post, and arms pivotally connected with

the post to swing vertically and having their outer ends arranged between the inner ends of the leaf hinges and pivotally connected therewith.

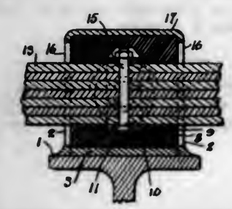
1,458,146. BANK. ARTHUR C. PRINCE, Chicago, Ill. Filed Nov. 23, 1921. Serial No. 517,171. 11 Claims. (Cl. 232—4.)

1. In combination with a coin bank a slot having a plurality of tumblers movably mounted within said bank and adapted when said bank is upright to swing upon contact with a coin to permit the ingress of said coin through said slot and adapted when said bank is reversed to block the egress of the coin through said slot, some of said tumblers at all times extending across said slot.



1,458,147. AIR GUN. BERT W. PUNCHES, Plymouth, Mich. Filed Feb. 6, 1922. Serial No. 534,320. 17 Claims. (Cl. 124—11.)

10. In an air gun, the combination with a false barrel, of a true barrel longitudinally movable therewithin, a guide within the outer end of said false barrel for the outer end of said true barrel, said guide having an aperture normally covered by said true barrel but adapted to be exposed beyond its outer end, and said guide being rotatable relative to said false barrel as well as movable longitudinally thereof to expose its aperture, and means connecting said false barrel and guide for normally holding said guide in a predetermined position relative to said false barrel.



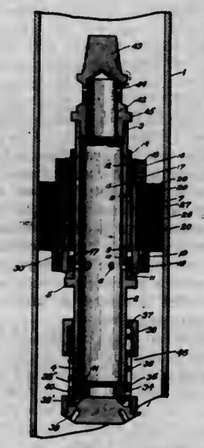
1,458,148. CUSHION WHEEL. RALPH REED, Cincinnati, Ohio. Filed Sept. 30, 1922. Serial No. 591,615. 7 Claims. (Cl. 152—3.)

7. In combination in a wheel, a hub portion, a rim portion and resilient element interposed between, reinforcing members located in said resilient element, and air spaces located therebetween in the resilient element,

and detachable members for retaining said resilient and reinforcing elements in position.

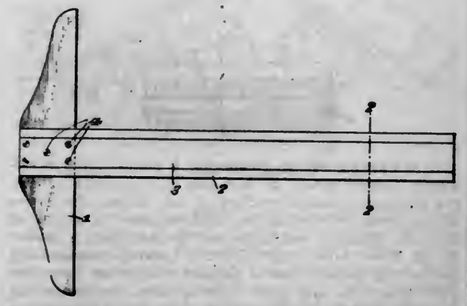
1,458,149. SHOCK-ABSORBING DEVICE. RALPH REED, Cincinnati, Ohio. Filed Oct. 9, 1922. Serial No. 593,207. 10 Claims. (Cl. 267—52.)

1. In combination, an axle, a supporting housing, a leaf spring passed therethrough and a resilient medium embracing said leaf spring and interposed between it and the housing.



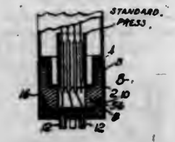
1,458,150. ANTIFRICTION ROLLER BEARING. JOEL TROUT RICE, ROYAL A. RICE and JOEL A. RICE, New York, N. Y. Filed July 22, 1920. Serial No. 398,103. 4 Claims. (Cl. 64—62.)

4. A roller bearing including inner and outer bearing rings forming an annular race, an annular series of rollers in said race, and a cage carrying said rollers and disposed between said bearing rings, said cage comprising



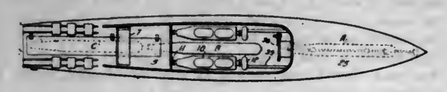
rings at opposite sides of the bearings, one of which presents bearings for the journals at the adjacent ends of the rollers, the other of said cage rings being composite and composed of separate inner and outer ring elements, the inner one of which is rigid with the first-mentioned cage ring and presents radial slots extending to the outer periphery for receiving the journals on the adjacent ends of the rollers, said inner ring element being of less diameter than the cage ring at the opposite side, said outer ring element presenting a radial flange directed laterally inward to fit over said inner ring element and close the slots therein; together with means to detachably fasten said inner and outer ring elements together.

1,458,151. OIL-WELL SWAB. LAWRENCE E. ROBINSON, deceased, late of Coffeyville, Kans., by Edith A. Robinson, administratrix, Coffeyville, Kans. Filed Aug. 12, 1921. Serial No. 491,718. 11 Claims. (Cl. 166—19.)



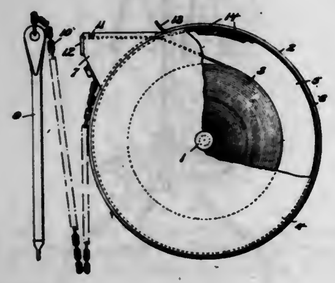
1. An oil well swab comprising a central tubular member having an inlet and an outlet, a sleeve slidable upon the central member, means carried by the sleeve for valving the inlet, and oil lift rings carried by the sleeve, the rings being interposed between the inlet and the outlet.

1,458,152. T SQUARE. WILKENS A. SCHENCK, Philadelphia, Pa., assignor to Charles H. Robbins, jr., Philadelphia, Pa. Filed July 21, 1922. Serial No. 576,449. 4 Claims. (Cl. 33—112.)



1. A T-square, the blade of which is provided with a reinforcing strip having fixed connection therewith at one end and slidable connection with the remaining portion thereof.

1,458,153. VACUUM TUBE BASE AND RECEPTACLE. FRANK H. SHAW, East Orange, N. J. Filed Aug. 20, 1919. Serial No. 318,838. 9 Claims. (Cl. 250—27.)

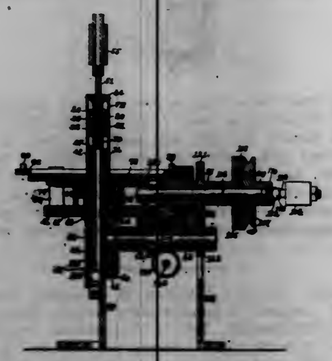


1. A base for a vacuum tube or other electrical apparatus, comprising a shell having a cylindrical end and having molded into air and moisture proof fit in said cylindrical end, under pressure, a closure of insulating material, said shell having openings through the shell wall adjacent to said closure, and said closure and said shell being interlocked by individual radial projections from said closure molded under pressure into said openings.

1,458,154. BOAT. WILLIAM B. SHEARER, New York, N. Y., assignor to International Torpedo Boat Corporation, Wilmington, Del., a Corporation of Delaware. Filed May 21, 1920. Serial No. 383,170. 2 Claims. (Cl. 114—18.)

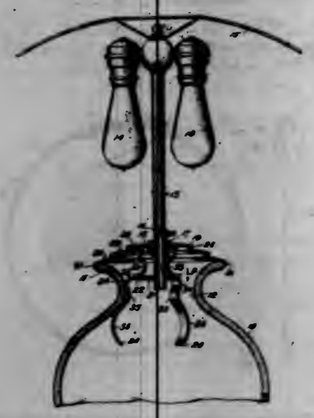
2. A boat having a forward torpedo launching space, a stern reserve torpedo space, an intermediate closed cabin and an open cockpit at the rear of the latter, part of the cockpit overlying said reserve space and constituting a removable deck over said reserve space.

1,458,155. WIRE-MARKING DEVICE. HERBERT E. SHREEVE, Maplewood, N. J. Filed Dec. 3, 1920. Serial No. 427,996. 2 Claims. (Cl. 281—5.)



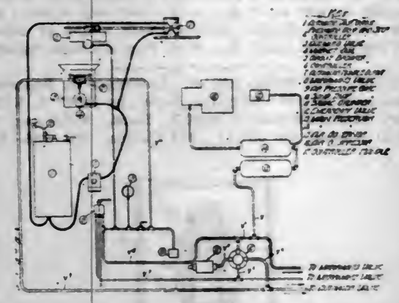
1. A device for housing and marking a strip of copper foil, comprising a housing having a discharge opening at one point in its marginal portion, a bracket secured to such marginal portion adjacent the discharge opening, a yieldable supporting writing platen on said bracket for receiving a piece of copper foil strip coiled in the housing thereon.

1,458,156. CIRCULAR WARP-KNITTING MACHINE. HENRY M. SMITH, Salem, Mass. Filed Mar. 16, 1918. Serial No. 222,963. 8 Claims. (Cl. 66—33.)



1. In a knitting machine, in combination, a plurality of needles provided with eyes and with latches for clos-

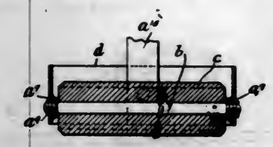
ing and opening said eyes, a guiding tube for said needles, means for reciprocating said needles, a stripper tube located above said guiding tube and co-operating with said needles to support the free ends thereof and to limit inward movement thereof, a carrier for a plurality of threads revoluble about said reciprocating needles, guides



for said threads movable with said carrier in a fixed path outside of and about said needles and means for presenting said threads to said needles to enable the latch of one needle to be moved into its open position by a thread in the eye of said needle and to be closed by a loop of the same thread and confine in the eye of said needle a succeeding thread.

1,458,157. ELECTRIC LIGHTING FIXTURE. HAROLD J. STRICH, Brooklyn, N. Y., assignor to L. D. Bloch & Co., New York, N. Y., a Corporation of New York. Filed May 19, 1920. Serial No. 382,561. 2 Claims. (Cl. 240—52.)

1. A lamp of the character described comprising, in combination, a hollow base portion having a mouth and neck, and a fixture to be applied thereto and removable therefrom comprising a vertical rotary tubular standard provided on its upper end with an electric lamp bulb and containing within it the electric wires for said bulb and having a threaded lower end, a series of resilient sheet metal arms depending into said neck, a non-rotary support to which said arms are hinged and a wedge-disk on the threaded end of said standard and between said arms and having a laterally projecting finger to engage the edge of one of said arms on the rotation of said standard for arresting said disk against rotation, said arms having downwardly and outwardly inclined portions to engage said disk and having outwardly curved portions to engage said neck.

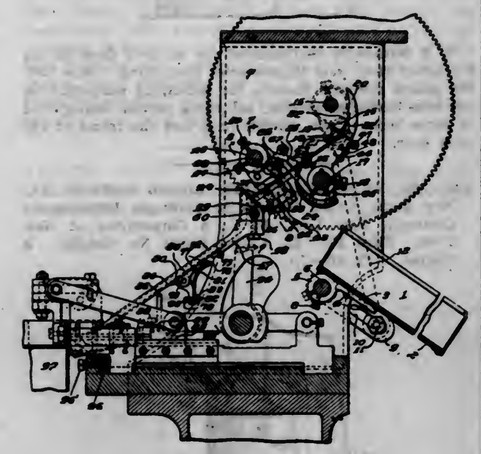


1,458,158. AUTOMATIC CAR-CONTROL MECHANISM. JOHN SUTHERLAND, Davenport, Iowa. Filed Sept. 2, 1919. Serial No. 321,037. 93 Claims. (Cl. 303—19.)

2. An automatic car stopping means for electric cars and the like comprising a working circuit, a controller, a circuit breaker, and electrically operated means for operating the circuit breaker to break the working circuit when the operator removes his hand from the controller handle when the controller is in running position, and auxiliary means controlled by the operator for neutralizing the circuit breaker operating means, said means comprising a foot switch pressure on which interrupts the circuit breaker operating means.

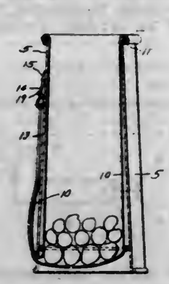
21. An automatic car stopping means for electric cars and the like comprising a working circuit, a controller, a circuit breaker, and electrically operated means, operative only when the controller has been moved away from the neutral position, for operating the circuit breaker to break the working circuit when the operator removes his hand from the controller handle, and auxiliary means controlled by the operator for neutralizing the circuit breaker operating means, said means comprising a foot switch, pressure on which interrupts the circuit breaker operating means, and an air brake and automatic means operated by the circuit breaker, and operating means for putting it into operation when the working circuit is broken.

1,458,159. DEVICE FOR WASHING CLOTHES AND THE LIKE. BENJAMIN FRANKLIN TITUS, Brixton, England. Filed Aug. 28, 1920. Serial No. 406,693. 2 Claims. (Cl. 68—8.)



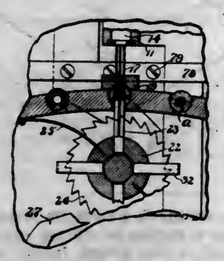
1. A washing device comprising a plate having downwardly turned flanges at each side and inwardly extending perforated bosses provided in each flange, the bosses of one flange being dispose- each opposite to a boss of the other flange, a handle secured to said plate, a plurality of fluted rollers, and spindles passing through said rollers and perforations to support said rollers rotatably with respect to said plate, said spindles having bearing portions slightly longer than the length of the rollers and reduced end portions forming shoulders adapted to seat against said bosses, said reduced end portions passing through said perforations, and being clamped to said plate to prevent rotation thereof.

1,458,160. SIGN. ANDREW P. TRUCKSESS, Camden, N. J. Filed Sept. 5, 1922. Serial No. 586,099. 1 Claim. (Cl. 40—130.)



In a sign, forwardly extending top, bottom and side edges forming a recess in which is located a sign frame spaced on every side from the forwardly extending portions, said framework of the sign consisting of a closed back wall, bottom wall and side walls, said frame being divided into horizontal compartments by horizontal partitions, each compartment deeper and extending forward farther than the one above it, chambers being provided by vertical partitions which are provided with flanges at their front as well as the side walls, the top wall of a compartment being the bottom of the next above it, and is provided with openings to admit light, the letter plates and glass plates resting upon the horizontal partitions and being spaced from the front edge the distance of the openings through which the letter plates are inserted, and lamps in the recess between the sign frame and the forwardly extending edges.

1,458,161. MULTIPLE STAPLING MACHINE. HARRISON B. WALTER, Philadelphia, Pa., assignor to Fibre Container Company, a Corporation of Pennsylvania. Filed Oct. 22, 1919. Serial No. 332,471. 5 Claims. (Cl. 1—8.)



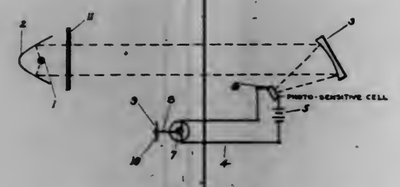
1. In a stapling machine provided with staple separating means and staple driving means arranged to reciprocate horizontally, the combination of inclined means connected between said staple separating and staple driving means over which separated staples hang vertically and are adapted to slide gravitationally, means connected to said inclined means for successively releasing said staples to allow the same to move gravitationally to said driving means, means to turn said staples into a horizontal position in front of said driving means, means on said driving means for operating said releasing means in time relation with the operation of said driving means, and resilient means for returning said releasing means to inoperative position.

1,458,162. FRUIT-PICKING RECEPTACLE. DANIEL C. WHITENACK, Selah, Wash. Filed Dec. 29, 1921. Serial No. 525,667. 4 Claims. (Cl. 150—2.)

1. A fruit-picking receptacle comprising a metallic sheath wider at the bottom than at the top, a fabric lining therein constituting a bag and a discharge spout constituted by an extension of the fabric lining and extending laterally beyond the side of said receptacle at a point above the level of the bottom of said sheath, the bottom of the bag lying wholly above the lower edge of said sheath until said spout is released to discharge the contents of the bag.

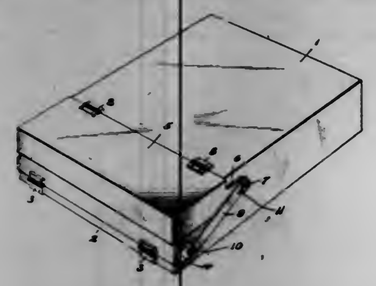
1,458,163. FRUIT-PITTING MACHINE. WARREN C. WHITMAN, Medford Hillside, and GEORGE E. GOODRIDGE, Reading, Mass., assignors to Atlas Products Co. Inc., Boston, Mass., a Corporation of Massachusetts. Filed Aug. 13, 1921. Serial No. 491,893. 39 Claims. (Cl. 146—5.)

34. A fruit pitting machine comprising means for holding the fruit, means for slitting the fruit transversely of the pit, and means for pushing the pit out through the slit.



1,458,164. CUFF BUTTON. ALLAN H. BACON, St. Louis, Mo. Filed July 1, 1922. Serial No. 572,274. 6 Claims. (Cl. 24—102.)

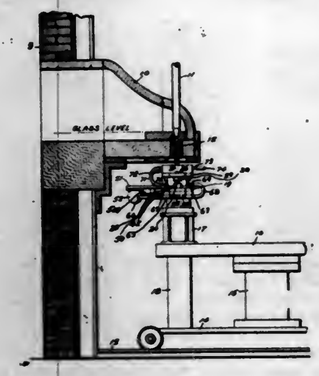
1. A cuff button comprising two end button members, a link pivotally united to one of said members, an addi-



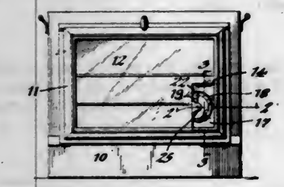
tional link pivotally united to the other one of said members, an abutment on the first named link arranged to slide on the second one, a separate abutment on the second link arranged to slide on the first one, and a single coil spring of the expansion type encircling both of said links and pressing against said abutments.

1,458,165. SYSTEM OF ELECTRICAL CONTROL. WILLIAM W. COBLENTZ, Washington, D. C. Filed Sept. 22, 1920. Serial No. 412,050. 9 Claims. (Cl. 250—2.)

1. A method of thermal radio dynamic control consisting in the optional projection of thermal rays of wave lengths greater than 0.65 micromillimeters or less than 0.65 micromillimeters onto a light reactive receiver interposed in a relay circuit, whereby to increase or decrease the electrical conductivity of said receiver to vary the flow of current through an electrical responsive device connected in such circuit.



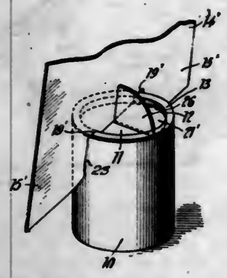
1,458,166. PHOTOGRAPHIC-PAPER RECEPTACLE. WILLIAM C. COX, Washington, D. C. Filed June 16, 1920. Serial No. 389,512. 4 Claims. (Cl. 220—35.)



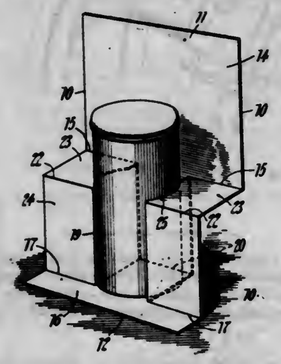
1. A box-like receptacle having its forward end open and also having a portion of its top open adjacent to such forward end, a flap hinged to the receptacle and normally closing the forward end opening, a lid hinged to the receptacle and normally closing the opening in the top, a crank arm extending backwardly from said lid, and a link pivotally connected to said flap and having a jointed connection with the lid.

1,458,167. METHOD OF AND APPARATUS FOR FEEDING MOLTEN GLASS. SCOTT DAVIDSON, Hillsboro, Ill., assignor to Schram Glass Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 29, 1921. Serial No. 440,915. 11 Claims. (Cl. 49—5.)

1. The herein described method of delivering glass to the moulds of a forming machine, which consists in the establishment of a regulated stream of glass, arresting the downward movement of said stream until a sufficient mass of glass has been accumulated therefrom, supporting said mass along its bottom and its side a predetermined interval, and then first releasing the mass entirely on its bottom and simultaneously during such release imparting to the batch a rotary movement, and immediately subsequent to the release of the batch on its bottom a jolt for assisting the discharge of the batch by gravity.



1,458,168. OVEN THERMOMETER. GEORGE J. DAY, Buffalo, N. Y. Filed Aug. 19, 1921. Serial No. 493,768. 8 Claims. (Cl. 73—119.)

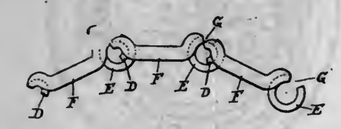


1. A detachable thermometer for an oven door having a window pane, said thermometer comprising a base having means mounted thereon for indicating temperatures, the base having a marginal attaching portion constructed to enter between the window pane and the frame of the oven door.

1,458,169. DISPLAY DEVICE. ADOLPH DIETSCHE, Jr., New York, N. Y., assignor to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed Feb. 23, 1922. Serial No. 538,691. 5 Claims. (Cl. 40—7.)

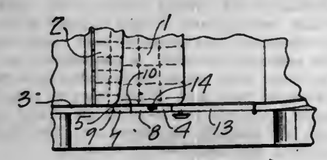
1. A display device adapted for erection on a container and comprising a body of sheet material from one portion of which projects a pair of legs, the infacing edges of said legs being spaced apart a distance less than the major transverse dimension of the container on which the display is adapted for erection, said inner edges being adapted to locate the device against rearward movement, said body having articulated thereto between and on a line substantially normal to the inner edges of said legs a wing member for engagement with the container top, said wing member having an ear articulated thereto adapted to locate the device against forward movement.

1,458,170. DISPLAY DEVICE. ADOLPH DIETSCHE, Jr., New York, N. Y., assignor to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed Mar. 7, 1922. Serial No. 541,852. 2 Claims. (Cl. 211—24.)



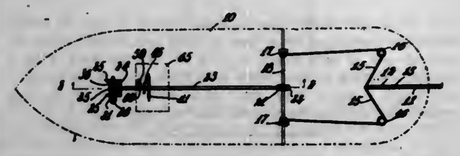
1. In a display device of sheet material adapted for use in displaying an upstanding article, the combination of a rear upright member and a base member, said rear member having a mid-down-reaching leg articulated to a foot rear-reaching from said base member, opposite tables articulated to and forwardly reaching from said rear member on each side of said rear member leg respectively, and opposite panels articulated to and upstanding from said base member on each side of said base member foot respectively, the upper ends of said panels being articulated to the forward ends of said tables respectively, said device being adapted for folding into flat form when not in use.

1,458,171. TOOL. JOHN S. DONALDSON, New York, N. Y. Filed Feb. 8, 1921. Serial No. 443,322. Renewed Feb. 14, 1923. 2 Claims. (Cl. 279—97.)



1. A hammer-driven tool, comprising a shank bifurcated at its outer end by a longitudinal slot of uniform width and having a transverse hole in its bifurcated portion, an operative member having a flat projection with substantially parallel sides throughout a range essentially greater than the depth of the slot and adapted to enter said slot and engage the inner end of the slot and having a transverse hole registering with the hole in the shank, and a clamping bolt extending through said holes, the hole in the projection being elongated longitudinally of the tool so that while the sides of the aperture engage said bolt a clearance is provided between the lower end of the aperture and the bolt.

1,458,172. LOCKING LINK FOR CHAIN BELTS. RAYMOND W. DULL, La Grange, Ill., assignor to Link Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 2, 1920. Serial No. 407,618. 7 Claims. (Cl. 59—91.)



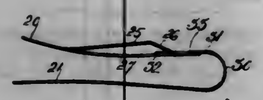
1. A chain belt comprising a plurality of separate links each having a cross bar at one end and a hook at the other with side bars slightly spread near the cross bar to give free access to the hook.

1,458,173. EXPANSIBLE AUTOMOBILE SEAT. ADAM E. FISHER, St. Louis, Mo. Filed Nov. 22, 1922. Serial No. 602,544. 6 Claims. (Cl. 296—63.)

1. In combination with an automobile seat and body having the seat end portions cut away, expansible ends for the seat, comprising panels hinged together and then in turn hinged rearwardly to the body in lieu of the cut away portions, and so as to buckle horizontally backwardly outwardly.

1,458,174. AUTOMATIC SHIP-STEERING MECHANISM. JUSTIN FIZESAN, Saugerties, N. Y. Filed Apr. 18, 1922. Serial No. 555,147. 2 Claims. (Cl. 114—146.)

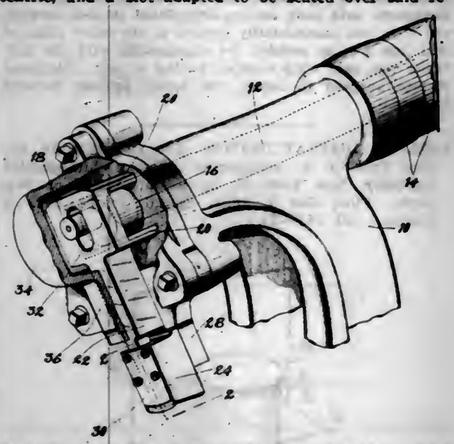
1. In combination with a rudder, a rotatable shaft operatively connected thereto, power mechanism for rotating said shaft in opposite directions, control means therefor including a clutch element, an arm adapted to shift said clutch element, a rock-shaft on which said arm is fixed, a pair of clutch elements one of which is fixed and one loose on said rock-shaft, a clutch sleeve loose on said



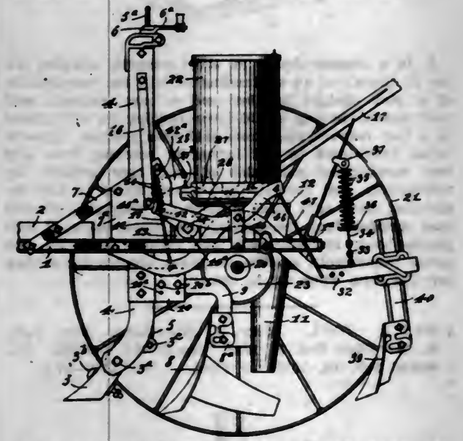
shaft between said clutch elements, a steersman's wheel fixed on said clutch sleeve, and means forming an operative connection between said loose clutch element and said first mentioned shaft.

1,458,175. VEHICLE WHEEL. THOMAS J. FLAHIE, Pennville, Ind. Filed July 1, 1921. Serial No. 481,926. 2 Claims. (Cl. 152—28.)

1. A vehicle wheel comprising in combination, a hub, spokes radiating from the hub, rings secured to the sides of the spokes toward the hub from the ends of the spokes and connecting all of the spokes near their outer ends, a channeled rim located outward from the ends of the spokes and in which the outer end portions of all of the spokes are loosely located, a double coil-spring located between each two of said spokes, means for securing the central portion of the springs to said rim, means for mounting each coil of each of said springs on a stem, means for connecting said stems to said rings whereby said hub is retained resiliently in suspension, an inner disc, and an outer disc, means for securing said discs to said rim whereby they will extend inward toward the hub but spaced therefrom and by which all of said springs are enclosed, substantially as shown and described and for the purposes set forth.



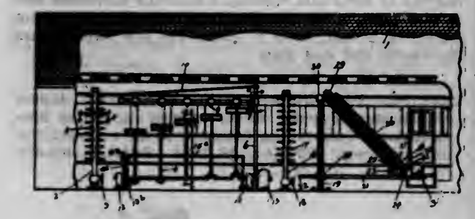
1,458,176. HAIR CURLER. PAUL GLAMZO, Brooklyn, N. Y., assignor of one-third to Frank Grimm, New York, N. Y., and one-third to Rudolf Rittmeyer, Brooklyn, N. Y. Filed Feb. 10, 1922. Serial No. 535,510. 2 Claims. (Cl. 132—41.)



1. In a hair curler the combination of a pair of resilient arms connected by a loop, a hook end formed with the end of one of said arms, a pair of locking jaws with a locking opening formed with said hook end and a projecting latch formed with the other arm adapted to lock with said locking jaws and locking opening.

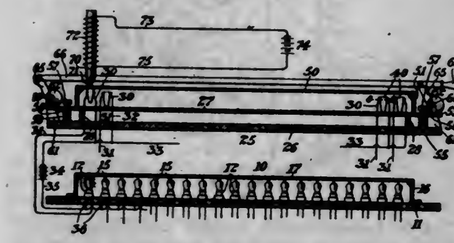
1,458,177. BEATING MACHINE. PERLEY R. GLASS, Wayland, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 1, 1919. Serial No. 335,201. 6 Claims. (Cl. 12—42.)

1. A machine of the class described having, in combination, a reciprocating tool, a guide adjacent thereto, and means for reciprocating said tool comprising a rotatable shaft, an eccentric thereon, and a concentric portion of said shaft of a reduced diameter beyond said eccentric, said tool comprising a jaw to embrace the eccentric, and a slot adapted to be seated over said reduced portion of the shaft to secure rectilinear movement of the tool.



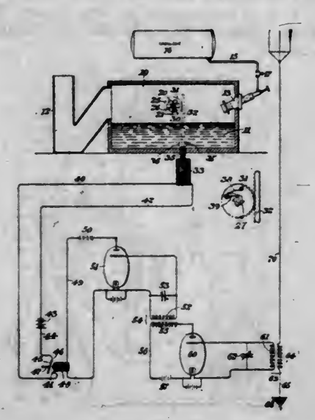
1,458,178. PLANTER. RICHARD H. GRIFFITH, Bellevue, Ohio, assignor to The Ohio Cultivator Company, Bellevue, Ohio, a Corporation of Ohio. Filed Jan. 31, 1921. Serial No. 441,260. 4 Claims. (Cl. 111—61.)

4. In a planter, a main frame, a furrow opener provided with a vertically movable shank, a rock shaft provided with crank arms extending at the sides of said shank, links extending upwardly between said arms and said shanks, a spring suspended supplemental frame carried by said main frame and provided with upwardly extending links slidably and resiliently connected to said arms of said rock shaft for simultaneous normal operation with the latter and said furrow opener, a feed hopper and feed mechanism carried by said main frame, and crank and link means between said rock shaft and feed mechanism for throwing the latter into and out of operation with the movement of said furrow opener and furrow covering shovels into and out of their ground engaging positions, respectively.



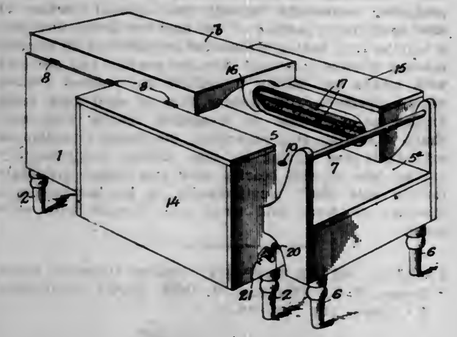
1,458,179. CAR-CLEANING APPARATUS. THURSTON M. HAMER, Montreal, Quebec, Canada. Filed July 25, 1921. Serial No. 487,378. 8 Claims. (Cl. 15—53.)

1. In a car cleaning apparatus, a track, a water pipe located adjacent to said track and provided with horizontally arranged nozzles, scrubbing brushes adapted for reciprocating movement adjacent to said water pipe, means for reciprocating said brushes, means for delivering water



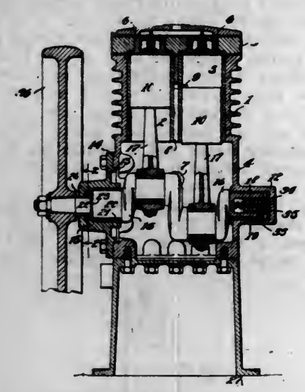
to said brushes, air spraying apparatus located adjacent to said scrubbing members and a polishing element.

1,458,180. ADVERTISING DEVICE. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed June 1, 1916, Serial No. 101,106. Renewed Oct. 5, 1921. Serial No. 505,565. 12 Claims. (Cl. 177—349.)



1. Electrical switching means comprising a plurality of magnetic switch members arranged to be reciprocated respectively in predetermined straight paths and separately movable from inoperative into operative positions, and means movable in a predetermined path for simultaneously moving a plurality of said switch members members from operative into inoperative positions.

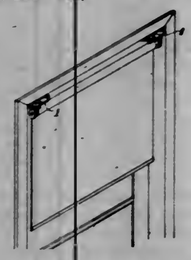
1,458,181. SMOKE PRODUCER. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Oct. 17, 1917, Serial No. 197,125. Renewed Oct. 25, 1921. Serial No. 510,288. 7 Claims. (Cl. 158—91.)



1. In a smoke producer, the combination with a combustion chamber provided with an opening, of means responsive to radiant energy for controlling the effective area of said opening.

1,458,182. ELECTROTHERMAL BATH CABINET. MARIE F. HASEMEIER, Woodward, Okla. Filed Jan. 25, 1922. Serial No. 531,617. 6 Claims. (Cl. 174—177.)

1. A therapeutic bath cabinet of the character described comprising a horizontally extending body portion having an entrance opening at one end, a table upon which the patient may lie slidably extending through said entrance opening into said cabinet and dividing the cabinet into upper and lower chambers, a heater disposed in said lower chamber to be adjustable along the length of said chamber, said table having a plurality of openings therein through which the heat may pass upwardly into said upper chamber and around the patient on the table.

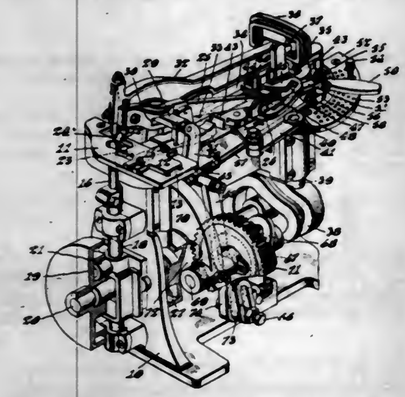


1,458,183. SHAFT SEAL FOR COMPRESSORS. FRED J. HEIDEMAN, Detroit, Mich., assignor to Kelvinator Corporation, Wilmington, Del., a Corporation of Delaware. Filed Sept. 6, 1918. Serial No. 252,819. 2 Claims. (Cl. 286—7.)

1. In a compressor, a crank case one of whose walls is formed with an aperture and the opposite wall with a recess in line with said aperture, said aperture being formed with a bearing portion, a threaded portion, and an inwardly facing seating portion, a bearing ring screwed into said threaded portion from within and provided with means for seating it against said seating portion and having its inner face formed as a surface of revolution coaxial with said bearing portion, an operating shaft journaled in said bearing portion and having an extension projecting through said aperture, a sealing ring embracing said shaft and having its outer face complementary to said bearing ring, and spring means in said recess and operating against the opposite end of said shaft to force said rings together.

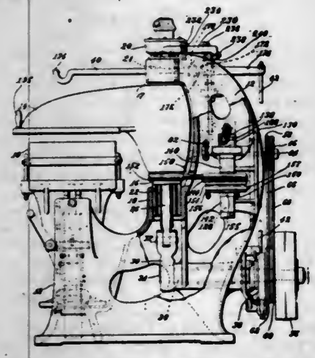
2. A refrigerating apparatus having a closed casing and a rotatable shaft journaled therein, one wall of said casing having an aperture which is reduced at its outer end, and said shaft having a reduced extension projection outwardly through the reduced portion of said aperture, a portion of the aperture being threaded, a bearing ring having a threaded exterior and an arcuate interior screwed into said threaded portion and provided with means for sealing it against the reduced portion of the aperture, the interior face of said ring being formed as a surface of revolution coaxial with said shaft, a sealing ring embracing the reduced portion of said shaft and having its face formed complementary to the face of said bearing ring and means yieldingly forcing said shaft longitudinally of its bearing in a direction to force said rings into contact with each other.

1,458,184. SHADE SUPPORT. ERNEST HEITMAN, North Bergen, N. J. Filed Sept. 1, 1920. Serial No. 407,543. 3 Claims. (Cl. 156—24.)



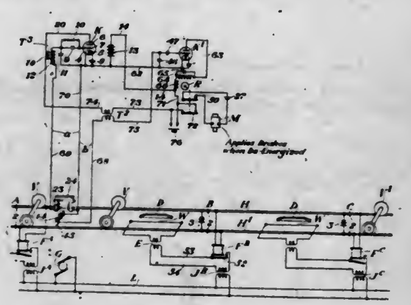
2. A shade support comprising in combination a bracket-guide consisting of a rod bent in the form of a closed frame with parallel sides and having its ends turned at substantially right angles to the parallel sides, a base-plate attached to the ends of said bracket-guide, said base-plate being provided with perforations adapted to receive suitable means for securing it to a window frame, a one-piece adjustable bracket formed by having one end portion engage the sides of said bracket-guide, the remaining portion being bent upwardly through said sides then downwardly parallel with the end portion and then downwardly through said sides at right angles to said end portion, said bracket being provided with tightening means and a perforation in its right angled portion adapted to receive the pintle of a shade.

1,458,185. GLOVE FORM. JAMES R. HEMPHILL, Akron, Ohio, assignor to The Colonial Sign and Insulator Company, a Corporation of Ohio. Filed Feb. 28, 1921. Serial No. 448,566. 9 Claims. (Cl. 18—41.)



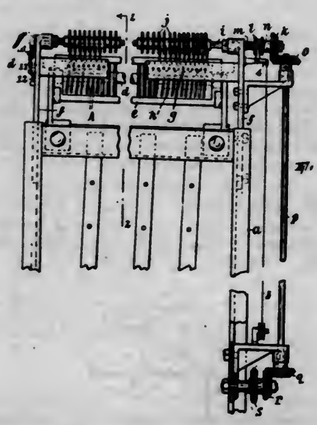
7. In a device of the class described, in combination a hollow glove form having an end wall at the arm end thereof, said end wall provided with an elongated opening, a plate adapted to register in said opening and be positioned transversely thereof within the form, a handle adapted to cover said opening, a centrally positioned hole in said plate, a similar hole in said handle and means insertable in said holes to clamp the end wall between the handle and said plate.

1,458,186. FASTENER-SETTING MACHINE. ALBERT E. HUDSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 16, 1920. Serial No. 403,674. 17 Claims. (Cl. 218—15.)



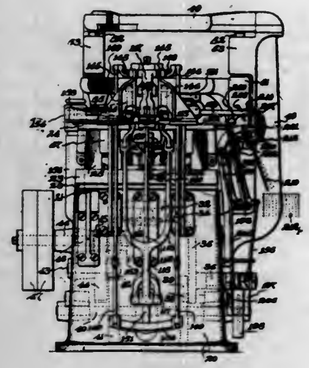
15. A fastener-setting machine comprising fastener-setting mechanism, regulatable work-feeding mechanism, automatic mechanism constructed and arranged to regulate the feeding mechanism so as to produce two lengths of feeding steps alternately, regulatable mechanism for punching a hole in the work to receive the fastener, and means connecting said automatic regulating mechanism with said punching mechanism so that the latter will be automatically controlled to vary the spacing of the punched holes in accordance with the length of the feeding steps.

1,458,187. PRESS. ALBERT E. HUDSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 25, 1921. Serial No. 447,650. 27 Claims. (Cl. 164—23.)



1. In a machine of the class described, a work supporting bed and a presser member relatively movable toward and from each other in pressure applying operations, and a post for supporting the presser member for swinging movement laterally over the bed, the said post being integral with the presser member and having trunnions mounted in bearings on the frame of the machine.

1,458,188. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LLOYD V. LEWIS, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed Nov. 25, 1918, Serial No. 263,969. Patent No. 1,377,187, dated May 3, 1921. Divided and this application filed Mar. 24, 1921. Serial No. 455,140. 8 Claims. (Cl. 246—63.)



1. Railway traffic controlling apparatus comprising a vehicle, governing means thereon held in inactive condition when supplied with pulsating current of a given frequency, a source of pulsating current on said vehicle normally delivering current of said given frequency to said governing means, devices located at intervals in the trackway for varying the frequency of said source and thereby placing said vehicle governing means in active condition, and means located in the trackway and controlled by traffic conditions in advance for modifying the effect of said trackway devices on said governing means.

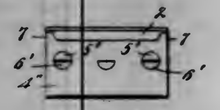
1,458,189. STOP-MOTION MECHANISM FOR WARPING MACHINES. ARTHUR C. MASON, Hawthorne, N. J. Filed Sept. 2, 1922. Serial No. 585,924. 6 Claims. (Cl. 28—50.)

1. In combination, with mechanism to advance a warp longitudinally and meanwhile maintain the same taut, a support, and detectors having free ends all projecting in substantially the same direction, said detectors being movable in the support back and forth laterally of the warp and respectively engaged with the threads of the warp, each detector being normally urged in one direction and held by the corresponding thread against such movement and the support affording clearance for shifting the constitutent threads of the warp in between and out from between the detectors.

1,458,190. MACHINE FOR OPERATING UPON SHOE PARTS. RALPH S. MEGATHLIN, West Somerville, and ALBERT E. HUDSON, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 12, 1920. Serial No. 350,771. 106 Claims. (Cl. 69—8.)

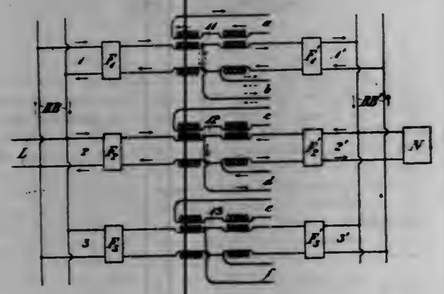
8. A machine of the character described, having, in combination, an endless series of duplicate blank-supporting tables, means for holding a blank in position above each table, means for actuating said series of tables to cause each to successively occupy different stations, and means for compressing each blank and measuring its thickness by successive operations at different stations.

16. A machine of the character described, having, in combination, a mold plate, means for supplying a blank thereto, means for transferring said plate and blank successively to a plurality of stations, and means for operating on the blank while held by the mold plate to compress it, measure its thickness, skive one side of it, and iron its other side.



1,458,191. ARMORED TIRE. JOSEPH CLEMENT MIRE, Feitel, La. Filed May 8, 1922. Serial No. 559,341. 2 Claims. (Cl. 152—17.)

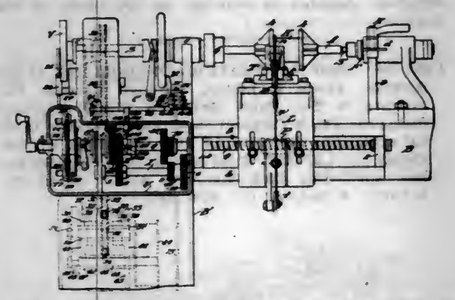
1. In an armored tire, a casing, a plurality of sections encasing the casing, each comprising a transversely curved metallic plate, said metallic plates overlapping each other, interlocking means for releasably securing said sections to each other in assembly, circumferentially extending flanges carried by said curved metallic plates and defin-



ing a circumferentially extending channel, the flanges of each section slidably overlapping the adjacent section and an endless band of cushioning material received in said channel.

1,458,192. REENFORCED BLADE. WILLIAM E. NICKERSON, Cambridge, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Jan. 9, 1919. Serial No. 270,347. 7 Claims. (Cl. 30—12.)

1. A reenforced blade comprising a folded backing and a cutting portion located in part between the folds of the backing and terminating at a distance from its folded edge, said backing being provided with tongues bent around the cutting portion at points close to the latter whereby said cutting portion and both of the overlying folds are secured together.

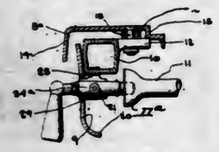


1,458,193. MULTIPLE BALANCING ARRANGEMENT FOR MULTIPLEX TRANSMISSION. HAROLD S. OSBORNE, Montclair, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 13, 1919. Serial No. 323,504. Renewed Nov. 14, 1922. Serial No. 600,986. 9 Claims. (Cl. 178—44.)

9. In a signaling system, a transmission line, a balancing circuit therefor, a plurality of connecting circuits between said line and balancing circuit, a pair of signaling channels associated with each connecting circuit, one signaling channel of each pair being so associated with the connecting circuit as to be conjugate with respect to the other signaling channel of the pair, and the connecting circuits being so arranged with respect to the line and balancing circuit that a channel associated with one of said connecting circuits will be conjugate with respect to a channel similarly associated with another of said connecting circuits.

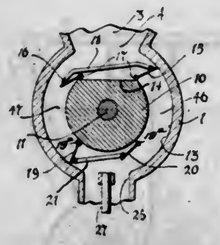
1,458,194. STARTING AND STOPPING MECHANISM FOR WINDING MACHINES. EDWARD F. PARKS and CARL A. BRINK, Providence, and GEORGE N. TAYLOR, East Providence, R. I., assignors, by mesne assignments, to The New England Trust Company, a Corporation of Massachusetts, trustee. Filed Mar. 12, 1919. Serial No. 282,349. 13 Claims. (Cl. 242—36.)

1. In a winding machine, the combination with a rotating winding-mandrel and a traverse-guide, of means to feed the guide longitudinally of the mandrel, and means to disconnect the guide from its feeding-means when the



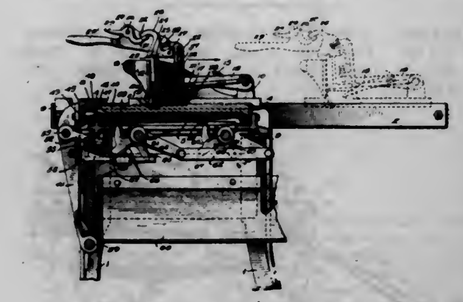
guide meets an obstruction which causes abnormal resistance to its feeding movement.

1,458,195. PORTABLE ELEVATOR. WILLIAM B. PAVEY, Chicago, Ill., assignor to Economy Engineering Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 4, 1922. Serial No. 540,957. 12 Claims. (Cl. 187—11.)



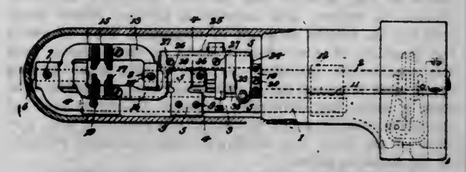
5. A raising and lowering machine comprising a stationary upright frame, an auxiliary frame and a load-carrying frame, said frames being mounted for relative up and down movement, a sheave carried at the upper end of the stationary frame, sheaves carried by the opposite ends of the auxiliary frame, and hoisting mechanism including a cable passing over said sheaves successively and connected with said load frame.

1,458,196. GAS RANGE. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed July 5, 1921. Serial No. 482,388. 7 Claims. (Cl. 126—42.)



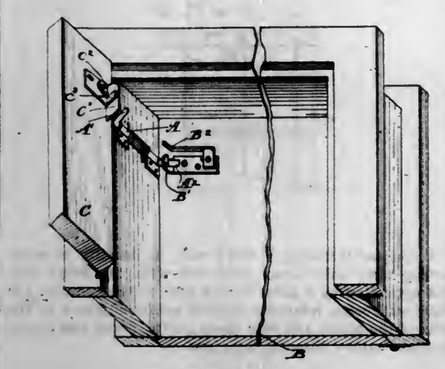
7. In a gas range, the combination of a top frame, a burner, means for supplying gas to the burner, including a valve, a handle for the valve, and a flame guard between the burner and said handle.

1,458,197. DOUGHNUT MACHINE. CHESTER A. PURDY, Chicago, Ill. Filed Jan. 19, 1922. Serial No. 530,413. 6 Claims. (Cl. 107—14.)



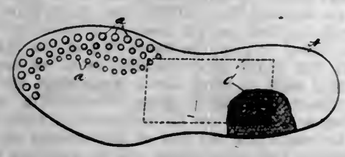
1. A device of the character described comprising a casing, a rotor mounted within the casing, a pair of valve members hinged to the rotor, a pair of valve members hinged to the casing adjacent the rotor, said casing being provided with an inlet port and a delivery port, and means for manually oscillating the rotor, whereby dough or the like introduced to said casing may be delivered through said delivery port.

1,458,198. TILE-MAKING MACHINE. ALFRED H. RUSH, Phoenixville, Pa. Filed Apr. 12, 1922. Serial No. 551,909. 18 Claims. (Cl. 25—42.)



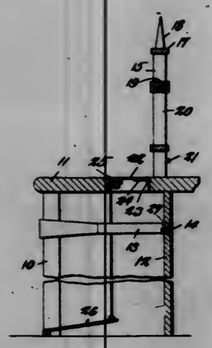
1. A tile making machine comprising a former having an open top, said former being adapted to receive material to form said tile, a cutter bar adapted to be reciprocated over said former to remove excess material therefrom, and means for locking said former during the formation of said tile.

1,458,199. FEEDING MECHANISM FOR SEWING MACHINES. DUDLEY S. SEYMOUR, Oak Park, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 4, 1919. Serial No. 287,389. 7 Claims. (Cl. 112—209.)



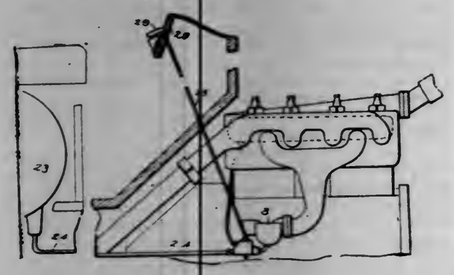
1. The combination of a projecting tubular work supporting arm and a feeding mechanism located within said arm, said feeding mechanism including a main feed dog and an auxiliary feed dog, means within the tubular work supporting arm for raising and lowering the feed dogs, and means for moving the feed dogs back and forth in a plane substantially at right angles to the longitudinal axis of the work supporting arm, said last-named means including devices whereby the auxiliary feed dog may be given a different length of movement from said main feed dog.

1,458,200. WALL RECEPTACLE FOR RECEIVING DELIVERIES. WILLIAM J. SLOAN, Cleveland, Ohio, assignor of one-half to Frank Paulin, Cleveland, Ohio. Filed Nov. 22, 1918. Serial No. 263,657. 1 Claim. (Cl. 232—41.)



In a safety wall receptacle, a casing, outer and inner doors therefor, a keeper having a vertical opening and mounted upon said outer door, a pivoted guard adapted to fall over said vertical opening, a latch member pivoted upon one side wall of said casing and provided with a latch extremity adapted to engage with the vertical opening in said keeper when the outer door is closed and to pass horizontally under said guard, and an operating member for said latch member, said operating member pivotally secured upon the inner face of said inner door, said latch member provided with a lateral extension adapted to be engaged by said operating member when the inner door is shut and depress the same; said operating member constructed to pass by said lateral extension after depressing the same and a stop means on said inner door preventing said operating member from swinging on its pivot when the inner door is closed but releasing the same when the inner door is opened.

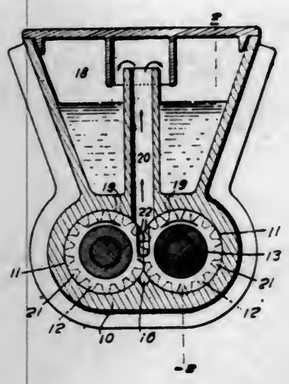
1,458,201. SHOE SOLE. JAMES H. STEDMAN, Braintree, Mass. Original application filed Apr. 24, 1919, Serial No. 292,417. Divided and this application filed Sept. 25, 1920. Serial No. 412,693. 5 Claims. (Cl. 36—56.)



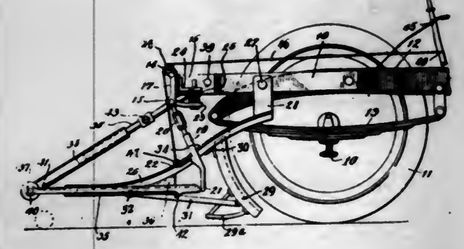
5. A golf shoe having an outer sole made of rubber compound, said sole having a smooth wearing surface and being provided with integral resilient hobs about its toe near its inner edge, whereby on turning the shoe on its inner edge as an axis the hobs will tend to adjust themselves to the unevenness of the ground and afford a firm purchase to the wearer of the shoe.

1,458,202. SAFETY BANK COUNTER. HIRAM STOUT, Newton, Kans. Filed Feb. 24, 1920, Serial No. 360,576. Renewed Feb. 20, 1923. 1 Claim. (Cl. 89—36.)

A counter including a front wall, a plurality of pipes having their outer ends connected with the front wall and extending to a point at the rear of the counter, the front wall being relatively thin at points adjacent to the ends of the pipes, and said pipes having flared inner ends to guide bullets through the pipes.



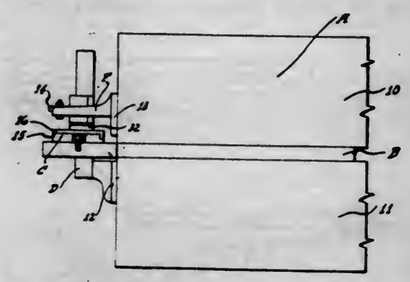
1,458,203. RESERVE FUEL SYSTEM FOR AUTOMOBILES. PERRY TANNER, Ashland, Ky. Filed May 16, 1922. Serial No. 561,200. 2 Claims. (Cl. 158—46.5.)



1. In combination with a motor vehicle having a motor, a carbureter, a main fuel supply tank, a main fuel supply pipe leading from the main fuel supply tank, an auxiliary fuel supply tank mounted on the motor and above the horizontal plane of the carbureter, means for spacing the auxiliary fuel supply tank from the motor to form an air passage between said tank and the motor to cool the liquid fuel in the tank, an auxiliary fuel supply pipe extending from the auxiliary fuel supply tank, a valve casing with which the main and auxiliary fuel supply pipes communicate, a pipe connecting said casing and the carbureter, a valve in the casing for controlling the flow of fuel through the main and auxiliary fuel supply pipes, and an operating handle extending from the valve to within reach of the operator of the vehicle.

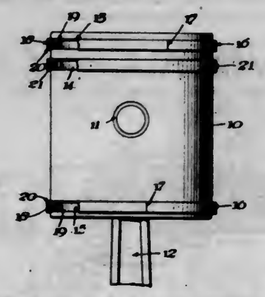
1,458,204. PUMP. RAYMOND W. TIBBETTS, Roxbury, Mass. Filed Nov. 2, 1920, Serial No. 421,282. Renewed Apr. 17, 1923. 3 Claims. (Cl. 30—30.)

1. A pump having rotors consisting of intermeshing herring bone gears and passages at the central part of the gears for the escape of liquid from the pocket formed by the intermeshing of the gear teeth, said passages opening into the spaces between the gear teeth and an outlet pipe to which liquid is directly delivered, said passages being merely relief ports.



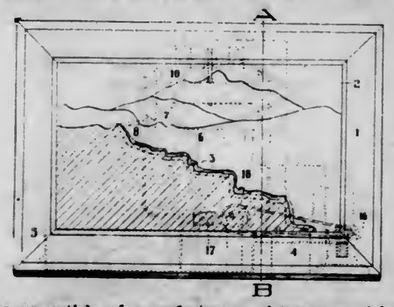
1,458,205. SAFETY ATTACHMENT FOR AUTOMOBILES. JULIUS M. ALTER, Brooklyn, N. Y. Filed Feb. 20, 1922. Serial No. 537,855. 3 Claims. (Cl. 180—83.)

1. In a safety attachment as set forth, the combination with a frame and a bumper bar carried thereby, of a receiver pivoted to the frame and extending downward and forward therefrom to a position close above the ground, means suspended from the pumper bar for holding the receiver normally elevated, and trip mechanism in advance of the receiver and movable rearward relatively thereto to release said suspended holding means when striking an article disposed in alignment with or above the position of the receiver close to the ground, said trip mechanism including a pair of side arms having upper ends mounted for pivotal movement around a fixed axis, a cross bar extending between the front ends of the arms, and a brace extending between the mid portions of the arms and serving to hold the pivot portions of the arms in place.



1,458,206. GUIDE FOR MATCH PLATES. WILLIAM BOCK, Racine, Wis. Filed June 20, 1921. Serial No. 479,025. 5 Claims. (Cl. 22—10.)

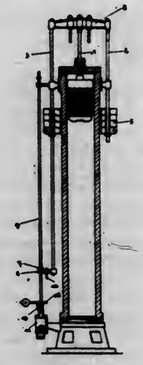
1. The combination with a flask including a cope portion, a drag portion, and a match plate interposed therebetween, a flask pin carried by one of said portions, a socket carried by the other portion for the flask pin, a



casing carried by the match plate, oppositely disposed slidable tension plates carried by the casing for engaging the opposite sides of the flask pin.

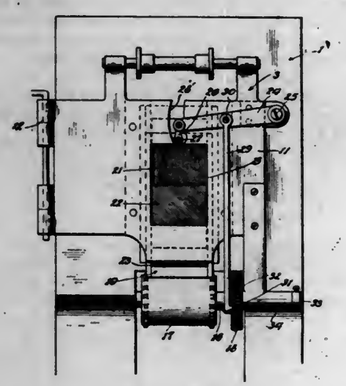
1,458,207. PISTON RING. JOHN HERBERT BRENNER, Douglas, Wyo. Filed June 26, 1920. Serial No. 391,877. 7 Claims. (Cl. 74—109.)

1. The combination with a piston provided with a ring groove having imperforate walls; of a piston ring of the split expansion type comprising a concentric resilient ring body having a series of spaced recesses therein diagonally at one corner and adjacent the peripheral faces of the ring and piston for cooperation with the wall of the cylinder bore whereby to cause said ring to seat inwardly and outwardly under suction and compression respectively.



1,458,208. TOY OR ADVERTISING DEVICE. HENRY ALBERT HOUGHTON, Douglas, Isle of Man. Filed Sept. 19, 1922. Serial No. 589,140. 1 Claim. (Cl. 40—126.)

As an article of manufacture a picture comprising a flat backing, a frame supporting said backing, a device in bas-relief covering a portion of said backing, a receptacle behind said backing communicating with a perforation therein adjacent the apex of said portion in bas-relief, a



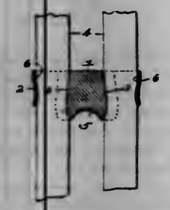
receptacle collecting water at the bottom of said backing, a pump, means connecting said pump with said receptacle, a main reservoir supported on said frame at a point above the perforation in the backing, a float in said main reservoir, means to drive the pump and means operated by said float to cause the operation of the motor driving the pump whenever the water level in the main reservoir falls below a predetermined degree and means to interrupt the driving of said pump when the water level has reached a predetermined degree in said reservoir.

1,458,209. AIR ACCUMULATOR. FRITZ KEMPTER, Stuttgart, Germany. Filed Oct. 8, 1920. Serial No. 415,090. 3 Claims. (Cl. 103—42.)

1. In a device of the kind described in combination, a cylinder closed at both ends, a rodless piston freely movable within said cylinder, means comprising a valve for introducing a pressure liquid at one end of said cylinder and a rod operatively connected with said valve projecting into said cylinder so as to be acted upon by said piston at one end of its stroke.

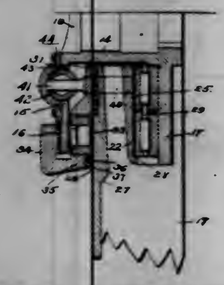
1,458,210. MOTION-PICTURE-PROJECTION APPARATUS. THOMAS A. KILLMAN, Nashville, Tenn. Filed Apr. 18, 1922. Serial No. 554,668. 6 Claims. (Cl. 88—16.4.)

1. In apparatus for projecting motion pictures in color from film having alternate picture areas possessing complementary color value, a film gate having an aperture to accommodate two picture areas of the film, means for shifting the film intermittently the distance of one picture area, a color screen supported in operative relation to said aperture and having spaced light ray transmitting



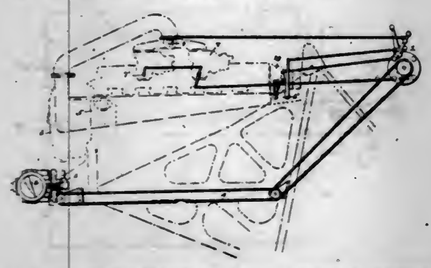
areas of the same primary color and an intermittent light ray transmitting area of a complementary primary color, and means operable to shift the screen to successively bring the intermediate area and alternate ones of the first mentioned areas thereof simultaneously into operative relation to the aperture of the film gate.

1,458,211. PHOTOGRAPHIC SHUTTER. EDWIN F. KINGSBURY, Rutherford, N. J. Filed Dec. 6, 1919. Serial No. 342,873. 8 Claims. (Cl. 95—57.)



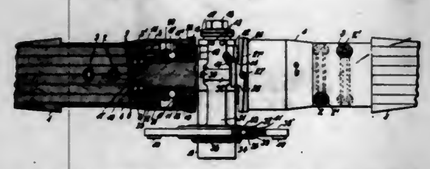
8. In combination with the curtain shutter sections of a photographic shutter, a flexible tape engaging at the front end the two free ends of said shutter sections to keep them in spaced relationship, attaching means for the remaining end of said flexible tape, additional means for providing a loop between the said ends of the tape, and means for increasing and decreasing the size of said loop.

1,458,212. AIRCRAFT LANDING-GEAR-CORD CLAMP. SIDNEY P. LYON, Dayton, Ohio. Filed Jan. 11, 1922. Serial No. 528,516. 1 Claim. (Cl. 24—136.)



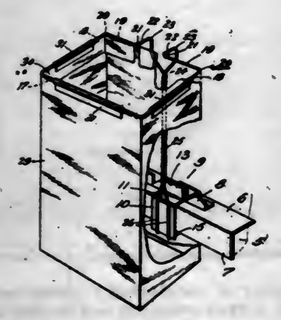
A landing gear cord clamp for aircraft, comprising a wedging block insertable between opposing portions of the landing gear cord, and having transversely concave and longitudinally convex wedging faces, and a ferrule adapted to embrace such portions of the cord and clamp the same against said block, said ferrule having transversely concave and longitudinally convex wedging faces.

1,458,213. PROPELLER FOR AIRCRAFT. ERNEST G. MCCAULEY, Dayton, Ohio. Filed Aug. 13, 1921. Serial No. 491,973. 9 Claims. (Cl. 170—163.)



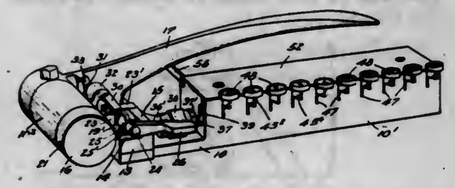
1. In a propeller, the combination with a blade thereof having a counterbored portion, of a ferrule, and an expanding ring adapted to be inserted in said counterbored portion for bending and compressing the material of the propeller blade against said ferrule.

1,458,214. SYNCHRONIZING CONTROL MECHANISM FOR REVERSIBLE-PITCH PROPELLERS. ERNEST G. MCCAULEY, Dayton, Ohio. Filed Aug. 30, 1921. Serial No. 497,056. 7 Claims. (Cl. 244—25.)



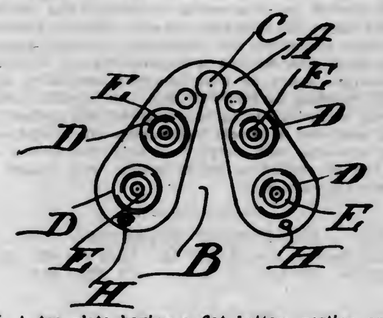
1. A control mechanism for aircraft having a reversible propeller, comprising, in combination, a rotatable shaft, a cam disc rotatably mounted on said shaft, gearing for operating said cam disc from the shaft, a throttle lever, devices adapted to be actuated by the cam of said cam disc for automatically positioning the throttle valve, and means connected to said shaft for changing the angularity of the propeller blades simultaneously with the automatic movements of the throttle valve.

1,458,215. PROPELLER REVERSIBLE BLADE AND WOOD-RETAINING FERRULE. ERNEST G. MCCAULEY, Dayton, Ohio. Filed May 13, 1922. Serial No. 560,752. 9 Claims. (Cl. 170—163.)



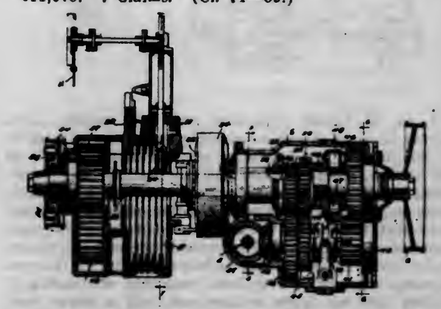
1. In a reversible propeller having a plurality of blades and ferrules, means for retaining each of said blades within its ferrule, said means comprising a screw-threaded expanding ring having a blunt edge adapted to engage a counterbored concentric circular groove in the base of said blade, said blade base being further provided with transverse slots for the purpose of insuring evenly distributed expansion of the blade base caused by the expanding action of the applied expanding ring.

1,458,216. BAG-HOLDING DEVICE. HARRY H. WOOD, Seattle, Wash., assignor of one-half to Don H. Palmer, Seattle, Wash. Filed Oct. 25, 1921. Serial No. 510,404. 4 Claims. (Cl. 83—26.)



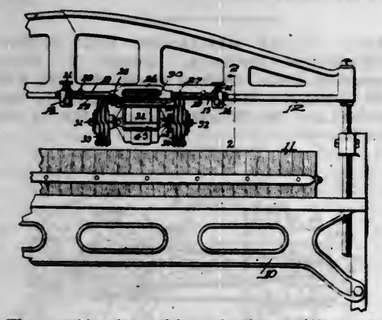
1. In a device of the character described, the combination with a support, of an attachment adapted to engage over the top of said support and having a socket, a bag holder made of a single piece of wire bent to form a substantially horizontal frame element and having a pair of rearwardly extending arm elements disposed at a lower elevation than said frame element and engageable in the socket of said attachment.

1,458,217. KEY-CUTTING MACHINE. FRANK ELLISON BEST, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed Jan. 18, 1921. Serial No. 438,105. 21 Claims. (Cl. 164—42.)



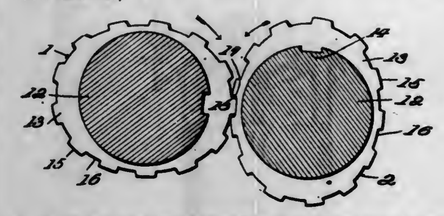
1. In a key cutting machine, the combination with means for setting a blank to have notches cut therein to predetermined depths, and finger actuated keys controlling said means, of mechanism for spacing the notches automatically.

1,458,218. SOLE TIP. ERNEST J. BRISBEN, East Cleveland, Ohio. Filed Sept. 10, 1921. Serial No. 499,611. 5 Claims. (Cl. 36—73.)



5. A toe plate having a flat bottom portion and an upper plate secured at its rear end thereto, said toe plate provided with a vertical opening and a vertical plug secured to the lower side of said upper plate and extending through said opening.

1,458,219. BALLOON WINDLASS. WARREN D. BURTON, Omaha, Nebr. Filed Sept. 18, 1920. Serial No. 411,075. 7 Claims. (Cl. 74—59.)

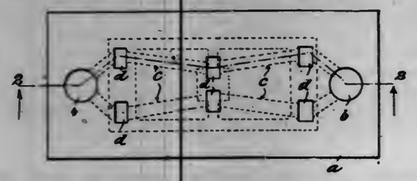


1. In a changeable speed power transmission gearing, a main transmission shaft, a friction clutch member rotating therewith, a sleeve surrounding said shaft and free to rotate thereon, a friction clutch member on said sleeve adapted to engage the first named clutch member, a countershaft, gears on said sleeve and countershaft for transmitting motion from the sleeve to the countershaft, a ratchet wheel whose axis is in alinement with the axis of the main transmission shaft, a gear on and concentric with said ratchet wheel, a gear on the countershaft arranged to drive the gear on the ratchet wheel, and a pawl carried by the main transmission shaft adapted to cooperate with said ratchet wheel.

1,458,220. BLOCK PLANER. ORNAN S. COOK and HENRY A. GALE, Fitchburg, Mass. Filed Nov. 21, 1921. Serial No. 516,561. 4 Claims. (Cl. 164—34.)

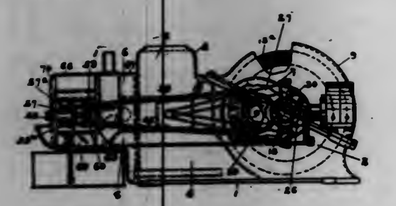
1. The combination with a leather cutting machine having a block for supporting leather with the dies on it and a beam at the top parallel with the block for engaging the tops of the cutting dies, of a frame adapted to be mounted between the beam and the block in any desired position along the beam, a carriage slidable on said frame longitudinally of the beam, a slide transversely movable on the carriage across the machine and over the block, and a rotary cutting tool carried by the slide and movable therewith for dressing off the top of the block.

1,458,221. CORN-HUSKING MACHINE. RALPH COVER, Baltimore, Md., assignor to The United Machinery Company, Westminster, Md., a Corporation of Maryland. Filed June 3, 1919, Serial No. 301,506. Renewed Sept. 17, 1921. Serial No. 501,450. 13 Claims. (Cl. 130—5.)



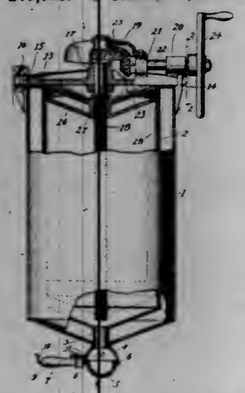
1. A husking machine including in combination a pair of parallel longitudinally extending husking rolls along which the ears are conveyed, said rolls being non-concentric and disposed so that their cooperating surfaces are substantially of uniform distance apart, said rolls having their surfaces provided with intermeshing projections disposed so as to grip the husk and forcibly strip the same from the ears.

1,458,222. METHOD OF GATING CASTINGS. JAMES F. DIETER, Highland Park, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed July 18, 1921. Serial No. 485,606. 1 Claim. (Cl. 22—134.)



The herein described method of casting comprising forming a riser in communication with the runner, and

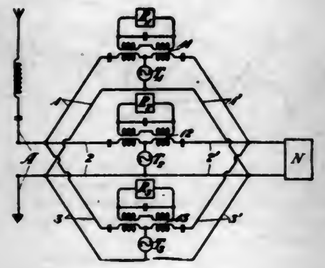
between the pouring basin and the mould proper, whereby the riser fills with the last poured metal, which metal



feeds into, and exerts pressure on, the metal in the mould during the cooling thereof.

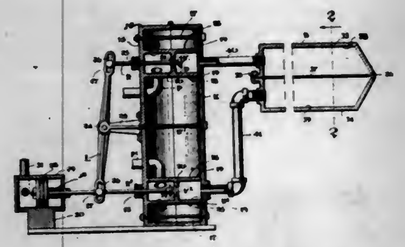
1,458,223. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. ALBERT Y. EDWARDS, Springfield, Ohio. Original application filed Feb. 7, 1918, Serial No. 215,702. Divided and this application filed Apr. 10, 1920. Serial No. 374,818. 3 Claims. (Cl. 123—90.)

1. In a gas engine, the combination of a pair of cylinders, a fly wheel located on a line extending between the cylinders, a crank shaft and casing located at one end of said cylinders, valves at the opposite end of said cylinders, valve connections, a cam shaft casing detachably secured to the crank casing at one side thereof, and a cam for operating the valve connections within said cam shaft casing.



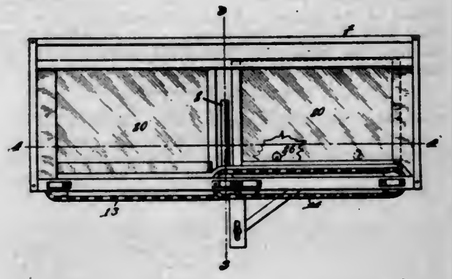
1,458,224. ICE-CREAM-DISPENSING DEVICE. IRA STRAUSS EAMAN, Cincinnati, Ohio. Filed Feb. 28, 1919. Serial No. 279,756. 4 Claims. (Cl. 107—48.)

1. A dispensing device for use with ice cream comprising a container, a vacuum shell vessel, a member mounted in the vessel adapted to advance through the container, and a delivery element on the vessel, said advancing member likewise having a vacuum shell.



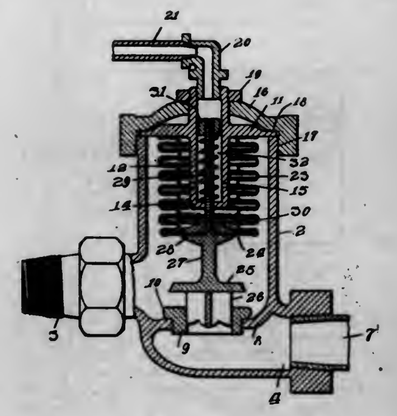
4. A method of handling ice cream which consists in freezing the ice cream in a container with an axial hole formed in the ice cream mass, placing the container in a vacuum shell vessel, causing a follower to pass through the container when it is within the vessel, and utilizing the hole in the ice cream mass for clearance of a nonreciprocating element upon which the follower moves.

1,458,225. MULTIPLE BALANCING ARRANGEMENT FOR MULTIPLEX TRANSMISSION. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 29, 1919. Serial No. 320,661. 15 Claims. (Cl. 179—4.)



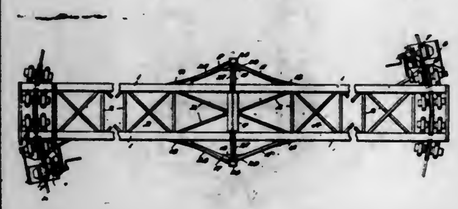
1. In a multiplex signaling system, a transmission circuit, a balancing means therefor, a plurality of receiving devices and a plurality of transmitting devices, selective means discriminative between different alternating current frequencies for maintaining frequency separation between different sets of transmitters and receivers, and separate means for simultaneously associating each of said receiving devices with said transmission circuit and said balancing means, said transmitting devices being so associated with said transmission circuit and said balancing means that energy from said transmitting devices will be applied to points neutral with respect to said receiving devices.

1,458,226. OIL-BURNING APPARATUS. WALTER EMILE FISHER, New Iberia, La. Filed Oct. 22, 1921. Serial No. 509,515. 3 Claims. (Cl. 758—45.5.)



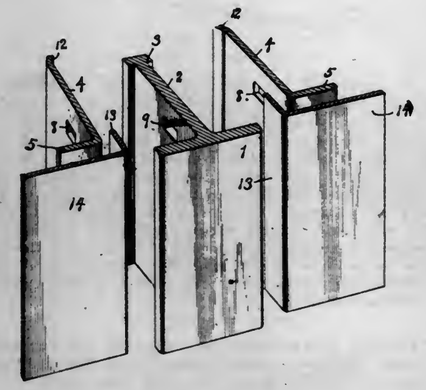
1. An oil burner comprising two half sections, each having an inclined end terminating at its free edge short of the plane of the free edges of the remaining walls of the section, means whereby the two sections may be secured in edge to edge superposed relation, a partition plate clamped between the confronting edges of said sections and terminating at its one end short of the confronting edges of the inclined ends of the sections, whereby an outlet for the casing is provided between the confronting edges of the inclined ends and the casing is divided into an upper compartment and a lower compartment, said compartments having restricted communication with each other at the juncture of each with the outlet port.

1,458,227. CHANGEABLE EXHIBITOR. JOHN P. FREEMON and EURA P. MCFADDEN, Ann Arbor, Mich. Filed Sept. 27, 1922. Serial No. 590,888. 4 Claims. (Cl. 40—79.)



1. In a changeable exhibitor, the combination of a main frame adapted to contain two alined packs of display cards arranged in close proximity with a transverse space between them, a motor, endless chains actuated by said motor and having card engaging means individual to the front and rear of the packs and adapted to successively shift a card from the front of one pack to the front of the other and from the rear of one to the rear of the other whereby a gradual pull of the motor will be given, thereby reducing friction to the minimum and avoiding interference with the display of the signs.

1,458,228. VALVE. SIGVORT O. HAGEN, Minneapolis, Minn. Filed May 1, 1920. Serial No. 378,289. 4 Claims. (Cl. 137—130.)

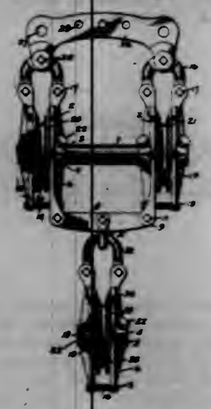


1. In a device of the class described, a casing having a seat; an expansion member carried by the casing; a valve forced by the expansion of said member to cooperate with the seat, the valve having a stem; a tubular guide carried by the casing, the stem being slidable therein, the guide communicating with the expansion member; spring means in the guide and cooperating with the stem to retract the valve from the seat and to compress the expansion member; and a fluid pressure line communicating with the guide.

1,458,229. TURNTABLE. MEIER GEORGE HILPERT, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Oct. 26, 1921. Serial No. 510,428. 20 Claims. (Cl. 104—35.)

1. A turntable of the multiple-span type, comprising alined spans, a cross girder between the ends of said spans, projecting on both sides thereof and flexibly connected therewith about an axis transverse of said spans, said spans each being provided with an inside lateral bracing system connected with said cross girder in a plane including said axis, an outside lateral bracing system connected with each of the projecting ends of said cross girder in a plane containing said axis and providing, in effect, a continuous horizontal wide truss system extending on both sides and along the central portion of the table.

1,458,230. BUILDING CONSTRUCTION. THOMAS H. KANE, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed May 15, 1920. Serial No. 381,544. 5 Claims. (Cl. 189—2.)

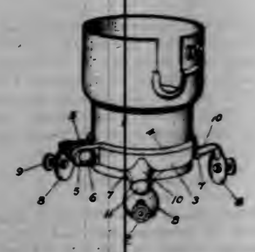


1. A metal building construction comprising a column and two alined sheet metal panels, the vertical edges of the panels being bent inwardly to constitute parallel flanges, the column consisting of a central T bar against whose web and flanges the flanges and main portions of the panels are fitted, said column further consisting of a pair of angle bars and bolts to press the edges of the panel against the webs of said T bar.

1,458,231. LEAD BLOCK. DAVENPORT LAWSON, Elk, Calif., assignor to Goodyear Redwood Co., Elk, Calif., a Corporation of Maine. Filed Jan. 27, 1921. Serial No. 440,295. 2 Claims. (Cl. 254—192.)

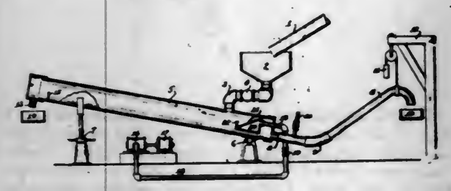
1. A block comprising twin frames, a sheave in each

of said frames, means connecting said frames for holding them in fixed relation, a single frame pivotally sus-



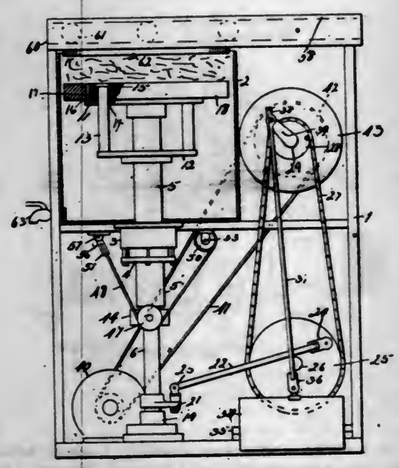
pended from said twin frames, and a sheave in said single frame.

1,458,232. SHADE AND CURTAIN BRACKET. CARL A. MAIENSCHEIN, Evansville, Ind. Filed June 20, 1921. Serial No. 478,973. 1 Claim. (Cl. 156—24.)



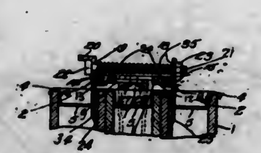
A bracket of the character described comprising a substantially Z-shaped supporting arm, one end portion of said arm being secured to a support, the opposite end portion having a recess extending laterally thereof, and a curtain holding member consisting of a length of material having one end portion thereof pivoted to the arm adjacent the first mentioned end portion of the arm and arranged for vertical movement relative to the arm, said holding member extending laterally of the second mentioned end portion of the arm and through the recess, said second mentioned end portion of the arm limiting movement of the curtain holding member in one direction.

1,458,233. SHADE HOLDER. CHARLES STANLEY MALLETT, Toronto, Ontario, Canada. Filed Nov. 22, 1921. Serial No. 517,039. 1 Claim. (Cl. 240—128.)



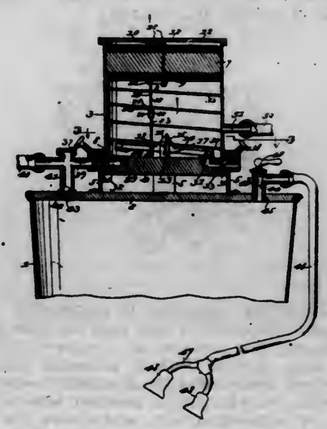
In an electric lamp shade holder, the combination with an electric lamp socket and lamp shade, of an annular ring, means for detachably securing the ring to the socket, radially extending arms on the annular ring provided with depending portions, means for detachably securing the shade to the depending portions, longitudinally extending convexed reinforcing ribs formed on the horizontal portions of the arms and convexed humps formed at the junction of the horizontal portion of the arms with the depending portions and straddling their junction, the reinforcing ribs being contiguous to the reinforcing humps.

1,458,234. SEPARATING SOLIDS FROM LIQUIDS. HAROLD C. MILLER, Bakersfield, Calif., assignor to Standard Oil Company, San Francisco, Calif., a Corporation of California. Filed Nov. 6, 1922. Serial No. 599,450. 2 Claims. (Cl. 210—51.)



1. An apparatus for separating solids from liquids comprising an inclined separating pipe-like vessel having an outlet at each end; means for continuously supplying said vessel to its capacity with the aggregate to be separated; means for controlling the discharge from the lower end of said vessel; and means for introducing a plurality of jets of air into the lower end of said vessel.

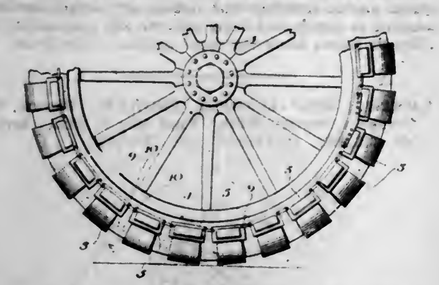
1,458,235. WASHING MACHINE. VITO MONTALTO, Allentown, Pa. Continuation in part of application filed Dec. 18, 1920. Serial No. 431,575. 5 Claims. (Cl. 68—37.)



1. In a washing machine, a stationary receptacle, a bed plate, a hollow shaft supporting said bed plate, a block suspended beneath the lower end of the hollow shaft, two pulleys journalled to said block, a cable running over said pulleys and means for taking up and letting out said cable whereby the block will be raised and lowered to raise and lower the hollow shaft.

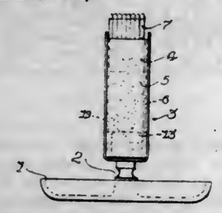
1,458,236. PAPER-CORE BUNDLING DEVICE. HAROLD ARTHUR MOREY and CHRISTOPHER PHILIP ROBERTS WARREN, Sault Ste. Marie, Ontario, Canada. Filed Mar. 23, 1922. Serial No. 546,200. 5 Claims. (Cl. 206—46.)

1. A paper core bundling device comprising end plates provided with depressed portions fitting the hollow cores, means operated from the exterior of the plate and extending through the depressed portions for engaging the interior peripheries of the hollow cores, and holding locking means for carrying such engaging means simultaneously in and out of the engaging position.



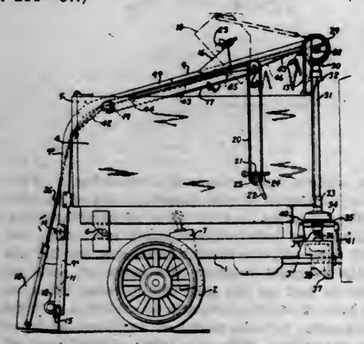
1,458,237. MILKING MACHINE. WILLIAM N. MUELLER, Fredericksburg, Iowa. Filed Apr. 22, 1922. Serial No. 555,986. 11 Claims. (Cl. 31—08.)

1. In a milking apparatus, a receptacle having a teat engaging means, means for creating a vacuum in said receptacle and the teat engaging means, means actuated by said vacuum creating means for retaining said vacuum, and pneumatic means operable upon the retaining means for terminating the period of vacuum created in said receptacle and the teat engaging means, and means for controlling the escape of air from the pneumatic means.



1,458,238. TIRE PROTECTOR AND ANTISKIDDING DEVICE. HERMAN A. MYER, Yakima, Wash. Filed Jan. 8, 1923. Serial No. 611,321. 2 Claims. (Cl. 152—16.)

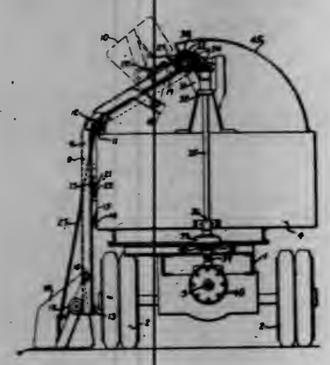
2. In a tire protector and anti-skidding device comprising a plurality of tire sections placed in a series around a tire, plates provided with apertures for receiving the beaded portions of the tire sections and securing the latter to a tire, a portion of the plate which is removed to form the aperture being bent downwardly to



provide a rounded edge along the side of said aperture which engages under the head of the tire section.

1,458,239. SAFETY-MATCH-BOX HOLDER. JOHN A. OBERMAIER, Chicago, Ill., assignor to Wilmort Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 9, 1919. Serial No. 316,299. 1 Claim. (Cl. 206—31.)

A match box holder comprising, in combination, a single piece of metal bent to a U-shape with a bight equal to the depth of a match box, and arms of a width substantially equal to the width of a match box, the length of said arms being somewhat greater than the length of a match box, and integral projections struck up out of said bight to a distance greater than the difference between the length of a match box and the length of said side portions, whereby said integral projections abut the match box itself to hold it projecting above said side portions, and permit the cover to slide below said side portions.

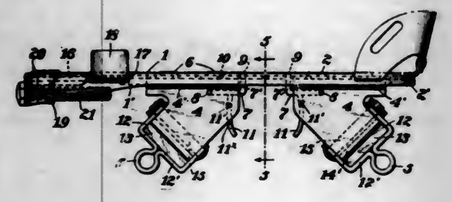


1,458,240. ASH COLLECTOR OR LIKE SELF-LOADING VEHICLE. GEORGE W. OTTERSON, Seattle, Wash. Filed May 5, 1923. Serial No. 636,865. 7 Claims. (Cl. 214—67.)

1. A self-loading vehicle having a cargo body, a track extending upward at the rear end of the body and

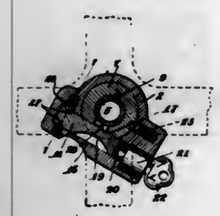
thence forward lengthwise over the top of the body, a car and means for drawing the same up and along the track, and a dumping spur having an inclined surface adapted to engage and dump said car and positionable at different points along the upper portion of the track.

1,458,241. SELF-LOADING VEHICLE. GEORGE W. OTTERSON, Seattle, Wash. Filed May 5, 1923. Serial No. 636,866. 12 Claims. (Cl. 214—67.)



1. A self-loading vehicle having a chassis, a power shaft therein, a cargo body tiltably mounted on the chassis, a loader on the body, mechanism for driving the loader from said power shaft comprising cooperative separable driving and driven members connected respectively with said shaft and with the tiltable body, and means for separating and reconnecting said members when the tiltable body is in normal position.

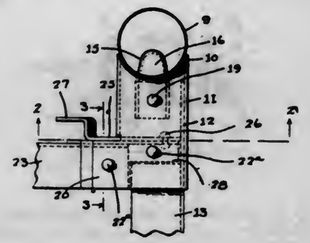
1,458,242. VEHICLE TOP. EDGAR A. RATHBUN, Pontiac, Mich., assignor to American Forging and Socket Co., Pontiac, Mich., a Corporation of Michigan. Filed Nov. 26, 1920. Serial No. 426,482. 4 Claims. (Cl. 296—116.)



1. A vehicle top framework comprising a front bow, pieces of hardware carried thereby, a set of parallel arms pivotally connected to each piece of hardware, the inner arm of each set being slotted, a lug carried by the outer arm of each set, an intermediate bow having its ends pivotally mounted between the arms of each set and adapted to rest on the lugs of the outer arms, an outrigger bow pivotally connected to said sets of arms, and means carried by said pieces of hardware and having a sliding connection with the inner slotted arm of each set of arms, and adapted to support the sets of arms relative to said front bow.

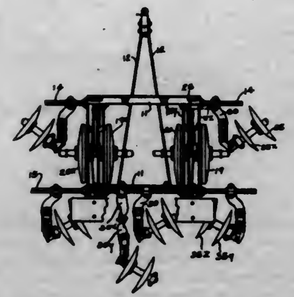
1,458,243. ROLLER SKATE. WILLIAM F. REACH, Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed June 9, 1921. Serial No. 476,258. 16 Claims. (Cl. 46—51.)

1. In combination in a skate a sectional foot plate, a connecting member having a plurality of spaced apart openings and slidable on the lower face of the foot plate, locking means to engage in any one of the openings of the connecting member and movable to and from the same, and a clamping member for holding the locking means in place and a frame part connected to the sectional plate and on which said locking means and clamping member are mounted.



1,458,244. AUTOMOBILE LOCK. HERBERT REEVES and JACOB E. CAIN, Columbus, Ohio, assignors of one-half to Samuel D. Hearing and Hershel W. Unkel, both of Zanesville, Ohio. Filed Nov. 26, 1919. Serial No. 340,732. 3 Claims. (Cl. 70—129.)

2. A vehicle lock comprising, in combination, an annular member adapted to be fixed upon the upper portion of the steering post structure of a motor vehicle, said member being provided with a tangential groove, a steering wheel axially rotatable about said member, said wheel having its hub portion provided with a socket disposed for registration with said groove, the longitudinal axis of said socket being disposed at right angles to the major axis of the post structure, a cylindrical locking element extending longitudinally of said socket and mounted for rotation therein, said element being provided with a recess shaped to conform with the peripheral formation of said member, whereby when said element occupies an inactive position the same will be independent of said member but when in an active position the said element will be disposed within the groove of said member, and key actuated locking mechanism disposed in the outer end of said socket and capable of directly and positively effecting the rotation of said element.

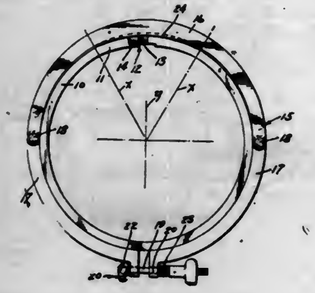


1,458,245. BED CORNER. MORRIS ROSENBERG, Warren, Ohio. Filed Mar. 16, 1922. Serial No. 544,074. 3 Claims. (Cl. 5—55.)

1. A bed corner having a face plate shaped to fit against the bed post, a bracket extending at right angles to the face plate, and a link extending through the face plate and bed post to receive a wedge, said link having its outer side portions extending from top to bottom of the aforesaid bracket, and the upper and lower portions

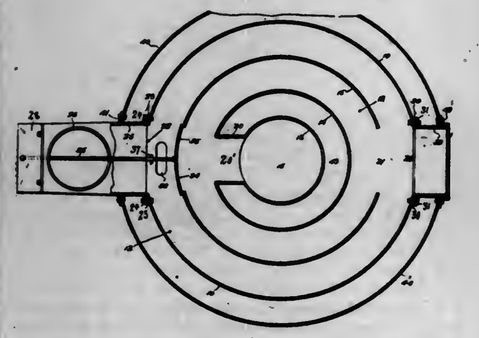
of said side members turned in so as to overlap, and with the overlapped portions secured to the top and bottom walls of the bracket.

1,458,246. THREE-ROW RIDGE CULTIVATOR. JOSEPH SCHERMULY, Wichita, Kans. Filed May 23, 1922. Serial No. 563,030. 5 Claims. (Cl. 97—56.)



1. In a machine of the class described, a frame including front and rear elements; two sets of side elements, each set comprising a pair of frame elements spaced apart in parallelism and adjustably secured to the said front and rear elements at selected intervals spaced apart; an axle for each set of side elements and wheels supporting the machine revolvably mounted thereon.

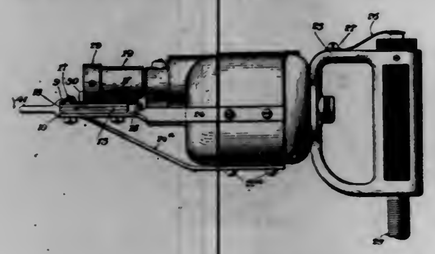
1,458,247. WIRE CLAMP. JOHANNES F. SCHLEPER, Amsterdam, Netherlands. Filed Feb. 20, 1920. Serial No. 360,233. 5 Claims. (Cl. 173—263.)



3. An electric wire connector, comprising a member having an upstanding collar over which the ends of the wires are bent, arms projecting from said collar and having spaces between them to receive the wire ends and hold the same spaced, means surrounding said arms and adapted to engage the bent ends of the wires and electrically connecting the same, said means being deformable to fit wires of different diameters, and means engaging said arms and also engaging said means surrounding the arms for causing the latter to clamp the wires and insure good electrical connection.

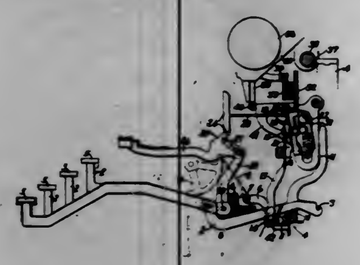
1,458,248. PROCESS AND APPARATUS FOR FORMING PISTON RINGS. HENRY R. SEIFERT, East Ellsworth, Wis. Filed July 18, 1921. Serial No. 485,686. 10 Claims. (Cl. 29—156.6.)

1. The process of making piston rings which consists of forming a ring with ends arranged to overlap when compressed, forming the inner surface of the ring at said ends with an inset eccentric portion, compressing the ring and springing its ends inward, holding the ring while compressed with its ends sprung inward, and cutting the periphery of the ring, while compressed and its ends sprung inward, to a true circle.



1,458,249. FURNACE. FRANK C. STANKRAUFF, Detroit, Mich. Filed Nov. 26, 1921. Serial No. 517,841. 4 Claims. (Cl. 126—102.)

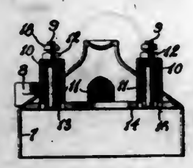
1. In a furnace a hollow annular radiator element adapted to be mounted on the means providing the combustion chamber of the furnace and comprising a body portion having a top and bottom integral therewith and further including an inner, intermediate and outer spaced circular member interposed between and integral with said top and bottom thereby providing an outer passageway, an intermediate passageway and a centrally disposed flue spaced from the inner passageway and formed with a closed top and having its bottom opening directly into the top of the combustion chamber of the furnace, said top and bottom of said element formed with an opening to provide a hot air outlet passage between said inner and intermediate members, means for establishing communication between said flue and inner passageway, said outer member having diametrically opposed openings for establishing communication between said inner and outer passageways, an outlet flue leading from said outer passageway and in alignment with one of the open-



ings in said outer member, and shiftable means for closing said last mentioned opening, said body portion and said inner and outer circular members being tapered.

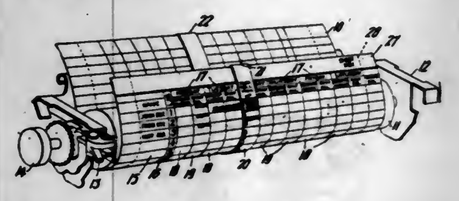
1,458,250. HEDGE CUTTER. WILLIAM J. STAUDINGER, Brooklyn, N. Y. Filed Sept. 29, 1922. Serial No. 591,235. 10 Claims. (Cl. 30—11.)

1. In a hedge cutter, the combination of supporting means comprising a pair of supporting plates, means extending between said plates for spacing them apart, a cutter blade adapted to be reciprocated between said plates, a motor carried by said supporting means at one end thereof, and a pair of handles at opposite ends of the supporting means for manipulating the hedge cutter.



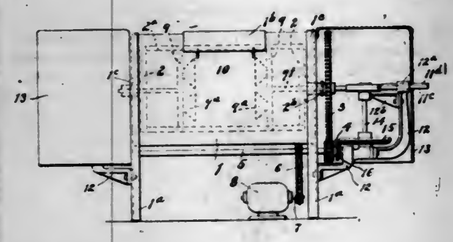
1,458,251. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 28, 1922. Serial No. 557,073. 10 Claims. (Cl. 197—83.)

1. In a typewriting machine having a traveling carriage, an escapement mechanism therefor, type-keys, and means for operating the escapement mechanism from the type-keys, the combination of means for silencing the escapement mechanism including a bar universal to the type-keys and provided with bendable teeth or tongues individual to corresponding type-keys, and capable of occupying a position to cause the type-keys to operate said bar for silencing the escapement mechanism, and capable of occupying another position in which the type-keys are ineffective to operate said bar, whereby selected type-keys may silence the escapement mechanism and other selected type-keys may be effective to operate the escapement mechanism.



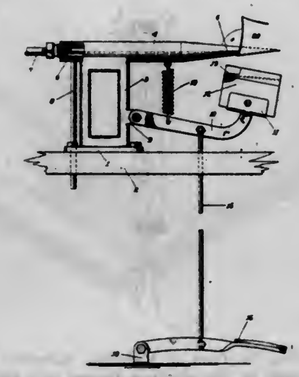
1,458,252. TIMER. JOHN H. STOAT, Merchantville, N. J. Filed Dec. 6, 1919. Serial No. 343,076. 3 Claims. (Cl. 200—19.)

1. The combination in a timer of a timer shaft, a rotating brush, an annular race composed of hard material such as metal on which the brush rides, said race being disposed at approximately right angles to the axis of the shaft and being provided with apertures, and a plurality



of contacts projecting into said apertures from a direction substantially parallel to the axis of the shaft and lying approximately flush with the race.

1,458,253. LEDGER SHEET. EDWARD THOMAS, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 16, 1919. Serial No. 304,597. 15 Claims. (Cl. 283—65.)



1. The combination with a Boston ledger sheet having day columns and subsidiary columns, of a strip tending to cling to said sheet to accommodate a pick-up column having a plurality of fold lines, and shiftable along its length upon the sheet from one to another of the fold lines to alter the height of a pick-up balance.

1,458,254. WASHING MACHINE. WILLIAM H. THOMPSON, Burbank, Ohio. Filed May 11, 1922. Serial No. 560,233. 4 Claims. (Cl. 68—18.)

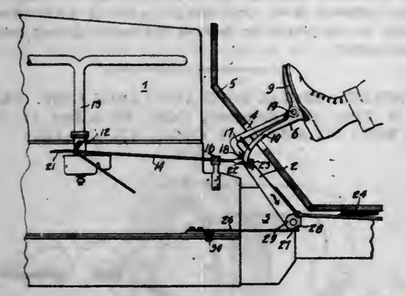
3. A washing machine, comprising a casing, a washing cylinder of open formation rotatably mounted therein, piston heads in said cylinder movable longitudinally therein toward and from each other, vacuum creating devices carried by said pistons and adapted to engage the clothes to be washed as moved toward each other and to create suction therein as moved from each other as the cylinder is rotated, means for rotating said cylinder in said casing, and means for simultaneously moving said piston heads toward and from each other as the cylinder is rotated.

1,458,255. SHAPING MACHINE FOR LAUNDERED COLLARS. SAMUEL L. THRIFT, Stockton, Calif. Filed Mar. 22, 1922. Serial No. 545,761. 2 Claims. (Cl. 68—9.)

1. A mandrel which is circular in cross section, such mandrel having a gradual taper terminating in a sharp point which can be readily inserted into the open end of a turned down collar to form a roll therein gradually increasing in diameter from the normal crease of the collar to the open end thereof, and a presser block co-operating with said mandrel.

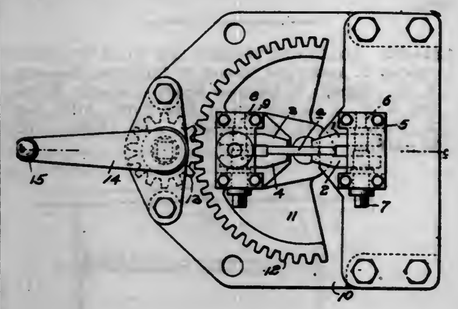
1,458,256. CELLULOSE-ETHER COMPOSITION. ADRIAAN P. H. TRIVELLI, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 2, 1922. Serial No. 533,659. 6 Claims. (Cl. 134—79.)

5. A composition of matter comprising cellulose ether, a monohydroxy aliphatic alcohol containing more than two but less than six carbon atoms and xylol.



1,458,257. RUBBER HEEL. JEAN VAN MELLE, Dubuque, Iowa. Filed Apr. 18, 1922. Serial No. 554,690. 1 Claim. (Cl. 36—39.)

In a detachable resilient shoe heel, a rubber body conforming to the shape of a heel and provided with a circular opening, a metal plate positioned on top of the rubber body, a series of V-shaped tongues struck from the metal body and molded within the rubber body, said metal plate provided with a series of openings to align with openings in the rubber body for the reception of fastening means to a leather heel, and a plug rotatable within the circular opening of the rubber body.



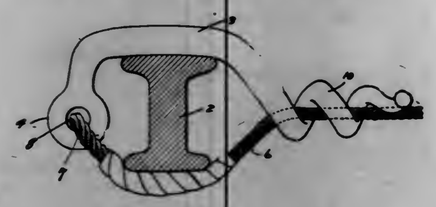
1,458,258. CONTROL MECHANISM FOR AUTOMOBILES. WILLIAM W. WHITTON, Oakland, Calif. Filed July 6, 1920. Serial No. 394,019. 1 Claim. (Cl. 74—81.)

In an automobile having an engine provided with a valve-controlled fuel intake passage, a foot-brake lever pivoted to a relatively stationary member and projecting thru an opening in the dash-board of the automobile, a fuel-control foot-lever pivoted to said brake-lever hav-

ing one arm thereof extending thru said dash opening, and means concealed behind the dash-board for resiliently retaining said levers in inoperative position.

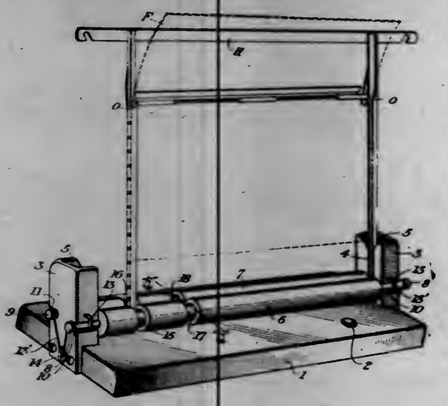
1,458,259. TESTING MACHINE. FREDERICK WILLS, Warren, Ohio, assignor to The Trumbull Steel Company, Warren, Ohio, a Corporation of Ohio. Filed Aug. 5, 1921. Serial No. 490,018. 3 Claims. (Cl. 265—13.)

1. In a machine for subjecting material to a bending test, the combination of two clamping devices mounted on a suitable foundation and spaced apart at an interval one from the other and adapted to receive undistorted an article introduced simultaneously into both, said clamping devices being mounted so as to be movable, one relatively to the other, in a direction transverse to a length of material held undistorted between them, means for effecting such relative movement without increasing the distance between the clamping devices.



1,458,260. FENCE STRUCTURE. GEORGE W. WILSON, Hopkinsville, Ky. Filed May 13, 1922. Serial No. 560,584. 4 Claims. (Cl. 256—27.)

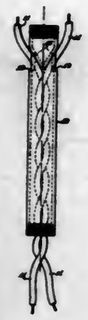
1. A coupling member comprising two elongated plates, one of said plates having an elongated slot, the second plate being insertable through said slot, said



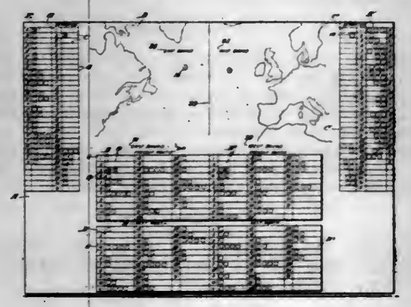
second plate having a marginal slot to receive a portion of the first plate defining the slot when said plates are in overlying relation, the outer ends of the plates having opposed jaws, and means co-acting with adjacent ends of the plates for holding the same against relative movement.

1,458,261. SPIRAL ROPE AND CABLE GRIP. GEORGE J. ZINK, San Francisco, Calif. Filed July 11, 1921. Serial No. 483,941. 1 Claim. (Cl. 24—115.)

Means for forming a loop around an object comprising a spiral, a shank extending from one end of the spiral substantially at the angle of the spiral windings, a flexible member and means for securing the same to the free end of the shank allowing an intermediate portion of the flexible member to be twisted into the spiral while the shank and the flexible member encircle the object.



1,458,262. LOADING FIXTURE FOR FILM HOLDERS. ERNEST C. ALLEN and GEORGE F. PHILLIPS, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 2, 1921. Serial No. 498,017. 11 Claims. (Cl. 95—100.)

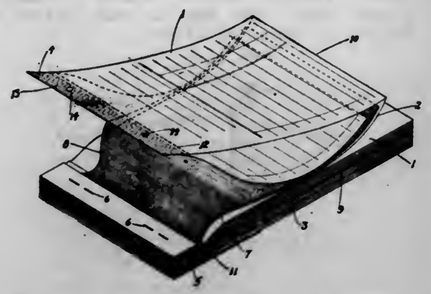


1. A loading fixture for film holders, comprising a base, and means on the base for supporting a film holder at an angle thereto.

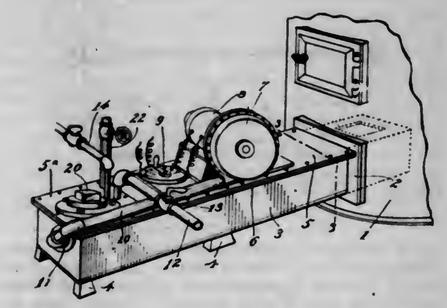
1,458,263. ELECTRIC-WIRE FIXTURE. CHARLES BARTON, Ford City, Ontario, Canada, assignor to Swedish Crucible Steel Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 2, 1921. Serial No. 519,415. 1 Claim. (Cl. 240—85.)

An electric light fixture comprising a wall stud, a hollow fixture member supported thereby, said fixture member having opposed side walls cut and the cut material struck inwardly to leave opposed side openings adjacent the upper end of said member with the inwardly struck material supported from the upper end walls of said openings and the lower ends of the material meeting to form a V-shaped deflector in said fixture member at the openings thereof and adapted to guide ends of wires out of the fixture member.

1,458,264. CHART. EMIL BÖNNELYCKE, Washington, D. C. Filed Jan. 25, 1922. Serial No. 531,728. 2 Claims. (Cl. 116—136.)



2. The combination of a chart having thereon two separate sets of definite spaces which are numbered in counterpart to indicate the chronological order of ships' sailings, the first set indicating the ships scheduled to depart and the second set indicating departed ships, and a geographically-indicated space; and two duplicate sets of indicating devices, each device bearing the name of a ship and its average time of voyage; the indicating devices of one set adapted to be initially positioned in the first set of spaces according to the chronological sailing schedule of the ships to which they relate, and to be successively transferred therefrom to the correspondingly-numbered spaces of the second set as said ships depart; the other set of indicating devices adapted to be positioned in said geographically-indicated space simultaneously with the transfer of the duplicate indicating devices of the first set from the first to the second set of spaces.



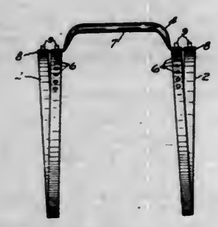
1,458,265. MANIFOLDING SALESBOOK. EDWARD KIRBY BOTTLE, Elmira, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed Sept. 30, 1919. Serial No. 327,372. 15 Claims. (Cl. 282—9.)

12. A manifolding salesbook comprising, in combination, a series of sets of checks bound together in book

form, each set including three checks joined end to end with each other, one check forming the sole connection of the corresponding set of checks with the book, the other two checks being pasted together to form the above mentioned joint therebetween.

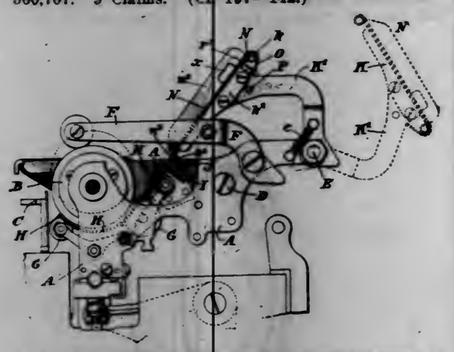
1,458,266. LIQUID-FUEL-BURNING APPLIANCE. ROBERT G. BREEDING, Cincinnati, Ohio. Filed Oct. 13, 1920. Serial No. 416,727. 10 Claims. (Cl. 158—28.)

8. An oil burning appliance comprising an elongated box like structure suitably heat insulated, said box having a removable cover at the outer end thereof, and a delivery opening at the other end thereof, and oil inlet and gas inlet pipe passing into the conduit through said removable cover, and a blower having its delivery opening into the conduit directed along the axis of the conduit at the oil inlet end thereof, said oil inlet pipe having a burner mounted thereon within the conduit, said burner having a large oil outlet, and a spherical faced block about said opening, said spherical face being directed toward the blower delivery opening, and a hand hole formed within the romovable cover, said hand hole having a closing plug therein.



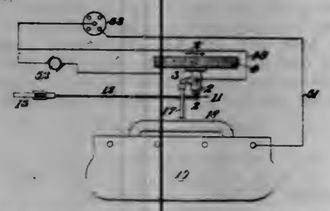
1,458,267. RESILIENT TIRE. VERNON L. BUCHMAN, Trenton, N. J. Filed July 13, 1920. Serial No. 395,832. 3 Claims. (Cl. 301—31.)

1. In a wheel construction of the class described, a rim body having side walls and provided with beveled end edges converging toward the outer side of the body, a detachable rim section slidably fitting between the ends of the rim body and having beveled end edges mating with the end edges of the rim body, said rim section being movable inwardly and radially of the rim body to released position, coupling plates fixed to



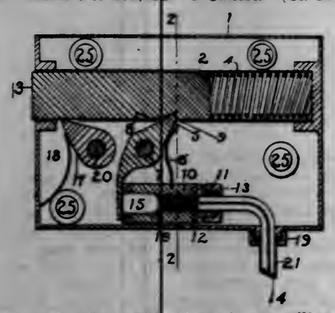
the ends of the rim section and overlapping the ends of the rim body, lugs upon said plates extending through the rim body and provided with beveled confronting shoulders coacting with the rim body, and bolts fitting through the plates and engaging the base of the rim body for securing said rim section against displacement.

1,458,268. WATERMELON CARRIER. SUMNER F. CALL, Hartford, Conn. Filed Oct. 22, 1921. Serial No. 509,543. 1 Claim. (Cl. 224—49.)



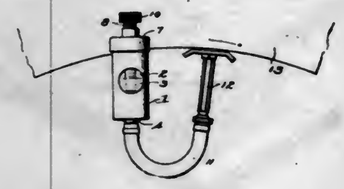
A watermelon-carrier comprising two strips to encircle the watermelon and provided with spurs for detachably connecting the strips with said watermelon, the strips having a perforation at one end portion and a series of perforations at their opposite end portion, and a bail-like handle having flat ends lying in a horizontal plane when the handle is in use, said ends being provided with upstanding lugs adjacent their edges which are adapted respectively to extend through end perforations in the strips when the latter overlie said ends.

1,458,269. TYPEWRITING MACHINE. WALTER D. CAMP, Wethersfield, Conn., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed May 13, 1922. Serial No. 560,707. 9 Claims. (Cl. 197—142.)



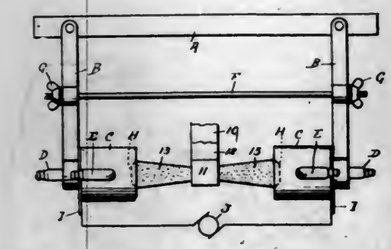
1. A paper table for typewriting machines having an elongated opening extending lengthwise of it and having enlargements at its opposite ends to receive a scale plate.

1,458,270. AUTOMOBILE ENGINE STOP. FORREST L. CANTRALL, Likley, Calif., assignor, by mesne assignments, to Engineering Specialties Company, San Francisco, Calif., a Corporation of California. Filed Jan. 3, 1921. Serial No. 434,621. 16 Claims. (Cl. 122—146.5.)



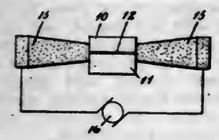
1. An attachment for automobile engines comprising a switch for interrupting the spark, means operating in both the closed and open positions of said switch for applying thereto a rapidly accelerated resilient pressure to throw the switch abruptly to the other position, and means effective when the transmission system of the automobile is inoperative for initiating the operation of said means.

1,458,271. AUXILIARY LOCKING BOLT. WILLIAM ELGIN CLARK, Minneapolis, Minn. Filed May 23, 1921. Serial No. 471,798. 8 Claims. (Cl. 109—3.)



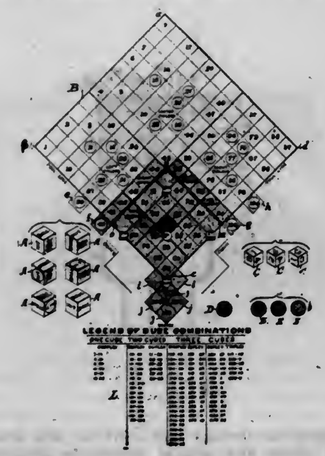
1. In a safe, the combination of an auxiliary locking bolt normally supported in inoperative position, with a combustible charge, and means adapted upon combustion of the charge to cause movement of the bolt to locking position.

1,458,272. TESTING DEVICE. MARTIN J. CLAUSEN, Seattle, Wash. Filed Apr. 12, 1922. Serial No. 551,784. 2 Claims. (Cl. 73—51.)



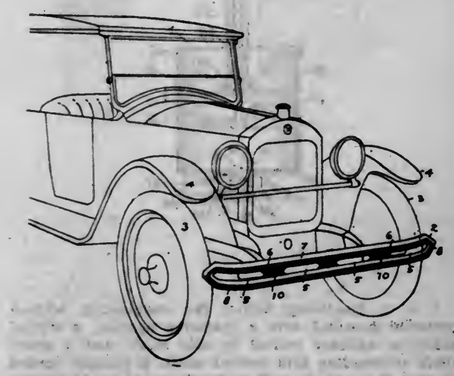
1. A valve leak detector, comprising a casing adapted to contain water and thru which the water column is visible, a conduit leading from the casing and adapted to be connected with the stem of a tire valve, a valve in the casing to control the admission of water to said conduit, said conduit being in part flexible.

1,458,273. WELDING APPARATUS. MONROE S. CLAWSON, Upper Montclair, N. J. Filed Apr. 23, 1920. Serial No. 376,068. 2 Claims. (Cl. 219—12.)



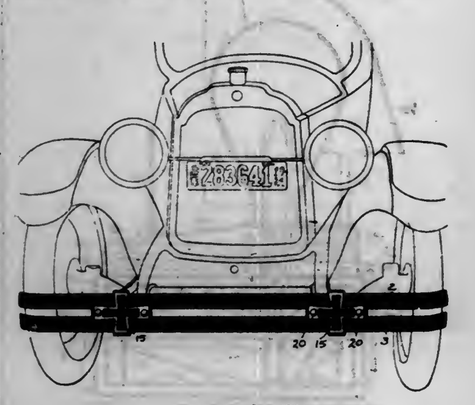
1. A welding apparatus comprising a pair of heads connected with a source of current, a member of refractory material associated with each head and having an enclosing metallic shell detachably engaged upon the head, and each refractory member being formed to receive one end of a resistance element.

1,458,274. WELDING PROCESS. MONROE S. CLAWSON, Upper Montclair, N. J. Filed Apr. 23, 1920. Serial No. 376,069. 2 Claims. (Cl. 219—10.)



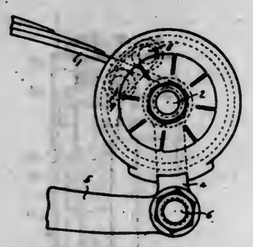
1. A process for welding pieces of metal having an alloy strip disposed therebetween consisting in passing an electric circuit through the joint and utilizing the thermo-electric current set up between the alloy and one of the pieces of metal when the same become heated for determining the point at which welding occurs.

1,458,275. BASEBALL GAME. HAROLD R. COSSITT, Alameda, Calif., assignor to Ninety Nine Publishing Company, Incorporated, Carson City, Nev., a Corporation of Nevada. Filed Mar. 13, 1922. Serial No. 543,351. 3 Claims. (Cl. 46—63.)



1. A base-ball game comprising an element adapted for the chance selection of any of a plurality of indices denoting the several initial results of a pitched ball; a second element adapted for the chance selection of any of a plurality of indices to determine the location of and the plays following a hit ball; a board element provided with surface delineations dividing it into areas some of which are differentially inscribed with indices to denote the fielding location of the hit ball and all furnishing counting means to determine the plays following the location of said hit ball; a legend of indices corresponding with the indices of said second element, said legend having also other indices corresponding both with its first named indices and with the differentially inscribed areas of the board element; and a plurality of independent pieces adapted for movement upon the board element to visually signalize the plays and the positions gained.

1,458,276. VEHICLE FENDER. WILLIAM G. COX, Cleveland, Ohio. Filed Feb. 5, 1923. Serial No. 616,972. 9 Claims. (Cl. 293—55.)

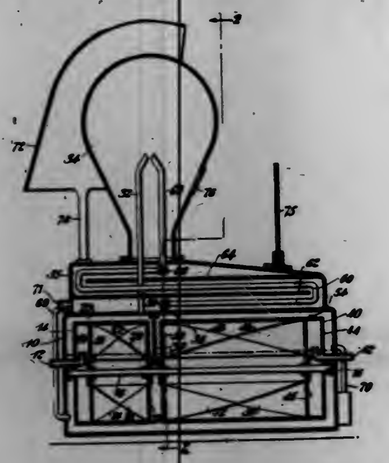


1. A fender for an automobile, comprising a supporting bar having looped spring extremities, and an impact plate fixed to said spring extremities having a series of elongated openings therein and beveled adjacent said openings.

1,458,277. END SHIELD FOR MOTOR VEHICLES. WILLIAM G. COX, Cleveland, Ohio. Filed Mar. 14, 1923. Serial No. 624,895. 15 Claims. (Cl. 293—55.)

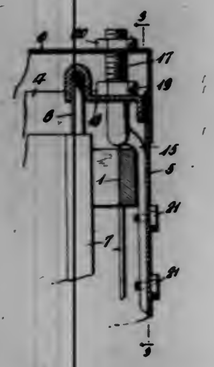
4. A broad-faced shield or guard for a motor-vehicle comprising vertically spaced buffer rails, separate attachment arms lying adjacent each other in different horizontal planes for each rail, and means connecting the adjacent arms together in clamping engagement with said rails.

1,458,278. SHOCK ABSORBER. ALEXANDER DE BRETTEVILLE and GEORGE J. HENRY, San Francisco, Calif. Filed Apr. 19, 1920. Serial No. 374,787. 5 Claims. (Cl. 267—54.)



1. A spring shackle for a pair of coacting vehicle springs comprising a pair of side arms spaced apart, bolts connecting the ends of said arms and adapted to movably engage the springs, a pivot extending from one of said bolts and a shoulder therebetween, a disc about said pivot and movable with the adjacent arms, a second disc rotatably mounted on said pivot and having an extension adapted to engage one of the vehicle springs, and screw means on the end of said pivot adapted to clamp the discs against said shoulder.

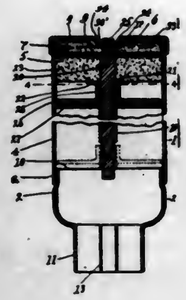
1,458,279. DOMESTIC HEATING STOVE. HENRY L. DOHERTY, New York, N. Y., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 8, 1920. Serial No. 408,970. 15 Claims. (Cl. 126—85.)



1. A method of heating dwellings or other buildings comprising mixing air and gas in such proportions as

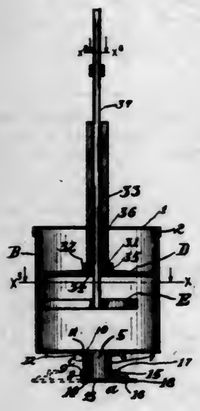
will produce complete combustion of said air and gas, igniting said mixture in the interior of a closed combustion chamber of refractory readily incandescent material, maintaining a high flame temperature of said burning

products in contact with the walls of said chamber, and reflecting the radiant heat of the combustion chamber in a definite desired direction.



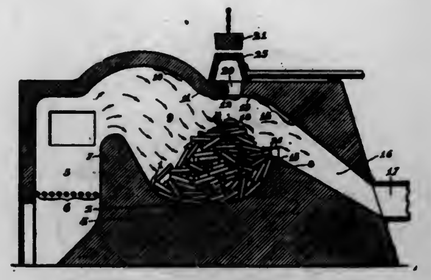
1,458,280. BATTERY BOX. FRANK M. DOOLEY, Mobile, Ala. Filed Apr. 14, 1922. Serial No. 552,745. 8 Claims. (Cl. 180—68.5.)

1. A device of the character described comprising a battery container, a cover therefor, a cover securing member carried by said container, and means on said member adapted to engage a battery in the container.



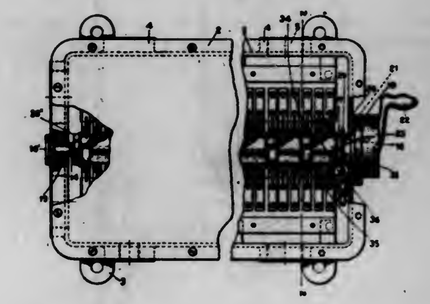
1,458,281. DAUBER. HOWARD E. EVERETT, St. Paul, Minn. Filed Apr. 3, 1922. Serial No. 548,962. 5 Claims. (Cl. 15—137.)

1. A dauber comprising a hollow handle adapted to contain a paste composition, a bristle brush screw threaded in the end of said handle, to constitute a closure therefor, an aperture within the body of the bristles of the brush, said aperture being in open communication with the atmosphere and with the interior of the handle, and hand operable means for forcing the



paste composition through said aperture, said means including a piston and member operatively connected to said piston extending through the wall of the handle, whereby said means may be actuated, and a humidifying element in the hollow of the handle back of said piston for the purpose set forth.

1,458,282. DISPENSER. LUKE J. FAIRBANKS, Los Angeles, Calif. Filed Feb. 10, 1920. Serial No. 357,729. 13 Claims. (Cl. 221—78.)

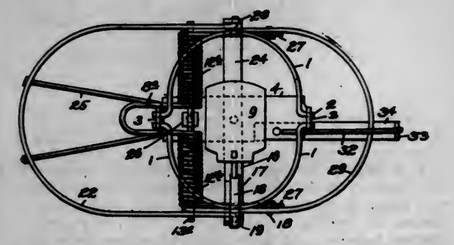


1. In a dispensing device, the combination with a container provided with a discharge opening, a central shaft, an agitator carried by said shaft, and a sleeve shaft surrounding said central shaft, a plunger carried by said sleeve shaft, both said agitator and said plunger being within the container and capable of reciprocal motion within same.

1,458,283. FURNACE FOR MELTING METALS. GEORGE D. FAULDS, Philadelphia, Pa. Filed Oct. 26, 1920. Serial No. 419,647. 2 Claims. (Cl. 266—33.)

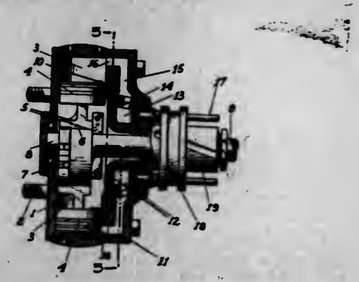
1. A melting furnace having a combustion chamber and comprising a relatively deep fusion hearth, a high front bridge wall between the hearth and combustion chamber, a curved top wall to direct the hot gases over the bridge wall and then downward upon the hearth, and a sloping outlet passage to conduct the gases away from the hearth in a continuing downward direction, said top wall having a filling opening located above the hearth and toward the rear side, whereby the material fed through said opening may pile upon the hearth to partially constrict said passage and also to present a broad side exposed to direct contact with the gases coming from the combustion chamber to hasten fusion.

1,458,284. CIRCUIT CONTROLLER. HANNIBAL C. FORD, Jamaica, N. Y., assignor to Ford Instrument Company, Inc., New York, N. Y., a Corporation of New York. Filed June 13, 1918. Serial No. 239,909. 6 Claims. (Cl. 200—8.)



1. In a multi-throw control switch, a rotary contact of conducting material having a plurality of contact segments, said segments being longitudinally disposed and out of radial alignment, a pair of brushes for each contact segment, one brush of one pair of said brushes being adapted to be connected to a source of current and an auxiliary brush adapted to be connected to a source of current engaging one of said contact segments when the other brush connected to the source of current is disengaged from the segments, both of said last two named brushes being out of engagement with the contact segments in one position of the switch.

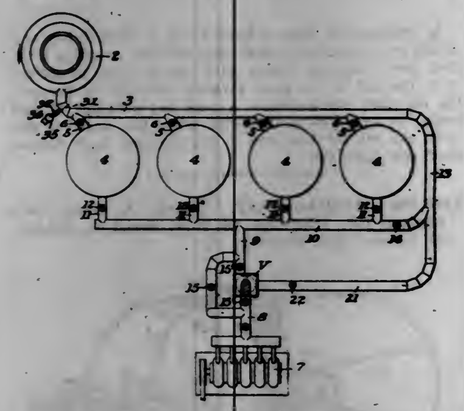
1,458,285. HAND TRUCK. PETER C. FRITZ, Philadelphia, Pa., assignor, by mesne assignments, to Pittsburgh Hand Truck Mfg. Co., Pittsburgh, Pa., a Corporation of Delaware. Filed June 12, 1919, Serial No. 303,733. Renewed Nov. 10, 1922. Serial No. 600,189. 1 Claim. (Cl. 214—63.4.)



In combination with a hand truck a ratchet bar and casing being adapted to slide upon said bar, a spring actuated pawl enclosed within said casing, lugs projecting from the tail of the pawl through the sides of the casing for hand manipulation, a hook bar attached to said casing so as to move therewith when the latter is slid upon the ratchet bar, and a two pronged hook formed upon said hook bar.

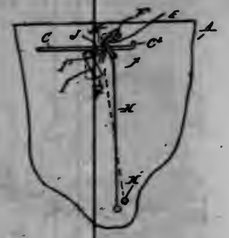
1,458,286. ANIMAL TRAP. WALTER A. GIBBS, Wilmington, Del. Filed Sept. 24, 1919. Serial No. 326,053. 11 Claims. (Cl. 43—88.)

1. An animal trap having in combination pivotally mounted main jaws, an auxiliary jaw having its pivotal axis at an angle to the axes of the movement of the main jaws, a lever provided with fingers adapted to shift and lock the main jaws in closed position, a spring operatively connected to said lever and to the auxiliary jaw and means for releasably holding the main jaws and auxiliary jaws.



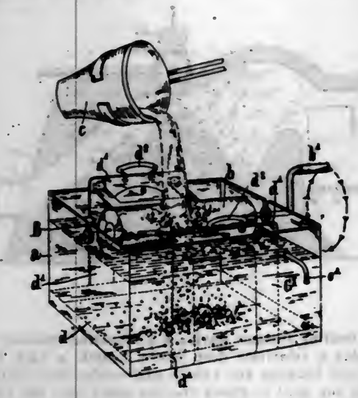
1,458,287. OIL-PRESSURE CLUTCH. ALFRED D. GOODWIN, Ripon, Calif. Filed Jan. 11, 1922. Serial No. 528,518. 2 Claims. (Cl. 192—60.)

1. An oil pressure clutch comprising a closed casing, radially disposed cylinders therein, pistons in the cylinders, a driven shaft journaled in the casing, operative connections between the shaft and pistons whereby the reciprocatory movements of the latter will be opposed to each other, a rotary valve member mounted in the



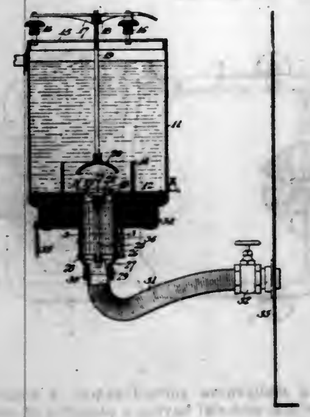
casing and surrounding the shaft, an oil chamber formed in the valve and extending continuously therearound, passageways formed in the casing and extending radially from the peripheral ends of the cylinders, and ports in the valve leading from the chamber to the periphery thereof and adapted to communicate with the passageways.

1,458,288. AIR-BLAST CONTROL FOR BLAST FURNACES. HERBERT W. GRAHAM, Pittsburgh, Pa. Filed Oct. 22, 1920. Serial No. 418,778. 20 Claims. (Cl. 263—19.)



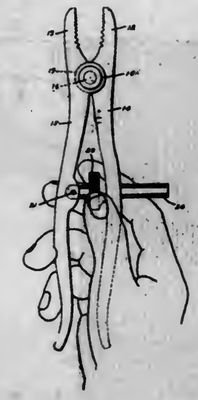
1. A system for blast furnace control, comprising a hot blast main for the furnace, means for creating an air blast, a heater connected to said main and said means for heating a portion of the air, a second connection between said main and said means for a portion of the air, and means for simultaneously controlling from minimum to maximum the amount of air passing through either of said connections, said means being effective for causing substantially all of said air to pass through either one of said connections at will, substantially as described.

1,458,289. GARAGE-DOOR HOLDER. CHARLES F. GRANZOW, Jr., Detroit, Mich. Filed July 2, 1921. Serial No. 482,082. 7 Claims. (Cl. 292—274.)



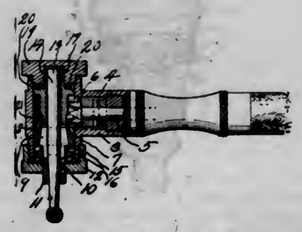
1. In a device of the character described, the combination with a hinged door and its frame, of a rod pivoted upon said frame and extending substantially in a horizontal direction and substantially parallel to the door, and means for holding said door in any desired position of adjustment comprising a gravity actuated latch member pivoted upon the door and having a portion apertured for engagement by said rod and normally inclined to said rod and said latch member binding upon the rod to frictionally resist relative sliding of the rod and latch member in one direction.

1,458,290. METHOD OF PREPARING METALLIC ALLOYS AND OF REFINING METALS AND ALLOYS. HORACE CAMPBELL HALL, Derby, England, assignor to Rolls-Royce Limited, Derby, England, a British Company. Filed Feb. 18, 1921. Serial No. 446,114. 3 Claims. (Cl. 75—1.)



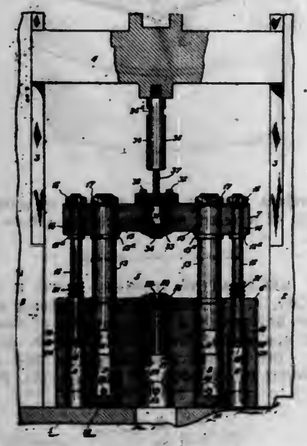
1. A method of preparing metal alloys and of refining metals and alloys consisting in introducing into a main molten constituent an additive metal or metals in a granulated and oil coated condition.

1,458,291. APPARATUS FOR DEHYDRATING PETROLEUM OILS. FORD W. HARRIS, Los Angeles, Calif., assignor to Petroleum Rectifying Company, a Corporation of California. Original application filed June 28, 1921, Serial No. 481,171. Divided and this application filed Sept. 19, 1921. Serial No. 501,548. 12 Claims. (Cl. 204—24.)



1. An apparatus for dehydrating petroleum emulsions comprising a tank; a pipe by which an emulsion composed of petroleum and water may be introduced into said tank; a lower electrode secured near the bottom of said tank; an upper electrode insulated from said tank and secured near said lower electrode under the surface of said emulsion; and means for subjecting any current flowing between said electrodes through said emulsion to the action of a coercive magnetic field.

1,458,292. LOCKING PLIERS. LEWIS E. HART, Needham, Mass. Filed Aug. 25, 1922. Serial No. 584,270. 1 Claim. (Cl. 294—41.)



Locking pliers comprising a pair of elongated pivotally connected members; a pivot connecting the same, each member including a jaw at one side, and a handle at the opposite side of the pivot, the outer end portions of the handles constituting rests on which jaw-opening pressure may be exerted by a hand holding the pliers; and an adjustable brace composed of a screw-threaded rod pivoted to one handle and passing loosely through a slot in the other handle, and a nut engaged with the rod between the handles, and adapted to bear on the inner side of the slotted handle, said nut having a peripheral grip portion of greater diameter than the width of the handles, the said brace being located between the rest portions of the handles and the pivot, so that the nut may be turned by the thumb and a finger of the hand holding the pliers.

1,458,293. DENTAL TOOL. CLAUDE E. HINCHEY, Weyauga, Wis. Filed Mar. 29, 1922. Serial No. 547,801. 2 Claims. (Cl. 32—11.)

1. A dental head comprising a T-shaped casing, a driving gear mounted in one of the arms of the T-shaped casing, a rotatable chuck rotatably mounted in the other arms, a driven ring gear surrounding the chuck and floatably mounted in the last named arms, said chuck being provided with a tapered split inner portion cooperating with a tapered chamber in the gear ring and forming a clutch therebetween, antifrictional bearings for supporting the chuck and adjustable caps whereby the tapered split chuck may be contracted for holding a drill and frictionally engaging within the tapered chamber of the ring gear.

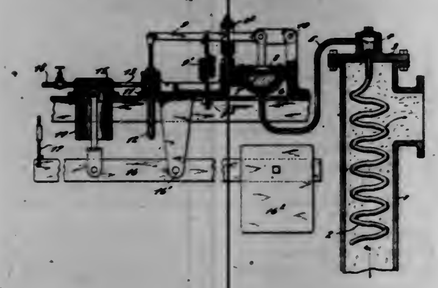
1,458,294. SWAGING APPARATUS. HENRY C. HOOK, Windsor, Vt., assignor, by mesne assignments, to Aluminum Manufactures, Incorporated, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 15, 1920. Serial No. 430,901. 15 Claims. (Cl. 29—34.)

1. In an apparatus for swaging tubular articles in combination with a die having downwardly tapered side walls and a bottom wall adapted to support a tubular article, of a punch having an enlarged portion adapted to cause radial expansion of a tubular article in the die, and a shoulder adapted to remove said article from the die.

1,458,295. MUD LUG FOR VEHICLE WHEELS. JAMES M. JACOBS, East Peoria, Ill. Filed June 5, 1922. Serial No. 566,168. 8 Claims. (Cl. 152—14.)

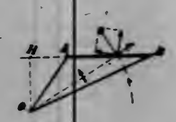
6. In a device of the character described, a series of shoes adapted to receive upon them the tire of a vehicle wheel, each including a part at each side of the tire extending toward the wheel center, a sleeve clamped upon each of certain of the spokes of the wheel and each including a stop, and means connecting the parts on each shoe, the same encircling one of the said sleeves, being slidable thereon and in its sliding movement being limited by said stop.

1,458,296. SUPPORT FOR COOKING VESSELS. JOSEPH H. JACOBS, Denver, Colo., assignor to 3-In-One Pressure Cooker Company, Denver, Colo., a Corporation of Colorado. Filed Jan. 16, 1922. Serial No. 529,522. 3 Claims. (Cl. 248—41.)



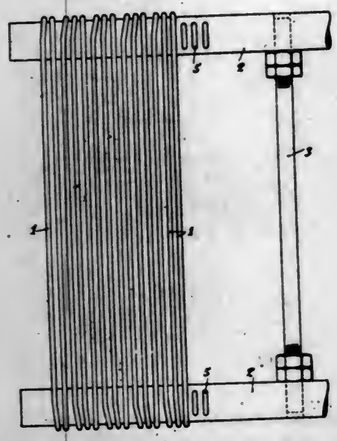
1. As a new article of manufacture, a plurality of straight and rigid rods, pivotally connected at one end

and adapted to lie in spider form in a horizontal plane, the arms at their free ends only having downwardly



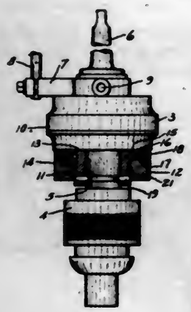
curved portions forming hooks adapted to embrace the circular rim of a vessel upon which the article is to be supported.

1,458,297. REGULATING DEVICE. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Original application filed Dec. 14, 1916, Serial No. 136,823. Divided and this application filed Aug. 10, 1918. Serial No. 249,361. 7 Claims. (Cl. 236—86.)



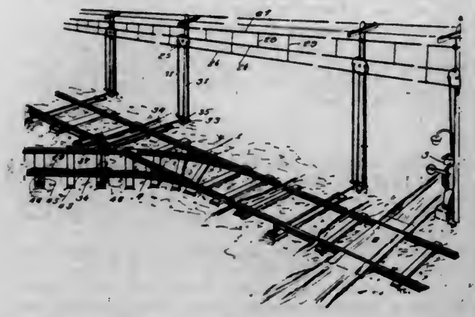
1. In a regulating device, a movable member, a cylinder and its piston for moving said member, a valve for controlling the admission of a fluid under constant pressure to said cylinder, a controlling mechanism connected to said valve and actuated by a fluid under variable pressure and means to return said member to normal position, said cylinder having a permanently open outlet for the discharge of the fluid therefrom.

1,458,298. OSCILLATING SIEVE. ARMAND JACQUELIN, Paris, France. Filed Dec. 28, 1921. Serial No. 525,436. 10 Claims. (Cl. 83—56.)



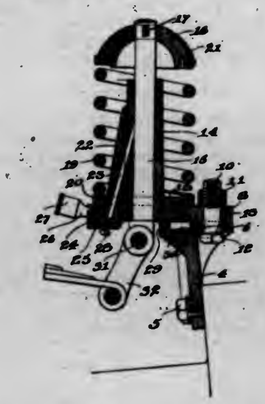
1. In an oscillating sieve, the combination with a fixed support, of a casing, a single horizontal shaft carrying said casing, and arranged below the same in front of the perforated surfaces of the riddles of said sieve, the movement of the sieve from back to front being the movement of progression of the material over the riddles, the rear portion of the riddles being inclined towards the rear of the sieve, i. e., towards that portion where the material to be treated is admitted to the sieve, and a damping system being interposed between the said casing and the said fixed support.

1,458,299. GRID OR RIDDLE FOR SIFTING MINERALS, COAL, AND OTHER MATERIALS. ARMAND JACQUELIN, Paris, France. Filed Dec. 28, 1921. Serial No. 525,437. 3 Claims. (Cl. 80—56.)



1. A sifting grid comprising a continuous metal wire wound around a frame and then stretched, the upper strands of the wire being arranged in a certain number of parallel planes and the lower strands of the wire being connected in bundles of two or more.

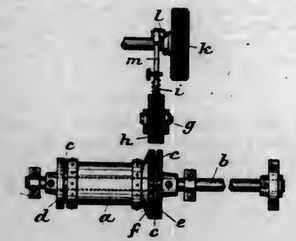
1,458,300. TAP CHUCK. MARSHALL N. JARVIS, Glidersleeve, Conn. Filed May 14, 1921. Serial No. 469,542. 1 Claim. (Cl. 10—134.)



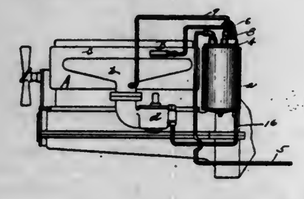
A tap chuck comprising a housing to contain driving mechanism and furnished with a rigid projecting sleeve, a spindle operatively associated with the housing, extending through the sleeve and longitudinally adjustable therethrough, a ring surrounding the sleeve and advanceable and retractable thereon into two positions, yieldingly urged balls on the ring, the sleeve being separately grooved to receive the balls when the ring is in one of its two positions and thus hold the same in an adjusted position, radially slidable pins in the sleeve, the ring having a groove to receive the outer ends of the pins when the spindle is in its back position, and a groove on the spindle to receive the inner ends of the pins when the spindle is in said back position.

1,458,301. SIGNALING APPARATUS. JAMES W. KENNEDY, Canton, Ohio. Filed Oct. 2, 1922. Serial No. 591,802. 11 Claims. (Cl. 246—293.)

2. Apparatus for operating a permanently located semaphore, comprising a pair of longitudinally extending ramps pivotally mounted upon pivotally mounted supports, an actuating rod, supplemental rods connected to the actuating rods for operating the semaphore, means provided on the longitudinally extending ramps for rotating the actuating rods and a connection between the actuating rods, whereby the signals on the semaphore are alternately set to indicate danger or safety, by a moving train.



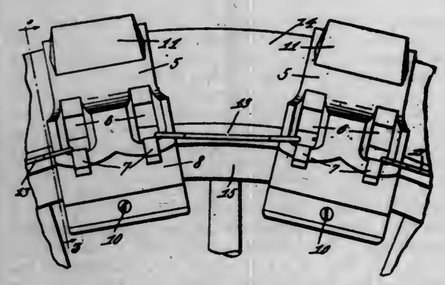
1,458,302. SHOCK ABSORBER. EDWARD KRUK, Coplay, Pa. Filed Nov. 22, 1921. Serial No. 516,991. 3 Claims. (Cl. 267—29.)



1. In a device of the character described comprising a base, a rod slidable relative the base and spring means operative between the base and the rod and means for securing the base to the frame of a vehicle including a versible wedging means for varying the inclination of the rod relative the vehicle.

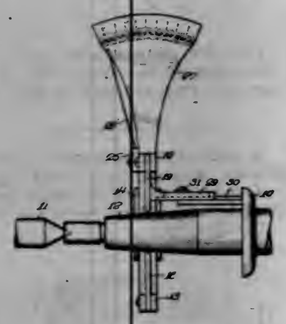
1,458,303. ARRANGEMENT OF CENTERING THE FILM IN THE GATE OF CINEMATOGRAPH PROJECTORS. STANISLAUS KUCHARSKI, Charlottenburg, near Berlin, Germany. Filed Aug. 31, 1921. Serial No. 497,303. 4 Claims. (Cl. 88—17.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In mechanism of the class described, means for adjusting the film in the window, comprising in combination with the intermittently moving feed wheel and the drive shaft for the film, of a normally operative frictional connection between the feed wheel and the driving shaft for the film, and manually operated means for positively connecting the feed wheel with the film drive shaft to cause said wheel and shaft to move at different speeds.



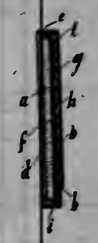
1,458,304. MOTOR-CONTROL MEANS AND SYSTEM AND METHOD. RUDOLPH KYSELA, Los Angeles, Calif., assignor of one-half to Leo V. Starr, Los Angeles, Calif. Filed Oct. 27, 1921. Serial No. 510,774. 9 Claims. (Cl. 123—119.)

1. The combination, with a vacuum system for supplying liquid fuel to internal combustion motors, of means associated with said motor and said system for cutting off air supply to the vacuum system and thus preventing fuel supply to said motor if the motor starts to overheat.



1,458,305. MUD LUG. EDWARD J. LAHAN, Quincy, Ill. Filed Oct. 14, 1920. Serial No. 416,821. 1 Claim. (Cl. 152—14.)

An anti-skid device including mud lugs, each of which comprises a curved body portion formed of rigid material and having pairs of openings formed adjacent to the ends thereof, opposed metallic securing sections, each of said having a pair of fingers, said fingers adapted to extend through the openings of the body portion and engage



the body portion to fasten the securing sections to the body portion, means for clamping the securing sections together, spacing links having their ends disposed within the openings of adjacent lugs and bent around portions of the body portions to secure the links to the lugs, and said links being of lengths to extend between adjacent lugs when positioned on a tire to hold the lugs in spaced relation with each other.

1,458,306. MICROMETER. ARTHUR H. LAMBERT, Muskegon, Mich., assignor to Muskegon Motor Specialties Company, a Corporation of Michigan. Filed Sept. 14, 1920. Serial No. 410,209. 1 Claim. (Cl. 33—148.)

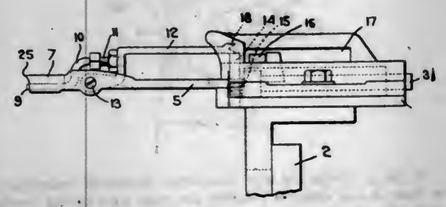
A micrometer for measuring elongated tapering objects comprising a pair of pivoted measuring jaws for engaging opposite sides of the object to be calipered, and a gage extending axially of the object and adjustable to locate the jaws at the same point of the taper of a plurality of like objects.

1,458,307. DRY ELECTRIC BATTERY. LOUIS LEVAILLANT, Zurich, Switzerland, assignor to Heinrich Gattikertanner, St. Gallen, Switzerland. Filed Jan. 12, 1923. Serial No. 612,240. 3 Claims. (Cl. 204—38.)

3. An electric battery cell of the character described, comprising a carbon electrode composed of a hard impervious shell and of a soft active carbon-manganese mixture accommodated in the hollow of said shell, a zinc electrode composed of a dished plate applied to the rim of said shell so as to cover the active mixture, a porous diaphragm interposed between the electrodes, and an electrolyte arranged between the diaphragm and the zinc plate, the zinc plate being formed with a neck through which the electrolyte can be introduced after the electrodes have been assembled and connected.

1,458,308. CEMENT. PURL C. PLASTERER, Hamilton, Ohio, assignor to Darn E. Z. Laboratorys, Dayton, Ohio, a partnership consisting of Purl C. Plasterer, Karl M. Horne, and James A. Hopkins. Filed Mar. 11, 1921. Serial No. 451,631. 1 Claim. (Cl. 87—17.)

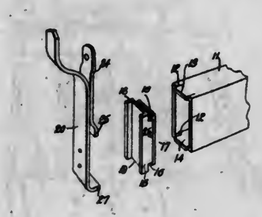
A cement consisting of rubber digested together with commercial rosin and commercial brown shellac into a semi-solid by means of carbon disulphide, and gum arabic dissolved in benzine, said ingredients digested together to form a thick paste.



1,458,309. METHOD OF MAKING BISULPHITE COOKING LIQUOR. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Aug. 28, 1920. Serial No. 406,644. 8 Claims. (Cl. 23—18.)

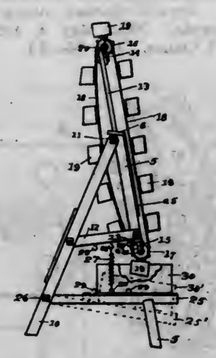
1. In the manufacture of sulphite cooking liquor for use in producing sulphite pulp, the following steps, comprising enriching the raw acid liquor with free sulphur dioxide by recovered blow-pit gas to produce an intermediate acid liquor having a greater free sulphur dioxide content, and producing a final acid liquor having an increased free sulphur dioxide content by enriching the intermediate acid liquor with relief gas from the digester.

1,458,310. PROCESS OF MAKING SULPHITE LIQUOR. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Sept. 3, 1920. Serial No. 408,052. 6 Claims. (Cl. 23—13.)



1. A process of making sulphite cooking liquor, which comprises producing a sulphite solution by an absorption system, separating the gases from the hot liquor relieved from the digester, cooling the strong gas thus separated, absorbing sulphur dioxide from the cooled strong gas, recovering free sulphur dioxide from the remaining hot relief liquor, and passing such recovered sulphur dioxide into the said system where the strength of the gas in said system is approximately that of the recovered gas.

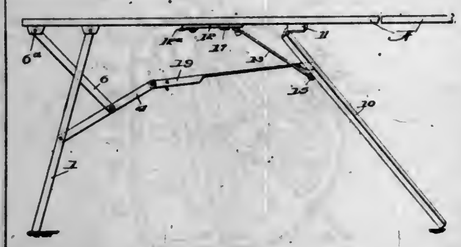
1,458,311. FEELER MECHANISM FOR LOOMS. ALBERT J. ROOSE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed June 19, 1922. Serial No. 569,267. 4 Claims. (Cl. 139—85.)



1. A feeler mechanism for looms comprising an impinging member adapted to engage and be moved forwardly by the running filling carrier upon a detecting beat, a detecting member movable with and with respect to the impinging member, means actuated by movement of the detecting member with respect to the impinging member followed by forward movement of the detecting member with the impinging member for initiating filling replenishment, the impinging member having a protecting projection extending rearwardly from its face above the detecting member whereby upon the improper presentation of a hard surface opposite the said members upon the detecting beat the blow will be taken by the said projection without effecing movement of the detecting member with respect to the impinging member.

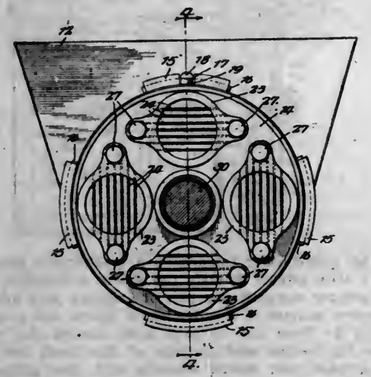
1,458,312. TUBE-FRAME BRACKET. EFFA H. RYON, Waltham, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 22, 1923. Serial No. 626,826. 4 Claims. (Cl. 139—10.)

4. In a loom, a rectangular hollow metal tube frame, an end block and a tube frame bracket, said frame and said bracket having portions interlocked with said block to secure said parts in fixed assembled relation.



1,458,313. FRUIT-PICKER'S LADDER AND CONVEYER. NEWTON D. SERGEANT, Bellingham, Wash., assignor of one-third to J. V. Lindquist, Bellingham, Wash. Filed June 12, 1922. Serial No. 567,595. 3 Claims. (Cl. 214—1.)

1. In combination, a ladder, a gravity conveyer mounted longitudinally on said ladder for operation thereon, a plurality of buckets adapted to carry fruit fastened at spaced intervals to said conveyer's chain, a receptacle beneath the delivery end of said conveyer, and means whereby said receptacle is automatically depressed by the weight of the fruit delivered from said buckets into said receptacle.

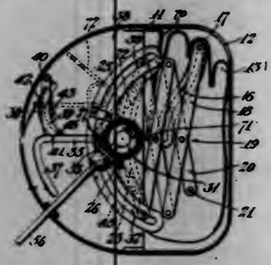


1,458,314. IRONING BOARD. GRIDLEY ADAMS, Chicago, Ill. Filed Dec. 1, 1919. Serial No. 341,662. 8 Claims. (Cl. 68—10.)

1. In combination with the board having a hinged leg at one end and two legs at the other end of the board pivoted thereto for swinging each about a single pivotal axis in a plane oblique to the plane of swinging of the other of said two legs, means connecting the two legs

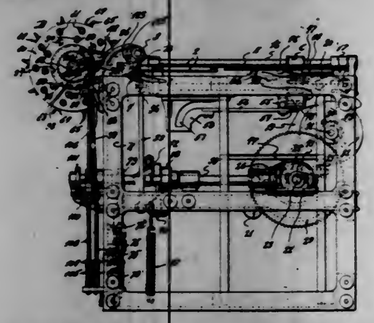
for simultaneous swinging, consisting of interengaging lever connectors fulcrumed on the board, and links connecting them respectively with the two legs.

1,458,315. FRUIT-DISINTEGRATING MACHINE. LELAND A. BABCOCK, Chicago, Ill., assignor to Sprague Canning Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 21, 1919. Serial No. 318,911. 1 Claim. (Cl. 146—11.)



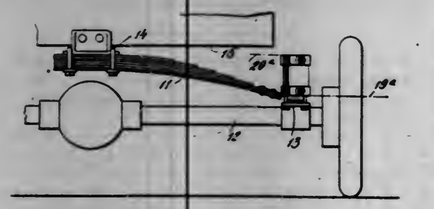
In a cutting device of the class described, a housing having a plurality of openings; a plurality of cutting elements arranged in registration with said openings, each of said cutting elements being a separate and independent unitary structure mounted upon the outer side of said housing and comprising an annular holder and knives mounted in said holder; and means for forcing the material to be cut through said cutting elements.

1,458,316. THREE-WAY SAFETY AUTO SIGNAL. FREDERICK M. BALDWIN, Los Angeles, Calif. Filed July 12, 1921. Serial No. 484,052. 6 Claims. (Cl. 116—40.)



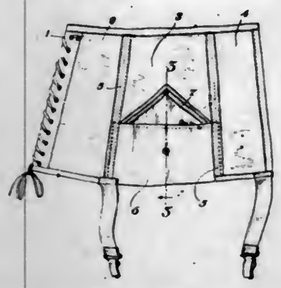
1. In a direction signaling device for automobiles, a casing, a lazy tongs pivotally mounted in said casing, a display member on the outer end of said lazy tongs, a pair of links pivotally connected at one end to the inner end of said lazy tongs, a pin connecting the other end of said links and means engaging said pin arranged to operate said lazy tongs, and means for controlling the direction of movement of said pin whereby the angular posi-

tion of the extended lazy tongs may be varied, said controlling means consisting of a cam plate having a cam slot therein to receive said pin, said slot having branch



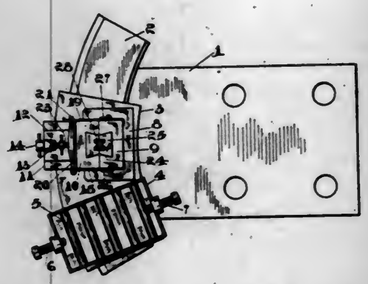
slots, and means controlling the entry of said pin to one of said branch slots.

1,458,317. SHEET ACCUMULATOR. DANIEL BELCHER, Webster Groves, Mo., assignor to Bemis Bro. Bag Company, St. Louis, Mo., a Corporation of Missouri. Filed May 9, 1921. Serial No. 467,848. 39 Claims. (Cl. 93—93.)



1. An accumulator comprising a sheet-holder provided with a sheet-gripper wherein the sheets accumulate, said sheet-gripper comprising a pair of gripping jaws adapted to receive margins of a collection of sheets and a spring tending to force one of said jaws toward the other, means for feeding said margins of the sheets into said sheet-gripper, and means whereby said sheet-gripper is shifted in response to a predetermined number of sheet-feeding operations.

1,458,318. SPRING SUSPENSION. HARVEY W. BELL, Yonkers, N. Y., assignor to The Beloyt Corporation, Dover, Del., a Corporation of Delaware. Filed Dec. 24, 1920. Serial No. 432,943. 29 Claims. (Cl. 267—54.)

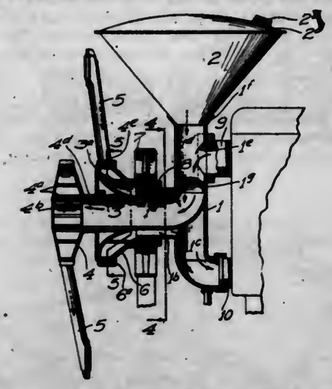


1. In spring suspensions for vehicles, the combination with substantially longitudinal side springs and a substantially transverse spring at the ends of the longitudinal springs, of suspension links connected between the ends of the transverse and longitudinal springs and comprising continuous webs disposed substantially at right angles to plane bisecting the angles between the transverse and longitudinal springs.

1,458,319. CORSET. SARAH E. BEMIS, Philadelphia, Pa. Filed June 28, 1922. Serial No. 571,374. 2 Claims. (Cl. 2—73.)

2. A corset composed of panels of flexible material, stiffening ribs seamed along the edges of the panels, one of said panels being extended below the body of the corset and folded inwardly upon itself to form a pocket on the inner wall of the corset, the side edges of the folded portion being stitched by the seams which hold the stiffening ribs, and a waterproof lining for said pocket.

1,458,320. APPARATUS FOR DRESSING BITS AND RIMMERS. ROLAND ROBERT BLACKWELL, Petrolia, Ontario, Canada. Filed May 3, 1922. Serial No. 558,237. 17 Claims. (Cl. 76—5.)

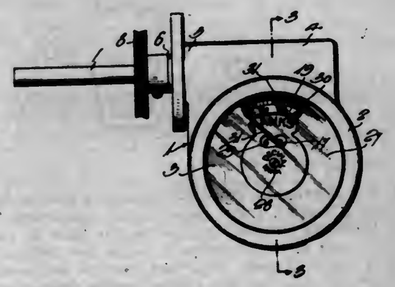


1. In apparatus for dressing bits, the combination of a longitudinally divided mold, one part being provided with an integral extension at its lower end on which the other part is rectilinearly slidable to open and close the mold; an impact receiving member; and a guide for guiding the mold into contact with said member.

1,458,321. WATER-COOLING APPARATUS FOR GAS ENGINES. SAMUEL BOWMAN, Redondo Beach, Calif. Filed Mar. 1, 1920. Serial No. 362,406. 5 Claims. (Cl. 123—174.)

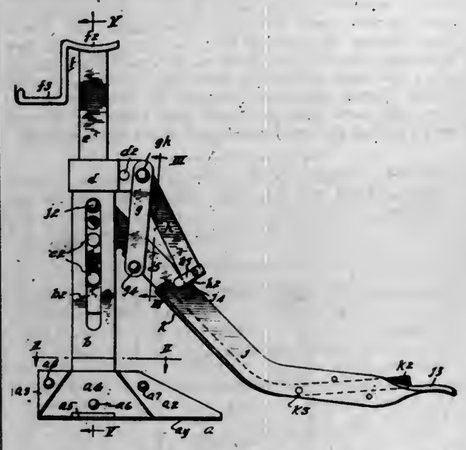
1. A water cooling apparatus for gas engines, including a combined support and water conductor communicating with the water inlet and outlet of the gas engine, a water reservoir communicating with said conductor, a fan revolubly mounted on said support and

conductor provided with hollow blades divided in the middle and communicating with said conductors forming



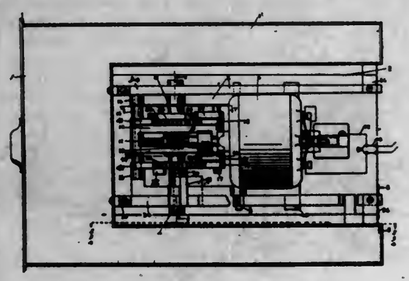
a continuous water circulating medium, a centrifugal pump member secured to a portion of said conductor forming a pump with said fan.

1,458,322. PROCESS OF MANUFACTURING ABRASIVE DISKS. SAMUEL M. BULLOCK, Chicago, and HARRY S. LLOYD, Oak Park, Ill. Original application filed Sept. 10, 1915, Serial No. 49,983, Patent No. 1,311,550, dated July 29, 1919. Divided and this application filed July 15, 1919. Serial No. 310,967. 3 Claims. (Cl. 51—278.)



1. The process of forming an abrasive disk comprising wetting a fabric disk and then applying thereto a mixture of abrasive, calcined magnesite and magnesium chloride solution.

1,458,323. HANK REGISTER. JAMES L. BURNHAM, Saco, Me. Filed Mar. 30, 1922. Serial No. 548,031. 5 Claims. (Cl. 235—103.)

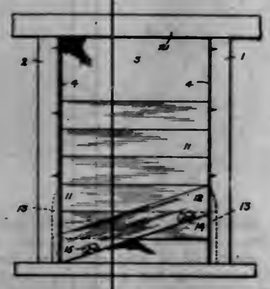


1. A counter of the character described comprising a casing, a stationary plate in the casing provided with inner and outer sight openings, an element rotatably mounted in the casing and carrying a dial viewed through the inner sight opening, a drive shaft for said rotatable element, a gear disk rigid in the casing and positioned about the axis of said rotatable element, a second rotatable element rotatably carried by the first about its axis and carrying a dial positioned concentric to the first dial and viewed through the outer sight opening of said plate, and means carried by the first rotatable element and actuated by the rigid gear disk for imparting rotary motion to the second rotatable element during rotation of the first.

1,458,324. LIFTING JACK. HENRY H. BURNS, Battle Creek, Mich. Filed Sept. 28, 1921. Serial No. 503,719. 6 Claims. (Cl. 254—117.)

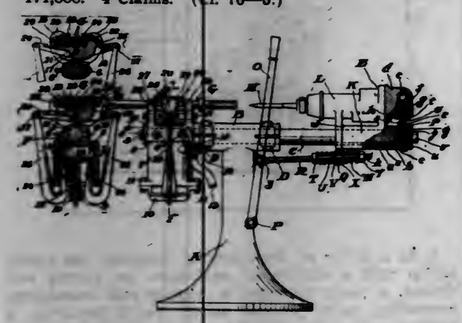
1. In an apparatus of the kind described, the combination of the supporting guide *b*, a band *d* engaging around the upper end of said guide and provided with an outwardly extending lug, a link *g* pivoted to said lug and depending therefrom, a lifting bar adapted to reciprocate in said guide, a lever *j* pivotally supported upon said link and engaging said lifting bar to actuate the same, said lever being provided with a notch at its upper end, a pawl *h* pivoted to said lug at one end and at the other end resting upon said lever so as to engage in said notch.

1,458,325. TIME-CONTROLLED LOCKING MECHANISM. EDWIN M. CLARK, Clarkston, Mich. Filed July 23, 1921. Serial No. 486,962. 9 Claims. (Cl. 70—26.)



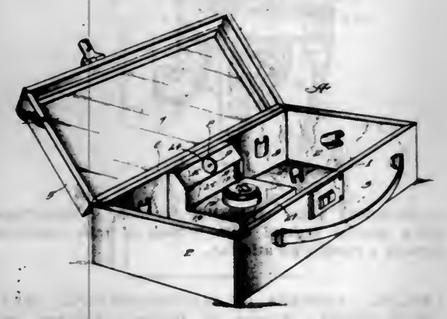
1. In a device of the character described, the combination with a drawer, of mechanism for closing said drawer, a motor arranged to actuate said mechanism, controlling means for said motor, remote therefrom, a locking member for said drawer automatically engaging the same when closed, and a slow-motion release mechanism for said member driven by said motor.

1,458,326. HAIR-CLIPPER BLADE. CLYDE O. CONNOR, Wichita, Kans. Filed May 2, 1921. Serial No. 466,028. 1 Claim. (Cl. 30—1.)



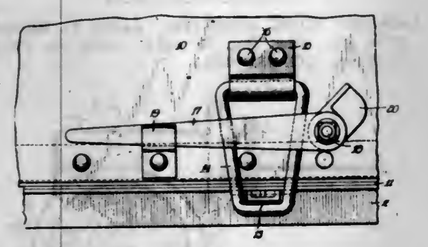
In combination in a hair cutting device, a lower blade having bearded cutting teeth and an upper blade slidably mounted and controlled thereupon; said lower blade having its base portion convexly curved in two directions, namely from front to back and from side to side; the upper portion of said blade having a central recess therein extending towards the convexly curved base and posts rigid with said base extending through said recessed portion towards the upper blade element.

1,458,327. GRAIN DOOR. WILLIAM DAHLEN, Duluth, Minn. Filed Feb. 21, 1922. Serial No. 538,206. 4 Claims. (Cl. 20—30.)



1. The combination with a car door of the character described having a removable upper portion spaced above the floor of the car, of a single vertically removable board externally of the upper portion acting as a closure to the space below the upper portion and vertically elongated recesses at either side of the door opening in which the ends of the single board are engaged, said board being removable therefrom only by raising one end foremost.

1,458,328. PEDESTAL PUNCH. JESSE DITSON and ARTHUR E. PETERS, Littleton, Colo., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 4, 1921. Serial No. 474,888. 4 Claims. (Cl. 76—5.)



1. A machine for punching hollow drill steels and similar articles, comprising a support, a guide bar carried by said support, punching mechanism slidable upon said guide bar, a vise head adapted to be sleeved over said guide bar, jaw levers pivoted on said vise head, a cylinder and fluid actuated piston for said vise head, lift levers operatively connecting said piston and the jaw levers, and means for controlling the operation of said piston.

1,458,329. HAND BAG. CLIFFORD SANFORD ELFELT, Los Angeles, Calif., assignor to Esther Elfelt and David Weber, both of Chicago, Ill. Filed May 16, 1921. Serial No. 470,134. 4 Claims. (Cl. 240—8.4.)

4. In a device of the character described, the combination with a compartment having an inside wall and a mirror hinged thereto, of means for mounting an electric lamp adjacent to the mirror with its lens facing angularly and away from the mirror, means for supplying current to the lamp, a switch for controlling the current, said mounting means comprising an inclined member secured to a wall of the compartment, and a reflector associated with the lamp.

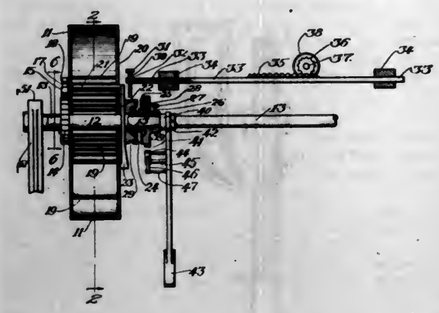
1,458,330. DOOR LOCKING AND RELEASING MECHANISM. FREDERICK S. GALLAGHER, Yonkers, N. Y., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Mar. 25, 1921. Serial No. 455,483. 10 Claims. (Cl. 105—308.)

1. In a railway car, the combination of a door having a projecting member, a link movable into engagement with said projecting member for holding the door in closed position, and means including a handle for locking said holding means in door supporting position and a wedge member for releasing said holding means from supporting position.

1,458,331. DRAG LINK. HARRY B. GARMAN, Detroit, Mich., assignor to The Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 14, 1921. Serial No. 522,374. 4 Claims. (Cl. 287—90.)

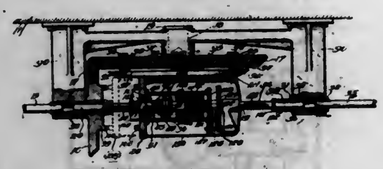
1. A drag link comprising a tubular member having a slotted end socket; an arm extending through the slot and having a ball end journaled in said socket; a bearing block in said socket engageable with said ball on one

side thereof a spring for yieldingly pressing said bearing block into engagement with said ball and a grease retaining case enclosing said block and spring.



1,458,332. DRAG LINK. HARRY B. GARMAN, Detroit, Mich., assignor to Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 14, 1921. Serial No. 522,375. 2 Claims. (Cl. 287—90.)

1. The combination with a drag link having a tubular ball receiving socket in the end thereof; of an actuating arm having a ball end seated in said socket; a plug adapted to close the outer end of said socket; a grease cup carried by said plug; a bearing block fitting in said socket and engageable with the side of the ball toward the end of the socket, said bearing block having a grease duct therethrough; a coil spring interposed between said plug and bearing block; and a grease conduit extending from said grease cup to said bearing black.

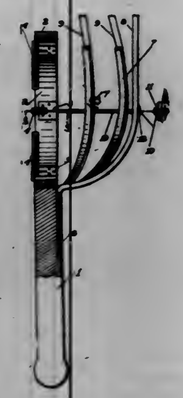


1,458,333. SPRING-WINDING MECHANISM. CHARLES H. GILL, Chicago, Ill., assignor of one five-thousandth to Louis J. Bergamo, one five-thousandth to Andrew C. Arentz, one hundred five-thousandths to Mack H. Higginbottom, one five-thousandth to Edward Dossmann, one five-thousandth to Carolina Dossmann, and one five-thousandth to Henry Saxe, all of Chicago, Ill. Filed Mar. 28, 1921, Serial No. 456,194. Renewed Dec. 6, 1922. 15 Claims. (Cl. 185—43.)

15. In spring winding mechanism, the combination of a spring barrel, a rotatable shaft, a sleeve rotatably mounted upon said shaft and rotatably mounting the said spring barrel, a coil spring having its inner end secured to the said sleeve and its outer end secured to the said spring barrel, means adapted to prevent the said sleeve from rotating in a non-winding direction, a clutch member splined upon the said sleeve, a second clutch member adapted to be freely rotatable upon the said shaft but having no longitudinal freedom of movement thereon, resilient means normally urging the two said clutch members apart, a ratchet wheel secured to the said second clutch member and rotatable upon the said shaft therewith, a cam member movable into operative position by the unwinding of the said coil spring beyond a given degree and out of operative position by the winding of the said coil spring beyond a given degree and adapted to force the said first named clutch member into mesh with the said second clutch member when in operative position, a pendulum adapted to swing upon the said rotatable shaft but not rotatable with said shaft, a pawl carried by said pendulum and adapted to engage the said

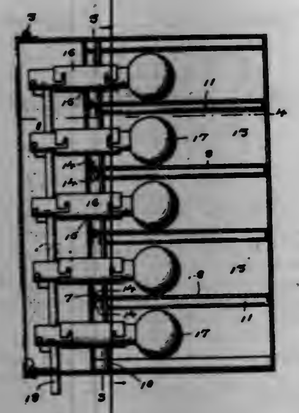
ratchet wheel secured to the said second clutch member, and means for holding the said pawl out of engagement with the said ratchet wheel when desired.

1,458,334. SLIPPAGE-GOVERNED TRANSMISSION MECHANISM. CHARLES H. GILL, Chicago, Ill., assignor of one five-thousandth to Louis J. Bergamo, one five-thousandth to Andrew C. Arentz, one hundred five-thousandths to Mack H. Higginbottom, one five-thousandth to Edward Dossmann, one five-thousandth to Carolina Dossmann, and one five-thousandth to Henry Saxe, all of Chicago, Ill. Filed Jan. 25, 1922, Serial No. 531,643. Renewed Dec. 6, 1922. 36 Claims. (Cl. 74—26.)



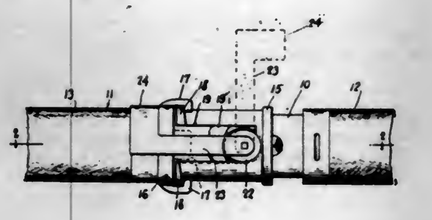
1. In transmission mechanism, the combination of a driving shaft, a driven shaft, speed changing mechanism operatively interposed between said shafts and including a member mounted for free rotation upon said driven shaft, an element mounted upon said driven shaft to rotate said driven shaft therewith and yieldably engaging said member, and automatic means carried entirely by said driven shaft and controlled by the degree of yield in the engagement of said element with said member, above or below a given degree of yield, for so changing the relationship of the said member to the balance of the said speed changing mechanism as to vary the ratio of the rotary speed of the said driven shaft to the speed of the said driving shaft inversely to variations in the degree of resistance offered to the rotation of the said driven shaft.

1,458,335. BALL CATCHING AND THROWING RACKET. ALEXANDER GLINCHIKOFF, Stockton, Calif. Filed July 20, 1921. Serial No. 486,030. 2 Claims. (Cl. 46—59.)



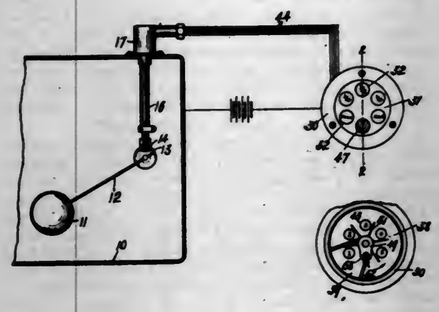
1. A ball catching and throwing racket comprising a handle, a ball enclosing structure fixed thereon, an intake opening for the enclosure whereby to permit a ball to enter the same, an outlet from said enclosure positioned in a plane at right angles to the plane of the intake,

fingers projecting into the intake opening and adapted to yield only in the direction of the enclosure, and springs



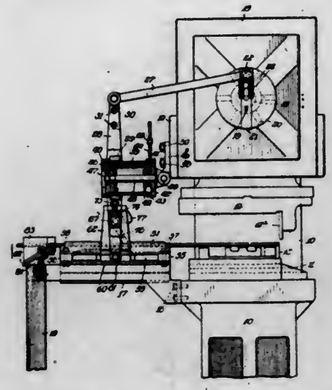
spaced about the outlet and projecting upwardly therefrom, these springs outlining an opening normally smaller than a ball being used.

1,458,336. ILLUMINATED AUTOMOBILE SIGNAL. SIDNEY GEORGE GRANDJEAN and JESSE JOHN DARCEY, Braithwaite, La. Filed July 2, 1921. Serial No. 482,241. 1 Claim. (Cl. 177—329.)



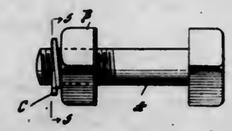
An automobile signal comprising a casing body having a wall and signal openings therein, a door complementary to said body, a pane of glass within the casing body and against the wall in which the signal openings are provided, partitions in the casing body in spaced relation to each other and having lateral edge flanges of concavo-convex form in section with their concave sides opposed to said glass, said partitions forming compartments one to each signal opening, packing strips held in said flanges against the pane of glass to prevent rattling and the passage of light, means interposed between opposite walls of the casing body and extending at right angles to the partitions and engaging the partitions to assist in maintaining the latter in position, a removable panel disposed in the casing body in spaced relation to said door and having means detachably engaging the ends of the partitions to hold the panel to the partitions and also having apertures, and incandescent lamp sockets arranged in the said apertures of the panel and adapted to carry bulbs one for each compartment formed by the said partitions.

1,458,337. COUPLING. THOMAS J. GRIER, West Palm Beach, Fla. Filed Jan. 24, 1920, Serial No. 353,656. Renewed Apr. 9, 1923. 1 Claim. (Cl. 285—171.)



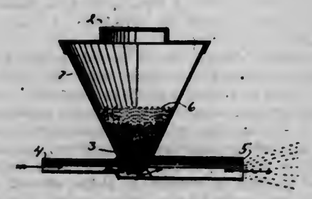
A coupling having terminally abutting members, interlocking elements carried by said members consisting of a sleeve mounted upon one member and shouldered arms mounted upon the remaining member, cam faced flanges provided on said sleeve, said arms being in engagement with said flanges by a transverse revoluble movement of one of said elements relative to the other, said sleeve being longitudinally slotted to receive the shouldered extremities of said arms, cams arranged to operate in said slots, a yoke straddling said coupling member at a point beyond the head forming the body portion of the interlocking element, and yoke levers connecting the cams for swinging movement relative to the coupling members.

1,458,338. HEIGHT INDICATOR FOR LIQUIDS. RALPH GRIMSHAW and CARL JOHN WEIS, Clyde, Ohio. Filed Oct. 9, 1919. Serial No. 329,553. 9 Claims. (Cl. 177—35.)



6. A sectional conductor plate having its sections insulatingly spaced, a plurality of signal circuits having signal devices connected to said conductor sections, some of said circuits including both conductor sections, a switch operable to selectively close breaks in each of said circuits, and means operable to electrically connect the conductor sections.

1,458,339. AUTOMATIC FEEDING DEVICE. RANDOLPH B. HANCOCK, Gary, Ind. Filed Feb. 20, 1922. Serial No. 537,885. 8 Claims. (Cl. 164—48.)

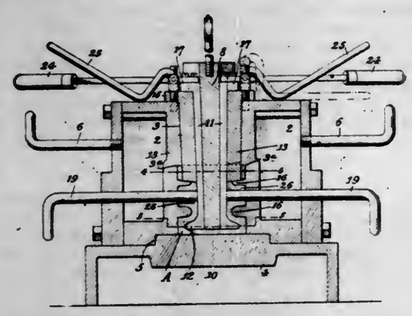


1. In combination, a feeding member, a resiliently positioned fulcrum member and means for operatively connecting said member to the operating parts of a machine.

1,458,340. NUT LOCK. ALVIN O. HENDERSHOTT, Keokuk, Iowa. Filed Nov. 4, 1921. Serial No. 512,841. 1 Claim. (Cl. 151—21.)

A nut lock comprising a relatively thin blank having a bolt-receiving bore, the edge of the lock in said bore being substantially helical and provided with a single thread to cooperate with an engaged screw thread, said blank being flexible whereby said thread may conform to bolt threads varying in thickness, the blank being split on a line from its bore to its outer edge, and said thread being cut away adjacent the split to provide a plurality of teeth to engage bolt threads and resist retrograde movement of the lock.

1,458,341. POWDER SPRAYER. HENRY E. HERBERT, Martin, Mich., assignor of one-half to Jane M. Herbert, Martin, Mich. Filed Oct. 1, 1921. Serial No. 504,723. 1 Claim. (Cl. 43—147.)



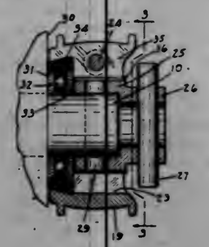
In an implement for spraying powder, a conical containing chamber having a close fitting cover thereon, said chamber opening at right angles into a large outflow pipe, a small air inflow pipe entering the end of the outflow pipe longitudinally thereof near the line of connection between the lower end of the container with the end of the outflow pipe; in combination with a screen extending well down into the outflow pipe and so covering the end of the container within the outflow pipe as to form a narrow crescent formed passage way between the screen and the wall of the outflow pipe for the passage of a part of the air current below the screen.

1,458,342. PAPER-MAKER'S FELT. EDMUND N. HUYCK, Albany, N. Y., assignor to F. C. Huyck & Sons, Albany, N. Y., a Corporation. Filed Sept. 12, 1921. Serial No. 500,182. 2 Claims. (Cl. 92—49.)

1. Endless papermakers' felts having a guide line formed thereon by the application of a suitable dye after the completion of the fulling or felting thereof.

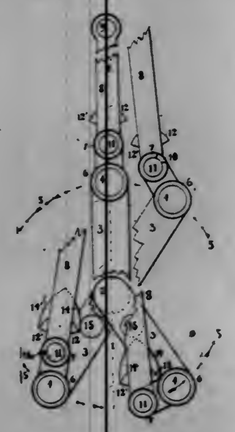
2. Endless papermakers' felts having a guide line formed thereon after the completion of the fulling or felting thereof, by the application of a dye which will have no appreciable effect upon said felt other than to color the portion thereof to which it is applied.

1,458,343. METAL MOLD FOR PISTON CASTINGS. GUSTAV R. KELM, New York, N. Y., assignor to W. M. Levett and Walker M. Levett Co., New York, N. Y., a Corporation of New York. Filed Aug. 24, 1922. Serial No. 584,001. 3 Claims. (Cl. 22—170.)



1. In permanent molds for casting skirted pistons, a combination of a support, a pair of permanent mold members mounted on said support and movable bodily upon said support toward and away from each other, said mold members being formed with complementary curved walls comprising outer walls of a mold cavity for casting a skirted piston therein, a permanent sectional core comprising a plurality of sections supported from the top of the mold member and forming the interior side walls thereof, and levers attached to certain of such core sections co-operating with the top of the mold member to reciprocate the last mentioned core sections into and out of casting position.

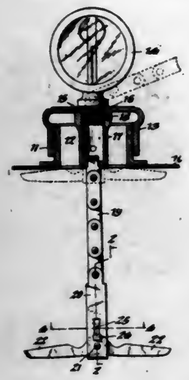
1,458,344. ADJUSTABLE THRUST-BEARING ATTACHMENT FOR CRANK SHAFTS. ELBERT B. KIMES and JOHN H. CARSON, Fairmount, Ind., assignors of one-fourth to Oliver P. Buller and one-fourth to Robert L. Kimes, both of Fairmount, Ind. Filed Mar. 11, 1922. Serial No. 543,069. 2 Claims. (Cl. 64—49.)



1. The combination with a crank shaft for an internal combustion engine and a main bearing therefor, of means for providing an end thrust bearing and taking up the end play therein, comprising an externally threaded member adapted to fit over the end of said crank shaft, said member having a plurality of longitudinally extending peripheral slots therein, means for securing said member

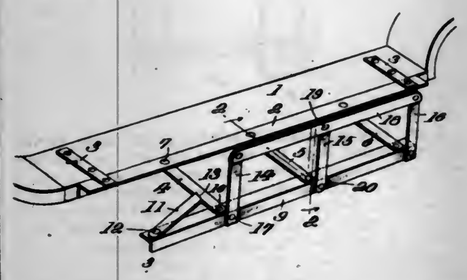
on said shaft, an internally threaded split fan pulley adapted to screw thereon, a thrust bearing positioned between said pulley and the main bearing, a bolt adapted to extend through the split ends of said last mentioned

member for securing them together, and a key adapted to be positioned between said split ends so as to extend into said peripheral groove for locking said pulley on said member after the end play of said shaft is taken up by the adjustment of the pulley thereon.



1,458,345. LINK-JOINT-CONNECTING ROD. JOHN KONAR, Chicago, Ill. Filed Apr. 11, 1921. Serial No. 460,562. 9 Claims. (Cl. 74—38.)

1. With a crank movement having a suitably guided workhead, a rotative crankshaft provided with a crankpin, a link having one of its ends rotatably fitted on said crankpin, said link having near its other end a linkjoint to engage therewith the crank end of a connecting rod, a connecting rod linked with its crankend to said linkjoint and having at its other end means to engage said workhead, whereby during speedy dead center transitions of the crankpin said linkjoint is free to yield and to release said connecting rod and a thereto adapted workhead for extending by combined inertia their travel beyond the radius of the crankpin and whereby said linkjoint also affords flexibility to said connecting rod and therewith lost motion and latitude to said crankshaft when an undue obstacle is met by said workhead.

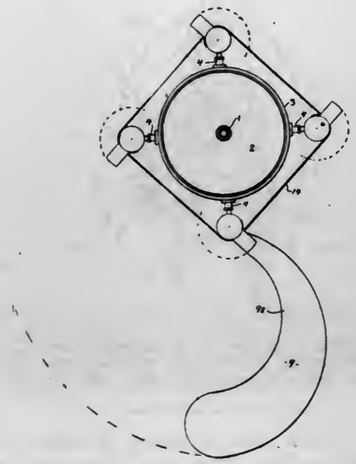


1,458,346. ATTACHMENT FOR RADIATOR CAPS AND THE LIKE. CHARLES J. KRENTZ and GEORGE W. KRENTZ, Buffalo, N. Y. Filed July 17, 1922. Serial No. 575,671. 4 Claims. (Cl. 220—24.)

1. An attachment for a closure cap of the character described, comprising a supporting member arranged to be suspended from the cap, a foldable anchoring device mounted on said member, means at the lower end of said member for preventing said anchoring device from swing-

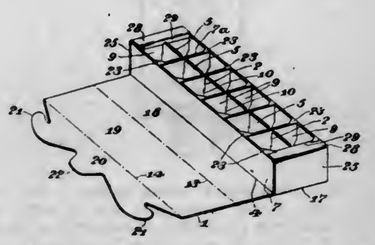
ing below its extended operative position, and a floating locking bolt guided on said member and arranged to interlock with the anchoring device in its unfolded operative position.

1,458,347. LUGGAGE CARRIER FOR AUTOMOBILES. MILFARD J. LANTIER, Alexandria Bay, N. Y. Filed Mar. 3, 1922. Serial No. 540,674. 15 Claims. (Cl. 224—29.)



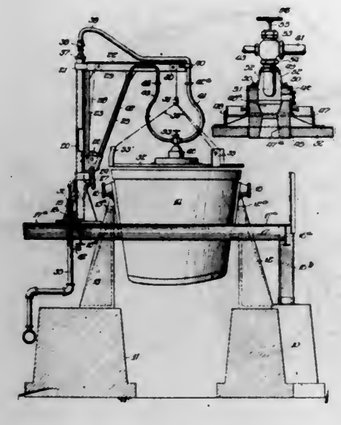
2. A luggage carrier for automobiles or the like comprising a collapsible horizontal section, and a collapsible vertical section attached thereto, said sections being collapsible indeepndently of one another.

1,458,348. DISAPPEARING ELECTRIC-FAN MECHANISM. CLARENCE W. LE VELLE, Wichita, Kans. Filed July 31, 1922. Serial No. 578,763. 4 Claims. (Cl. 230—1.)



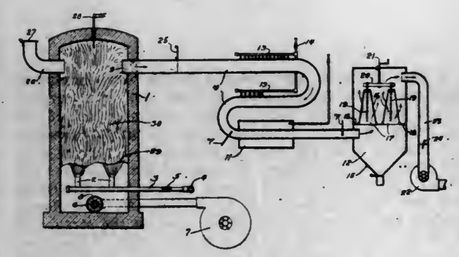
4. In a motor driven fan, a motor having a vertical axis, a rotatable ring concentric with the axis; a plurality of bracket elements radially disposed from said ring; each bracket member carrying an adjustable stop member, a cap member pivotally mounted to move on elements carried by said bracket member, an arm rigid with said cap member, means on the cap for limiting the amount of pivoted movement in either direction by its contact at spaced pivoted positions with said stop element, a fan blade on said arm; a cable leading to a binding post on said cap element, thence backwardly to another post on said cap element, thence outwardly to a similar connection in turn with each other cap ele-

ment and to a connection from the point of beginning; and whereby any pivoted movement of one fan blade element is simultaneously transmitted to each and every



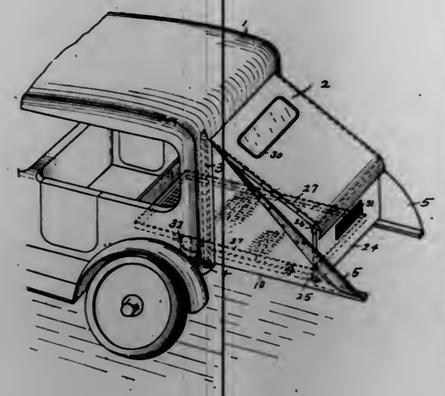
other fan blade element so that a unified and controlled pivoted movement of all fan blades is had for the purposes of the invention.

1,458,349. COLLAPSIBLE BOX AND METHOD OF MANUFACTURING SAME. HENRY LEVINE, Philadelphia, Pa. Filed June 7, 1921. Serial No. 475,647. 1 Claim. (Cl. 229—29.)



A box of the character described, comprising side walls and a series of transversely extending partitions having integral connection at their opposite ends with the said side walls, the said partitions having notches in their lower edges, a longitudinally extending partition situated between and in parallel relation with the said side walls, said partition having notches in its upper edge, the said notches being adapted to be interlocked with the notches in the said first mentioned partitnons, and the bottom of said box having its opposite ends extended, which ends are folded up against the opposite ends of the longitudinally extending partition and being folded inwardly and interlocked with the outermost notches of the said partition.

1,458,350. LADLE-DRYING APPARATUS. GEORGE R. MCDERMOTT, Chicago, Ill. Filed Aug. 25, 1920. Serial No. 405,984. 4 Claims. (Cl. 263—5.)



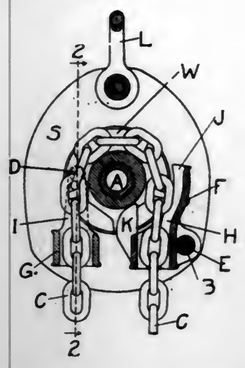
1. In a ladle drying apparatus, the combination of a burner, means for supplying fuel to said burner, a cover through which said burner extends and means for suspending the cover above a ladle, the marginal edges of the said cover conforming in shape substantially to the form of the opening in said ladle, the said cover plate being held out of contact with the ladle during the operation of the burner.

1,458,351. METHOD AND APPARATUS FOR PRODUCING CARBON. CHAUNCEY MATLOCK, Brooklyn, N. Y., assignor to Monroe-Louisiana Carbon Company, Monroe, La., a Corporation of Delaware. Filed Jan. 5, 1921. Serial No. 435,071. 14 Claims. (Cl. 134—60.)

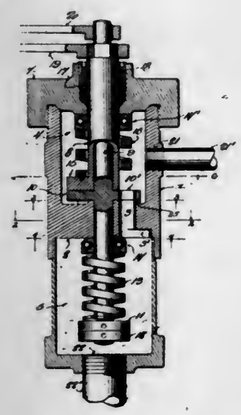
5. In an apparatus for separating and recovering carbon black from a hydrocarbon, the combination of a furnace arranged to permit a free unobstructed flow of burning gases together with burners adapted to receive and partially burn the hydrocarbon by the supply thereto of air in quantities insufficient for complete combustion, means for supplying the hydrocarbon to said burners, means for positively furnishing to said burners and said furnace predetermined quantities of air, and a collecting system wherein the resultant products are passed at a comparatively high velocity.

1,458,352. VEHICLE BODY. OTTO H. MENNING, Houston, Tex. Filed Oct. 3, 1921. Serial No. 504,848. 7 Claims. (Cl. 296—23.)

1. The combination with a vehicle body, of an extension frame carried thereby, a seat above the frame, a foldable mattress support folded under said seat and adapted to be unfolded onto said frame when the frame is in extended position, and means for projecting said frame into extended position relative to the body.



1,458,353. HOSE SUPPORTER. BENJAMIN MORSE, New York, N. Y. Filed Aug. 2, 1921. Serial No. 489,293. 1 Claim. (Cl. 241—6.)

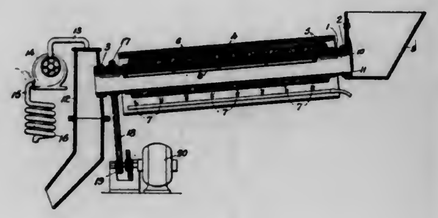


A hose supporter comprising a flexible strap having at each end means for gripping the hose, and of an overall length substantially equal to the circumference of the leg below the knee, whereby when the gripping means are engaged with the hose at each side of the leg with the strap extending across the rear of the leg at the top of the calf, the strap will extend in open loop formation and will be supported in such position and held closely against the leg by the pull of the hose on the strap, and a reinforcing member arranged transversely of the strap at the center thereof, said member being of semi-rigid material.

1,458,354. GUIDE FOR HOISTING WHEELS. ALBERT H. NELLER, Fairfield, Iowa, assignor to The Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed June 30, 1922. Serial No. 571,970. 3 Claims. (Cl. 254—167.)

1. In guides for hoisting wheels in which an elevating chain is used, a frame for the wheel having opposite sides, a straitening member having an opening in its body to fit the contour of the chain, and through which the elevating portion of the chain is passed, whereby in passing, it will be straitened, if twisted, before being drawn on to the wheel, and upstanding approximately parallel arms on opposite sides of the straitening member, said arms being pivoted in opposite sides of the frame approximately in line with the transverse center of the chain where it comes in contact with the wheel.

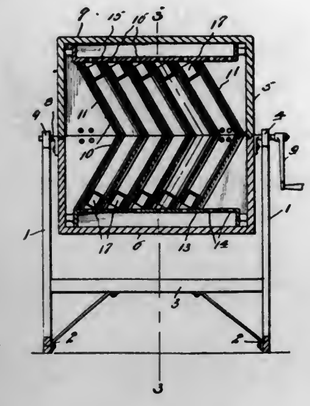
1,458,355. VALVE. KARL O. NELSON, Milwaukee, Wis. Filed Feb. 14, 1921. Serial No. 444,925. 4 Claims. (Cl. 138—16.)



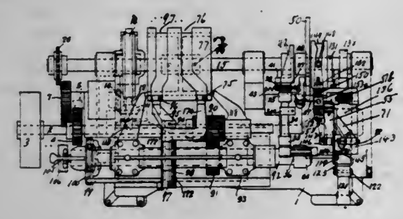
1. A valve comprising a casing having a fluid pressure inlet port, a fluid return port and an outlet port, means for selectively providing a communication between any or all of said ports, said means comprising a valve plate provided with openings adapted to selectively form communications between the desired ports, and a cut-off for controlling said openings, and yieldable means adapted to hold the cut off upon its seat against a predetermined pressure.

1,458,356. RECEPTACLE FOR HOLDING CIGARETTES. WILLIAM D. O'KANE, Springfield, Ohio. Filed Aug. 11, 1922. Serial No. 581,089. 4 Claims. (Cl. 220—18.)

1. A new article of manufacture consisting of a receptacle having an entrance and exit opening and supporting wall to present cigarettes with their ends adjacent to said opening in a predetermined position, and a rear guiding and deflecting wall to insure the placing of cigarettes in proper position, said opening being sufficiently large for the introduction of a package of cigarettes there through and the introduction of the fingers of the operator for the extraction of cigarettes therefrom.



1,458,357. APPARATUS FOR EXTRACTING VOLATILE MATTER. CARL POSTEL, New York, N. Y., assignor to American Shale Reduction Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 12, 1922. Serial No. 528,870. 1 Claim. (Cl. 196—20.)

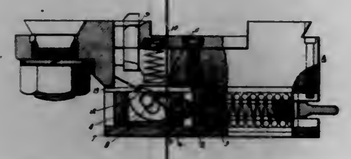


In an apparatus for extracting volatiles from oil bearing shale and like material the combination with a retort arranged to rotate on an inclined longitudinal axis and having openings at its ends for admission and discharge of material to be treated, of a closed jacket enclosing the main portion of the retort and carried thereby containing molten metal, means for applying heat to the exterior of the jacket to maintain the metal in molten condition, means for rotating the retort and jacket to cause the heat applied to the jacket to be distributed evenly to all parts of the retort within the jacket, and means for drawing off from the retort the vapors produced therein.

1,458,358. WASHING MACHINE. EDWARD J. RAPPS, Phoenix, Ariz. Filed July 8, 1922. Serial No. 573,568. 3 Claims. (Cl. 68—18.)

3. A washing machine comprising a receptacle formed with top and bottom sections, trunnions on the bottom section alining axially with each other, bearings supporting said trunnions whereby said receptacle may be rotated, pairs of guide members secured to the opposite side walls of each section, the pairs on one side wall alining respectively with the pairs of guides on the other side wall, washboards mounted in said guides, the washboards in one section being inclined in a direction reverse to the direction of the washboards in the other section, said washboards defining pockets to receive the clothes to be washed and trough-like elements in said pockets adapted in the rotation of the receptacle to slide within the pockets to facilitate the washing of the clothes, a false bottom in said lower section closing the bottom ends of the pockets and a false top in the upper section closing the upper ends of the pockets, said false bottom and top being perforated, whereby the washing compound may circulate freely in the rotation of the receptacle, and means carried by said guides to hold said washboards in place.

1,458,359. BOLT MACHINE. MICHAEL J. RILEY, East Cleveland, Ohio. Filed Sept. 7, 1920. Serial No. 408,550. 63 Claims. (Cl. 10—19.)

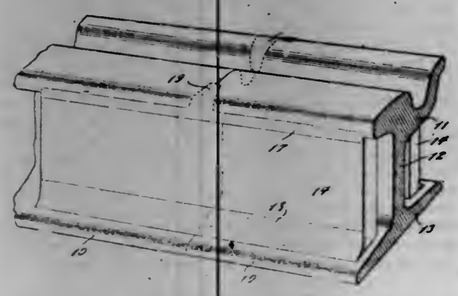


1. In the machine of the class described, a head, a spindle in the head, means for reciprocating the spindle in the head, a stop in the head to limit the spindle movement, a collet in the spindle, picker fingers for placing a headed blank in alignment with the spindle as it reciprocates, a spring supported plunger carried by the fingers to determine the position of the blank in the collet, a kick out device adjacent the fingers, means for operating the collet at one end of the spindle movement so as to grasp the blank by its shank, a spring within the collet, a plunger compressing the spring within the collet when the spindle reciprocates, a roller rest, means for advancing the roller rest to engage the blank below its head while it is held in the collet, means for rotating the spindle carrying the blank, a tool slide, tools on the tool slide, means for moving the tools transversely to the axis of the blank in the collet, and means for moving the tools to cut under the head of the blank.

1,458,360. TRIGGER MOTOR. HERBERT O. RUSSELL, Los Angeles, Calif., and LAURENCE J. SCHEBEN, Dayton, Ohio. Filed June 9, 1922. Serial No. 567,084. 5 Claims. (Cl. 89—27.)

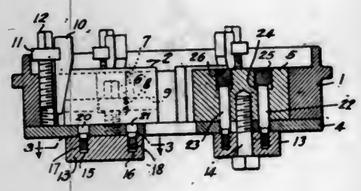
1. In a trigger motor for machine guns, the combination of a plunger, a plunger operating member, a trigger

operating slide movable in a path at an angle to the plunger, and a floating cam actuated by the plunger



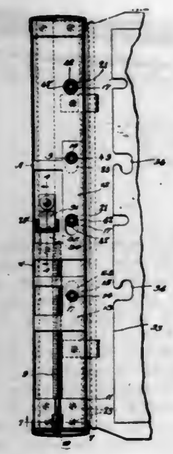
and operating with a thrust on the trigger operating slide.

1,458,361. ROTARY PUMP. WILLIAM L. RUTTLEDGE, Detroit, Mich., assignor to Roto Pump Mfg. Co., Detroit, Mich., a Corporation of Michigan. Filed Oct. 11, 1920. Serial No. 416,129. 4 Claims. (Cl. 103—140.)



4. In a rotary pump, the combination with a casing including a cylinder, of a piston therein, a valve upon said piston engageable with the inner wall of said cylinder, said wall comprising an arc of approximately 60°, and a pair of equal arcs of approximately 150° connecting tangentially into said first-mentioned arc at opposite ends thereof, said first-mentioned arc having a radius substantially equal to that of said piston, and each of said pair of arcs having a radius greater than that of said first-mentioned arc but within approximately 125 per cent of the radius of said piston.

1,458,362. WELDED RAIL JOINT. ELY M. T. RYDER, Yonkers, N. Y. Filed May 23, 1922. Serial No. 563,000. 8 Claims. (Cl. 238—164.)

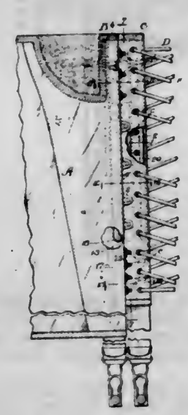


1. A rail joint comprising alined rails, a joint plate fitting between the fishing surfaces of the adjacent ends of the respective rails and welded thereto, and a supplemental weld formed between and directly joining the ends of the respective rails to each other and to the top of the joint plate across the entire width thereof.

1,458,363. BLADE-ADJUSTING MECHANISM FOR CUTTER HEADS. CHARLES L. SAVINO, Lima, Ohio, assignor to Walter H. Foster, New York, N. Y. Filed Apr. 21, 1921. Serial No. 463,293. 4 Claims. (Cl. 82—35.)

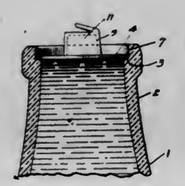
1. A cutter head carrying blades, means for varying the angularity of the blades and additional means for adjusting the blades radially.

1,458,364. SEPARABLE LOOSE-LEAF LEDGER. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association. Filed Apr. 2, 1921. Serial No. 458,014. 10 Claims. (Cl. 129—8.)



1. In a loose leaf ledger, a pair of separable sections, extensible leaf-engaging posts carried by each section, means to lock the sections together, means for automatically extending the posts when the sections are separated and means on each section to receive and guide the outer ends of the post extensions of the complementary section when the sections are in closed relation and during locking thereof.

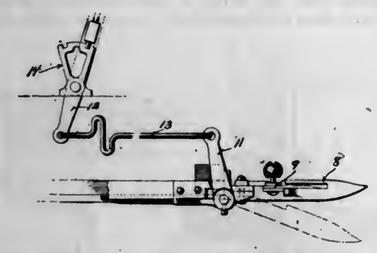
7. In a loose leaf binder, a pair of separable sections, means to lock the sections together, means to lock the leaves against accidental withdrawal, means carried by the locking means of the leaves to actuate the locking means of the sections and means for effecting positive operation of said locking means of the leaves.



10. In a loose leaf ledger, a pair of separable sections, leaf-engaging posts carried by each section, means having one end of the posts of one section affixed thereto to move the latter, and means to actuate the first-named means to move the latter posts into locking engagement with the leaves.

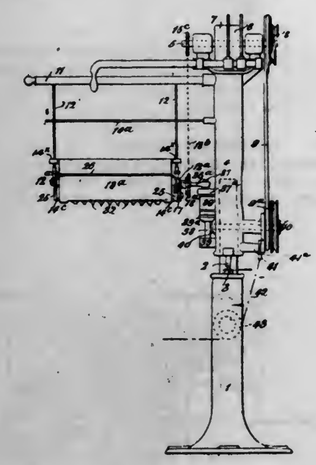
1,458,365. CORSET. CHARLES H. SCHOPBACH, Aurora, Ill., assignor to International Corset Company, Aurora, Ill., a Corporation of Illinois. Filed Dec. 24, 1920. Serial No. 432,993. 4 Claims. (Cl. 2—74.)

2. An insert for corsets comprising a relatively rigid body portion and a plurality of strips attached to and forming a prolongation of said body portion, said strips being arranged in overlapping relation each to each, and of greater flexibility than said body portion, said body portion being provided with clasp members, and said strips being free of clasp members.



1,458,366. BOTTLE STOPPER. HARRY J. SMALLWOOD, San Francisco, Calif. Filed June 26, 1922. Serial No. 570,787. 1 Claim. (Cl. 215—51.)

A stopper for a bottle having a cylindrical neck and an annular seat in said neck, comprising a disc fitting on said seat, a hole in the disc, a tube rising from the same communicating with the hole and a cap slidably engaging the tube having a flap associated with its top for facilitating its manipulation.

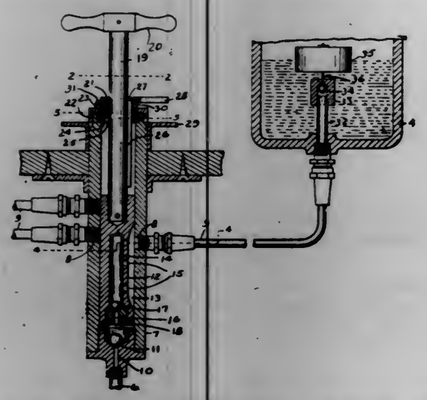


1,458,367. GUARD-TILTING DEVICE FOR GRAIN BINDERS. HENRY SMITH, Lone Rock, Wis. Filed Mar. 18, 1921. Serial No. 453,824. 1 Claim. (Cl. 56—307.)

A harvester having a platform, a finger bar in pivotal union therewith, guard fingers rigidly secured to the finger bar, means for oscillating said finger bar and associated guard fingers whereby they are raised and lowered independent of the platform, a rod having resilient loops therein pivotally connected with said means

and means for locking said rod in a plurality of positions for locking the said finger bar in a plurality of positions.

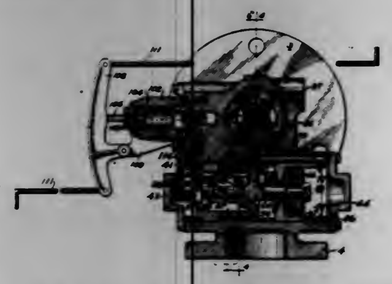
1,458,368. COATING OR DECORATING APPARATUS. ASBJÖRN SÖNSTHAGEN, West Ealing, London, England. Filed Sept. 27, 1919. Serial No. 326,706. 11 Claims. (Cl. 107—27.)



1. A machine for decorating, forming or coating sweetmeats comprising a hopper so supported as to be capable of movement by hand in horizontal directions and a roller located in the hopper for removing the material therefrom, means for securing the discharge of material from the roller, such means controlled by the same hand.

9. A machine for decorating, forming or coating sweetmeats comprising a hopper so supported as to be capable of movement in all horizontal directions, a discharge opening in said hopper, a feed roller adjacent said opening, peripheral grooves in said roller, scrapers engaging said grooves to remove the material therefrom, a handle for moving said hopper said handle also controlling the position of the scrapers to vary the amount removed from the hopper.

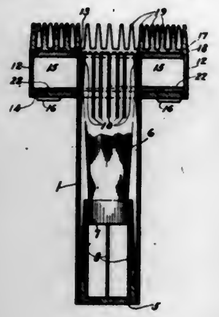
1,458,369. LUBRICATING PUMP. WILLIAM J. SPRINGER and ALBERT C. PICARD, Detroit, Mich. Filed June 9, 1921. Serial No. 476,248. 6 Claims. (Cl. 184—28.)



5. A lubricant pump, comprising a casing having an inlet at one end, a plurality of circumferentially spaced lateral discharge ports, a plunger rotatable and reciprocatory in said casing, formed with a passage for con-

necting the pressure chamber of the pump with one of said discharge ports, an actuating rod for the plunger projecting from the casing, a sleeve rotatively mounted upon the casing and constrained to rotate in unison there-

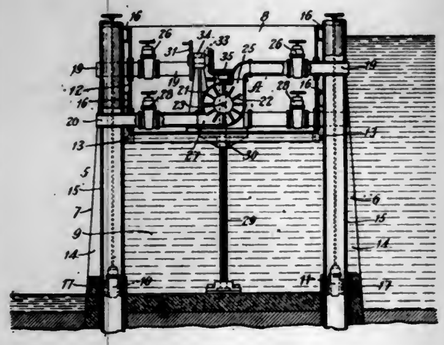
with, and co-acting indicating elements respectively carried by said sleeve and the casing for determining the rotative positions of the plunger bringing the respective discharge ports into use.



1,458,370. AIR-BRAKE-CONTROL VALVE. THOMAS J. STEINKELLER, Berkeley, Calif., assignor to M. G. Jeffress, San Francisco, Calif. Filed Feb. 14, 1921. Serial No. 444,641. 19 Claims. (Cl 303—78.)

1. An air brake control device comprising means responsive to brake cylinder pressure for closing the brake cylinder exhaust passage and responsive to auxiliary reservoir pressure for opening said exhaust passage, and means responsive to a difference in pressure between the train line and auxiliary reservoir for automatically effecting the application of pressure from the brake cylinder or the auxiliary reservoir to said first named means.

6. An air brake control device comprising a housing formed with a chamber A in communication with the brake cylinder, and a chamber B in communication with the auxiliary reservoir, said housing formed with a passage L for connecting chamber B with the brake cylinder and a passage M for connecting chamber A at one end with the open air and a passage N for connecting chamber A at the opposite end with chamber B and with the open air, a valve in chamber B for controlling said passages, means movable by train line pressure in one direction and auxiliary reservoir pressure in the other direction for operating said valve, a valve in chamber A for controlling passage M, and differential means movable by brake cylinder pressure in one direction and by auxiliary reservoir pressure in the other direction for operating said last named valve.

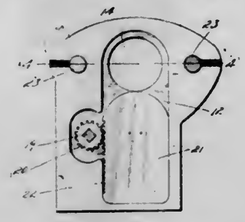


1,458,371. SHAVING AND MASSAGE BRUSH. HARRISON D. STERRICK, Pittsburgh, Pa. Filed Aug. 7, 1920. Serial No. 401,974. 10 Claims. (Cl. 15—110.)

1. The combination with a shaving brush adapted to telescope into its handle, of a reservoir positioned around the forward end of the handle, and means to force shaving soap from the reservoir upon the tip of the brush.

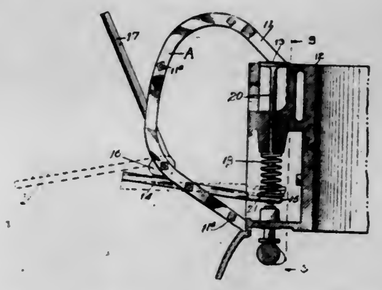
7. The combination of a tubular handle, an exteriorly tapered shaving-brush holder slidably mounted in the handle, rigid internal tapered teeth at the forward end of the handle, and means to force the brush holder into wedged engagement with said teeth.

1,458,372. TIDE MOTOR. JOSEPH TESTA, East Boston, Mass. Filed June 25, 1921. Serial No. 480,291. 3 Claims. (Cl. 61—20.)



1. A device of the character described having, in combination, a dam provided with a well having water therein and having a plurality of sluice-ways extending through the walls thereof and connecting with said well, a float located in said well, a shaft having screwthreaded engagement with said float, means to rotate said shaft and thereby raise and lower said float, a plurality of gates fast to said float and adapted to prevent water from entering said well through said sluice-ways, a water wheel mounted upon said float, means to conduct water from one side of said dam to said water wheel to rotate the same and means to discharge said water from said water wheel at the other side of said dam.

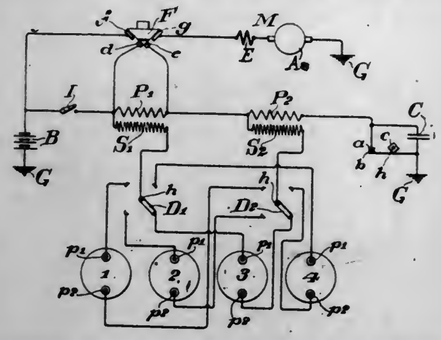
1,458,373. INTAKE LOCK. ALLIE WILLMAN, New Haven, Conn., assignor of one-half to Peter J. Torello, New Haven, Conn. Filed May 8, 1922. Serial No. 559,315. 4 Claims. (Cl. 251—6.)



1. In an intake lock for internal combustion engines, a pair of superimposed perforated registering sections one

of which has a continuous recess in its inner face, a slidable closure plate for the perforations having a rack on one side edge thereof slidable in the recess, a pinion in the recess in mesh with the rack, the inner face of the other section engaging the plate and pinion to hold both of the latter in the recess, said sections being brazed together, a hollow lug extending upwardly from said other section, a lock barrel in the lug having a key-actuated

spindle connected to the pinion, and means to secure the sections to the manifold pipe and carbureter including bolts extending through the sections, and connected to the manifold pipe and carbureter and studs screwed through the sections and impinged against the bolts so as to allow of removal of the nuts of the bolts and disconnection of the manifold pipe without disturbing the remaining parts.

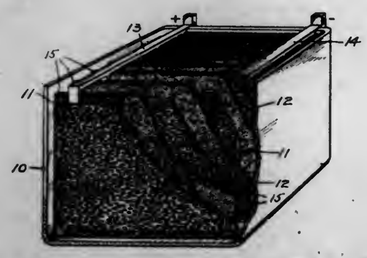


1,458,374. VALVE-SPRING LIFTER. CLIFFORD C. YOUNG, Des Moines, Iowa. Filed Mar. 30, 1922. Serial No. 548,097. 2 Claims. (Cl. 29—86.3.)

1. A valve spring lifter comprising a main portion having a body portion of substantially the form shown, and provided at its upper portion with diverging inclined arms, adapted to rest on top of an engine block, and at its lower portion with a part adapted to engage the side of the engine block, an arm pivoted to said body portion near the lower part thereof provided at one end with bifurcated fingers, a cam pivoted to said body portion and adapted to coact with the other end of said arm for raising said fingers for lifting the valve spring, said cam being arranged to move passed center when manipulated to the limit of its movement in either direction.

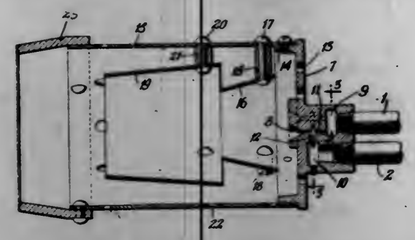
1,458,375. IGNITION APPARATUS. FRANK AIKEN, Elkins Park, Pa., assignor to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 31, 1921. Serial No. 441,273. 9 Claims. (Cl. 123—148.)

8. The combination with a combustion chamber, of a plurality of spark gaps therein, a plurality of induction coils having their primaries connected in series with each other, a source of current in circuit with said primaries, the secondaries of said induction coils connecting with the different spark gaps, current-interrupting means in circuit with said primaries, and means for discontinuing production of sparks at some of said gaps and simul-



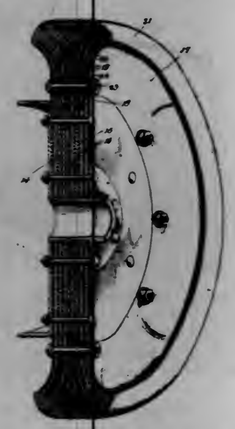
taneously increasing the spark intensity at the remainder of said gaps comprising switching mechanism for short-circuiting some of the primaries of said induction coils.

1,458,376. METHOD OF MAKING CERAMIC PRODUCTS. EDWARD ANDERSON, Dayton, Ohio, assignor, by mesne assignments, to The A. A. Simonds-Dayton Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 21, 1919. Serial No. 318,910. 15 Claims. (Cl. 18—47.5.)



1. The method of making ceramic products, which comprises mixing with the materials that are to compose the finished product a volatilizable substance adapted to bind said materials together and maintain the mass in whatever form it is given until after it is deposited in the kiln.

1,458,377. STORAGE BATTERY. EDWARD ANDERSON, Dayton, Ohio, assignor, by mesne assignments, to The A. A. Simonds-Dayton Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 18, 1919. Serial No. 338,892. Renewed Jan. 24, 1923. 10 Claims. (Cl. 204—29.)



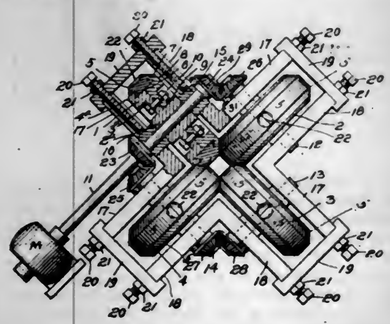
1. A separator for storage battery plates, composed of a granulated refractory material and a vitrified bond.

1,458,378. OIL BURNER. CARL P. ASTROM, East Orange, N. J., assignor to McKneat Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 21, 1921. Serial No. 438,815. 5 Claims. (Cl. 158—76.)

3. An oil burner comprising a plurality of substantially parallel atomizing nozzles adjacent one another and adapted to form a long homogeneous flame, means for supplying oil to the same, a plurality of baffles in succession disposed annularly of the combined path of said nozzles and beyond the same, and a burner nozzle beyond the outer baffle.

1,458,379. VEHICLE WHEEL. HARRY N. ATWOOD, Smithfield, N. C., assignor to Rubwood, Inc., Lawrence, Mass., a Corporation of Massachusetts. Filed Nov. 21, 1921. Serial No. 516,706. 9 Claims. (Cl. 152—29.)

4. A vehicle wheel comprising a body and tread, the body being made up of plies of veneer and intervening bonding plies of rubber, the veneer plies being outwardly curved at their peripheral portions in the direction of the relatively adjacent sides of the wheel and with gradually increasing degrees of curvature and the bonding plies being gradually increased in thickness at their peripheral portions to correspond to the increase in width of the spaces between relatively adjacent veneer plies, the tread being intimately incorporated with the said bonding plies.

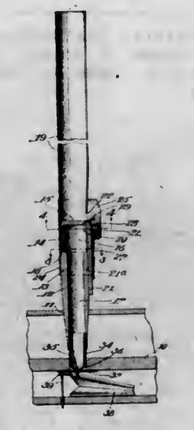


1,458,380. VEHICLE WHEEL. HARRY N. ATWOOD, Smithfield, N. C., assignor to Rubwood, Inc., Lawrence, Mass., a Corporation of Massachusetts. Filed Dec. 10, 1921. Serial No. 521,373. 22 Claims. (Cl. 152—29.)

14. A vehicle wheel comprising a body consisting of circular plies of veneer and intervening bonding plies of rubber material, the veneer plies being arranged in sets at the opposite sides of the midplane of the body, the peripheral portions of the plies of the two sets being outwardly curved in opposite directions to provide resilient tread sustaining shoulders, the margins of the said peripheral portions of the veneer plies being successively spaced inwardly with relation to one another from the outermost to the innermost ply of each set whereby said shoulders are of gradually decreasing thickness and

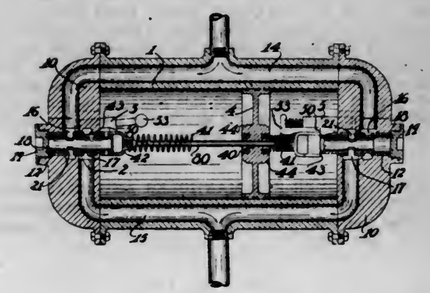
increasing resiliency and yieldability in the direction of their outer portions, and a tread surrounding and supported by said shoulders, the tread being of rubber material and being integrally bonded with the said bonding plies, and also filling the space between the innermost veneer plies of the two sets.

1,458,381. FINISHING ROLLS. GEORGE BAEHR, Pittsburgh, Pa. Filed July 31, 1918. Serial No. 247,660. 4 Claims. (Cl. 80—28.)



4. A mill for rolling bars of varying cross section comprising a driven shaft carrying a roll, a plurality of secondary shafts driven from the first shaft by connecting gears, each of said shafts carrying a roll adapted to cooperate with the other rolls, and means to completely release the shaft of each roll from its driving gear, whereby to adjust the roll to any desired circumferential relation to the other rolls without moving the other rolls and without moving the driving gear of the roll being adjusted.

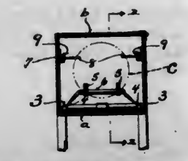
1,458,382. ORGAN PIPE. CHARLES E. BARKSTROM, Chicago, Ill. Filed July 15, 1921. Serial No. 484,861. 3 Claims. (Cl. 84—349.)



1. A flue organ pipe comprising a pipe having at one of its ends an opening, a hollow foot extended into said

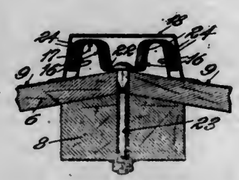
end of the pipe and having in its wall an opening coinciding with the pipe opening and provided at said end with an inwardly extended flange, a coupling uniting the pipe and foot, a slidable cap co-operating with the

coupling, foot, and pipe to partially close the openings in said foot and pipe, and an orifice tubular toe located in the end of the foot opposite its flange and adapted for communication with a supply of air under pressure.



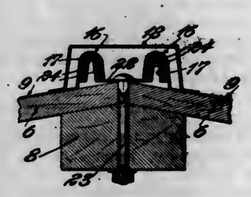
1,458,383. FLUID METER. CARLOS J. BASSLER, Portland, Oreg., assignor to American Liquid Meter Company, Portland, Oreg., a Corporation of Washington. Filed June 8, 1921. Serial No. 476,057. 6 Claims. (Cl. 73—30.)

1. In a fluid meter of the positively-acting type, mechanism which is reversible in action for controlling the inlet to and outlet from said meter, and means for cushioning said reversible mechanism at the ends of its stroke comprising a member having a recess of the shape of the adjoining end of the reversible mechanism, and slightly larger than this end.



1,458,384. CHEESE HOOP AND FOLLOWER STERILIZING WASHER. HENRY H. BATHKE, Oconto, Wis. Filed Apr. 26, 1921. Serial No. 464,737. 1 Claim. (Cl. 141—1.)

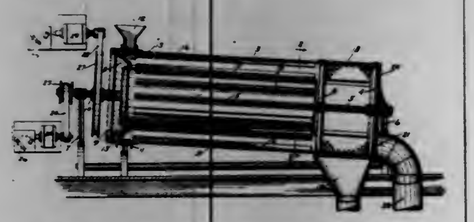
A cheese hoop and follower sterilizing washer comprising a closed, elongated receptacle of rectangular cross section and having a movable top to afford access to the interior thereof, a pair of perforated steam pipes located within the receptacle adjacent the bottom and closely adjacent the lower corners thereof, the axes of said perforations extending towards the center of said receptacle, a rigid rectangular frame of approximately the interior length of said receptacle and of materially less width than the interior width of said receptacle, a pair of supporting brackets carried by the inner side of the ends of



said receptacle for removably suporting said rigid frame in spaced relation to the bottom of the receptacle, spaced clips carried by the side walls of said receptacle and projecting inwardly thereof, a pair of rectangular rods removably carried by said clips and held against turning by said clips, and a plurality of inwardly projecting pins carried by said rods.

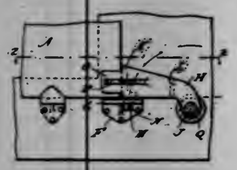
1,458,385. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Dec. 2, 1921. Serial No. 519,305. 14 Claims. (Cl. 108—5.)

1. A flexible car roof comprising roof sheets spaced apart along their adjacent margins and having hollow ribs extending lengthwise thereof, and an anchor member secured to the car between the spaced margins of adjacent sheets, said anchor member engaging both walls of the rib of each of said adjacent sheets, thereby preventing bodily movement thereof towards and away from each other, and having tangential contact with said walls, thereby permitting said sheets to slue about the contacting portions of said anchor member in response to the weaving of the car frame.



1,458,386. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Dec. 2, 1921. Serial No. 519,306. 11 Claims. (Cl. 108—5.)

1. A flexible car roof comprising roof sheets spaced apart along their adjacent margins which are formed with raised hollow ribs that extend lengthwise thereof, and an anchor member secured to the car between the spaced margins of adjacent sheets, said anchor member having raised ribs extending lengthwise thereof that are adapted to fit within the raised marginal ribs of ad-

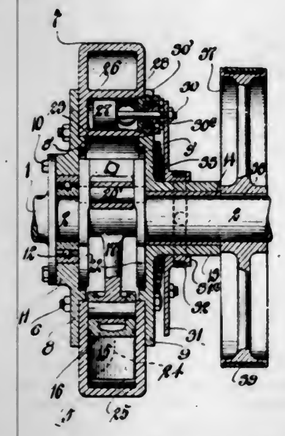


jacent sheets, the sides of the anchor member ribs having tangential contact with the sides of the roof sheet ribs, thereby preventing bodily movement of the sheets towards and away from each other and permitting said sheets to slue about the contacting portions of said anchor member ribs.

1,458,387. PROCESS OF TREATING CONCRETE AGGREGATE. CHARLES LUTHER BOURNE, Minneapolis, Minn. Filed May 17, 1920. Serial No. 381,925. 2 Claims. (Cl. 83—11.)

1. The process of treating aggregate material comprising gravel or other rock particles associated with softer particles, such as soft rock, shale, clay, dirt and the like, which consists in subjecting said material to repeated impacts between relatively moving surfaces, regulating such impacts in number and force so as to break up particles having a co-efficient of hardness less than a certain standard but not to break up the particles having a co-efficient of hardness greater than said standard, and then separating the broken-up particles from the unbroken particles to produce an aggregate material having a standard of hardness suitable for concrete.

1,458,388. RAILWAY-CAR-DOOR STOP AND SEAL. LEMUEL WILLIAM BOYD, Madison, Ill. Filed Mar. 23, 1922. Serial No. 546,121. 2 Claims. (Cl. 292—205.)

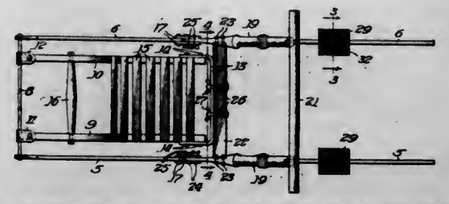


1. The combination with a sliding car door having supporting hangers at the top, of a device of the character described comprising a rotatable stop member having separated cheek plates forming a space at one end and provided with pivot holes,—the opposite end being adapted to engage the rear of said door in closed position,—a pivot bolt passing through the pivot holes in said cheek plates and into the side of the car below the path of the door, and a door-supporting roller located in the space between said cheek plates and mounted on said pivot bolt, substantially as described.

1,458,389. MANUFACTURE OF VISCOSE SILK. EMILE BRONNERT, Mulhouse, France. Filed Nov. 17, 1921. Serial No. 515,988. 2 Claims. (Cl. 18—54.)

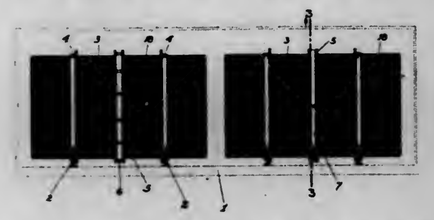
1. Process of manufacturing threads of any deniers below six deniers from raw viscose, which comprises forcing viscose through openings of a diameter considerably larger than the diameter of the thread to be spun in the case of viscose of normal fluidity, into a bath containing sulphuric acid, ammonium sulphate and sodium sulphate, the minimum concentration of the acid component of which bath is inversely proportional to the square root of the denier numbers of the thread desired and the amount of acid per unit volume of said bath, reckoning the ammonium sulphate as equivalent to half its weight of sulphuric acid, as not allowed to fall below a certain minimum weight, the said minimum being experimentally determined for any one denier number.

1,458,390. HYDRAULIC TRANSMISSION. JAMES H. BURROW and GEORGE A. BURROW, Spokane, Wash. Filed Oct. 24, 1919. Serial No. 333,041. 1 Claim. (Cl. 192—60.)



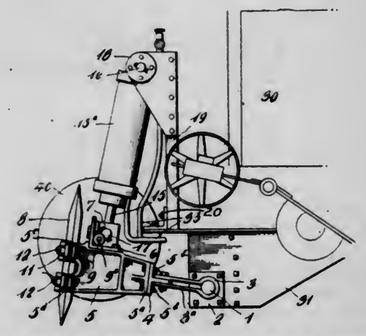
The combination of a driving shaft and its rotor having an open center, side plates attached to said rotor having annular recesses, a driven shaft having bearing disks in said recesses, an eccentric between said disks, said rotor having a passage and transverse pockets intercepting said passage, radiating pump cylinders opening into said passage, pistons for said pumps, pivotal stems between said eccentric and pistons, a slide valve in each pocket between each pair of adjoining pumps for controlling the flow of oil through said passage, spring pressed means for holding said valves normally in closed position, a bearing sleeve rigid with one of said side plates, a movable valve spider having a hub on said sleeve, and means for moving said spider to open said valves.

1,458,391. COVER FOR MANHOLES AND ANALOGOUS DEVICES. THOMAS JAMES BURTON, Murphysboro, Ill. Filed June 26, 1922. Serial No. 571,066. 2 Claims. (Cl. 137—13.)



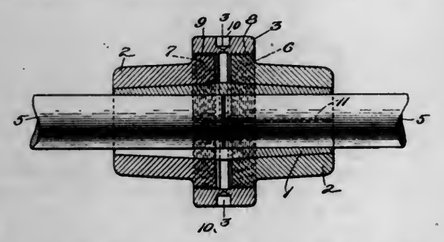
1. A cover for manholes and analogous devices comprising a plate having a hole extending therethrough, locking means mounted on one side of said plate, a stem extending through said hole and turnably and slidably mounted therein, said stem being connected at one end to said locking means for operating the same, and a handle for turning said stem, said handle being pivotally connected to the other end of said stem so as to be extended either on a plane of the axis of the latter or laterally thereof, said plate having its outer side provided with a recess for receiving said handle when swung laterally with respect to said stem, said recess being located and constructed so as to prevent said handle and therefore said stem from turning until said handle is entirely removed out of said recess.

1,458,392. PUSH SLED. MARTIN O. CARLSON, Chicago, Ill. Filed May 6, 1921. Serial No. 467,399. 1 Claim. (Cl. 280—28.)



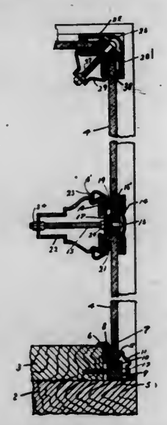
A push sled comprising a pair of runners connected at their front ends, steering handles rising from the runners, a cross-bar connecting the handles, a seat pivotally associated with the front of the runners, a yoke embracing the rear end of the seat and provided in its under edge with notches, and headed projections on the cross-bar adapted to be detachably received in the notches of the yoke.

1,458,393. REVOLVING CARRIAGE FOR DRIERS. FRANK C. CHAPMAN, Modesto, Calif. Filed July 18, 1921. Serial No. 485,503. 7 Claims. (Cl. 34—5.)



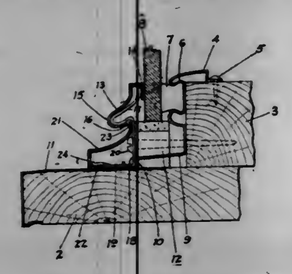
7. A device for carrying material to be dried through a dehydrating tunnel comprising a perforated cylinder adapted to be advanced through the tunnel and rotated as it advances, and a series of radial partitions within the cylinder which will carry the material to constantly different positions with the advancement of the cylinder through the tunnel, whereby the same may be uniformly subjected to the heat at different points in such tunnel.

1,458,394. SCARIFIER. EDWARD F. COOKINHAM and DAVID B. COOK, Frankfort, N. Y., assignors to Acme Road Machinery Company, Frankfort, N. Y., a Corporation. Filed Apr. 4, 1922. Serial No. 549,540. 3 Claims. (Cl. 262—11.)



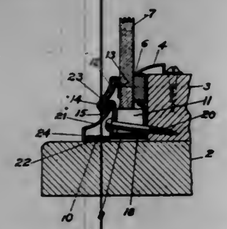
1. A scarifying attachment comprising a draw bar, a plurality of individual tooth blocks spaced along the bar, each block comprising a flanged casting with a front face secured to the bar, and a rear face having upper and lower seats, a tooth clamped against the seats, and a cross bar secured to the tops of the blocks.

1,458,395. COUPLING. CHARLES S. CUNNINGHAM and HOWARD A. BURDWOOD, Lynn, Mass. Filed Mar. 28, 1919, Serial No. 285,816. Renewed Feb. 26, 1923. 3 Claims. (Cl. 287—116.)



1. A coupling of the character described having in combination, a split sleeve adapted to telescopically overlap the ends of two shafts or the like, said sleeve being exteriorly tapered from near its middle toward each end and being formed non-circular in cross-section so as to provide its exterior with longitudinal flat faces alternating with longitudinal elevations; a pair of clamping members mounted upon said sleeve, and engaging only the longitudinal elevations thereof, and means for forcing said members together to contract said sleeve onto said shafts.

1,458,396. PLATE-GLASS SETTING. FREDERICK W. CURRIER, Minneapolis, Minn. Filed Nov. 22, 1919. Serial No. 340,057. 15 Claims. (Cl. 20—56.4.)

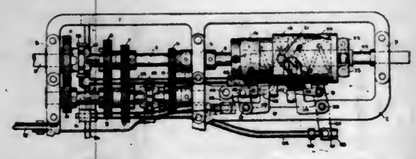


1. In a window structure or the like a glass setting comprising a rail having a base portion seated against the frame of the window and provided with an upwardly turned part or flange, a block interposed between the edge of the glass and the base of the rail, said upwardly turned part or flange having its edge folded over the adjacent edge of the window frame stop and provided with a recess, a second block fitting within said recess and seated against the inner face of the glass, a second flange on said base bearing against the outer face of the glass and means passing through said flanges and into said stop for drawing said outer flange against the face of the glass and the glass against the second block.

1,458,397. PLATE-GLASS SETTING. FREDERICK W. CURRIER, Minneapolis, Minn. Filed Mar. 21, 1921. Serial No. 454,101. 11 Claims. (Cl. 20—56.4.)

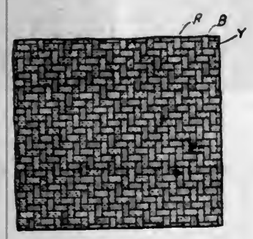
1. A separable longitudinally extending glass setting comprising an upper moulding section, means for holding it to the glass, and a lower moulding section normally entirely on the same side of the glass forming a continuation of said first section, said sections normally concealing the holding means.

1,458,398. GLASS SETTING. FREDERICK W. CURRIER, Minneapolis, Minn. Filed Aug. 4, 1921. Serial No. 489,754. 5 Claims. (Cl. 20—56.4.)



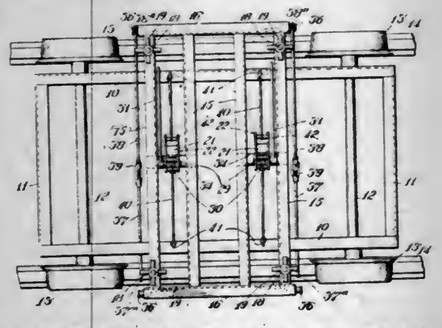
1. A glass setting comprising an inner rail having means to bear against the inner surface of the glass and provided with an outwardly projecting flange extending under the glass, an outer longitudinally divided rail having an upper section with means to hold it against the outer face of the glass and a lower section having a flange in engagement with the outwardly projecting flange of said inner rail, the meeting longitudinal edges of said outer rail sections being arranged in overlapping relation.

1,458,399. FASTENING DEVICE. JESSE FAIRLEY, Sioux Falls, S. Dak. Filed Sept. 18, 1922. Serial No. 588,943. 8 Claims. (Cl. 25—131.)



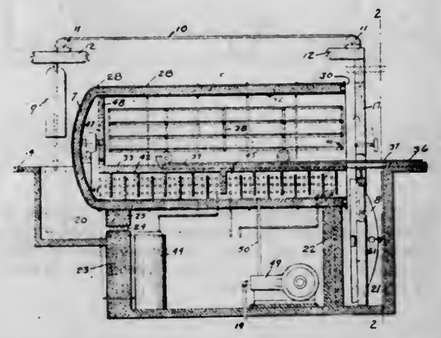
4. In a fastener for abutting elements having registering perforations, a resilient body extending substantially lengthwise of the elements and having one end extended at approximately right angles and formed to be projected through the registering perforations and having its opposite end formed to be sprung over the free edges of the elements.

1,458,400. CHANGE-SPEED MECHANISM. SAMUEL W. FERGUSON, Washington, D. C. Filed July 12, 1920. Serial No. 395,610. 9 Claims. (Cl. 74—59.)



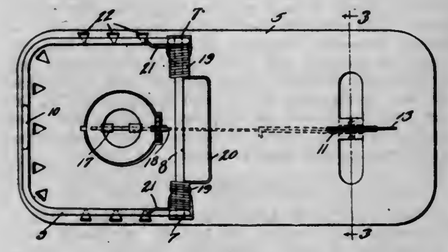
1. Automatic change speed mechanism including a driving member; a driven member; gearing operatively associated therewith; clutch mechanisms for connecting and disconnecting certain sets of gears; a torque mechanism operable by the strain between the driving and driven members; a plurality of levers operably associated with the torque mechanism; operative instrumentality connecting the levers and clutch mechanisms; and a lever actuating member associated with the torque mechanism and shiftable thereby into position to positively operate the levers.

1,458,401. METHOD OF PRODUCING MOTION PICTURES. JOHN W. FLENDER, Wexford, Pa., assignor of one-half to Henry Braun, Pittsburgh, Pa. Filed Nov. 10, 1920. Serial No. 423,355. 4 Claims. (Cl. 88—16.4.)



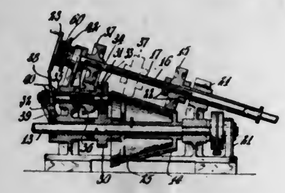
1. The method of producing atmospheric depth and color tone in motion pictures, which consists in projecting such pictures upon a screen having a plurality of equal-sized like-shaped areas of primary colors symmetrically arranged with no two areas of the same color in contact with each other.

1,458,402. TRACK RAISING AND SHIFTING APPARATUS. JOHN FORSBERG, Chicago, Ill. Filed Sept. 2, 1922. Serial No. 586,009. 18 Claims. (Cl. 104—7.)



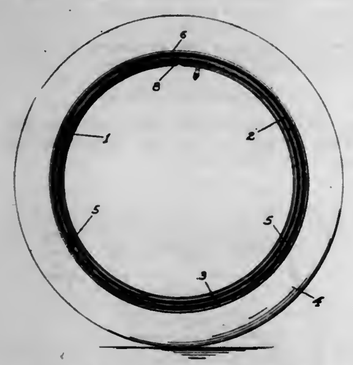
5. Apparatus of the class described comprising a supporting structure, means to anchor said structure to a section of track a frame pivotally connected to said structure, means to secure said frame when in a substantially vertical position to said structure, a lifting member slidably associated with said frame, means for effecting movement of said member relative to said frame in a direction lengthwise of said member, and means for holding said member against retrograde movement relative to said frame.

1,458,403. VACUUM DEHYDRATOR. CHARLES E. GLESSNER, Portland, Oreg. Filed Feb. 3, 1920. Serial No. 356,056. 5 Claims. (Cl. 34—30.)



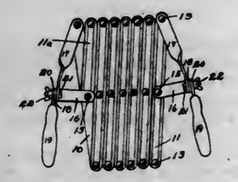
1. In a vacuum dehydrator, the combination of a dehydrating apparatus with a tank and closure member having expansible metal coverings adapted to hermetically enclose the structure of said tank and closure member, a means for sealing the union of said tank member and said closure member, and air exhausting and gauge means adapted to control the pressure within said tank, an air exhausting and gauge means adapted to control the pressure within the structure enclosing portion of the expansible metal covering, and a check valve arranged to permit the passage of air from within the structure enclosing members to the central enclosure.

1,458,404. RAT TRAP. HENRY C. GOODMAN, Los Angeles, Calif. Filed Dec. 19, 1921. Serial No. 523,409. 2 Claims. (Cl. 43—81.)



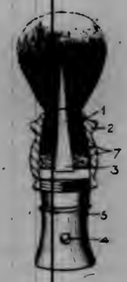
1. A trap comprising a body portion, said body portion having an opening disposed adjacent to one end thereof, a pivoted hook member having a forwardly extending portion, pivotally supported by the body, said hook member having an arm formed integral therewith and extending under the body portion, said arm having a slotted right angled flange formed at one end thereof, an arm pivotally supported under the body portion and extending through the slot of the flange, said last mentioned arm having a bait retaining member disposed in the opening of the body portion, and a spring controlled jaw adapted to be held in its inactive position by engagement with the hook member.

1,458,405. POWER-TRANSMISSION MEANS FOR BOATS. PAUL C. HAAN, Upper Nyack, N. Y. Filed Aug. 12, 1922. Serial No. 581,329. 4 Claims. (Cl. 74—26.)



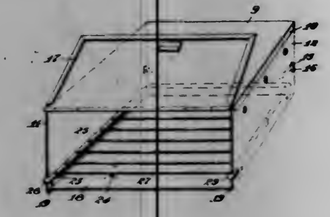
2. A power transmission means comprising a pair of conical drums, means for rotating said drums in opposite directions, an inclined shaft, a pair of disks fixed thereon, and a unitary means for moving said drums simultaneously in opposite directions into and out of engagement with the respective disks.

1,458,406. SECTIONAL AND DEMOUNTABLE RIM. LOUIS B. HARVEY, Buffalo, N. Y., assignor to Harvey Rim and Wheel Company, Inc., Buffalo, N. Y. Filed Aug. 16, 1920. Serial No. 403,691. 1 Claim. (Cl. 301—31.)



A rim having outwardly and inwardly projecting flanges, the rim and flanges having a V-shaped transverse cut to form contiguous interlocking ends, the lower flanges, on the obtuse angle of the cut, being cut away to extend substantially parallel to the ends of the cut in the outer flanges, as and for the purpose specified.

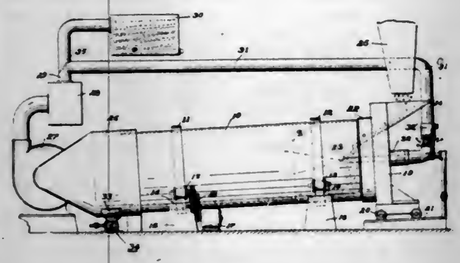
1,458,407. CLIPPING SHEARS. ESTUS J. HAWKS, Ames, Iowa. Filed Feb. 24, 1922. Serial No. 539,003. 3 Claims. (Cl. 30—11.)



1. A shears having generally the form of a plurality of lazy tong levers, the members of which are in the form of coacting blades, one edge of each pair of coacting edges being sharpened, handles mounted on the end blades of said shears.

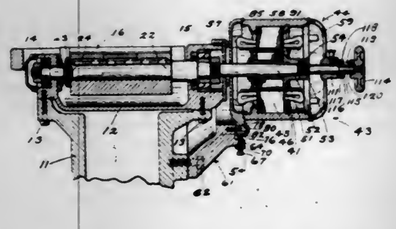
1,458,408. SHAVING BRUSH. CHARLES W. HAWTIN, London, England, assignor of one-half to William George Mason, London, W. 1., England. Filed Oct. 30, 1922. Serial No. 597,892. 3 Claims. (Cl. 15—143.)

1. A shaving brush, comprising a hollow handle provided at one end with a socket and having perforations in the walls thereof, brush material mounted in said socket, a tubular member mounted in that portion of the brush material located within the brush socket, the bore of said member cooperating with the perforations in said hollow handle to permit a free circulation of air through the central portion of the brush material.



1,458,409. FOLDING OVEN. JOHN HIGHAM, Los Angeles, Calif. Filed Nov. 29, 1920. Serial No. 426,965. 3 Claims. (Cl. 126—275.)

3. In a foldable oven, a top, side panels hinged to the top and extending downwardly, inturned flanges at the bottoms of the side panels, a bottom upon the flanges, and a shelf sliding between the side panels and having rigid hooks at its front corners to extend around the front edges of the side panels.

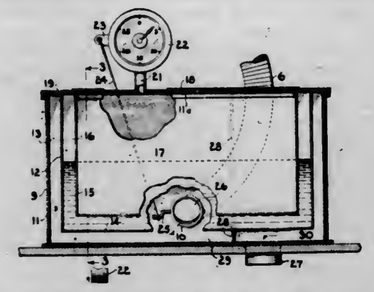


1,458,410. METHOD OF AND APPARATUS FOR PRODUCING CHARCOAL AND BY-PRODUCTS. STANLEY HILLER, San Francisco, Calif., assignor to Pacific By-Products Company, San Jose, Calif., a Corporation of California. Filed Sept. 4, 1919. Serial No. 321,555. 5 Claims. (Cl. 202—3.)

1. An apparatus for producing charcoal from fruit pits and shells, comprising in inclined rotary cylinder having heads at its ends, a spout and hopper through which the shells are supplied into one end of the cylinder, a fuel nozzle at the same end of the cylinder as the spout and hopper, means for rotating the cylinder for causing the material to travel in the same, whereby the material is first passed through the flame from the nozzle and subsequently subjected to a non-flammable heat, means for controlling the oxygen admitted at the end of the

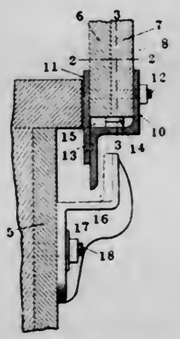
cylinder at which the nozzle is arranged, and suction, scrubbing and condensing means connected with the drum.

1,458,411. WOODWORKING MACHINERY. JAMES E. HIRST, Cincinnati, Ohio, assignor to J. A. Fay & Egan Company, Cincinnati, Ohio, a Corporation of West Virginia. Filed Jan. 22, 1923. Serial No. 614,067. 12 Claims. (Cl. 144—131.)



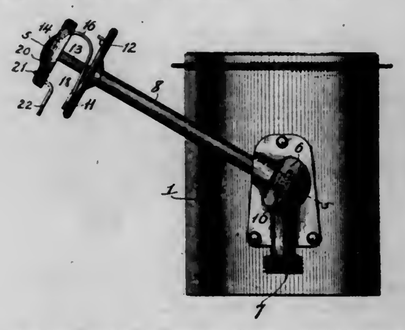
1. In wood-working machinery, the combination of a machine-frame comprising a supporting portion for a cutter-spindle, an electric motor comprising a motor-frame, an outer stator and a rotor within said stator, a cutter-spindle, a plurality of bearings on said supporting portion of said machine-frame for said cutter-spindle, said cutter-spindle having an overhanging end integral therewith extending to overhang said bearings, means for securing said rotor to said overhanging end, complemental steadying means between said motor-frame and said overhanging end of said cutter-spindle in line with said first-named bearings for steadying said overhanging end, and means for securing said motor-frame bracketwise to said machine-frame.

1,458,412. HOT-AIR AND STEAM COOKER. EARL C. HIXSON, and CHARLES T. HIXSON, Ringwood, Okla. Filed Aug. 8, 1921. Serial No. 490,621. 3 Claims. (Cl. 126—20.)



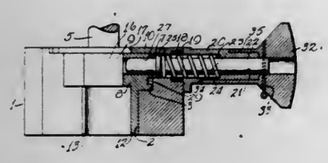
1. A cooker comprising an outer closed heating chamber adapted to be secured to the running board of an automobile and having heat insulating walls, a steam chamber depending from the top wall of the heating chamber and spaced from the sides and bottom thereof, a cooking chamber depending from the top wall of the steam chamber, the space between the sides and bottom of the cooking chamber and the sides and bottom of the steam chamber being partly filled with water and otherwise entirely unobstructed, the walls of the cooking chamber having integral flanges which form the top wall of the heating and steam chambers and a seal for the

latter, a removable cover for the cooking chamber, damper-controlling means affording communication be-



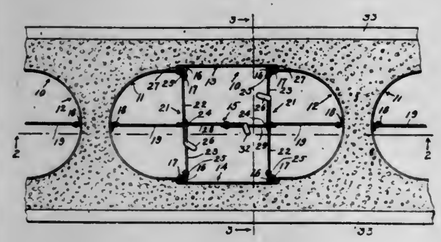
tween the heating chamber and the exhaust pipe of the motor, and a pressure gage connected with the steam chamber and automatically operable to control the damper.

1,458,413. CAR DOOR. LOUIS A. HOERR, St. Louis, Mo. Filed Sept. 23, 1922. Serial No. 590,048. 6 Claims. (Cl. 20—22.)



1. In a device of the class described, the combination with a wooden door, of a reinforcing strip provided with a vertical and a horizontal web, the horizontal web being positioned away from the lower edge of the door to form a ventilating space to dry the wood.

1,458,414. OIL BURNER FOR STOVES. WALTER E. HUENEFELD, Cincinnati, Ohio. Filed Aug. 4, 1922. Serial No. 579,749. 3 Claims. (Cl. 67—66.)

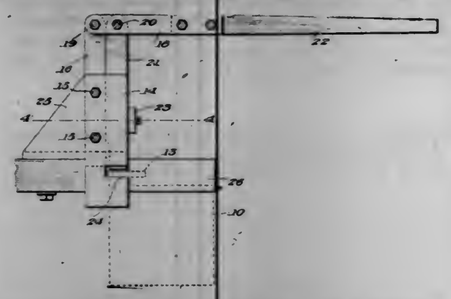


1. The combination with a burner, a tube secured thereto, and a disk rigid with said tube and provided with a stop, of a wick operating spindle passing through said tube and provided with a manually operable member, and a yoke of spring metal disposed between said disk and manually operable member and adjustably cooperable with the latter, one member of said yoke being cooperable with the stop on the disk to limit the height to which the wick may be raised.

1,458,415. ELEVATOR FOR SUCKER RODS. NEWEL AUSTIN JENNET, Ranger, Tex. Filed Nov. 14, 1921. Serial No. 515,008. 6 Claims. (Cl. 294—91.)

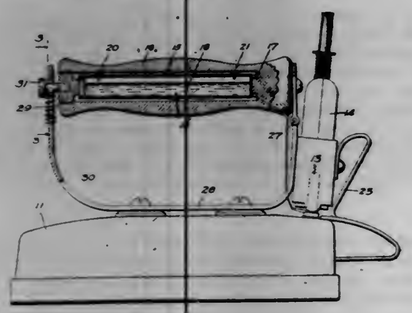
1. A device of the character described comprising a carrying block provided with a bore and having a slot extending from the outer wall of the block to said bore, a rod-engaging member carried by said block and having a slot arranged to register with the slot in the carrying member, whereby a rod can enter the slot in said rod-engaging member, said carrying member being rotatable with respect to the rod-engaging member, whereby the rod is prevented by said carrying block from displacement out of the slot in said rod -engaging member.

1,458,416. FORM FOR CONCRETE WALL CONSTRUCTION. JAMES JOHNSON, South Pasadena, Calif. Filed Sept. 13, 1922. Serial No. 587,917. 4 Claims. (Cl. 25—128.)



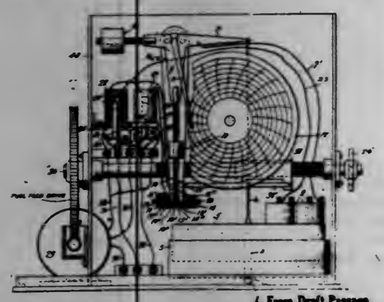
1. A core form, comprising a pair of oppositely disposed end members composed of flexible material and a pair of oppositely disposed side members interlocked with said end members, and means for moving said end members toward each other and disengaging them from the side members.

1,458,417. PLATE-PUNCHING MACHINE. OSCAR A. JOHNSON, Minneapolis, Minn. Filed Apr. 29, 1921, Serial No. 465,536. Renewed Feb. 10, 1923. 1 Claim. (Cl. 29—84.)



In a device of the character described, a frame comprising spaced parallel members, said members having

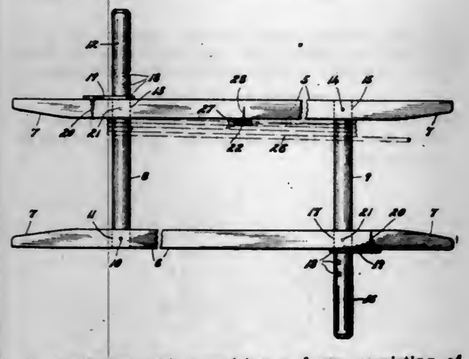
alined slots opening at one edge of the frame, a lever pivoted on said frame, a plunger operating between said



members and actuated by said lever, and a supporting bracket carried by one of the members of said frame.

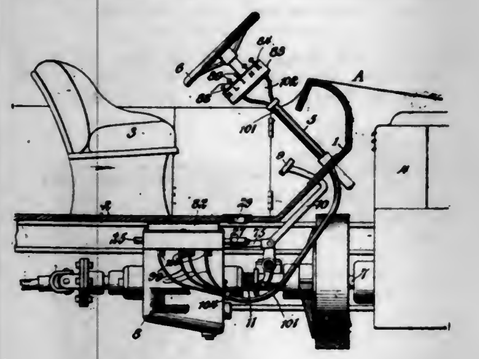
1,458,418. SAFETY DEVICE AND SWITCH. CLARENCE L. JOHNSTON, of Oakland, and CARL M. F. FRIDEN, of Piedmont, Calif. Filed Mar. 6, 1922. Serial No. 541,597. 14 Claims. (Cl. 219—25.)

1. In combination, an electrically heated device, and a switch operative by the operative movement of the device to close the circuit for the device.



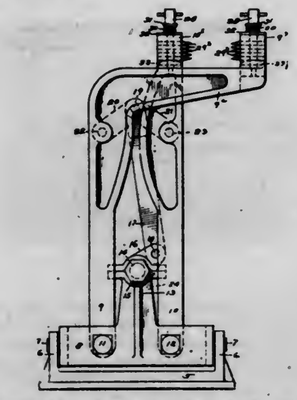
1,458,419. AUTOMATIC COMBUSTION REGULATOR. LABAN ELLSWORTH JONES and CHARLES ROSWOLD WRAITH, Anaconda, Mont. Filed Apr. 5, 1920. Serial No. 371,540. 13 Claims. (Cl. 236—15.)

4 From Draft Passage



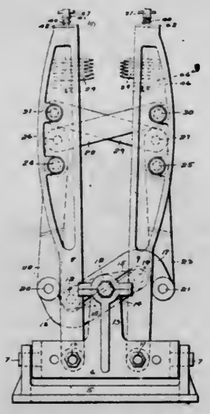
1. In apparatus of the character described, the combination with a pressure responsive means including a pivotally mounted element and means for translating variations of pressure into angular movement of said element and means for regulating conditions in a combustion chamber including an electric motor and electric circuits for controlling the motor, of an arm connected to the said element and partaking of said angular movement, contact elements disposed on opposite sides of the arm in the plane of movement thereof, said arm being adapted to contact with said contact elements, means operative upon contact between the arm and either of said contact elements to apply a force sufficient to hold the arm to the contact element against a predetermined force tending to break contact, said circuits being controlled by the said arm and the said contact elements and time-controlled means operative to make said holding force ineffective.

1,458,420. WINDING REEL. HARRY T. KEEL, Chester, Pa. Filed Nov. 4, 1922. Serial No. 599,137. 3 Claims. (Cl. 242—96.)



1. A winding reel comprising a frame consisting of a pair of parallel bars and a pair of cross bars, said cross bars each having an end projecting beyond one of said parallel bars, said projecting ends having a plurality of spaced notches, and hooks pivoted on the parallel bars and adapted to engage said notches whereby the parallel bars may be secured in adjustable spaced relation to the cross bars.

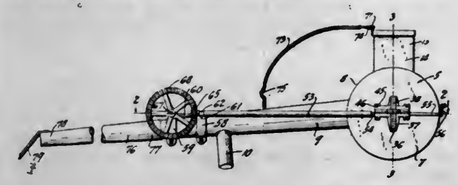
1,458,421. SHIFTING MEANS FOR TRANSMISSION GEARING FOR AUTOMOBILES. ELMER G. KESLING, Bloomfield, Mo. Filed Apr. 16, 1918. Serial No. 228,892. 33 Claims. (Cl. 74—58.)



1. In a gear shifting mechanism for automobiles, a series of selective devices, means for actuating any chosen one of the selective devices to the exclusion of the others, controlling-switch devices subject to the selective devices, and gear-shifting means controlled by the switch devices.

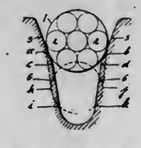
1,458,422. SPRING SPREADER. GOTTLIEB L. E. KLINGBEIL, Omaha, Nebr. Filed Sept. 7, 1922. Serial No. 586,775. 6 Claims. (Cl. 81—3.)

1. A spring spreader comprising a pair of standards, a base to which the lower ends of said standards are pivoted and by which said standards are held upright, mechanism for moving said standards toward and from each other, one of said standards carrying an extension which extends across the other of said standards, and spring-engaging wedges upon the upper ends of said standards.



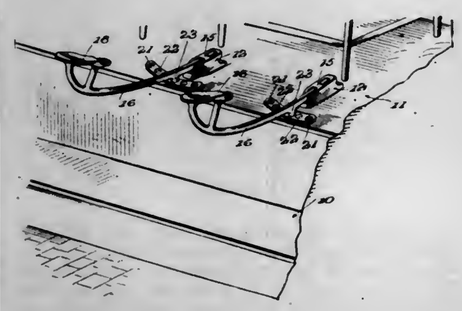
1,458,423. SPRING SPREADER. GOTTLIEB L. E. KLINGBEIL, Omaha, Nebr. Filed Sept. 7, 1922. Serial No. 586,776. 8 Claims. (Cl. 81—3.)

1. A device of the character described, comprising a pair of elements movable toward and from each other and individual wedge assemblies for each of said elements removably mounted thereon, each of said wedge assemblies comprising a group of individually movable wedges and means for holding them in assembled relation when removed.



1,458,424. APPARATUS FOR DISTRIBUTING POWDER. JOSEPH F. LEMONS, Adams, Tenn., assignor of one-half to Coleman R. Lemons, Adams, Tenn. Filed Oct. 14, 1922. Serial No. 594,484. 4 Claims. (Cl. 43—148.)

4. An apparatus for distributing powder comprising a casing, a fan rotatably mounted in the casing, an outlet conduit carried by the casing, a hopper carried by the casing, an outlet opening in the bottom of the hopper, an inlet opening in the side of the casing adjacent the bottom of the hopper, a chute disposed beneath the hopper, the end of said chute being open to admit air into the casing, an agitating disc mounted on the bottom of

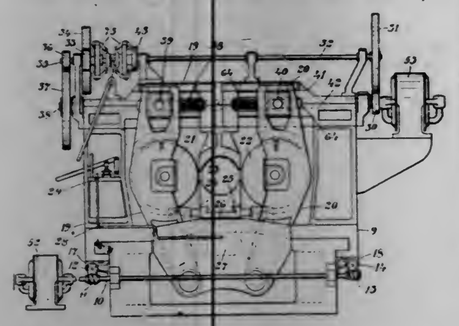


the hopper, a lever secured to the shaft of the agitating disc and extending through the chute, a valve carried by the shaft of the agitating disc beneath the bottom of the hopper, a driving shaft mounted on the casing, and means operatively connecting the driving shaft with the lever of the agitating disc.

1,458,425. V-GROOVED SHEAVE. DAVID L. LINDQUIST, Yonkers, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 12, 1919. Serial No. 310,410. 6 Claims. (Cl. 74—21.)

2. The herein described sheaves for the hoisting ropes of traction elevators, having wedge shaped grooves and circular arcs for supporting the ropes with the required traction for the elevators and an undercut portion between the ends of the arcs, the width of said portion being defined by angles of from 90° to 105° measured between straight lines drawn from the ends of the arcs at said ends of the arcs toward the axis of the pulley, and the sides of the undercut portion of the groove defined by straight lines drawn from said ends of the arcs intersecting each other at a point in a vertical line extended from the axis of the arcs and which said point is also the point of intersection of straight lines drawn tangent to the arcs.

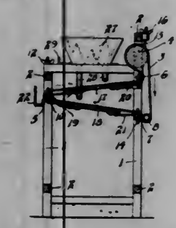
1,458,426. FOOT REST. FRANK P. LITZ, Corry, Pa. Filed Apr. 29, 1922. Serial No. 557,391. 7 Claims. (Cl. 15—265.)



7. In combination with a platform, a bracket swiveled thereon so as to be freely rotatable about a vertical axis,

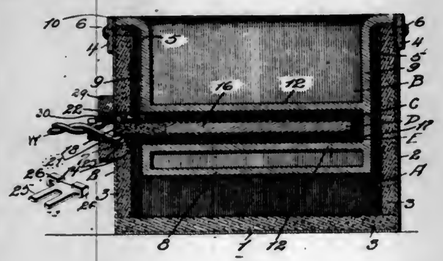
an arm connected to the bracket and extending outwardly therefrom, a foot plate carried by the outer end of the arm and releasable means for preventing turning movement of the arm and bracket.

1,458,427. METHOD OF TREATING FRUIT JUICES. WILLIAM T. MCGEORGE, Honolulu, Territory of Hawaii. Filed Oct. 31, 1921. Serial No. 511,916. 4 Claims. (Cl. 99—11.)



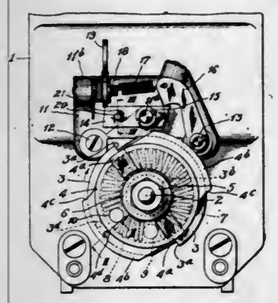
1. The process of preserving fruit juices which comprises agitating such a juice with hydrated aluminum silicate, removing the silicate and adsorbed matters by centrifugal force applied in such a degree that the effluent remains hazy or cloudy, pasteurizing the effluent juice and bottling.

1,458,428. METHOD OF AND ARRANGEMENT FOR CUTTING OFF INGOT BLOCKS. GUSTAF LEONARD MÄLLBERG, Vasteras, Sweden. Filed Aug. 14, 1922. Serial No. 581,902. 10 Claims. (Cl. 164—61.)



1. A machine for cutting off ingot blocks, consisting of means for rotating the block, two circular freely rotatable cutter discs each having a smooth periphery, two levers for supporting the disc and pivotally mounted adjacent one of the ends thereof and arranged on opposite sides of the block, means for pressing the other ends of the levers to and from each other to force the cutter discs into the block and thereby causing the cutter discs to be rotated only by their friction during the cutting operation with the ingot block.

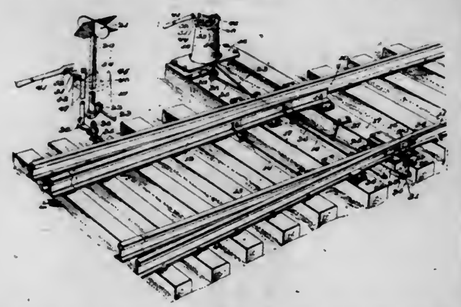
1,458,429. GRAIN SEPARATOR. HENRY HERMAN MEYER, Red Wing, Minn. Filed Oct. 23, 1922. Serial No. 596,305. 14 Claims. (Cl. 130—18.)



3. A machine for separating grain and impurities, having in combination, an apron arranged to form two upwardly moving surfaces adapted to carry grain and other seeds, devices at the upper end of each surface disposed above the same and under which the grain and seeds are adapted to pass, said device being operative to return said material over the top thereof and back to said surfaces.

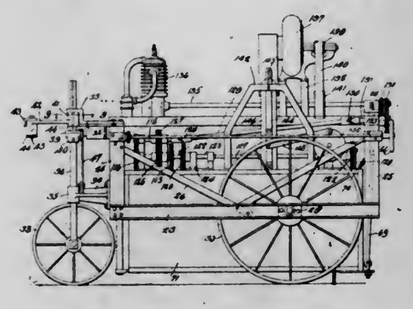
1,458,430. MELTING OR SOLDERING POT. EDGAR MILLNER, St. Louis, Mo. Filed Sept. 29, 1920. Serial No. 413,643. 2 Claims. (Cl. 219—19.)

1. A melting pot including an inner shell and a heating chamber, the heating-chamber being disposed crosswise within the shell and comprising top and bottom walls spaced from each other and from the bottom wall of the shell and connected with opposite end walls of the shell and side walls connecting said top and bottom walls and spaced from opposite side walls of the shell, one end wall of the shell forming an end wall of the chamber and the opposite end wall of the shell being slotted to provide an opening into the chamber, in combination with an outer containing shell for the inner shell and heating-chamber, the outer shell having a slot adapted for registration with the slot of the inner shell, and an electric heating-unit adapted for projection through said registering slots to fit within the heating-chamber for supplying heat to the chamber of the inner shell.



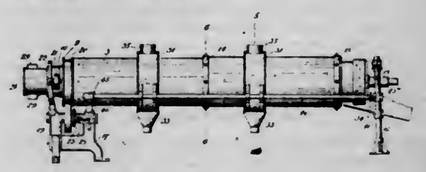
1,458,431. IMPULSE-STARTER MECHANISM FOR IGNITION GENERATORS. JOHN L. MILTON, Cleveland, Ohio, assignor to The Teagle Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 26, 1920. Serial No. 369,083. 5 Claims. (Cl. 123—149.)

1. In apparatus of the character set forth, the combination of rotary driving and driven members, resilient yielding transmitting means between said members, a stop adapted to temporarily retard the driven member relative to the driving member, and means adapted, in case of breakage or derangement of the apparatus, to lock the driving and driven members together against relative angular movement.



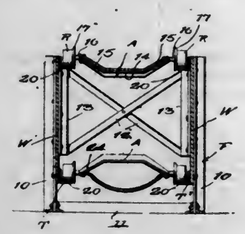
1,458,432. SWITCH LOCK. JOSEPH D. MOORE, Jacksonville, Fla., assignor of one-half to James S. Peterson, Jacksonville, Fla. Filed Feb. 28, 1923. Serial No. 621,807. 6 Claims. (Cl. 246—401.)

1. In a switch lock of the character described, a vertically swingable lock plate, a slide plate for a switch point having a downwardly offset shelf at one side beneath the lock plate, a flat spring inclined along said plate and secured at one end thereto, having its other end bearing upwardly against the lock plate, said shelf



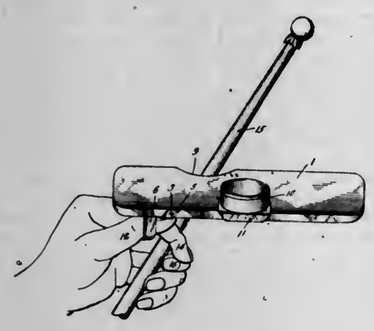
having an upstanding side wall along the outer side of said spring member and having an upstanding end wall across the free end of the spring for the purpose described.

1,458,433. COTTON PICKER. JOSEPH B. NEIL, York, S. C., assignor of one-third to Charles L. Cobb, Rock Hill, S. C., and one-third to J. C. Wilborn, York, S. C. Filed Nov. 14, 1919. Serial No. 337,946. 13 Claims. (Cl. 56—14.)



9. In a cotton picker a picking unit including a housing having an outlet opening and separate inlet openings, picker rolls projecting into the respective inlet openings, a spiral roll adjacent to and parallel with each picker roll, means for rotating the rolls, and a single doffing element mounted for rotation in the housing for removing cotton from the picker rolls in said separate inlet openings.

1,458,434. SCREENING APPARATUS. WILLIAM E. NICKERSON, Cambridge, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Aug. 26, 1918. Serial No. 251,411. 10 Claims. (Cl. 83—56.)

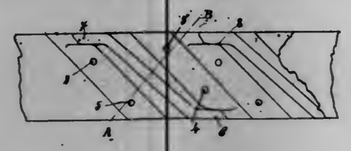


1. In a screening apparatus, the combination with a screen of a cylindrical rotary casing surrounding the screen and provided with peripheral apertures arranged in circumferential series, and a trough surrounding the casing, close to but out of contact therewith, and located in position to receive material discharged through said apertures.

1,458,435. CONVEYER. WILLIAM HOWELL ONION, New Orleans, La. Filed June 22, 1922. Serial No. 570,154. 7 Claims. (Cl. 198—204.)

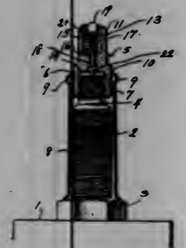
1. In combination, a pair of rollers, an endless belt passing thereover and adapted to move with the rotation of said rollers, a plurality of cross members, each cross member having a central offset, said members being disposed upon the inner side of the belt, means for securing said belt along its longitudinal edges to said cross members, and means for supporting said cross members whereby they may move with said belt.

1,458,436. PALETTE. JOHN K. PAMEYER, Tacoma, Wash. Filed Sept. 12, 1921. Serial No. 500,206. 3 Claims. (Cl. 41—4.)



1. In a device of the class described, a palette provided in one edge with a seat for the reception of a mahlstick; and sockets extended downwardly from the lower surface of the palette and spaced apart transversely of the palette, one of the sockets being located adjacent to the seat.

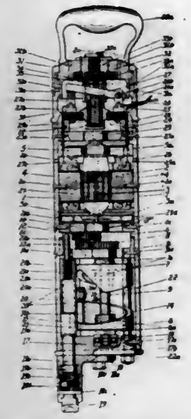
1,458,437. TREAD GRIP FOR THE WHEELS OF MOTOR OR TRACTOR VEHICLES. JULES PUECH, Paris, France. Filed Dec. 15, 1919. Serial No. 345,036. 1 Claim. (Cl. 301—43.)



A wheel having tread grips on the periphery of its rim, each tread grip comprising an intermediate section which extends across the periphery of the rim and is arranged substantially at an angle of 45 degrees with respect to the side edges of the rim, and oppositely ex-

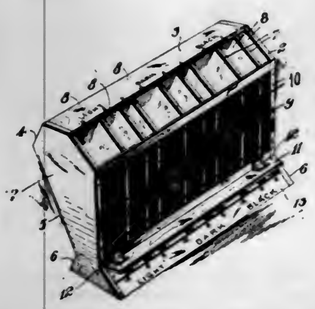
tending end sections which are arranged substantially parallel with the said side edges, the front and rear

edges of each section being also substantially at an angle of 45 degrees with respect to the side edges of the rim and said tread grips being juxtaposed.



1,458,438. AUXILIARY VALVE FOR INFLATING VALVE TUBES. ROBBE REYNOLDS, Houston, Tex.. Filed Oct. 26, 1921. Serial No. 510,557. 1 Claim. (Cl. 152—12.)

In an auxiliary valve for inflating valve tubes, the latter having a reduced extension, an auxiliary valve casing threaded to said extension and having its base the same diameter as the major base portion of the inflating valve tube, said auxiliary valve casing provided with an auxiliary valve adapted to operatively connect with and open the main valve of the inflating valve tube, a dust cap of larger diameter than and fitting over the inflating valve tube and having one end thereof flared outwardly and being engaged with the usual jam nut at the base of the inflating valve tube, the other end of the dust cap terminating in an inwardly rolled flange semi-circular in cross section, the diameter of the marginal edge of which being equal to and adjustably threaded upon the base of the auxiliary valve casing, the marginal edge of said flange extending inwardly beyond the inner cylindrical surface of the body of the dust cap, thereby holding the dust cap spaced from the inflating valve tube throughout its length, whereby the dust cap may be detached simultaneously with the auxiliary valve casing.

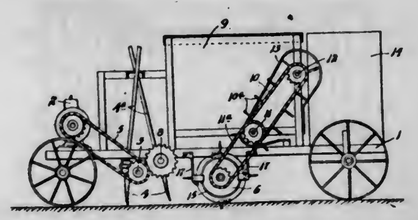


1,458,439. ELECTRICALLY-DRIVEN RECIPROCATING TOOL FOR RIVETING, CALKING, STONE-CUTTING, ETC. JOHN J. ROBERTS, Louisville, Ky. Filed Oct. 25, 1920. Serial No. 419,469. 3 Claims. (Cl. 78—27.)

1. In an electrically driven reciprocating tool provided with a handle, for riveting, calking, stone-cutting, etc., a motor driven by electro-magnetism, an insulated electric circuit to said motor, a manually operative switch in said circuit adapted to be closed by pressure upon the handle of said tool and to be opened automatically by the release of said pressure, combined with a reciprocating member or hammer head, a rotatable cylindrical cup and its rotating shaft adapted to lift said hammer head intermittently a predetermined distance, a spring adapted to force said hammer head down again, a stabilizer fixed to said shaft to compensate the intermittent work of said cylindrical cup, a gear train adapted to drive said shaft from said motor, and a nozzle provided

with a long-shanked tool bit slidably fastened therein and adapted to receive the blows of said hammer head in normal operation.

1,458,440. LAUNDRY-NET RECEPTACLE. FRANKLIN R. ROBISON, Gloversville, N. Y. Filed Apr. 11, 1921. Serial No. 460,378. 3 Claims. (Cl. 217—7.)

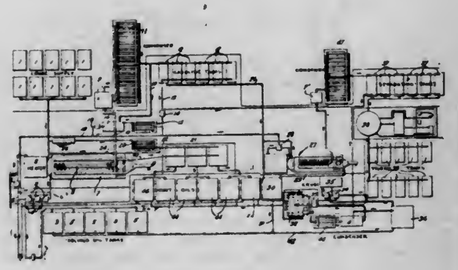


1. A laundry net receptacle including a bottom, an end piece vertically mounted upon each end of said bottom, the side edges of said end pieces being inclined downwardly and outwardly in opposite directions for a short distance and then converging downwardly and inwardly to a point slightly spaced from the said bottom, said side edges then diverging downwardly and outwardly to the bottom, side pieces for the receptacle connected between the said downwardly and inwardly converging portions of said end pieces, the top of the receptacle being open between said uppermost downwardly and outwardly diverging portions of the end pieces to form a receiving opening, and doors hingedly connected to the lower edges of said side pieces to close the bottom of said receptacle between the said lowermost downwardly and outwardly diverging portions of the end pieces.

1,458,441. QUACK-GRASS ERADICATOR. WILLIAM E. ROWE, Crookston, Minn. Filed July 21, 1921. Serial No. 486,506. 7 Claims. (Cl. 55—66.)

1. A quack grass eradicator having in combination, soil disintegrating devices adapted to dig up and loosen

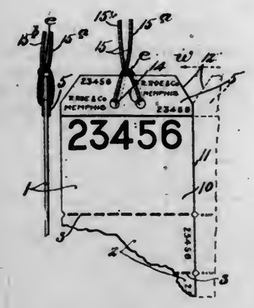
the grass and roots thereof, and a device constructed and arranged to extend into the disintegrated soil and to grip and pick up the grass and roots and deliver the same to a conveyer.



2. A grass pickup device having in combination a cylindrical ground-engaging roller, two series of soil piercing teeth projecting from the periphery thereof, one series being arranged to approach the other and grip the grass and roots therebetween and to recede and discharge the same.

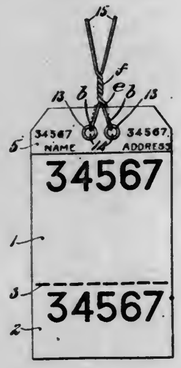
1,458,442. METHOD OF STORING SALT. AUGUST SCHILLING, San Francisco, Calif. Filed July 11, 1921. Serial No. 483,747. 1 Claim. (Cl. 23—11.)

The method of storing salt produced by natural evaporation through the aid of the sun, which consists in submerging the salt immediately after harvesting and with its contained impurities into a saturated brine held within a closed space.



1,458,443. PROCESS OF TREATING HYDROCARBONS. ALFRED SCHWARZ, Montclair, N. J., assignor to Petroleum Sand Products Corporation, a Corporation of Delaware. Filed Feb. 13, 1923. Serial No. 618,758. 27 Claims. (Cl. 196—27.)

12. The process of synthetically producing hydrocarbon compounds which comprises maintaining a substantially chemically constant solution of hydrocarbons so proportioned that the hydrogen is in excess and varying the temperature while distilling under violent agitation sufficient to form a vapor-oil emulsion.



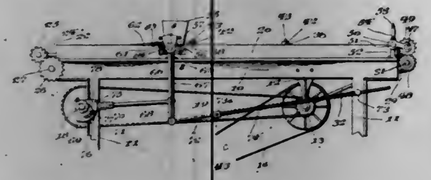
1,458,444. TAG. HENRY F. SCOTT, Framingham, Mass., assignor to Dennison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Filed June 8, 1922. Serial No. 566,834. 9 Claims. (Cl. 40—20.)

1. A tag having a body, and an attachment filament having therein integral bights severally penetrating and in engagement with the body at separated places, said

bights severally extending from the margin of the tag to said places of penetration and engagement.

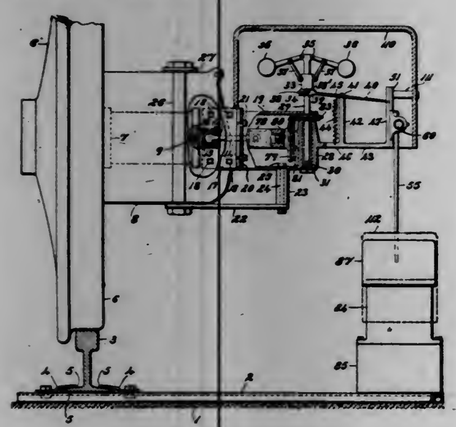
1,458,445. TAG AND METHOD OF MAKING THE SAME. HENRY F. SCOTT, Framingham, Mass., assignor to Dennison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Filed June 8, 1922. Serial No. 566,835. 3 Claims. (Cl. 40—21.)

1. A tag having a body, a plurality of anchorage holes in the body, and an attachment wire threaded successively through one hole, around the margin, and through another hole, whereby to form bearing bights in the respective holes.



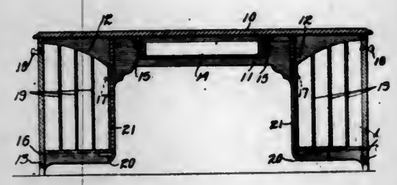
1,458,446. RUBBER HEEL. CLARENCE W. SHAEFFER, Chicago, Ill. Filed Apr. 29, 1921. Serial No. 465,430. 2 Claims. (Cl. 36—35.)

1. A heel for shoes comprising a resilient member, a suction chamber in said member having a deep portion and open at the bottom thereof, said chamber having a convex top, a bead surrounding the mouth of said chamber, and an air chamber above said suction chamber and



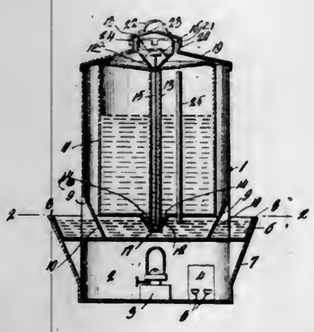
spaced therefrom, said air chamber having a concave bottom to correspond to the convex top of said suction chamber and extending beyond the heel portion equipped with said bead.

1,458,447. PASTING MACHINE. AXEL B. SKEPPSTEDT and ELI HADDON, Chicago, Ill.; said Haddon assignor to Frank Littrell, Chicago, Ill. Filed Jan. 9, 1922. Serial No. 527,058. 17 Claims. (Cl. 216—9.)



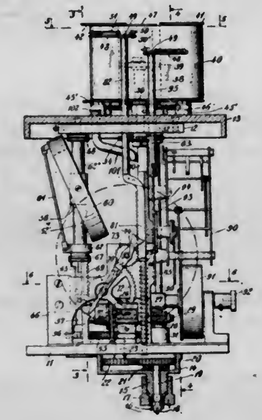
9. In a pasting machine, a work-supporting surface, a work edge-guide extending lengthwise of said surface, means for feeding work along the surface, rollers protruding from said surface for engagement by the work, said rollers having their axes parallel to the direction the work is fed, and means for rotating the rollers in a direction to carry the work laterally into engagement with the edge-guide.

1,458,448. TRAIN-CONTROLLING MECHANISM. ALLEN E. SNYDER, Bowmanstown, and MOSES SNYDER, Lehighton, Pa. Filed Sept. 15, 1922. Serial No. 588,395. 12 Claims. (Cl. 246—182.)



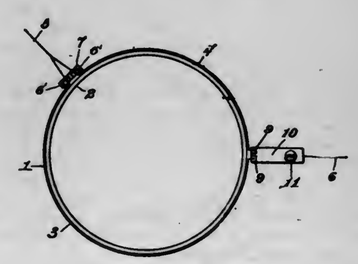
2. In a train controlling mechanism the combination with a rotating axle thereof and the air brake line of ball governor mechanism driven by said axle, means adjacent the governor mechanism having a vertically movable pendulum trip member carried thereby, means connecting the governor mechanism with the trip member carrying means, means actuable by the trip member for effecting an initial opening of a bleed in the air brake line to cause a normal application of the brakes, means for automatically releasing the aforesaid bleed opening means under a predetermined service condition, means actuable by said trip member for further opening said bleed to effect an emergency application of the brakes, means for locking said bleed in the last mentioned open position, and manually operable means for releasing the locking means before the train can be restarted.

1,458,449. COMBINED BENCH AND MUSIC CABINET. JOHN M. SNYDER, York, Pa. Filed June 27, 1921. Serial No. 480,759. 2 Claims. (Cl. 45—64.)



2. A music bench comprising a top adapted to be used as a seat, supporting members spaced apart with a free open space between them and located under the respective ends of said seat, said end supporting members having walls at the sides and back and normal open fronts, receptacles mounted in said open fronts and pivoted along their lower front edges and adapted to fit within and close said open fronts resting against the back walls of the supporting members, substantially as set forth.

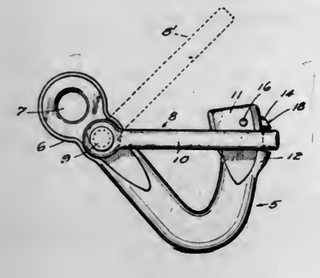
1,458,450. DRINKING FOUNTAIN FOR STOCK. JOHN W. UNGER and HERMAN LAHANN, Sioux City, Iowa. Filed Jan. 20, 1920. Serial No. 352,827. 1 Claim. (Cl. 119—73.)



A fountain of the class described comprising a casing having a combustion chamber in its lower end with a trough mounted above it, the top of said casing being provided with an opening surrounded with an upstanding flange, a removable closure adapted to be placed upon said flange, a water tank supported in said casing above said trough and being spaced from the walls of the casing to provide a heat chamber around the tank, the bottom of the tank being provided with a funnel shaped depending nozzle having a valve seat therein, a vertical pipe extending through the tank and having its lower end apertured and arranged in contact with the funnel shaped nipple of the tank and its upper end extended through the water tank and provided with a funnel shaped member which is arranged within the flange of the top of the casing in slightly spaced relation thereto, a support arranged in said funnel shaped member, a valve stem extending through the vertical pipe and having a valve on its lower end adapted to seat in the nozzle to cut off communication between the tank and trough when the former is being filled and the upper end of said stem being provided with means engageable with said support for retaining the valve off of its seat.

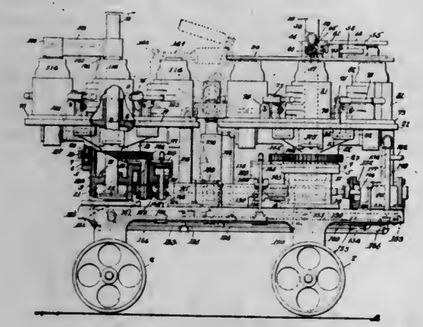
1,458,451. RECORDING APPARATUS FOR VEHICLES. ANTHONY F. WALLBILLICH, Newark, N. J. Filed May 16, 1918. Serial No. 234,869. 8 Claims. (Cl. 234—31.)

1. In recording apparatus for vehicles, a shaft operatively connected to a moving part of the vehicle, a record tape, actuating connections between said shaft and said tape for driving the latter in unison with the vehicle, a centrifugal device operatively connected to said shaft, a marker operatively connected to said centrifugal device for producing on said surface a record of the speed of the vehicle, a second marker, an actuating rod therefor provided with parallel racks, a clock mechanism and a mutilated pinion driven thereby and adapted to engage said racks alternately to cause the second marker to oscillate periodically over the tape.



1,458,452. CYLINDER-CAPPING DEVICE. WILLIAM WESTBURY, Caney, Kans. Filed Jan. 19, 1922. Serial No. 530,479. 7 Claims. (Cl. 49—50.)

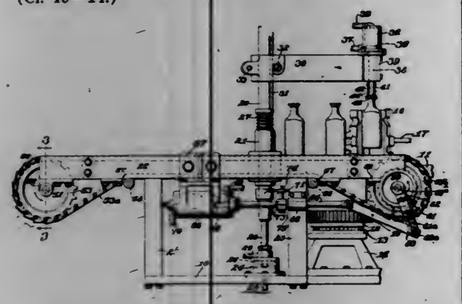
4. An electrical cylinder cracking device comprising a cracking wire, means insulating portions of the wire from each other, and means for passing a current through one portion of the wire independent of another.



1,458,453. SAFETY HOOK. FRANK A. YOUNG, Sultan, Wash., assignor of one-half to Kenneth S. Startup, Sultan, Wash. Filed June 1, 1922. Serial No. 565,113. 3 Claims. (Cl. 24—241.)

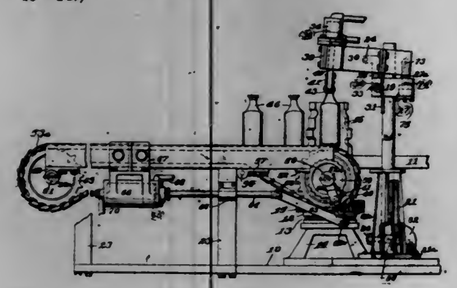
1. The combination with a hook, of a substantially U-shaped link pivotally connected to the hook shank and arranged to be swung into position to extend across the hook opening to embrace the hook-bill, and a spring-

pressed bolt mounted in the hook-bill and engageable against the upper surface of the link for releasably securing the link in its engaged position.



1,458,454. GLASS-BLOWING MACHINE. JAMES M. YOUNG, Anderson, Ind., assignor to Obear-Nester Glass Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 21, 1916. Serial No. 126,935. 23 Claims. (Cl. 49—5.)

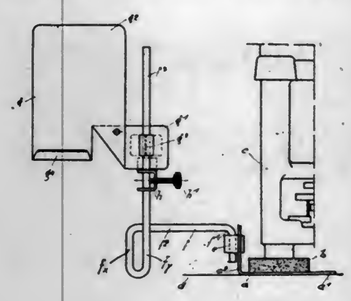
4. In a glass blowing machine, the combination with a blank mold, and a neck pin, of a combined shearing plate and blow head, means for raising and lowering the same relative to the blank mold, means for automatically shifting the shearing plate to sever a gather, and pack it within the blank mold and around the neck pin, said shearing plate having an aperture therein movable into communication with the blank mold after the gather has been sheared, and means controlled by the movement of the shearing plate for placing said aperture in communication with a source of pressure, and pressure operated means for withdrawing the neck pin from the gather.



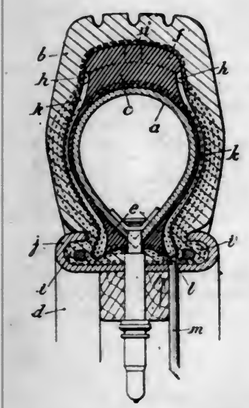
22. A transfer device for a semi-automatic bottle-blowing machine in which bottle blanks are formed at one point with the necks down and are blown into finished bottles at another point with the necks up, comprising means for transferring the bottle blank from the blank forming to the bottle-blowing portion of the machine, said transferring means including means for grasping the bottle blank at the lower neck portion, means active during the transfer operation to invert the bottle blank, and means for elevating the neck of the bottle blank to compensate for the inversion.

1,458,455. TAKE-OUT AND DELIVERY DEVICE FOR GLASS-BLOWING MACHINES. JAMES M. YOUNG, East St. Louis, Ill., assignor to Obear-Nester Glass Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 10, 1919. Serial No. 336,821. 7 Claims. (Cl. 49—14.)

7. In a glass blowing machine, the combination of a movably mounted mold, a take-out mechanism comprising an upright shaft having a cross-arm adjustably secured thereto for rotation therewith and adapted to overhang the mold in one position of its movement, means for intermittently rotating said shaft, a piston mounted on the outer end of said cross-arm, and article grasping fingers pivotally supported on said piston, said cross-arm having cam slots engaged by said fingers, whereby upward movement of the piston will raise the fingers and cause them to separate, and downward movement of said piston will lower said fingers and cause them to be brought together.



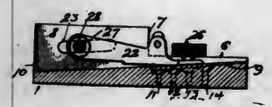
1,458,456. TAKE-OUT AND STEADYING DEVICE FOR GLASS-BLOWING MACHINES. JAMES M. YOUNG, St. Louis, Mo., assignor to Obear-Nester Glass Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 26, 1920. Serial No. 376,649. 11 Claims. (Cl. 49—14.)



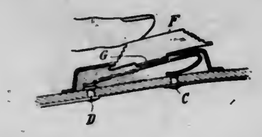
11. In a glass blowing machine, the combination of a movably mounted mold and a device for conveying articles removed therefrom, a take-out mechanism for removing an article from said mold and depositing said article upon said conveying device, and means for steadying the article in said mold prior to its engagement by said take-out to remove the article from the mold and after said mechanism has deposited the article on said conveying device.

1,458,457. COPY CARRIER FOR WRITING MACHINES, ADDING MACHINES, AND THE LIKE. LOUIS FRÉDÉRIC AMEZ-DROZ, Geneva, Switzerland. Filed Mar. 11, 1921. Serial No. 451,549. 3 Claims. (Cl. 120—28.)

3. A copy carrier for writing, adding and the like machines comprising a supporting member attached to the machine, an arm pivotally mounted on said supporting member, a plate with a bottom flange, a part of said plate bent back upon itself to form a lateral extension thereof and a socket integral with said plate, mounted on said arm and kept in position by a clamp and locking screw.



1,458,458. PNEUMATIC TIRE. MARIE JOSEPH CAMILLE ANDRÉ, Paris, France. Filed Mar. 13, 1922. Serial No. 543,437. 1 Claim. (Cl. 152—13.)

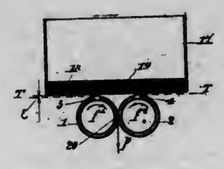


A pneumatic tire comprising an external cover having retaining beads formed with apertures, an intermediate envelope mounted in the cover and having a thick tread formed with transverse peripheral grooves which communicate with annular grooves formed in the sides of the tread, air passages connecting the annular grooves with the apertures in the cover, and yielding partitions centrally arranged in the transverse grooves operable during the running of the tire to cause an ingress and egress of air through the apertures.

1,458,459. TOOL FOR GRINDING ELECTRICAL CONTACT POINTS. NILS ALFRED ANDERSON, New York, N. Y. Filed Oct. 20, 1921. Serial No. 509,092. 4 Claims. (Cl. 51—216.)

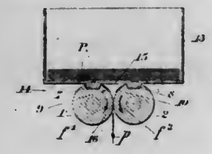
1. A tool for refacing contact points, comprising a base or holder having aligning tracks for guiding a resurfacing tool, said base having a plurality of apertures adapted to receive therein a contact holding screw, and opening at different levels with respect to the base, whereby said base is adapted to hold said screw at different elevations relatively to said tracks in said several apertures, said tracks serving as a stop for the resurfacing tool when the latter has resurfaced the contact point of a member held in one of said apertures.

1,458,460. SWITCH FOR PORTABLE LAMPS. ARTHUR G. ARNOLL, Glendale, Calif., assignor to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1919. Serial No. 324,487. 10 Claims. (Cl. 200—60.)



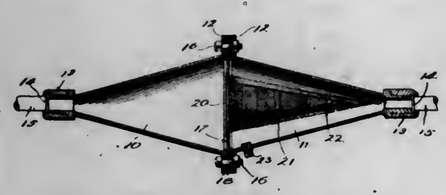
1. A switch for portable electric lamps and like devices comprising a casing, a pair of terminals therein, a bent spring secured to one terminal and having its free end over the other, a movable member or finger piece slidable over a slot in the top of the casing and depressible downwardly relative to the top of the casing and through the slot, said member having a projection which encounters the spring when the said movable member is forced to one side and depresses its free end into contact with the underlying terminal.

1,458,461. PROCESS FOR BLEACHING BARYTES. LORENZ KNEEDLES AYERS, St. Louis, Mo. Filed Apr. 15, 1922. Serial No. 553,166. 2 Claims. (Cl. 252.)



1. The process of bleaching barytes consisting in subjecting the ground barytes to the bleaching action of sulphuric acid solutions under pressures greater than atmospheric.

1,458,462. APPARATUS FOR EFFECTING THE EXTRACTION SUCCESSIVELY OF SHEETS OF PAPER CONTAINED IN A MAGAZINE, AND FOR FOLDING SUCH SHEETS. ROGER BRAUNSTEIN, Paris, France. Filed July 20, 1921. Serial No. 486,254. 1 Claim. (Cl. 270—68.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

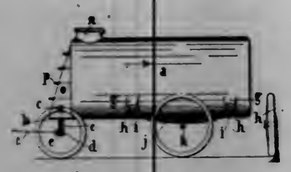


The combination with a magazine for holding a stack of thin sheets of paper and having an opening in its bottom, of means for extracting said sheets successively from the bottom of the stack through said opening and folding them, comprising two parallel cylinders arranged directly beneath the opening in the bottom of the magazine, and means connected with the interiors of said cylinders for alternately exhausting the air therefrom and opening them to the atmosphere at certain stages in their revolution, each of said cylinders having distantly spaced holes therein of small diameter and disposed along a line parallel to its axis and said cylinders being geared together and driven so that their upper surfaces move inwardly towards one another.

1,458,463. APPARATUS FOR EFFECTING THE GRIPPING, THE EXTRACTION, AND THE FOLDING OF SHEETS OF PAPER CONTAINED IN A MAGAZINE. ROGER BRAUNSTEIN, Paris, France. Filed July 20, 1921. Serial No. 486,255. 1 Claim. (Cl. 270—68.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

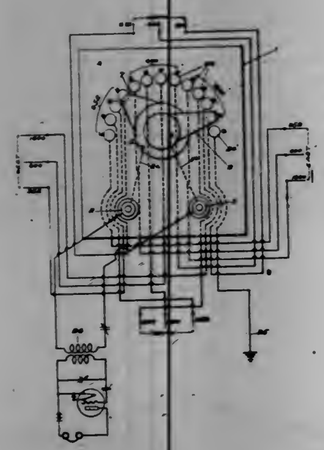
The combination with a magazine for holding sheets of thin paper in a pile and having an opening in its bottom, of means for gripping said sheets one by one and extracting them through said opening and folding them, comprising two parallel cylinders 1, 2 arranged directly beneath said opening, said cylinders being provided in their surfaces with narrow strips 7, 8 of friction material extending longitudinally of said cylinders, said cylinders being further provided adjacent said strips 7, 8 with narrow strips 9, 10 of plastic material, said cylinders being geared together in such manner that when they are driven with their upper surfaces turning toward each other, said strips 7, 8 will simultaneously frictionally engage through said opening the bottom surface of the bottom sheet in said magazine and in extracting it through said opening give it a buckle which is then gripped by the plastc strips 9, 10 to complete the folding.

1,458,464. STRAINER. DE FOREST BYERS, Clear Lake, Iowa. Filed Oct. 29, 1921. Serial No. 511,302. 2 Claims. (Cl. 210—164.)



1. A strainer including a two-part casing of which the parts are of similar conical form and construction, each having a flange around its larger end and tube attaching means at its opposite smaller end, a rigid strainer plate removably clamped between the flanges of the casing parts and reversible therebetween, having a central opening, and conical screen members telescoping one another in spaced apart relation and secured upon one face of said plate around the opening for extension into either part of the casing.

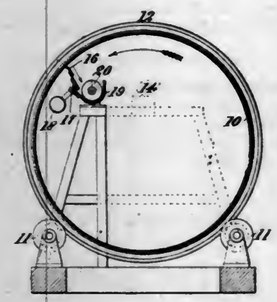
1,458,465. TRAILER BOX AND TANK CAR. HENRI COANDA, Paris, France. Filed June 7, 1920. Serial No. 387,169. 2 Claims. (Cl. 280—5.)



1. In a tank car, a cistern body, stops depending from the lower rear portion of said body, an axle arranged to

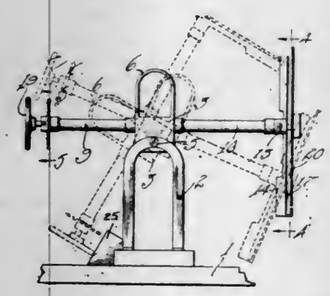
move freely between said stops in a vertical plane, collars on said axle arranged at the opposite ends of the stops,

resilient elements interposed between the collars and the adjacent faces of the stops, and means resiliently connecting the axle with the body.



1,458,466. ANTENNA SELECTOR SWITCH. ALFRED CROSSLEY, Washington, D. C. Filed July 7, 1919. Serial No. 309,173. 2 Claims. (Cl. 250—11.)

1. In combination a plurality of groups of independent directional collectors of radio signals, the collectors of each group having different wave length characteristics but having the same direction, and a rotary selector switch having contacts to which the collectors are connected, the said contacts being grouped and marked to indicate the directional and wave length characteristics of the collectors.

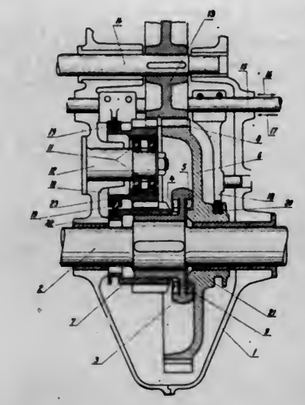


1,458,467. METHOD OF AND APPARATUS FOR CONCENTRATING ORES. SAMUEL H. DOLBEAR, San Francisco, Calif., assignor of one-half to Edwin Letts Oliver, San Francisco, Calif. Filed Nov. 4, 1919. Serial No. 335,664. 17 Claims. (Cl. 83—85.)

1. A method of separating from gangue or waste those mineral particles which exhibit a preferential wetting by selective reagents, consisting of treating a suitable pulp containing such mineral particles with a selective reagent, bringing the pulp so treated into contact with a solid collecting element which exhibits a preference for selective reagents, and maintaining the portion of the

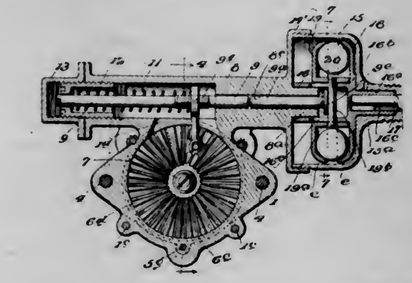
element presented to the pulp relatively free from the selective reagent.

1,458,468. GAME. ROBERT DONER, Chicago, Ill. Filed Oct. 5, 1922. Serial No. 592,650. 3 Claims. (Cl. 46—56.)



1. A device of the character described comprising a movable dial, a movable indicator hand for said dial, means for manually moving said dial and said hand independent of one another and means for moving said dial into engagement with said hand, whereby the dial and the hand become set against movement relative to one another and both may come to a quick standstill.

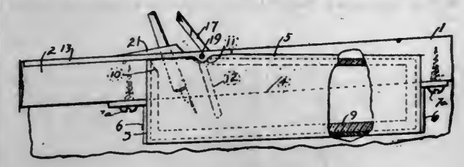
1,458,469. CHANGE-SPEED DEVICE. PIERRE DONON, Paris, France, assignor to Etablissements Baudet & Donon, Paris, France. Filed Nov. 26, 1921. Serial No. 517,901. 4 Claims. (Cl. 74—59.)



1. A change speed gear having two ratios and its gear wheels constantly in mesh comprising in combination, a driving shaft, a common driving gear keyed to said shaft, a driven shaft, a double faced gear clutch disk keyed to the driven shaft, two final gears corresponding to the two ratios loosely mounted on the said driven shaft and constantly actuated by the common driving gear, one of the final gears having a single set of spur gear teeth for

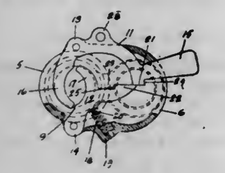
simultaneously engaging a gear which turns it, and the double faced gear clutch disk, and means for shifting

respectively the final gears along the driven shaft whereby either of the gears is caused to engage the said clutch disk.



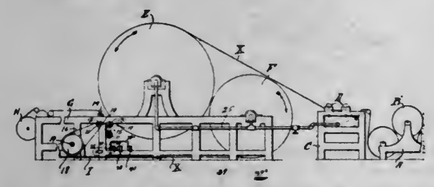
1,458,470. SPEED GOVERNOR. WILLIAM S. DORMAN, Brooklyn, N. Y., assignor to Ross G. Leonard, Brooklyn, N. Y. Filed Aug. 12, 1920, Serial No. 403,104. Renewed Sept. 2, 1922. Serial No. 586,023. 10 Claims. (Cl. 264—17.)

1. A speed limiting device comprising a valve casing at one end having a longitudinally-projecting boss with an exterior cylindrical bearing surface, a throttling valve movable in said casing to control the motive fluid passage therethrough, a spring in the casing normally holding said valve in open position, a housing removably secured to the end of the casing having said boss, a centrifugal governor within said housing and removable therewith, said housing providing a bearing for said governor, said governor also removably fitting and rotating on said boss, the outer end of said housing having a longitudinal bearing opening for the reception of driving means for said governor, and means extending through said boss for operatively connecting the governor and valve.



1,458,471. INKWELL. VICTOR DORNBERGER, San Jose, Calif. Filed Feb. 10, 1921. Serial No. 443,960. 5 Claims. (Cl. 120—72.)

1. An ink well for desks, comprising a receptacle, a top plate having an opening through which access is gained to the ink receptacle, a sectional cover for the receptacle, the sections of which are pivoted independently in the opening of the top plate, and normally

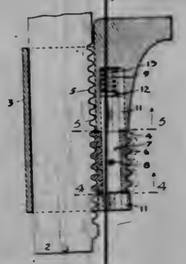


nesting cam fingers carried by the cover sections whereby upon tilting one section to open the same the companion section will concurrently open.

1,458,472. HAND-ROPE LOCK FOR ELEVATORS. EDWARD L. DUNN, East Orange, N. J., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 8, 1922. Serial No. 534,849. 9 Claims. (Cl. 187—46.)

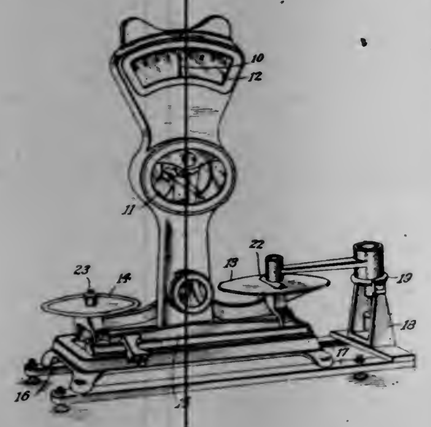
7. An elevator lock comprising a pair of levers, one lever having a jaw arm and another arm on one and the same side of the pivot for the lever with a cam projection thereon between the said two arms, the other lever having a jaw arm, a cam projection and a handle arm, the cam projection being between the handle and jaw arm and said cam projections adapted to coact with each other and to be moved across each other's surface in moving the jaw arms to their operative and inoperative positions.

1,458,473. RENOVATING ATTACHMENT FOR SLASHERS. LEWIS L. EVANS, Lancaster, S. C., assignor of one-half to Olen W. Connor, Concord, N. C. Filed Dec. 10, 1921. Serial No. 521,474. 4 Claims. (Cl. 28—28.)



1. The combination with a slasher having drying drums, of rapidly revolving brushes disposed on opposite sides of the yarn passing from said drum, and means disposed in advance of said brushes and between the brush and the drum for spraying lubricant in a heated and finely divided condition against the yarn.

1,458,474. WRENCH. JOHN H. FONES, Oakland, Calif. Filed Apr. 26, 1922. Serial No. 556,640. 5 Claims. (Cl. 81—158.)



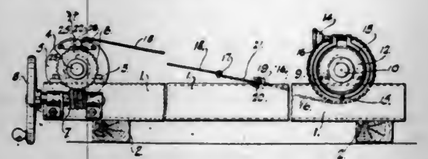
1. A wrench comprising a handle having a rack and a jaw thereon, a second jaw slidable upon the handle and having a recess therein permitting access to the rack, said movable jaw having a bore therein, a pin movable bodily within the bore, a rib on said pin, said

jaw having a groove opening into the bore and adapted to receive said rib to permit movement of the pin towards and away from the rack and a worm on the pin

and adapted to be moved into and out of engagement with the rack and rotated while in contact with the rack.

1,458,475. ATTACHMENT FOR WEIGHING SCALES. EDWARD G. FREED, Dayton, Ohio, assignor, by mesne assignments, to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Apr. 1, 1921. Serial No. 457,639. 7 Claims. (Cl. 73—51.)

1. In an apparatus of the class described, an even balance weighing scale having an automatic counter-balance, an over and under chart and cooperating pointer and weight pans, in combination with means for supporting an article to be standardized comprising a pivot-like support carried by one of the weight pans, and a supplementary pivotal support remote from the weight pan, said supports conjointly supporting the article to be standardized whereby a portion of the weight thereof reacts upon the supporting weight pan of the scale.

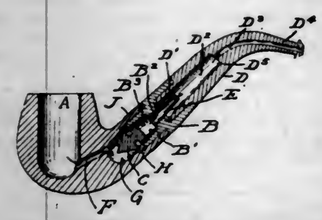


1,458,476. APPARATUS FOR PLYING UP TIRE FABRIC. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 31, 1921. Serial No. 473,573. 11 Claims. (Cl. 164—78.)

1. Apparatus for plying up tire fabric comprising means for supporting successive lengths of the work in a longitudinal space corresponding to the circumferential length of a tire, means defining said longitudinal space, and a set of markers adapted to be moved individually

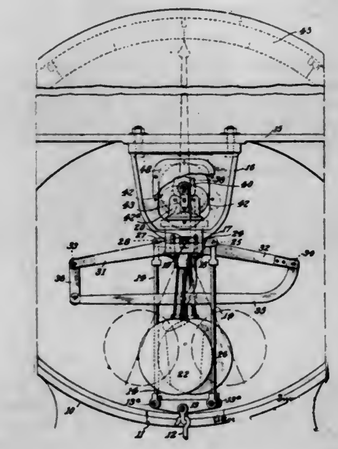
into marking position intermediate the first said markers to represent corresponding points on successive lengths of the work.

1,458,477. METHOD FOR APPLYING SHEETS TO PRINTING CYLINDERS. WILLIAM GAMBLE and MALCOLM OWEN, London, England; said Gamble assignor to A. W. Penrose and Company Limited, London, England. Filed Sept. 8, 1922. Serial No. 587,014. 3 Claims. (Cl. 101—415.1.)



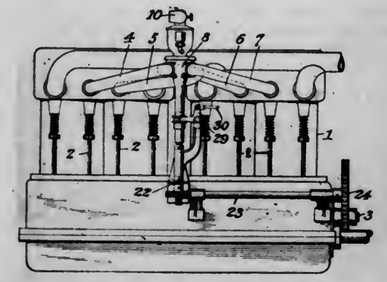
1. A method of applying sheets for use as a printing surface to printing cylinders, wherein one end of the sheet is attached on one side of the gap of the cylinder and the sheet is stressed mechanically under tension tangentially to the cylindrical surface, the cylinder being held against rotation during the initial straining and then while the strain is maintained, rotated to warp the sheet tightly around it, whereon the other end of the sheet is fixed within the gap aforesaid.

1,458,478. PROCESS OF PRODUCING A CATALYST FROM VANADIUM PENTOXIDE AND THE PRODUCT THEREOF. HARRY D. GIBBS, Penns Grove, N. J., dedicated, by mesne assignments, to the Government of the United States and to the people thereof. Filed Nov. 28, 1921. Serial No. 518,452. 3 Claims. (Cl. 23—28.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



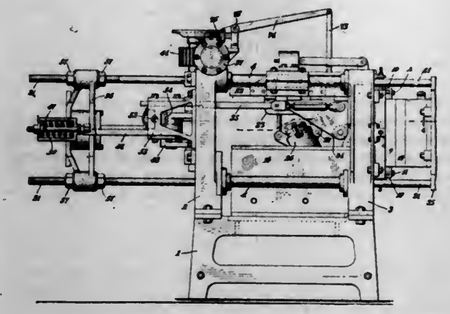
1. In the production of catalyzers from vanadium pentoxide, the steps of fusing the same and crushing the product.

1,458,479. SMOKING PIPE. ROBERT C. GIBBONS and THEODORE K. FELCH, Jersey City, N. J. Filed Feb. 24, 1920. Serial No. 360,718. 2 Claims. (Cl. 131—12.)



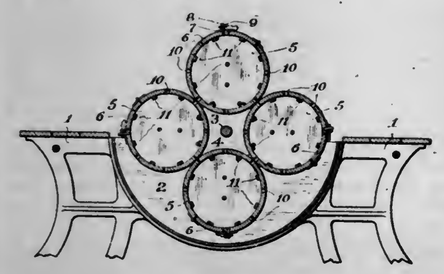
1. A pipe comprising a bowl having a restricted outlet, a stem made in separable sections and having a continuous channel extending therethrough and in communication with said outlet, said channel having an enlargement adjacent the outlet and an enlargement removed therefrom and toward the outer end of the stem, a removable baffle between said enlargements having an imperforate conical portion pointed toward said outlet, so constructed and arranged as to permit the passage of smoke and other combustion products between the walls of the pipe and the base of the conical portion, a diaphragm portion connected with said conical portion spanning the bore of the channel, said diaphragm having restricted passages therethrough between which and the outlet the conical portion is interposed, and a member outward of said baffle extending into the outer enlargement and beyond the lower portion of the same having a passage way communicating with said diaphragm passages and said last named enlargement.

1,458,480. PENDULUM SCALE. WILLIAM NATHAN GILBERT, Dayton, Ohio, assignor to International Scale Company, Dayton, Ohio, a Corporation of Illinois. Filed Apr. 11, 1921. Serial No. 460,186. 10 Claims. (Cl. 265—62.)



1. In a weighing scale in combination, a pair of pendulums mounted in pivotal alignment with each other, an equalizer bar having links connecting the same to said pendulums, an indicator driving device comprising a member coupled to both of said pendulums and elevated and lowered thereby, and a rack connected to said member for driving a pivotal indicator.

1,458,481. INTERNAL-COMBUSTION ENGINE. JOHN GOOD, Garden City, N. Y. Filed Aug. 15, 1914, Serial No. 856,906. Renewed July 2, 1921. Serial No. 482,193. 15 Claims. (Cl. 123—52.)

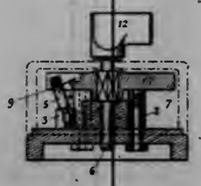


1. A multi-cylinder engine comprising engine cylinders, each having an intake valve and a separate intake pipe, a liquid fuel and air mixing device common to all of such intake pipes and means between such device and the intake pipes for successively connecting the device with the said pipes, the said device and pipes being inclined downwardly to drain toward the engine cylinders.

1,458,482. DIE-CASTING APPARATUS. CHARLES M. GREY, East Orange, N. J. Filed Apr. 7, 1919. Serial No. 288,082. 26 Claims. (Cl. 22—69.)

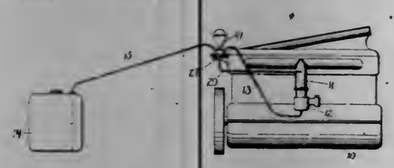
1. In a die casting machine, a sprue-die supporting plate, an ejector-die supporting plate, and operating means for effecting relative movement between said plates, said sprue-die supporting plate being positioned between the ejector-die supporting plate and said operating means.

1,458,483. MACHINE FOR SCALDING FUR-NAPPED BODIES. GEORGE GROVER, South Norwalk, Conn., assignor of one-half to James Delohery, Danbury, Conn. Filed Apr. 18, 1922. Serial No. 555,143. 5 Claims. (Cl. 28—7.)



1. In a machine for scalding napped felt bodies, a scaling tub adapted to contain water at suitable temperature, a frame supporting the tub, a rotary shaft journaled on the frame, and a series of hollow perforated cylinders carried by said shaft in radial disposition thereto and provided with internally projecting lags, said cylinders during their orbital travel around said shaft being continuously submerged within and emerged from the water in the tub.

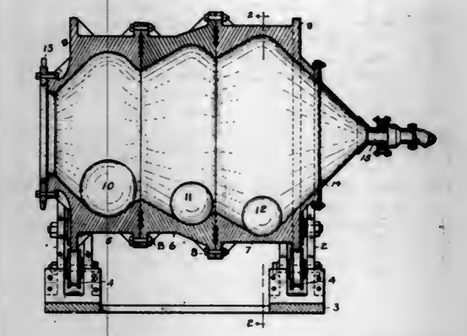
1,458,484. ELECTRIC ROTARY SWITCH. FRANZ PAUL HABICHT, Schwanden, Switzerland, assignor to the Firm "Therma," Fabrik für Elektrische Heizung A.-G., Schwanden, Canton of Glarus, Switzerland. Filed Aug. 25, 1921. Serial No. 495,328. 9 Claims. (Cl. 200—155.)



1. An electric rotary switch, in which the contact is formed by at least one movable contact member,

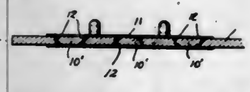
adapted to be swung round the axes of rotation and elastically resting against two fixed contact members, the distance between the latter being bridged over by the movable contact member, characterized by the fact that the movable contact member itself is rotatable on

a geometrical axis, situated between its points of contact and parallel or approximately parallel with the axis of rotation of the switch, in such a manner that said movable contact member rolls on one of the two fixed contact members, for the purpose of ensuring the rupture of the spark.



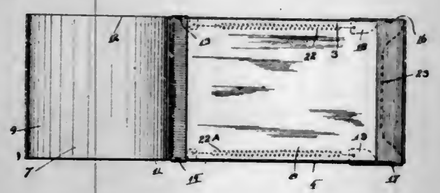
1,458,485. FUEL-FEED SYSTEM. ERNEST R. HUNTLEY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Mar. 19, 1920. Serial No. 367,283. 4 Claims. (Cl. 240—36.)

1. In a liquid feed system, a diaphragm pump including a diaphragm, a casing in which said diaphragm is clamped at its periphery, fluid inlet and outlet connections in said casing at one side of said diaphragm, the opposite side of said casing having a constricted continuously open port adapted to be connected to a suction producing means, and having a relatively enlarged port to the atmosphere, an outwardly opening check valve for said latter port, means actuated by the diaphragm for opening said check valve, the operation of said means being delayed until after the diaphragm has moved a substantial distance beyond neutral position.



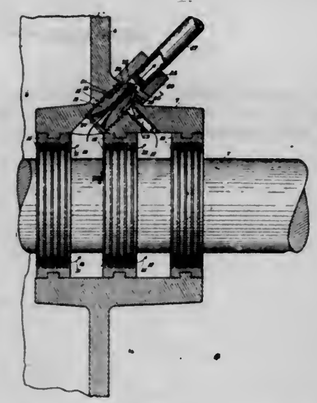
1,458,486. PULVERIZER. CHARLES A. KLOMAN, Bellevue, Pa. Original application filed June 25, 1919, Serial No. 306,612. Divided and this application filed Mar. 1, 1922. Serial No. 540,151. 1 Claim. (Cl. 83—9.)

A pulverizer comprising a shell mounted for rotation about an axis, means for rotating the shell, the shell being open from end to end and completely closed circumferentially along its sides, the shell being provided at its interior with a series of annular raceways disposed transversely of the axis of the shell, the raceways increasing in diameter from the inlet end of the shell toward the exit thereof, each raceway having a transverse arcuate intermediate wall surface and synclined side wall surfaces, the said side wall surfaces which are disposed toward the inlet opening of the casing and of the initial and intermediate raceways being of greater area and greater transverse breadth than the said side wall surfaces which are disposed toward the exit end of the casing, the side wall surface of the final raceway which is disposed toward the exit opening of the casing being of greater area and transverse breadth than the side wall surface thereof which is disposed toward the inlet opening of the casing, the edges of the side wall surfaces of the adjacent raceways merging with each other at angles to each other, the radius lengths of



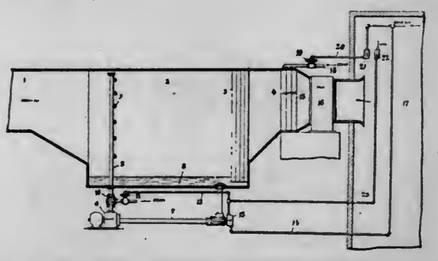
the arcuate surfaces of the raceways increasing from the initial to the final raceway and a ball loosely resting in each raceway, the length of the radius of each ball corresponding with the length of the radius of the arcuate surface of its respective retaining raceway.

1,458,487. FASTENER FOR METAL CLIPS. MAX KRISCHER and CHARLES ROSENBLUM, Brooklyn, N. Y. Filed May 15, 1922. Serial No. 561,119. 1 Claim. (Cl. 24—265.)



A clip of sheet metal and of U-shape in cross section and having two flat side portions bendable toward each other on the opposite sides of a support, one side portion having stamped therefrom a pair of triangular prongs having sharp points projected through the support and toward and clinchable against the other side portion when the clip is bent as aforesaid and having their bases parallel insuring that the points when so clinched will be directed toward each other embracing a portion of the support, and the other side portion having stamped therefrom, on opposite sides of the prongs aforesaid, two pairs of prongs, similar in construction and function to the pair first mentioned, whereby the grip on the engaged support of any pair of prongs is reenforced by the grip thereon of the next adjacent pair of prongs.

1,458,488. DESK PAD. AMOS M. LEE and ELMER J. HAGREEN, Rochester, N. Y. Filed Sept. 20, 1921. Serial No. 502,066. 3 Claims. (Cl. 281—6.)

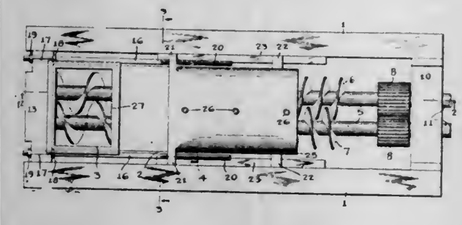


1. In a desk pad, the combination of a receptacle, a writing table formed at one end of said receptacle, said receptacle having a pocket formed therein to receive a roll of paper from which a continuous web of paper may be drawn over said writing table, horizontally movable clamping means at the free end of said writing table, said clamping means being adapted to move away from said table, said clamping means being adapted to hold the free end of the paper web against said writing table and permit the end of the paper web to move away from said writing table with said clamping means on the operation of said clamping means.

1,458,489. STEAM PACKING. HENRY B. LEE, New London, Conn., assignor to The D. E. Whiton Machine Company, New London, Conn., a Corporation. Filed Mar. 13, 1920. Serial No. 365,671. 4 Claims. (Cl. 286—9.)

3. A steam-packing comprising a casing, a bushing, a shaft passing through the same, three packing-rings spaced apart in the said bushing to form a primary expansion-chamber into which steam from the casing is introduced and a secondary expansion-chamber into which steam leaks from the said primary expansion-chamber through the intermediate packing-ring, and an ejector-plug mounted in the said bushing and connected with both of the said chambers for the exhaustion of the latter through energy derived from the steam entering the former from the said casing.

1,458,490. HUMIDIFYING-APPARATUS CONTROL. ADOLPH W. LISSAUER and WALTER L. FLEISHER, New York, N. Y., assignors to W. L. Fleisher & Co. Inc., New York, N. Y., a Corporation of New York. Filed Dec. 17, 1919. Serial No. 345,647. 3 Claims. (Cl. 236—44.)



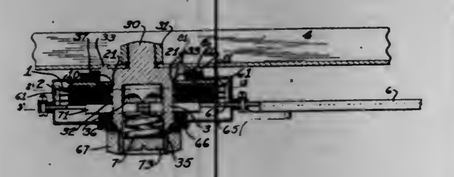
3. In combination with an enclosure, a humidifying apparatus control comprising a chamber through which air may be circulated before it enters the enclosure, a humidity control associated with the chamber, a heater for preheating the air coming from the chamber to the enclosure, a thermostat in the enclosure for controlling the heater, a second thermostat in the enclosure connected to the humidity control to prevent the operation of the said humidity control until a predetermined temperature is built up in the enclosure by the heater, substantially as and for the purposes set forth.

1,458,491. METHOD OF MAKING OXIDIZED AROMATIC SUBSTANCES. RALPH H. MCKEE, New York, and HERMON C. COOPER, White Plains, N. Y.; said Cooper assignor to said McKee. Filed Nov. 12, 1919. Serial No. 337,558. 6 Claims. (Cl. 260—108.)

6. The process of making benzoic acid which consists in treating toluene in liquid form with a mixture of chromic acid, water and sulphuric acid, the toluene treated being in excess of its combining proportion with the chromic acid of said mixture.

1,458,492. APPARATUS FOR MIXING. PAUL L. MATHEWS and RICHARD M. WILLIS, Newark, N. J. Filed Nov. 19, 1920. Serial No. 425,257. 5 Claims. (Cl. 259—9.)

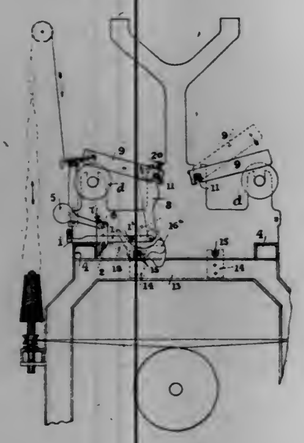
1. A mixing and fluxing apparatus comprising a tubular casing member and a pair of cooperating intermeshing and interacting worms or screws therein, said casing having a receiving opening at one end and a discharge opening at the other end, said tubular casing being in cross-section in the form of the numeral 8, there being one of said screws in each lobe of the 8, which screws are characterized by having the pitch of the flights or spirals on each gradually decreasing in passing from the receiving opening toward the discharge opening, the apparatus having means whereby said screws rotate in the proper direction relative to each other, and also having means for effecting a relative longitudinal adjustment between the screws on the one hand and the effective body portion of the casing which co-operates with the screws on the other.



1,458,493. VARNISH COMPOSITION. LOUIS MAUERHOFER, New York, N. Y. Filed Jan. 22, 1923. Serial No. 614,294. 1 Claim. (Cl. 134—26.)

As an article of manufacture, a varnish of the character designated, composed of coal tar, benzine and nitric acid in substantially the relative proportions herein specified.

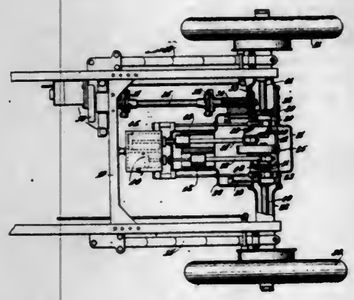
1,458,494. SHOCK ABSORBER. HARRY R. MITCHELL, Seattle, Wash., assignor to Mitchell Products Company, Seattle, Wash., a Corporation of Washington. Filed Jan. 25, 1922. Serial No. 531,574. 6 Claims. (Cl. 188—130.)



1. In a shock absorber, in combination, two series of relatively oscillatable friction plates adapted to be connected to relatively movable vehicle parts, a hub sleeve

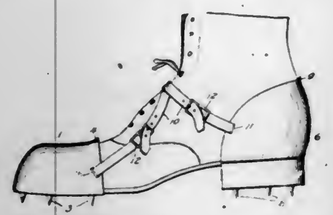
mounted concentrically of said plates, a spring in the axial bore of said hub sleeve operable to press said series

of plates together, and a nut threaded in an end of said hub sleeve and adjustable to vary the pressure of said spring.



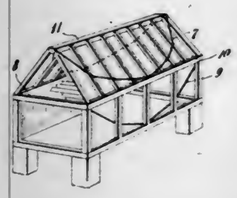
1,458,495. DOUBLING, TWISTING, AND WINDING AND SUCH LIKE MACHINE. JAMES WILLIAM MORRISON and THOMAS WILLIAM HOLT, Staleybridge, England. Filed Aug. 10, 1921. Serial No. 491,068. 5 Claims. (Cl. 242—18.)

1. In yarn doubling, twisting and winding machines a friction drum, bearings therefor, a primary weighting frame having means for supporting a package consisting of a frame, a fulcrum for said frame, a slidable member attached to said frame, a fulcrumed weighting device acting upon said slidable member, and automatically operative loading means combined with said sliding member for varying the constraining effect of said automatically operative loading means during the building up of a cheese or the like.



1,458,496. CRANK-SHAFT DIFFERENTIAL GEAR. ALDEN E. OSBORN, New York, N. Y. Filed Dec. 16, 1920. Serial No. 431,107. 3 Claims. (Cl. 180—56.)

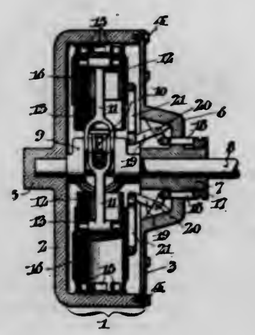
1. In a motor vehicle the combination of two traction wheels, a hollow supporting member carrying said wheels adjacent to each of its ends and carrying the propelling engine of the vehicle, springs connected to said hollow supporting member and supporting the framing of the vehicle and an auxiliary apparatus carried by said vehicle framing and means for driving said auxiliary apparatus from the propelling engine of the vehicle on said



supporting member while yet said supporting member and framing move relatively to each other under the action of said supporting springs.

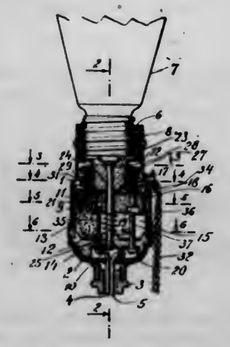
1,458,497. PROTECTOR FOR FOOTWEAR. CHARLES F. PERKINS, Lake View, Me., assignor of one-half to Mamie Reynolds Perkins, Lake View, Me. Filed Feb. 25, 1922. Serial No. 539,238. 1 Claim. (Cl. 36—63.)

In a protector for footwear, a sole member provided with apertured bottom recesses, an apertured washer fitting in each recess, a plug engaging the apertures of each recess and its related washer and having a lower flange, a headed top and a threaded opening, and a removable calk having a threaded shank engaging said threaded opening and a lower head abutting against said lower flange of the plug.



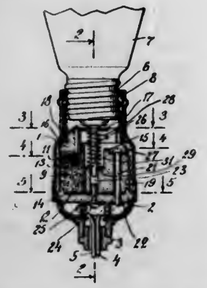
1,458,498. ROOF AND WALL CONSTRUCTION. PAUL M. PIEL, Lake Parlin, Me. Filed July 2, 1919. Serial No. 308,264. 4 Claims. (Cl. 108—23.)

1 In a roof the combination with a ridge pole and an eave structure, of a tension member attached to the ridge pole, and a plurality of rafters across which the



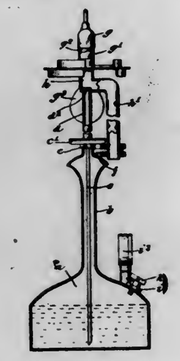
tension member extends and to which it is connected so that it is furthest from the ridge pole midway of its length, with the result that the tension member draws said rafters against the ridge pole.

1,458,499. POWER-TRANSMISSION DEVICE. JOSHUA C. PRATT, Framingham, Mass. Filed Apr. 9, 1921. Serial No. 460,056. 3 Claims. (Cl. 192—60.)



1. A hydraulic, power transmission device comprising a rotary casing, a plurality of cylinders fixed to the inner periphery of the casing and extending radially in an inward direction, each cylinder having a series of apertures formed adjacent its outer end, a sleeve embracing each cylinder and slidable longitudinally to vary the aperture of said openings, a concentric shaft having a crank portion, pistons slidable in the cylinders with piston rod connections to the crank portion, and means for simultaneously shifting the sleeves.

1,458,500. RHEOSTAT. FLORICEL A. ROJAS, New York, N. Y. Filed Nov. 18, 1921. Serial No. 516,134. 30 Claims. (Cl. 219—50.)

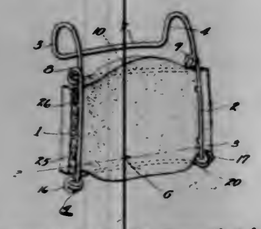


1. A rheostat comprising the combination of a movable member and compressible resistance material secured to said member, the conductivity of the resistance material immediately adjacent the member being normally greater than that of the rest of the material.

1,458,501. RHEOSTAT. FLORICEL A. ROJAS, New York, N. Y. Filed Nov. 18, 1921. Serial No. 516,135. 6 Claims. (Cl. 219—50.)

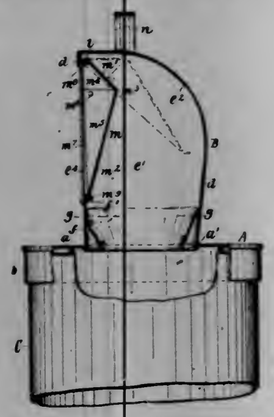
1. In an electric light socket designed to seat an attachment plug, the combination of a compressible resistance rheostat within the socket and forming a part thereof, and means for compressing the resistance material of the rheostat by means of the plug.

1,458,502. HYDROCARBON-VAPOR GENERATOR. WILLIAM RUFF, New York, N. Y. Filed July 25, 1919. Serial No. 313,337. 5 Claims. (Cl. 67—50.)



1. A hydrocarbon vapor generator embodying therein in combination, an oil supply tank, a burner, a vaporizer tube having a thin wall and a discharge opening therefrom, composed of an outer shell of a metal having high tensile strength, and an inner shell of aluminum, both of said shells having closed ends and an aluminum plug mounted in said closed end, said plug having a minute discharge opening therethrough communicating with the interior of the tube, said tube being so positioned as to be subjected to the radiant heat from the burner, means whereby an air cushion may be developed in said tank, and a pipe connection between said tank and said tube, whereby oil under pressure will be delivered to said tube.

1,458,503. BATHTUB HEAD CUSHION. DAVE SCHER, Tacoma, Wash., assignor of one-half to Jack Thielman, Tacoma, Wash. Filed June 20, 1921, Serial No. 478,853. Renewed Apr. 25, 1923. 3 Claims. (Cl. 4—2.)

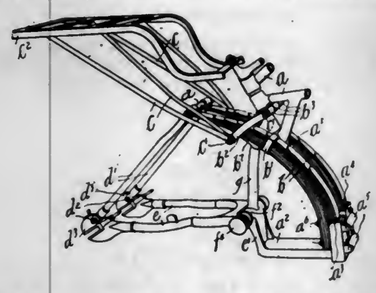


1. A device of the class described, comprising a supporting frame having hooks at its upper edge whereby the frame can be suspended within a tub from the edge thereof, a cushion removably applied to the frame and

a holding frame for the cushion having hinged connection at its upper end with the supporting frame and comprising side bars that are foldable over the side edges of the

cushion to cooperate with the supporting frame to clamp the cushion in functional position; said side bars having means at their lower ends adapted to be lockingly engaged with the supporting frame.

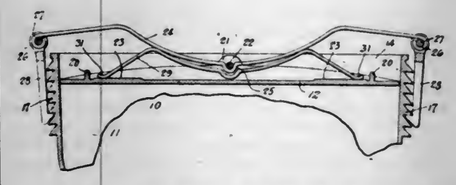
1,458,504. COVER DEVICE FOR BARRELS AND THE LIKE. PETER SMITH, Newark, N. J. Filed Nov. 5, 1921. Serial No. 513,123. 4 Claims. (Cl. 220—24.)



1. A sheet-metal cover device including, in combination, a base-plate having an aperture therein, and a cowl upstanding from the base-plate and having the major upper portion thereof rectangular in plan and the lower portion thereof funnel-shaped and fitted at its base to the aperture in the base-plate, said upper portion having a lateral opening approximating in width and height the width and height of said major upper portion of the cowl.

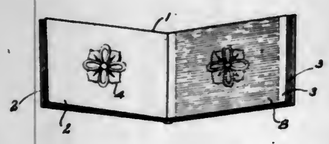
1,458,505. PLASTIC COMPOSITION FOR FILMS OR FILAMENTS FOR CINEMATOGRAPHIC AND OTHER INDUSTRIAL PURPOSES. WALTER JAMES STEVENSON, London, England. Filed Apr. 2, 1921. Serial No. 458,048. 2 Claims. (Cl. 106—40.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. A non-inflammable film consisting of acetyl cellulose and equal amounts of triacetine and triphenylphosphate in the proportion of from 10 to 30% of the weight of acetyl cellulose.



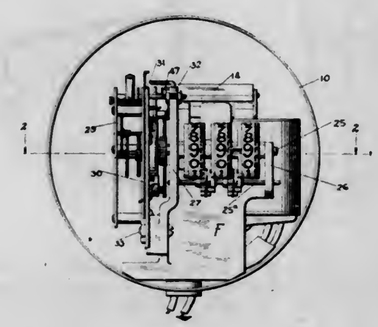
1,458,506. SPRING SUSPENSION FOR MOTOR CYCLES. MAURICE THOMAS GEORGE WESSON, Richmond, Melbourne, Victoria, Australia. Filed Mar. 9, 1922. Serial No. 542,240. 5 Claims. (Cl. 208—97.)

1. In a motor and similar cycles, a horizontal frame bar, a part depending therefrom, a cradle member at the lower end of the depending part, stay bars pivotally connected at corresponding ends to the rear end of the cradle and adapted at their other ends to receive the axle of a wheel, forks pivotally connected at correspond-



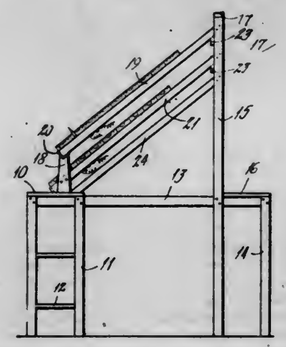
ing ends to the free ends of the stay bars, and springs fixed at one end in the front end of the cradle member and at their other ends pivotally connected to the other ends of the said forks.

1,458,507. MEAT-LOAF COOKER. HANS ADELMANN, New York, N. Y., assignor to Ham Boiler Corp., New York, N. Y., a Corporation of New York. Filed May 24, 1921. Serial No. 472,119. 3 Claims. (Cl. 100—57.)



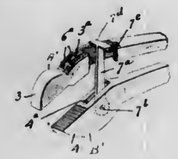
1. In a meat loaf cooker, the combination with a body and a cover therefor movable within the top of the body and having a flat inner surface, of means to lock the cover in position with respect to the body, said cover having a transverse pivot pin carried thereby, said locking means including a hanger of spring metal provided with a central bend having free pivotal embracing engagement with said pin, and members extending from the end portions of the hanger for engagement with the ends of the body.

1,458,508. CLAY-MODELING BOOK. JANET R. AIKEN, Branchville, Conn. Filed July 28, 1922. Serial No. 578,160. 2 Claims. (Cl. 25—12.)



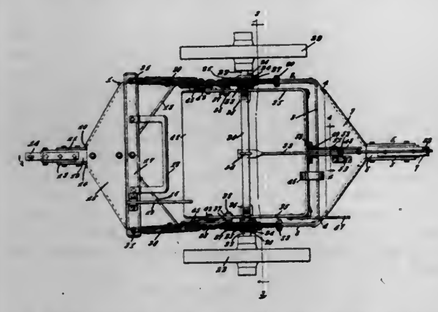
1. A book for use in clay modeling work, which book comprises sets of pages each of which sets when open has a left hand illustrative page and a right hand work page, the left hand illustrative page having thereupon a full representation of an object to be modeled in bas-relief on the opposite work page, which work page has thereupon an outline which is an exact replica of the outlines of the design appearing on the opposite illustrative page, the work surface of the work page also being coated with paraffin to serve as a protective coating.

1,458,509. REGISTERING MECHANISM. WILLIAM ARTHUR, New Haven, Conn. Filed Mar. 27, 1920. Serial No. 369,226. 9 Claims. (Cl. 235—91.)



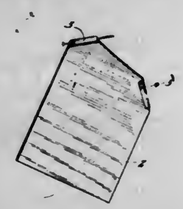
1. A registering mechanism for determining the efficiency of motormen, comprising a clock mechanism having a balance wheel, an electromagnet in circuit with the motor controller, so as to be energized whenever the power is applied, a pivoted armature cooperating with said electromagnet, and a swinging arm mounted independently of the armature but engaged directly by a part thereof, for engaging the balance wheel of the clock to start and stop the clock at the beginning and end respectively of the power period.

1,458,510. VENDING RACK. WILLIAM J. ASHTON, Dallas, Tex. Filed Mar. 20, 1922. Serial No. 544,983. 1 Claim. (Cl. 211—14.)



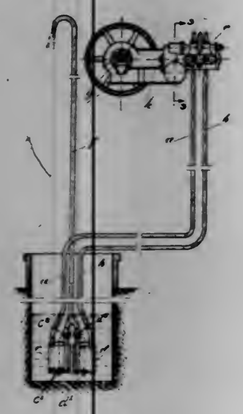
A vending rack comprising a frame structure including a counter and a rear support spaced from and extending above said counter and an elevated platform behind said support, a plurality of short standards mounted on said counter, an inclined display board having its upper end secured to said rear support and its lower end supported by the said standards, said board having a series of parallel longitudinal grooves, each having a curvature for snugly receiving a plurality of cylindrical articles in superposed order, and an arcuate guard adjacent the lower end of each groove in position to overhang the next to the lowermost article, said guard having means holding a price tag in juxtaposition to the articles in said groove.

1,458,511. COMBINATION TOOL. ADOLPH BANGERT, Union Hill, N. J. Filed Sept. 20, 1921. Serial No. 501,973. 2 Claims. (Cl. 7—4.)



1. In a wrench, a cam-shaped slotted jaw having two sets of teeth along the edges of said jaw, a second jaw having a groove, and a bail in form of a lever fulcrumed in said groove and adapted to project through a slot of the first-named jaw, the free end of said lever being broadened and formed with a knife edge to cooperate with said two sets of teeth in the adjustment of said jaws relative to one another.

1,458,512. WHEEL SCRAPER. FITCH H. BEACH and FRED S. BEACH, Charlotte, Mich. Filed Dec. 13, 1922. Serial No. 606,724. 4 Claims. (Cl. 37—134.)

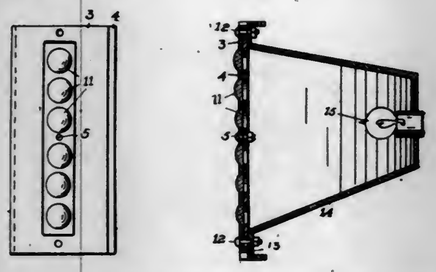


1. In a device of the class described, an arched axle; wheels carried thereby; a frame extended forwardly and rearwardly of the axle; a crank on the axle; a radius arm pivoted to the crank; a flexible member connected to the frame in front of the axle and to the rear thereof, the flexible member extending across the radius arm and including a retractile spring; an operating member connected to the arched portion of the axle; a scoop; and means for suspending the scoop and the frame from the operating member.

1,458,513. METHOD OF PRODUCING ARTIFICIAL FLOWER PETALS. ELLEN W. BELL, Los Angeles, Calif. Filed Jan. 23, 1922. Serial No. 531,125. 2 Claims. (Cl. 41—13.)

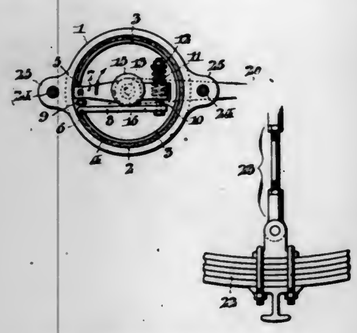
1. The method of producing artificial flower petals which comprises: forming a blank of sized fabric; rolling a corner of said blank while the same is wet; and then drying the petal.

1,458,514. COMPRESSED-AIR WATER ELEVATOR. VITTORIO BETTELONI, Florence, Italy. Filed Oct. 22, 1920. Serial No. 418,779. 1 Claim. (Cl. 103—240.)



A liquid raising apparatus, comprising in combination, an air compressor, a pair of receptacles having valve-controlled inlets for admission of the liquid to be raised, a distributing chest between the compressor and said receptacles for alternately causing the air to be exhausted from one receptacle and compressed in the other and vice versa, said chest having a chamber in communication with each of the receptacles, a double piston axially slidable in said chest for opening one of said chambers to compression and the other to exhaustion during a part of the operation of the compressor, and reversing such action during the remainder of said operation, and a cam operated by the compressor for reciprocating said double piston.

1,458,515. COIN ASSORTER. JOHN WARD BORING and GEORGE ANDY WAGONER, Gibsonville, N. C. Filed July 16, 1921. Serial No. 485,253. 7 Claims. (Cl. 133—3.)

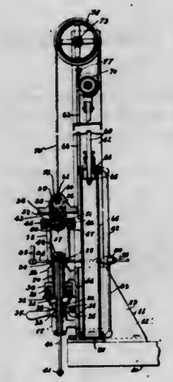


1. An assorting apparatus for coins and the like including in combination a coin receiving tray, an inclined chute communicating with said tray, an inclined holder adjacent said chute, a plurality of coin assorting devices detachably positioned upon said holder and receptacles for the assorted coins.

1,458,516. SIGN. JAMES C. BOYD, Pitcairn, Pa. Filed Sept. 14, 1922. Serial No. 588,233. 1 Claim. (Cl. 40—133.)

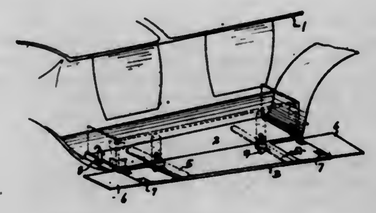
A device for the purpose set forth comprising a lamp casing provided with a flange, a lamp mounted in said casing, a plurality of plates detachably secured to said flange, each of said plates consisting of a pair of apertured metal sheets secured together one in advance of the other, said apertures in each plate arranged to designate a digit, a lens clamped in each of said apertures, the lenses of one of said plates being of a color different relatively to the color of the lenses mounted in an adjacent plate substantially as described.

1,458,517. SHOCK-ABSORBING DEVICE. EDMUND S. BRADFIELD, Media, Pa. Filed June 5, 1920. Serial No. 386,762. 4 Claims. (Cl. 188—130.)



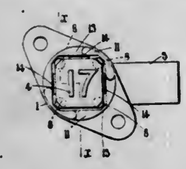
1. A shock absorbing device comprising a casing, a split expansible friction band in said casing, and variably adjustable connections operating between the free ends of said band for moving the same around the casing, one of said connections including a resilient element and exerting pushing pressure on said band when moved in either direction, while the other exerts a pressure on said band when moving one way only.

1,458,518. GLASS-TUBE SPINNING AND DRAWING APPARATUS. LOUIS N. BRUNER, New York, and SIMON D. OLSEN, Brooklyn, N. Y. Filed June 9, 1920. Serial No. 387,638. 11 Claims. (Cl. 49—17.1.)



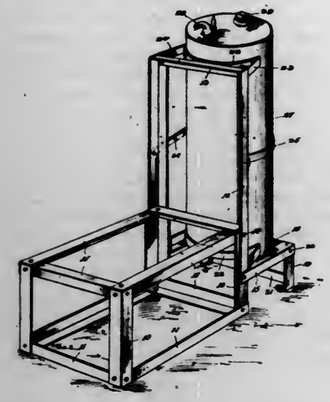
10. In combination, a rotatable spindle; a manual shift lever having a handle for controlling the rotation of said spindle; a mold on the upper end thereof; a lower draw head in the mold; a traveling draw head rotatably mounted in the upper end of the mold; a cylinder having a piston and piston rod; a flexible means passing from said piston rod to said traveling draw head; a four-way valve; a pressure feed pipe leading thereto; branch pipes

leading from said valve to opposite ends of the cylinder; a control rod for said valve whereby pressure medium can be directed to either end of the cylinder thereby to



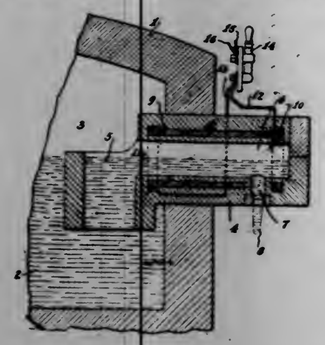
reciprocate the piston and raise the lower said traveling head; and a handle on said control rod and disposed over said handle of the shift lever.

1,458,519. COLLAPSIBLE RUNNING BOARD FOR MOTOR VEHICLES. JOHN C. CALHOUN, Houston, Tex. Filed Apr. 19, 1921. Serial No. 462,534. 1 Claim. (Cl. 224—29.)



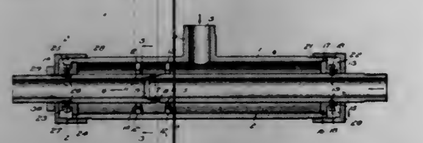
The combination with an automobile running board, of an extension board, hinges connecting the extension board to the outer edge of the running board, said hinges permitting the extension board to lie in coinciding position on the running board or to stand vertical relative thereto, shoulders carried by the hinges, said shoulders abutting when the extension board is extended into a common plane with the running board so as to support the extension board in the last mentioned position, said extension board having countersunk end sections, extensible ends hinged to the ends of the extension board, said ends being foldable into said countersunk sections and being adapted to stand vertical relative to the running board when said extension is in vertical position and to lie in said countersunk sections between the extension board and running board when the extension board is folded into coinciding position relative to the running board, said extensible ends being adapted to be extended out each way into a common plane with the extension board when said extension board is in extended position relative to the running board, the hinged ends of said end boards abutting against the adjacent ends of the extension board when said boards are in extended position and holding said end boards in said extended position, and holders adapted to engage with said ends to hold the ends and extension board in vertical position and also adapted to engage with the ends of the collapsed structure to hold the same in collapsed position.

1,458,520. LOCK. JAMES HARRY CASTELL, Westminster, London, England. Filed Aug. 18, 1922. Serial No. 582,768. 19 Claims. (Cl. 70—47.)



1. A lock comprising a case, a rotatable key pin mounted in said case, a key shaped to fit over and engage said pin, wards on said key pin and key, in the form of cameo and intaglio letters numerals or signs, and a spring controlled locking device operating between the key pin and the case and adapted to be released by the insertion of the key into the case.

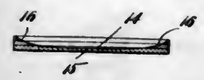
1,458,521. TANK STAND. JOHN L. CASTILE, Boone, Iowa. Filed Aug. 8, 1921. Serial No. 490,624. 1 Claim. (Cl. 248—56.)



In a stand of the class described, a base constructed of angle iron comprising corner posts transverse and longitudinal bars rigidly secured together at the corners; a cradle similarly constructed of angle iron comprising two longitudinal bars and one transverse bar rigidly secured at one end of the cradle in such a manner that it substantially coincides with the corresponding end of the base when the cradle is in a lowered position, the other end of the cradle being open; the flanges of the cradle bars being so situated that they rest upon and embrace three sides of the top in said position; journals for the cradle at the other end of said base, the open end of the cradle extending beyond the end of the base, a shelf positioned perpendicularly to the side bars of the cradle at the open end thereof, said shelf including side runners of angle iron and a transverse runner rigidly connecting said side runners, the side flanges of said side runners being secured to the open ends of the cradle bars and the inward flanges having their ends bent to form ledges and an arcuate tank support having legs with transverse feet resting upon the ledges and rigidly connected therewith, a second arcuate support at the closed end of said cradle similarly secured to the bars of the cradle, holding down means for a tank on said cradle and hinged legs at the free end of said shelf for supporting the cradle in upright position.

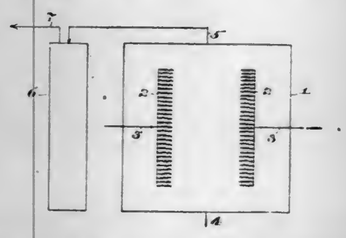
1,458,522. FEED TROUGH FOR GLASS FURNACES. WALTER G. CLARK, New York, N. Y. Filed May 27, 1920. Serial No. 384,654. 7 Claims. (Cl. 49—55.)

7. In combination, a furnace; a feed trough therefor comprising a horizontal portion having a closed outer end wall and a downwardly opening port near its outer end and having at the inner end an upflowing glass feed trough consisting of a riser chamber open at both ends and extending somewhat above the axis of the housing through which the glass rises upwardly from below its level within said chamber; an electric-resistance heating means associated with said trough and completely embedded in the walls thereof and extending substantially from end to end of the horizontal portion whereby to melt the glass within said trough; a second heating means comprising electrodes in communication with the interior of the trough at opposite ends thereof, whereby the glass may be maintained in molten state by passing a heating current through the molten glass; and a pair of controllable electric current supply means whereby current may be supplied at will to said resistance heating means or said second means or both.



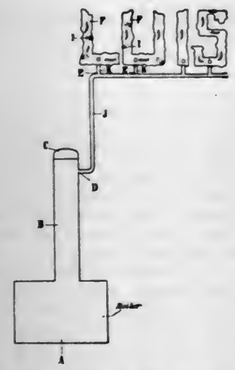
1,458,523. EJECTOR. BENONI L. COUTANT, Jacksonville, Fla. Filed Nov. 30, 1921. Serial No. 518,910. 8 Claims. (Cl. 162—1.)

1. An ejector including a casing formed of a cylindrical sleeve having internal and external screw-threaded ends, closure devices for the ends of said sleeve, each of said devices comprising a flanged collar secured within the internal threads of the sleeve and a cap secured upon the external threaded portions of said sleeve, packing material interposed between said collar and cap, and cooperating cylindrical ejecting nozzles arranged within said sleeve and supported by the closure devices.



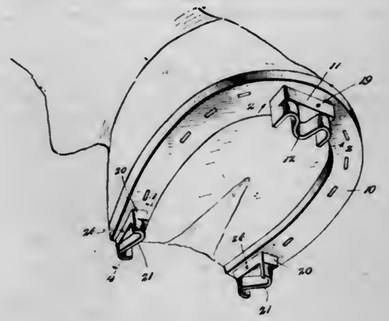
1,458,524. PROCESS OF MAKING SHOE-HEEL BASES. OTIS T. CRAFTS, Manchester, N. H. Filed Feb. 25, 1922. Serial No. 539,408. 1 Claim. (Cl. 12—147.)

The improved process of making heel bases, which consists in building an individual blank, of a plurality of layers, the combined height of said layers being oversize with regard to the thickness of the finished heel base, then skiving the blank to remove surplus height and simultaneously form a plane skived surface to which a rubber heel may be attached, and to also form a plane surface on which the blank may be supported in a gouging machine, and then gouging the blank to form a con-



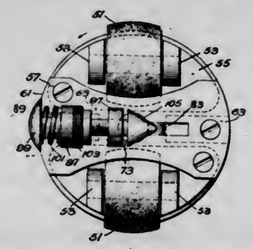
cave surface to fit the shoe heel, whereby successive heel bases of uniform height and of desired concavity on the heel seat attaching surface with a plane opposite surface are provided.

1,458,525. PROCESS FOR FIXATION OF ATMOSPHERIC NITROGEN. FARRINGTON DANIELS, East Falls Church, Va., and OLIVER R. WULF, Norwich, Conn. Filed May 12, 1919. Serial No. 296,542. 5 Claims. (Cl. 204—31.)



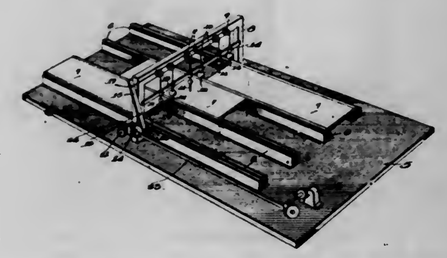
1. The process of making an oxygen compound of nitrogen, which consists in subjecting an intimate mixture of oxygen and nitrogen to the action of a discharge between electrodes of opposite polarity in an oscillatory electric circuit having a frequency between 10,000 and 100,000 cycles and a voltage between 10,000 and 100,000 volts, while maintaining a space between said electrodes substantially in excess of the "sparking distance" therebetween under such conditions and sufficient to produce disappearing streamers between said electrodes.

1,458,526. FLAMING ADVERTISEMENT. JOSÉ DE ELORZA, Madrid, Spain. Filed Feb. 13, 1922. Serial No. 536,326. 1 Claim. (Cl. 40—126.)



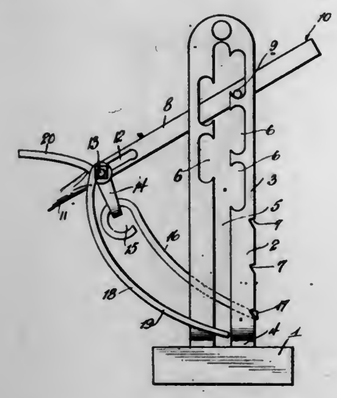
Improvements in advertising signs, comprising the combination of hollow letters of burnished glass, means for illuminating the interior with varying intensity, the various letters having the form of a log of wood, and being provided with orifices for the escape of steam, to simulate smoke issuing from the whole, forming a flaming advertisement.

1,458,527. HORSESHOE CALK. JACOB DINKELACKER, Hazleton, Pa. Filed July 21, 1921. Serial No. 486,337. 6 Claims. (Cl. 168—40.)



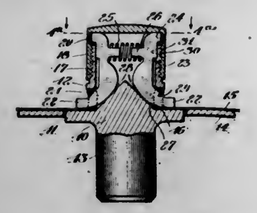
1. In a device of the character described, a shoe stud, a calk fitting the stud, a key extending within the calk coacting with the stud locking the calk thereto, and means upon the calk bending the key whereby to lock the key against displacement.

1,458,528. GRINDING MACHINE. VICTOR J. EMERY, Wollaston, Mass. Filed Jan. 14, 1922. Serial No. 529,375. 31 Claims. (Cl. 51—91.)



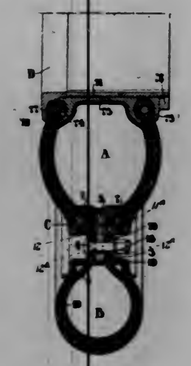
1. A grinding head comprising a centric group of abrading elements and incrementally movable means for expanding the group comprising a feeler governed by the portion of the work acted on by the abrading elements.

1,458,529. TESTING APPARATUS. CLAUDE RAYMOND HILL, Midland, Mich. Filed Apr. 13, 1920. Serial No. 373,672. 7 Claims. (Cl. 73—51.)



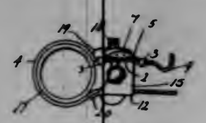
1. The combination of a plurality of sliding plates for carrying the material on test, propulsion means for said plates, a series of weighted needles disposed transversely of the plates, and automatic means for moving said needles into engagement with the material on the plates at regular intervals.

1,458,530. LIFTING JACK. DAVID F. HILTON, Dennison, Ohio. Filed Dec. 12, 1919. Serial No. 344,491. 1 Claim. (Cl. 254—130.)



A lifting jack comprising an upright, a lifting lever adapted to fulcrum thereon, a pivot member on said lever, a link fastened to the lever by said pivot member, a lever-fastening latch pivoted to said member and engageable with the upright, a lifting lever for the latch pivoted on said member and movable relatively to the link, the upper end portion of the latch-lifting lever extending above the operating end of the first lever to facilitate manipulation, and the other end portion of the latch-lifting lever being adapted to directly engage said latch to unfasten it, and the latter end portion being normally disengaged from said latch.

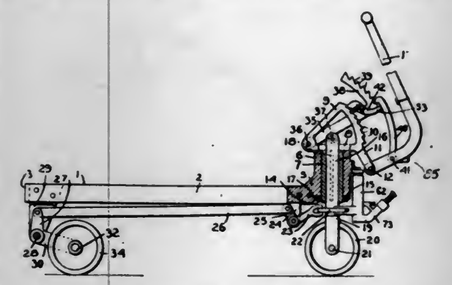
1,458,531. RECORDING INSTRUMENT. EDWIN HODGKINSON, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed June 2, 1921. Serial No. 474,378. 8 Claims. (Cl. 243—1.)



1. In a recording instrument, a device for holding a record sheet on the instrument comprising a support having a hollow post portion for insertion through an opening in the sheet and a laterally extending clamping flange at the base of said post portion, said post portion being formed with lateral openings in its walls adjacent said flange, holding means in said post portion having a sliding movement longitudinally thereof and through said openings therein for cooperation with said flange to clamp and release a sheet, a member adjustable on said post portion, and co-operating means on said member and support for effecting said movements of said holding means upon adjustment of said member.

1,458,532. WHEEL AND TIRE FOR ROAD VEHICLES. FREDERICK WILLIAM LANCHESTER, London, England. Filed June 10, 1919. Serial No. 303,163. 6 Claims. (Cl. 152—33.)

1. In a radially and laterally resilient wheel, a pneumatic sub-tire, a peripheral tire proper, a floating rim between the said tires comprising two side members provided with clinches for the outer edges of the sub-tire and adapted to position and hold the tire proper, a packing ring in the middle plane of the wheel between the two side members and provided with counter clinches for the outer edges of the sub-tire, and bolts passing transversely through the three said parts for fastening them in fixed relationship.

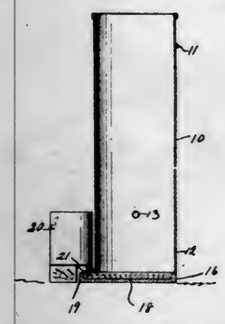


1,458,533. GROUND CLAMP. GEORGE LIPSCHUTZ, Philadelphia, Pa. Filed Apr. 26, 1921. Serial No. 464,642. 3 Claims. (Cl. 173—273.)

2. In a device of the character described, a fulcrum plate, a pair of attaching lugs formed at each side of said plate, a wing between each pair of attaching lugs, arcuate recesses formed in said wings, projections formed by the metal pressed from the wings to produce said recesses, a flexible band having a loop at one end and provided with a series of holes at its other end, said band having the fulcrumed plate secured thereto adjacent the looped end thereof, a tightening member consisting of a wall having an opening therethrough, a pair of parallel arms projecting at right angles therefrom, the outer ends of said arms being arcuate in shape and the inner edges thereof approximately aligning with the center of the opening through the wall, said tightening member straddling the flexible band with the arms in registration with the arcuate recesses in the fulcrum plate, a screw passing through the tightening member, both ends of the flexible band and the fulcrum plate and a nut threaded on said screw and resting between the projections on the fulcrum plate.

1,458,534. ELEVATING TRUCK. RALPH M. LOVEJOY, Meredith, N. H., assignor to Lewis-Shepard Company, South Boston, Mass., a Corporation of Massachusetts. Filed Mar. 1, 1919. Serial No. 280,030. 18 Claims. (Cl. 254—2.)

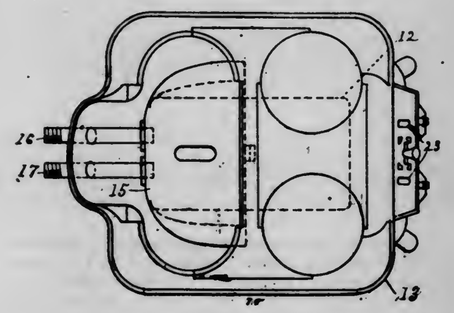
1. In an elevating truck comprising wheels and load supporting means, means for elevating said load supporting means relatively to said wheels including an elevating lever, a handle, interengaging members connecting said handle and lever operable when the handle is moved in one direction to actuate said elevating lever, locking means for holding the load supporting means in



elevated position including a dog pivotally mounted upon said elevating lever and a co-operating member, and means operable by movement of the handle in the opposite direction to release said dog from its engagement with said co-operating locking member.

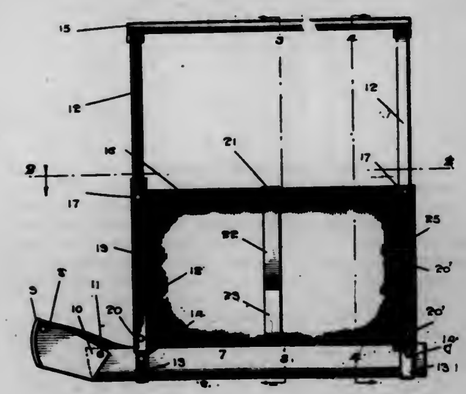
1,458,535. BOTTLE CAP. ALEXANDER MELDRUM, Syracuse, N. Y., assignor to The Smith-Lee Company, Oneida, N. Y., a Partnership composed of Wilbert L. Smith, Huribut W. Smith, and the estate of M. C. Smith. Filed July 19, 1921. Serial No. 485,853. 3 Claims. (Cl. 215—51.)

1. A bottle cap comprising a disk of paper board having a wire "pull," said wire being in the form of a loop having its ends passing through the disk within and near the margin thereof from the upper side to the lower side and again passing through from the lower side to the upper side, the extreme ends being folded against the upper face of the cap.



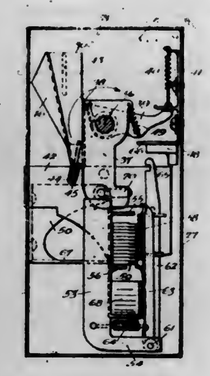
1,458,536. HEATER FOR BURNING PETROLEUM COKE. BANKS L. MILLER, San Juan, Tex. Filed Oct. 11, 1922. Serial No. 593,744. 5 Claims. (Cl. 126—59.5.)

1. A heater comprising a hollow body, and a grate disposed in the lower end of the body and having a



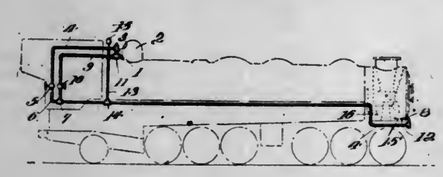
downwardly extending rib forming the base upon which the body and grate rest, said rib being hollowed out to form a trough for containing the fuel oil.

1,458,537. LAUNDRY STOVE. JOHN H. MILLER and GEORGE POHL, Plymouth, Ind., assignors to Keystone Foundry Company, Plymouth, Ind., a Corporation of Indiana. Filed May 25, 1922. Serial No. 563,479. 15 Claims. (Cl. 126—34.)



1. In combination, in a stove, a fire pot, a top, sides sloping outward and upward from the pot to the top, there being a smoke outlet in the rear of the stove top, and a deflector-plate between the pot and the smoke outlet, the front of said deflector-plate forming an arch having its ends resting on the sloping sides and its center supporting the stove top.

1,458,538. BOLL-WEEVIL TRAP. LESTER LEE MOORE, Winder, Ga. Filed June 15, 1922. Serial No. 568,615. 3 Claims. (Cl. 43—133.)



3. A portable trap adapted to be moved along plants comprising a longitudinal pan having inclined side walls, means for agitating the plants over said pan, and a guard wire within said pan having its front and rear ends secured to the pan near the front and rear ends of the pan, the portion of the wire between its ends being of zig-zag form with its bends seating on said walls of the pan to support the intermediate portion of the wire and to prevent the plants from dragging in the pan.

1,458,539. LOCK. RICHARD S. MURRELL, Columbus, Ohio, assignor of one-third to Clarence W. Shigley, Columbus, Ohio. Filed Oct. 8, 1920. Serial No. 415,543. 7 Claims. (Cl. 194—4.)

2. In a lock, a bolt, manually actuated means for shifting the bolt to locked and released positions, a single bolt locking member movable into and out of effective position for securing the bolt in the locked position of the latter, a series of selectively operable tumblers lockingly engageable with the bolt securing member when the latter is in effective position, and a series of successively operable tumbler controlling members individually dischargeable from and insertable within the lock, having differently positioned tumbler engaging and shifting means for the purpose described.

1,458,540. LOCOMOTIVE COMBUSTION REGULATOR. EDMUND T. D. MYERS, Jr., Richmond, Va. Filed Dec. 1, 1921. Serial No. 519,117. 7 Claims. (Cl. 110—150.)

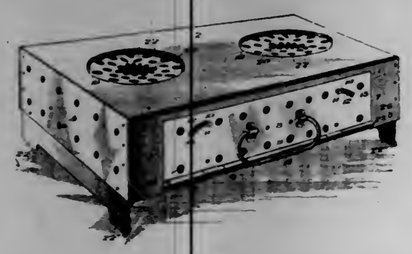
1. In a locomotive combustion regulator, the combination with a source of boiler pressure, the usual pop-valve, means operating at a pressure less than the discharge pressure of the main pop-valve for discharging steam from said source of boiler pressure into the smoke-box in opposition to the incoming draft from the firebox whereby to abate the draft by the velocity of the steam discharge as well as by the reduction of the vacuum in the smoke-box due to the expansion of the steam.

1,458,541. DISPLAY RECEPTACLE. PETER J. NAGLE, Rochester, N. Y., assignor to Flower City Specialty Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 12, 1920. Serial No. 416,434. 2 Claims. (Cl. 206—44.)

1. A display cover comprising two layers, one superimposed upon the other and said layers having registering openings, strips arranged along opposite edges of one of the layers and adhesively secured to one side of

the other layer, a transparent sheet loosely arranged between the layers and between the strips, and means for

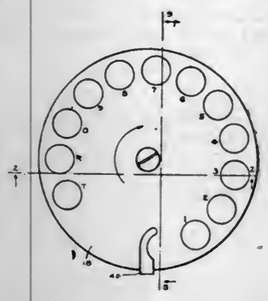
securing the two layers together so that the transparent sheet may be readily inserted between or removed from a position between the layers.



1,458,542. PROCESS FOR THE MANUFACTURE OF DISPERSOIDS. HERMANN PLAUSON, Hamburg, Germany. Filed Jan. 13, 1921. Serial No. 437,117. 7 Claims. (Cl. 252.)

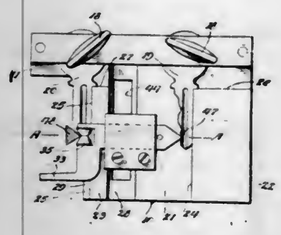
1. A process for the production of colloidal dispersions which consists in subjecting the substance to be dispersed and a liquid dispersion medium to intensive mechanical disintegration under the following conditions, viz (a) employing a peripheral speed of not less than 2,000 metres per minute, (b) using a liquid which is not a good electrolyte, and (c) using a mixture in which the total quantity of liquid comprises at least 70% of the mixture.

1,458,543. CONDENSATION PRODUCT AND METHOD OF MAKING SAME. FRITZ POLLAK, Vienna, Austria. Filed Jan. 10, 1922. Serial No. 528,339. 10 Claims. (Cl. 260—3.)



1. The process herein described for manufacturing condensation products which consists in reacting on a urea with formaldehyde in presence of a base, the formaldehyde being present in a smaller proportion than would correspond to 3 molecules of formaldehyde to 1 molecule of the urea, and heating the mixture until there is effected the formation of an easily gelatinizing liquid initial condensation product capable of transformation into a hard insoluble final product.

1,458,544. PORTABLE STOVE. ISAAC C. POPPER, New York, N. Y., assignor to The Theroz Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 29, 1919. Serial No. 320,610. 2 Claims. (Cl. 126—38.)

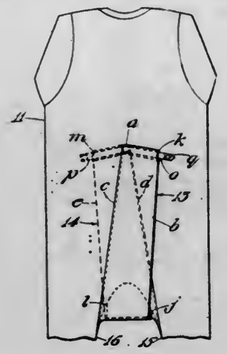


1. A stove comprising a top, a bottom, front, perforated back and ends, the front having an opening and a perforated door hinged at one edge thereof, means for fastening the door when closed, the top having a depressed opening with surrounding perforations through which the flame from the burner passes, and the bottom, having a hole immediately below the opening to receive, center, and hold the burner.

1,458,545. IMPULSE TRANSMITTER. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed June 13, 1919. Serial No. 303,899. 16 Claims. (Cl. 179—90.)

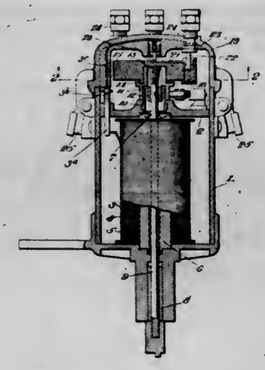
1. In an impulse transmitter, a manually adjustable device arranged to rotate forward and back to effect the transmission of impulses, a commutator and a circuit closing device cooperating therewith, and means actuated by said manually adjustable device for causing said commutator to make one complete revolution and only one for any setting of said device.

1,458,546. GAUGE FOR DUPLICATING KEYS. HENRY C. RAHMOELLER, St. Charles, Mo. Filed Apr. 12, 1922. Serial No. 551,979. 3 Claims. (Cl. 29—76.)



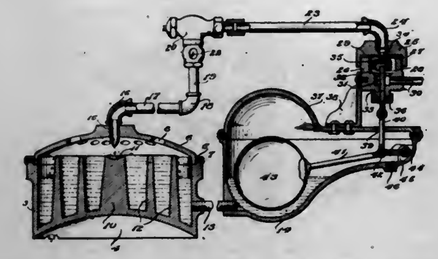
1. A key duplicating device, comprising a housing, longitudinal abutments in said housing adapted to receive a key pattern and a blank in parallel relation to each other, clamps for rigidly holding the pattern and the blank in such relation, a guide being formed in said housing running parallel to the longitudinal abutments, a gauge member having a pattern engaging edge, a bearing for said gauge member permitting reciprocation thereof relatively to said lateral abutments, and means for adjustably securing said bearing in said guide, a pair of rollers on said gauge member adjacent the abutments for the blank, adapted to limit the cutting action of a tool, said rollers having grooves situated in a plane running through said edge and a straight line connecting the bottoms of said grooves running parallel to said edge.

1,458,547. UNDERGARMENT. WILLIAM B. ROOD, Ware, Mass., assignor to Otis Company, Ware, Mass., a Corporation of Massachusetts. Filed May 11, 1921. Serial No. 468,514. 7 Claims. (Cl. 126—113.)



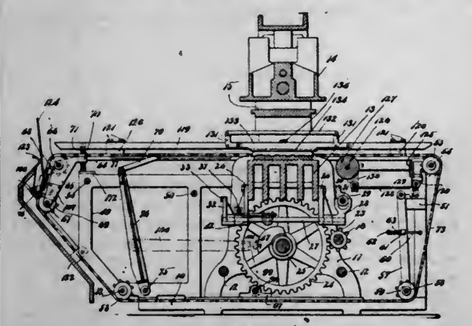
1. An improved union undergarment comprising a body portion and inner and outer seat pieces, one longitudinal

edge of each of said seat pieces being secured to the body of the garment and the other longitudinal edges of said seat pieces being free to form inner and outer



edges of a seat opening, both of said seat pieces being free along their upper edges and supported in such manner that the upper ends of said seat pieces are both laterally slidable.

1,458,548. IGNITER. RUDOLF ROSNER, Chicago, Ill., assignor, by mesne assignments, to Simplex Ignition Corporation, Chicago, Ill., a Corporation of Delaware. Continuation filed after grant of patent of application Serial No. 230,429, filed Apr. 24, 1918. Patent No. 1,332,758, dated Mar. 2, 1920. This application filed May 1, 1920. Serial No. 378,338. 3 Claims. (Cl. 123—148.)

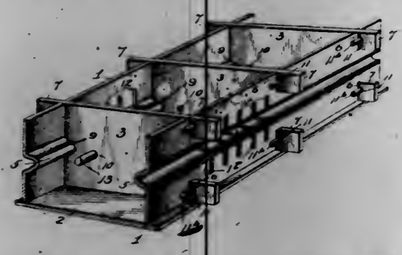


1. In an igniter, a distributer, an operating shaft therefor, a source of high potential current, a casing housing said source, distributer and shaft, a cover for said casing, a series of conducting plugs traversing said cover and arranged in a circle concentric with said shaft, a central contact on the interior of said cover in line with said shaft, said distributor having an arm driven by said shaft engaging said central contact and traveling over the interior ends of said plugs, a contact on the interior of said cover outside said circle, a terminal of said source mounted in said casing in position to engage said last-named contact, said terminal and contact being spring-pressed toward one another when said cover is in place, and a connection from said last-named contact to said central contact.

1,458,549. AIR MOISTENER. CLARENCE E. SALLADA, Huron, S. Dak. Filed Aug. 10, 1922. Serial No. 580,951. 4 Claims. (Cl. 126—113.)

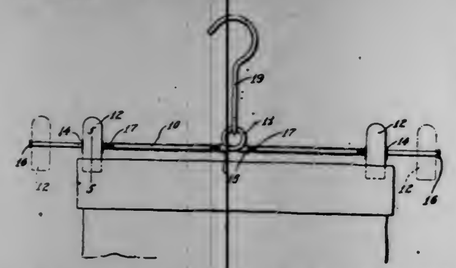
1. An air-moistening attachment for hot-air furnaces comprising a vaporizing pan constructed to rest upon the top of the furnace, a cover for the pan having outlet openings therethrough, means exterior to the furnace and its casing for supplying water through the cover to the pan, means within the pan to retard the flow of water therethrough, and means leading from the pan to the exterior of the furnace for carrying off excess water.

1,458,550. LEATHER-CUTTING MACHINE. CHARLES ADRIAN SAWYER, Jr., Newton, Mass. Filed Apr. 9, 1921. Serial No. 460,116. 5 Claims. (Cl. 164—21.)



1. An improved leather working machine, comprising a work table, a cutter head, means for reciprocating said cutter head toward and from the work table, an endless belt feeding means, a plurality of cross bars spaced along the length of said endless belt, material gripping devices attached to said cross bars, and means for moving said cross bars and gripping devices successively into position with respect to said work table and cutter head.

1,458,551. METAL MOLD FOR CONCRETE BLOCKS. WOODFORD O. SEAT, Nashville, Tenn., assignor of one-half to John Nichols, Nashville, Tenn. Filed Mar. 20, 1920. Serial No. 367,389. 3 Claims. (Cl. 25—121.)

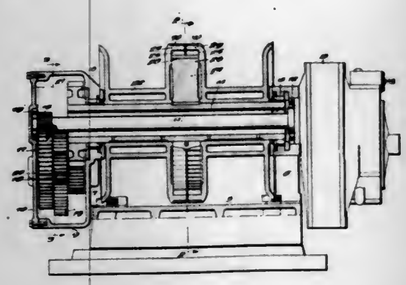


3. The combination with a pallet and a mold formed of side and division plates, with the latter substantially perpendicular to the side plates and dividing the mold into a plurality of molding chambers, of face molding strips separate from the pallet and from the side and division plates of the mold and having edge portions shaped to receive and sustain the side plates of the mold in elevated spaced relation to the pallet, and other face-molding strips separate from the pallet and adapted to be supported thereby and underlie and support the division plates of the mold in elevated spaced relation to the pallet, and means for connecting the ends of the division plates out-

side the side plates and above the face-molding strips, whereby blocks formed in the molds supported by the

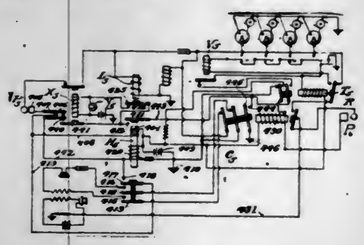
face-molding strips are of greater thickness from the front to the rear than blocks formed in a mold consisting solely of side and division plates.

1,458,552. GARMENT HANGER. PARKE E. SHEE, Lancaster, Pa., assignor of one-half to Edward I. Noble, Lancaster, Pa. Filed Mar. 31, 1922. Serial No. 548,407. 2 Claims. (Cl. 223—19.



1. A garment hanger comprising an integral bar member centrally bent and having its portions on opposite sides of the bend crossing and extending in opposite directions to form a closed loop, a supporting hook loosely engaging said loop, clasps each formed of a pair of spring jaws, rivets holding together said jaws and serving as bearings therefor, said bar passing through the rivets, springs on said bar tending to move the clasps outwardly toward the ends of the bar, the bar having upset ends to limit the movement of the clasps and abutment means on said bar adjacent said loop for the inner ends of said spring.

1,458,553. BELT. FRED C. SHIPPS, Coshocton, Ohio. Filed May 5, 1921. Serial No. 467,151. 3 Claims. (Cl. 74—66.)

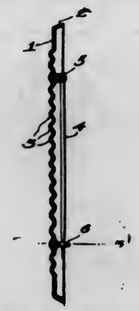


1. A belt consisting of a strip of twisted material perforated at one end and doubled upon itself midway its ends, the perforated end of the strip being inserted through the bight produced by doubling the strip and the free end of the strip being passed through the perforated end thereof and doubled upon itself and having its free portion intertwisted with the adjacent portion of the belt, the ends of the strip lying at opposite sides of the bight thereof.

1,458,554. REVERSIBLE DRUMS. ARTHUR H. SKAER, THEODORE E. BARKER, and OMAR E. CLARK, Denver, Colo., assignors to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Sept. 12, 1922. Serial No. 587,803. 3 Claims. (Cl. 254—185.)

1. The combination with a pair of oppositely rotatable driven members, of a driving member common thereto and rotatable in opposite directions, and a clutch member movable with the driving member and pivoted thereon on an axis that is parallel to the axis of rotation of the driving member, said clutch member being movable to a position to connect one or the other of the driven members to the driving member accordingly as the latter is moved in one direction or the other.

1,458,555. TELEPHONE SYSTEM. FRANK M. SLOUGH, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Original application filed Oct. 14, 1914, Serial No. 866,583. Patent No. 1,407,892, dated Feb. 28, 1922. Divided and this application filed Dec. 11, 1917. Serial No. 206,576. 4 Claims. (Cl. 179—58.)

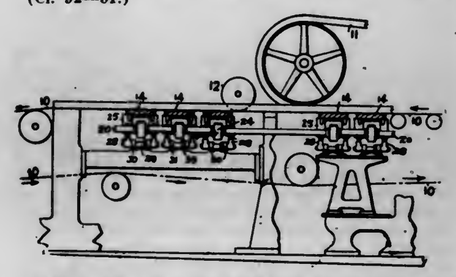


1. In a telephone system, the combination of a telephone line, a telephone line interconnecting mechanism including talking strands, two operator's sets, means to connect each set to said telephone line, apparatus to prevent the contemporaneous connection of said sets to said lines including a magnet double-wound with one relatively high and one relatively low resistance winding and a shunt of the high resistance winding controlled by said magnet, and a circuit for said magnet including a portion of one of said talking strands.

1,458,556. MATCH SCRATCHER. CHARLES S. SMITH, Providence, R. I. Filed Feb. 23, 1922. Serial No. 538,429. 2 Claims. (Cl. 44—48.)

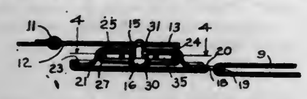
1. In a match scratcher, a plate-like body having transverse corrugations pressed out therefrom so as to occur on both the front and rear faces of the body and

having a beveled rim extending rearwardly to form clothes engaging means at its free edge, and a pin secured to the back of the body for attaching the device



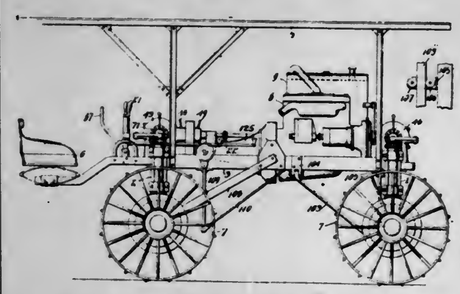
to the clothing of the user and for forcing the clothing against the corrugations occurring on the rear face of the body.

1,458,557. ROTARY VALVE. HERBERT V. SOUDERS, Wilmington, Calif. Filed Apr. 30, 1920. Serial No. 377,003. 13 Claims. (Cl. 123—59.)



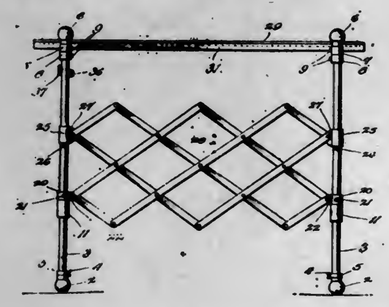
7. A multicylinder explosion engine provided with a single rotary valve structure including a valve casing having inlet and outlet ports in number corresponding to the sum of the inlet and outlet ports of the number of cylinders employed in the engine, and a rotary valve in the form of an elongated shaft having an unbroken exterior face and as many valve rings thereon as there are inlet and outlet ports in the valve casing, each ring having a passage therethrough providing a chamber or recess for passing the gas with the shaft constituting the bottom wall of the chamber or recess.

1,458,558. FOURDRINIER PAPER-MAKING MACHINE. LESTER M. START, Worcester, STEPHEN B. STAFFORD, Oxford, and JOHN WARREN VEDDER, Worcester, Mass. Filed Dec. 6, 1920. Serial No. 428,475. 7 Claims. (Cl. 92—51.)



1. In a Fourdrinier machine, the combination with the pulp supporting and feeding wire cloth conveyor, of a series of suction boxes over the surface of which said wire cloth is adapted to move constantly in one direction, means for imparting to said suction boxes a reciprocating motion in a straight line transverse to the direction of motion of the wire cloth, a roller located beyond the end of each suction box, and means for supporting each suction box from one of the rollers.

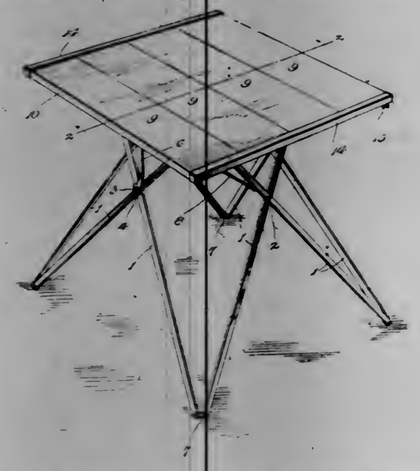
1,458,559. SEPARABLE FASTENER. ERVIN V. SWEET, Attleboro, Mass., assignor to C. O. Sweet and Son Company, a Corporation of Massachusetts. Filed June 24, 1922. Serial No. 570,562. 3 Claims. (Cl. 24—218.)



1. In a separable fastener, an attaching plate provided with a slot, a post on the plate, a head on the post, a back plate provided with a marginal slot and provided with a central depression and with a central hole, a front plate fast to the back plate, and a socket member embraced by the front plate and back plate in alignment with the hole and adapted to receive the head.

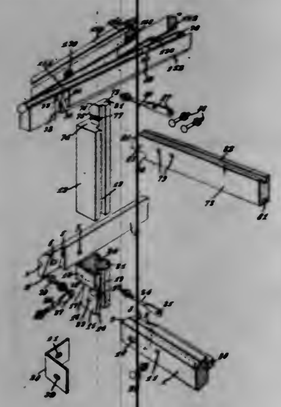
1,458,560. TRACTOR. ROBERT L. TOLSON, Memphis, Tenn., assignor, by mesne assignments, to John W. Farley, trustee, Memphis, Tenn. Filed Feb. 2, 1921. Serial No. 441,915. 14 Claims. (Cl. 180—80.)

1. In a tractor, a power operated steering device comprising an engine shaft extending lengthwise of the tractor, a drum having its axis parallel to said shaft, gears on the shaft and drum, a gear intermediate of and engaging said gears, a gear having its axis parallel to that of the drum, inner and outer flanges on the drum adapted to be engaged by said gear, means connecting said gear to the steering wheels of the tractor, and means under control of the operator whereby said gear may be moved into engagement with the said drum, substantially as set forth.



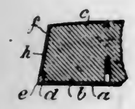
1,458,561. OPERATING TABLE. LEE R. TROMPETER, Cedar Rapids, Nebr. Filed June 21, 1922. Serial No. 569,906. 4 Claims. (Cl. 45—50.)

1. A table comprising a plurality of legs arranged in rectangular relation, foldable means connecting the legs



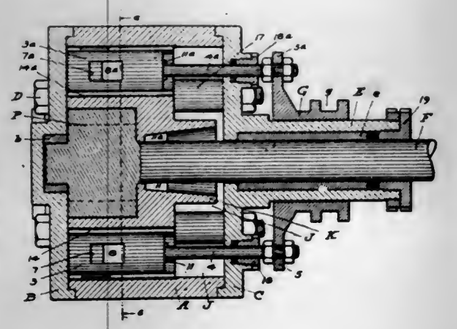
longitudinally, means connecting the legs transversely and securing them in vertical or in upwardly converging positions, and a foldable top fitting between the upper ends of the legs and constructed on the under side to engage the upper transverse connecting means in either position of the legs and thereby prevent collapse of the longitudinal connecting means.

1,458,562. INSTRUMENT TABLE. LEE R. TROMPETER, Cedar Rapids, Nebr. Filed July 19, 1922. Serial No. 576,085. 6 Claims. (Cl. 5—116.)



1. In a folding table, a table top consisting of a plurality of similar sections, a hinge connection between two of said sections, and links each pivoted at one end upon an end of one of the hingedly connected sections and at its opposite end upon the corresponding end of an adjacent section whereby all the sections may be swung about their connections to assume a position one above another.

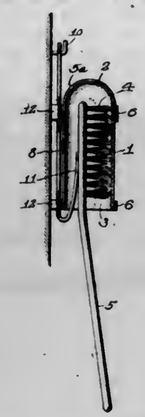
1,458,563. KNOCKDOWN INTERLOCKING FRAME. JAMES A. WALKER, Los Angeles, Calif. Filed Apr. 20, 1922. Serial No. 555,723. 13 Claims. (Cl. 20—2.)



1. In a device of the class described, a post having a reduced end defining a shoulder; angularly disposed sills overlapped on said reduced end and engaged beneath the shoulder; and tightening devices on the sills, the tightening devices passing through the post, the tightening device on one sill passing through the other sill.

1,458,564. GOLF CLUB. GEORGE WEAGER and ROY WHITE, Malvern Link, England. Filed July 10, 1920. Serial No. 395,327. 2 Claims. (Cl. 46—4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A golf club head having a sole plate, a face plate integral therewith, and an integral reinforcing rib extending along the inside of the edge formed by the two plates.



1,458,565. HYDRAULIC CLUTCH. WILLIAM S. WESTON, Dallas, Tex. Filed May 7, 1920. Serial No. 379,654. 21 Claims. (Cl. 192—61.)

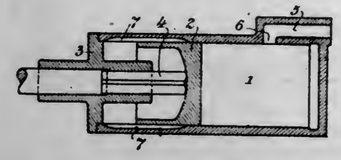
17. In a clutch of the hydraulic pump type, a pump mechanism including a rotatable casing and a concentrically mounted rotatable shaft, said pump mechanism having a discharge passage and separate passages for the supply of liquid and gas respectively to the suction side thereof, and controlling valve means interposed in each of said passages and arranged, in closed clutch position, to close the discharge and gas supply passages and permit flow through the liquid supply passage and, in open clutch position, to close the liquid supply passage and permit flow through the discharge and gas supply passages.

1,458,566. TOOTHBRUSH HOLDER. WALTER W. WELPLEY, Detroit, Mich., assignor of one-half to William T. McNamara, Detroit, Mich. Filed Dec. 19, 1919, Serial No. 346,077. Renewed Feb. 16, 1922. Serial No. 537,123. 1 Claim. (Cl. 248—63.)

A tooth brush holder comprising a stall having an upper closed end and a lower open end adapted to receive the end of a tooth brush, a hanger supporting said stall and disposed in parallelism therewith, said hanger having its lower end bent to provide a resilient clamping member extending into the open end of said stall, and adapted

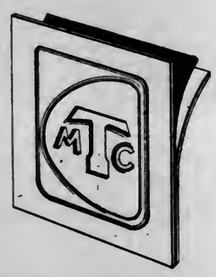
to be placed under tension by the end of a tooth brush interposed between said clamping member and the front wall of said stall.

1,458,567. COLLAR BURSTER AND EXPANDER. JAMES A. WOODS, Wichita, Kans. Filed Sept. 2, 1922. Serial No. 585,976. 6 Claims. (Cl. 81—188.)



1. A collar expander for wells comprising a body having an opening extending out through opposite sides thereof, pivot pins extending through said opening, and pawls rotatably mounted on said pivot pins and having their rear ends in rolling contact with each other whereby to relieve the pivot pins of the strain incident to the engagement of the pawls with a collar to be expanded.

1,458,568. METHOD OF PRODUCING A RUSTLESS IRON ALLOY. WILSON BENNETT, Wellington, New Zealand. Filed Dec. 4, 1922. Serial No. 604,899. 6 Claims. (Cl. 75—45.)



1. The method of producing a rustless iron alloy which consists in producing molten iron and partially refining the same, reducing the metal oxides of chromium ore, and refining the resultant metal in an electric furnace by the aid of suitable reducing and refining agents, transferring the molten iron and ferro-chromium to a separate combination arc and resistance electric furnace, and subjecting the combined charge to a final mixing, and refining and deoxidizing process at one and the same time.

1,458,569. PNEUMATIC TOOL DRIVEN BY PULSATING AIR. KARL ASSAR THEODOR BERG, Hoganas, Sweden. Filed Dec. 15, 1921. Serial No. 522,610. 2 Claims. (Cl. 125—34.)

1. In a pneumatic tool adapted to be driven by a single pulsating air column producing alternating periods of pressure and vacuum, a cylinder having a single inlet only for said air column with the inlet located adjacent the rear end of the cylinder, and a striking piston mounted for reciprocation within said cylinder by said alternating pressure and vacuum, the walls of the cylinder being provided at the forward end with a bypass without direct communication with the pulsating air column, said bypass extending in both directions beyond the striking piston when the latter is at its limit of stroke in non-working position and being continuously closed against the working portion of the cylinder when the piston is operating upon the tool.

1,458,570. LEAD MOLDING USED IN GALVANOPLASTY. EDOUARD BOUDREAUX, Paris, France. Filed Nov. 5, 1921. Serial No. 513,160. 3 Claims. (Cl. 154—46.5.)

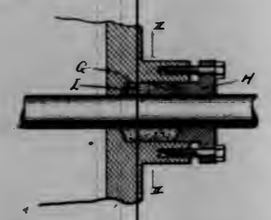
1. In an improved process for molding galvanoplastic plate consisting in applying a reticulated sheet to the lead sheet which takes the impression of the type and finally applying a sufficient amount of pressure for molding to temporarily render the sheets integral.

1,458,571. REPAIR LINK. LESTER S. CLARK, Reisterstown, Md. Filed June 30, 1922. Serial No. 572,074. 2 Claims. (Cl. 59—88.)

1. A device of the class described comprising a pair of members each including loop shaped parts, oppositely dis-

posed and an intermediate twisted portion affording a resilient connection between the said parts to permit access to the parts.

1,458,572. TANK HEATER. HARRY L. COLLINS, Delmar, Iowa. Filed Feb. 7, 1922. Serial No. 534,654. 4 Claims. (Cl. 126—368.)



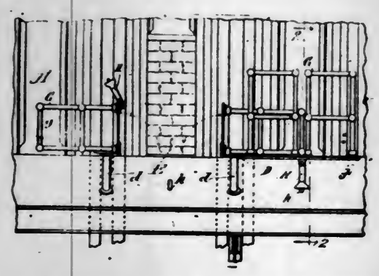
1. The combination with a water tank having a curved upright side wall, of a heater casing disposed in the tank and having a straight-side feed end, a casing section bolted to said straight-side feed end of the heater and having a curved-side end bolted to the curved wall of the tank, said wall having an opening therethrough registering with the feed opening in the heater, a front plate supported on the outer face of said tank wall, and a feed door mounted on said front plate for closing the opening in said wall and allowing access to the interior of the heater casing.

1,458,573. PROCESS OF MAKING TRAVELER RINGS. RANDOLPH CROMPTON, Worcester, Mass. Filed Nov. 19, 1921. Serial No. 516,459. 7 Claims. (Cl. 29—171.)

1. That method of making a traveler ring for textile purposes comprising the following steps; casting a metal suitable to produce a superhard surface and having self-lubricating properties, into the form of a ring having a traveler receiving flange; and then grinding or polishing the ring to dimensions suitable for ring spinning purposes.

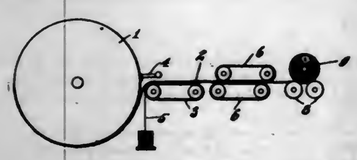
1,458,574. PACKING MATERIAL. JOSEPH A. CUMMINGS, Jr., New York, N. Y., assignor to Cee Dee Mfg. Co., New York, N. Y., a Corporation of New York. Filed Jan. 18, 1921. Serial No. 438,074. 3 Claims. (Cl. 106—8.)

1. A stuffing box packing comprising reduced lignum vitæ.



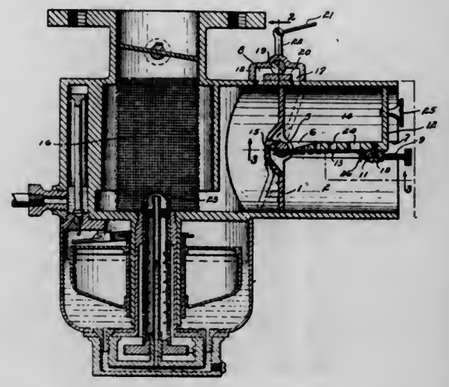
1,458,575. ILLUSION DEVICE. HORACE GOLDIN, New York, N. Y. Filed Sept. 9, 1921. Serial No. 499,431. 12 Claims. (Cl. 46—70.)

1. An illusion device comprising a long and deep box container specially designed for the herein described illusion of sawing the box and a person therein in half, the box being long and deep and having a top lid permitting a person to be placed in the box in an extended position, and the remote ends of the box being constructed to accommodate the extremities of the occupant so that they project in view of the audience, the body itself his legs up into the other half of the interior, the box being concealed, and the box being further so designed that the occupant can pull his feet into the box and draw



being further provided with a suitable entrance through which another pair of feet can be introduced and projected outward through the foot openings in the box end, the relations being such that the saw can then pass transversely without harm.

1,458,576. DISCHARGING PLATFORM FOR COKE OVENS. WALTER L. GRAUL and REGINALD H. TOWLER, Detroit, Mich. Filed Mar. 19, 1920. Serial No. 367,072. 2 Claims. (Cl. 202—9.)

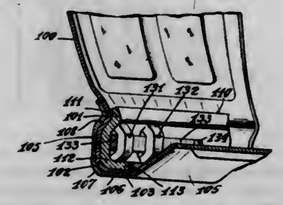


1. The combination with a block of coke ovens of a discharge platform extending along the discharge ends of the ovens consisting of a platform inclined downwardly from the oven wall and a horizontal platform adjoining the oven wall and extending along the oven block above the inclined platform (and supported thereby) and having the portions thereof opposite the oven openings removable so as to give free access from the oven openings to the inclined platform.

1,458,577. ASBESTOS YARN. JOHN ALLEN HEANY, New Haven, Conn., assignor, by mesne assignments, to Rockbestos Products Corporation, a Corporation of Delaware. Filed Feb. 5, 1920. Serial No. 356,562. 6 Claims. (Cl. 117—35.)

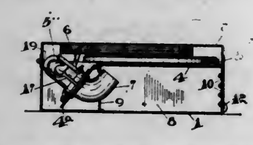
1. The process of forming asbestos yarn, which consists in twisting together a plurality of untwisted asbestos strands having filamentary reinforcing cores.

1,458,578. CARBURETOR. JOSEPH V. HENLEY, St. Louis, Mo. Filed Mar. 14, 1921. Serial No. 451,943. 7 Claims. (Cl. 261—63.)



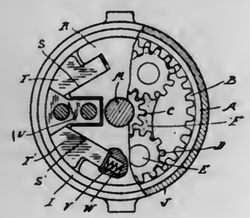
1. In a carburetor, an air intake pipe, a casing mounted on said intake pipe, a valve controlled passage in said casing, a butterfly valve located in said intake pipe, said valve controlled passage constituting a by-pass around said butterfly valve, and means for longitudinally moving the butterfly valve in relation to the by-pass.

6. A carburetor attachment comprising a casing mounted on the intake-pipe, a passage leading through the said casing and valve located in the said passage, and butterfly valve located in the intake pipe between the two ports of the said passage, the said butterfly valve being adapted to close the intake-pipe, a chamber within the intake-pipe, one wall of which is formed by the said butterfly valve and one port of the said passage being normally within the said chamber, and a partition forming another wall of the said chamber, the said partition containing ports normally closed, and a flat spring by which the said ports are normally closed, the said butterfly valve having a shaft with a cut-away part with which the said spring is in contact, the said cut-away part of the said shaft being adapted upon partial rotation of the said shaft, by the tilting of the butterfly valve, to lift the said spring off the said ports and to open the same.



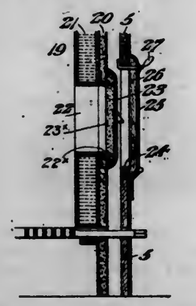
7. In a carburetor, an air intake pipe, means forming a chamber in said intake pipe, said means comprising a horizontal partition and two vertical walls, one of said vertical walls constituting a butterfly valve mounted in said horizontal partition a valve controlled by-pass around said butterfly valve and in communication with said chamber, and means controlling communication between the chamber and the air intake pipe.

1,458,579. KNOCKDOWN METAL RECEPTACLE. HENRY A. HOUSE, Bridgeport, Conn. Filed Sept. 27, 1919. Serial No. 326,935. 12 Claims. (Cl. 220—5.)



1. A barrel comprising a side wall, a head having a flange extending on the exterior of the end portion of the side wall and interlocked therewith, and locking means lying on the inner face of the end portion of the side wall and within the head and acting to expand the end portion of the side wall against the flange of the head to preserve the locked condition of these parts.

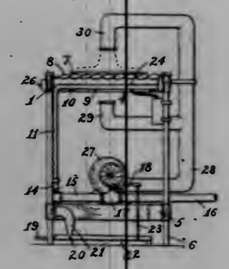
1,458,580. PORTABLE GRAMOPHONE. HERBERT C. KING, Toronto, Ontario, Canada. Filed May 1, 1922. Serial No. 557,786. 4 Claims. (Cl. 274—2.)



1. The combination with a gramophone including a hinged lid and pivotally mounted tone regulating shutters, of means for locking the lid in its closed position and adapted to engage the outer surfaces of the shutters to hold the latter closed.

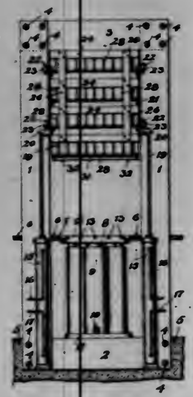
1,458,581. STEERING-GEAR REPLACEMENT. CHARLES H. KIRBY, Detroit, Mich. Filed June 15, 1918. Serial No. 240,197. 3 Claims. (Cl. 74—39.)

1. The combination with a steering wheel and a steering stem, of a yieldable element transmitting the normal drive from said wheel to said stem and a stationary element frictionally engaged by said yieldable element when the stem is subject to a driving stress from a source other than the wheel, said yieldable element being mounted for movement at an angle to said stationary element selected to interpose a large element of frictional resistance to a driving stress transmitted from the stem without absolute locking.



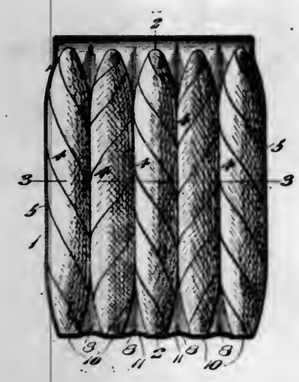
1,458,582. FURNACE AND BOILER CASING. CHARLES R. KLINE, Reading, Pa. Filed Aug. 24, 1921. Serial No. 495,043. 2 Claims. (Cl. 122—494.)

1. In a device of the character stated, a casing for boilers, furnaces and the like composed of metal sheets



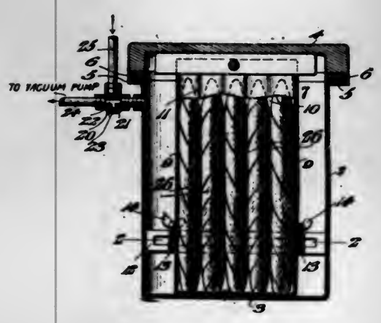
lined on their interior with non-conducting material, a boiler in said casing having a door, a door opening in said outer casing sheet aligning with said boiler door, and a casing door closing said opening and hinged to said outer sheet, the inner surface of said casing door being provided with a lining of non-conducting material and the inner surface of said boiler door being also provided with a lining of non-conducting material, and an outer projecting member surrounding the opening into said boiler, said member being adapted to be embedded in the non-conducting material of said boiler door when the door is closed.

1,458,583. MEANS FOR BAKING POWDER TO PLATES TO BE ETCHED. WILLIAM J. LOGAN, Cleveland, Ohio. Filed July 8, 1920. Serial No. 394,223. 7 Claims. (Cl. 91—55.)



1. In a means for baking powder and the like to plates, the combination of means for heating the underside of a plate, and means for cooling the underside of the plate after the means for heating the plate has been shut off, substantially as described.

1,458,584. COTTON-BALE-COMPRESSING DEVICE. CHARLES J. LUCE, Niantic, Conn., assignor of one-half to Emlen T. Littell, Bayhead, N. J. Filed Oct. 18, 1922. Serial No. 595,252. 18 Claims. (Cl. 100—19.)

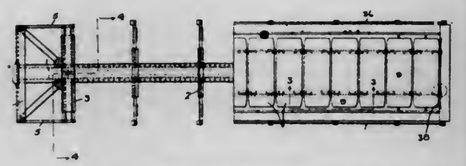


1. In a machine of the class described, the combination with a pair of pressing members, means for causing said members to be moved towards one another, another pair of pressing members, and means on said first-mentioned pair of pressing members for causing the second pair of members to be moved towards one another.

1,458,585. VACUUM CONTAINER FOR CIGARS, CIGARETTES, AND SMOKING TOBACCO. JOHN T. MCCROSSON, Honolulu, Territory of Hawaii, assignor of one-half to Eugene S. Cochran, New York, N. Y. Filed Oct. 2, 1922. Serial No. 591,699. 4 Claims. (Cl. 206—46.)

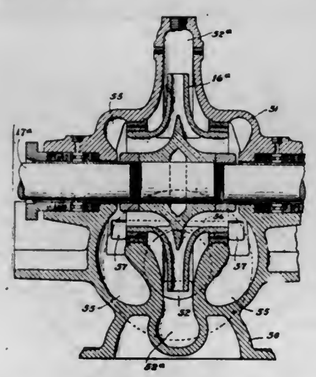
1. The herein described method of making a vacuum container for cigars, cigarettes and the like, which consists in placing the cigars in an open-ended trough-shaped container of flexible material, next, bringing the upper open ends of the container sides into juxtaposition, next, exhausting the air from the top of the container and hermetically sealing the juxtaposed upper edges thereof, and, lastly, forming the exterior walls of the container by exposure of same to atmospheric pressure into longitudinally extending corrugations which engage the contiguous peripheries of the cigars and retain them in longitudinal parallel alignment.

1,458,586. METHOD OF PACKING AND PRESERVING CIGARS, CIGARETTES, AND SMOKING TOBACCO. JOHN T. MCCROSSON, Honolulu, Territory of Hawaii, assignor of one-half to Eugene S. Cochran, New York, N. Y. Filed Oct. 2, 1922. Serial No. 591,700. 3 Claims. (Cl. 226—82.)



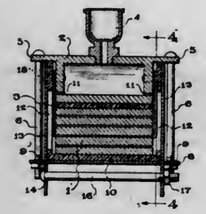
1. A process of packaging cigars, cigarettes and the like, which consists in enclosing the same in a container, exhausting the air from said container, filling said container with inert gas, and then hermetically sealing said container.

1,458,587. COP CONE. JOHN O. MCKEAN, Westfield, Mass. Filed Dec. 27, 1922. Serial No. 609,295. 7 Claims. (Cl. 242—122.)



6. A device for ensuring the even driving of a cop cone comprising an exterior circumferential driving bead on the winding surface of the cone, and a driving roll arranged to engage said bead.

1,458,588. MULTIPLE-UNIT TANK CAR. MAX MAURAN, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed Feb. 7, 1922. Serial No. 534,642. 14 Claims. (Cl. 105—360.)



1. A car of the class described, comprising a frame having a plurality of seats extending transversely thereof, a cylindrical container in each seat, and means for clamping the containera to the seats.

1,458,589. BALANCING MEANS FOR PUMPS. NORMAN A. MESSINGER, Easton, Pa., assignor to Pennsylvania Pump and Compressor Co., Easton, Pa., a Corporation of Pennsylvania. Filed July 10, 1920. Serial No. 395,239. Renewed Apr. 4, 1922. Serial No. 549,500. 3 Claims. (Cl. 103—112.)

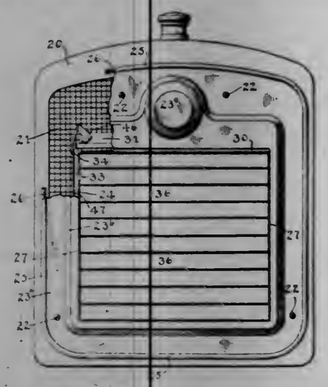
1. A balancing means for centrifugal pumps comprising in combination, a pump casing, a double impeller having intake areas on opposite sides therein, and a conduit formed within the parts of said casing extending from one side of the casing to the other and having orifices adjacent the intake areas on either side of said casing.

1,458,590. VEHICLE-SPRING LUBRICATOR. JOSEPH J. O'BRIEN, Galveston, Tex. Filed Nov. 10, 1922. Serial No. 600,021. 2 Claims. (Cl. 184—1.)

1. The combination in a vehicle spring lubricator, of a lubricant receptacle adapted to be arranged in superimposed position on a leaf spring, said receptacle having drip apertures, a bottom plate for arrangement below a leaf spring, means connecting the receptacle and the said bottom plate, side clamping plates extending through slots in the bottom plate, means connecting the pendant portions of said side clamping plates, a stirrup of absorbent material arranged above the bottom plate and having upwardly reaching arms with openings therein, means connecting the side clamping plates and said arms of the absorbent stirrup to the receptacle, and shims associated with the lubricant receptacle and interposed between the leaves of the spring.

1,458,591. FILM-MAKING MACHINE. CARL P. OLSON, Irvington, N. J. Filed Dec. 7, 1921. Serial No. 520,487. 14 Claims. (Cl. 18—15.)

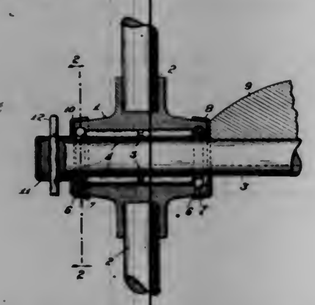
1. In a film-forming machine, in combination, an endless metallic band, rotatable supports therefor adapted to move said band in a substantially triangular path whose section lies in a horizontal plane, said path affording an upward run of said band; tilting means associated with a pair of said supports adapted to vary the inclination of said band upon its upward run, and coating means located between said pair of supports and comprising a container for a film-forming solution, said container being adapted to present said solution directly to the film-forming face of said band.



1,458,592. WRAPPING TISSUE. CARL P. OLSON, Irvington, N. J. Filed Apr. 17, 1922. Serial No. 554,181. 1 Claim. (Cl. 18—57.)

As a new article of manufacture, a wrapping sheet of tissue paper character composed of acetyl cellulose.

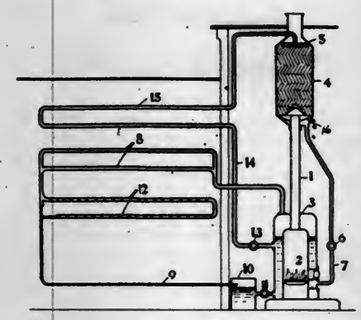
1,458,593. SHUTTER APPARATUS FOR RADIATORS. JAMES F. RALEIGH, Chicago, Ill., assignor to Pines Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 1, 1920. Serial No. 362,515. 8 Claims. (Cl. 257—132.)



2. In combination with an automobile radiator comprising a core and frame therefor, a detachable front for said radiator including a sheet metal shell having a fenestrated dished central portion bounded by a marginal flange lying parallel with the forward face of said core and wholly in front of the radiator, said flange bridging contiguous margins of the radiator frame and core, a shutter-supporting means rigidly mounted within the dished central portion of said shell and concealed

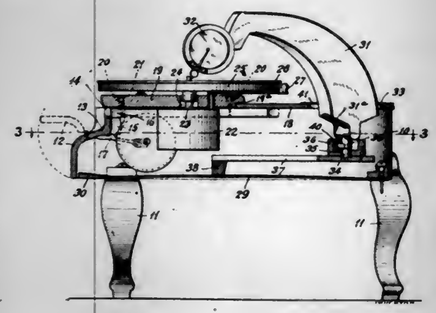
thereby, shutters mounted in said shutter-supporting means and adapted to control the flow of air through the shell fenestration, and a plurality of bolts extend-

ing through said marginal flange and the radiator core adapted to hold said detachable front upon and in front of said radiator.



1,458,594. ROLLER BEARING. WILLIAM RIETZ, Sheboygan Falls, Wis., assignor to White Wagon Works, Sheboygan Falls, Wis., a Corporation of Wisconsin. Filed July 2, 1919. Serial No. 308,206. 1 Claim. (Cl. 64—39.)

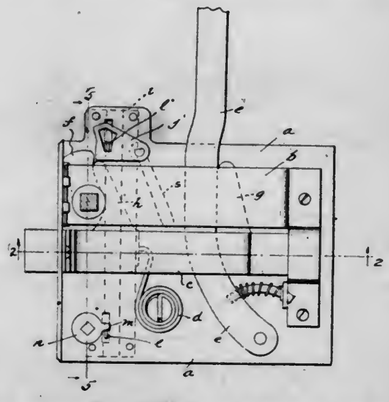
A roller bearing comprising a cast metal hub formed with a uniform cylindrical bore therethrough and internal annular grooves adjacent the opposite ends of the hub, resilient split rings of rounded cross-section engaging said grooves, an axle, and rollers arranged around said axle within the bore of the hub and between said rings, said rings co-operating directly with the ends of said rollers to hold such rollers in place.



1,458,595. PROCESS FOR UTILIZING IMPURE GASES OR EXHAUST GASES CONTAINING CARBON DIOXIDE. FRIEDRICH RIEDEL, Essen, Germany, assignor to Riedel Fertilizing Process Co., Inc., Elizabeth, N. J., a Corporation of New Jersey. Filed Aug. 24, 1920, Serial No. 405,753. Renewed Nov. 10, 1922. Serial No. 600,183. 5 Claims. (Cl. 71—90.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

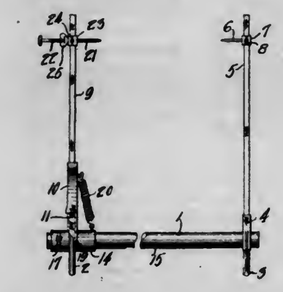
1. Process of supplying carbon dioxide, free from noxious concomitants, to the atmosphere enveloping growing plants, which consists in extracting carbon dioxide from impure carbon dioxide containing gases by means of salt solutions having an affinity for carbon dioxide, then releasing carbon dioxide from said solution by means of heat, the heat being of such degree that water vapor is formed from the said solution in such volume and under such pressure as to drive forward the carbon dioxide and to distribute it in the vicinity of the plants, while, during the thus induced travel of

the carbon dioxide, depriving it of the traces of injurious accompanying gases by taking up the latter in water of the condensing water vapor and then removing said contaminated condensed water without permitting the gases absorbed by it to become effective in the atmosphere enveloping the plants.



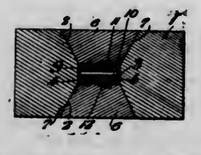
1,458,596. PHONOGRAPH. HERMAN ROTHKIRCH, New York, N. Y. Filed Apr. 7, 1921. Serial No. 459,300. 6 Claims. (Cl. 274—2.)

1. In a phonograph, the combination of a casing which itself constitutes the sound conduit for the passage of sound, said casing having an opening in its upper wall, a bottom of relatively thin wood constituting part of said casing and a tone arm extending from the exterior to the interior of said casing through said opening and having its inner end mounted upon said bottom and in communication with the interior of said casing.



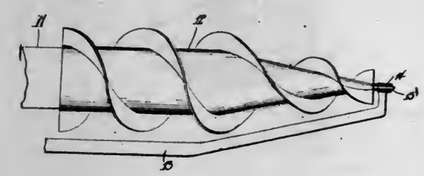
1,458,597. DOOR LOCK. EMORY GLENN SIMPSON, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Apr. 28, 1920. Serial No. 377,173. 9 Claims. (Cl. 70—29.)

1. In a lock, the combination of a sliding bolt, an outside actuator, a locking dog engaging the same, a cylinder lock provided with connections with the locking dog to actuate the same and provided with lost motion within the connections themselves and including a re-



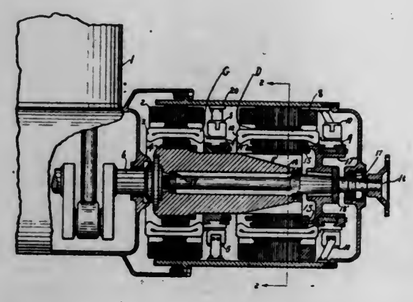
mote draft connection with the locking dog, and a button on the inside of the door for actuating the locking dog.

1,458,598. WHEEL GAUGE. RUDOLPH SPANGENBERG, Oakland, Calif., assignor to Jessie L. Call, Oakland, Calif. Filed Aug. 18, 1919. Serial No. 318,110. 6 Claims. (Cl. 33—180.)



1. In a device of the character described, a bar, a gauge arm extending upwardly from and mounted on the bar, a member mounted on the bar for adjustment towards and away from the gauge arm, an upright gauge arm pivoted to said member, and a spring tending to return the last named gauge arm to upright position.

1,458,599. METHOD OF MAKING DIES. FRANK R. STAFFORD, Philadelphia, Pa. Original application filed Aug. 22, 1916, Serial No. 116,346. Divided and this application filed Feb. 12, 1919. Serial No. 276,490. 5 Claims. (Cl. 76—107.)

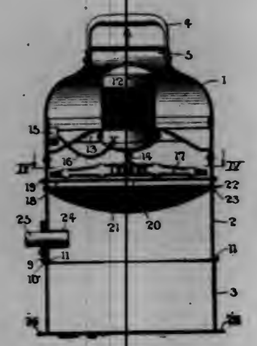


1. The method of die making, which consists in forming die blanks with tapering walls, and simultaneously moving a pair of blanks against a hub positioned between them to thereby form depressions in each blank of a pair.

1,458,600. SPIRAL PROPELLER. JOSEPH TABER, Millbrook, N. Y. Filed June 17, 1920. Serial No. 389,681. 1 Claim. (Cl. 115—20.)

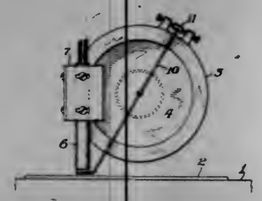
The combination with a boat hull of a propeller shell formed of integral sections, spiral fins provided externally of one section, circular racks provided internally of the other section, a drive shaft extending from the hull into the shell, a gear on said shaft, and gears connecting the drive shaft gear with the circular rack of the propeller shell.

1,458,601. ELECTRODYNAMIC TRANSMISSION SYSTEM FOR VEHICLES. HARRY L. TANNER, Brooklyn, N. Y. Filed Feb. 5, 1917. Serial No. 146,556. 27 Claims. (Cl. 290—10.)



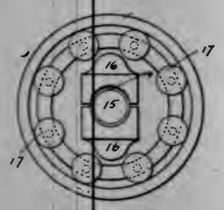
1. In a transmission system for automotive vehicles, the combination with a prime mover, a generator coupled thereto and a second dynamo-electric machine electrically associated therewith including a part coupled to said prime mover, a part coupled to the load and a stationary part, said second mentioned part being adapted to operate as the rotor or armature for either the first or last named parts.

1,458,602. VACUUM CLEANER. WILLIAM H. UPTON, New York, N. Y. Filed July 9, 1919. Serial No. 309,707. 3 Claims. (Cl. 183—37.)



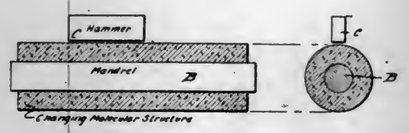
1. A vacuum cleaner comprising, a casing having three separable members in vertical alinement consisting of a cover member having its upper portion contracted into a neck to form an exhaust opening, a dust collecting bottom member, an intermediate member having a horizontally arranged inlet adjacent the lower edge thereof for receiving the dust to be deposited in the bottom member, said members being provided with coacting means for

removably securing one member to the adjacent member, a handle secured to said neck on the cover member for



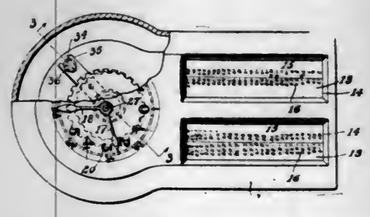
carrying the cleaner, and laterally extending ears on the bottom member to facilitate holding the botom member while separating the members.

1,458,603. METHOD FOR RECORDING SOUND. HARTWELL W. WEBB, Cresskill, N. J. Filed June 19, 1919. Serial No. 305,432. 4 Claims. (Cl. 274—46.)



1. The method of making a sound record, which consists in photographically recording on a relatively movable sensitized surface the movements of a sound-actuated member by means of a beam of parallel light rays projected from a relatively small elongated source of light placed parallel to and with its length lying in the direction of movement of the relatively movable sensitive surface.

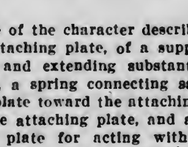
1,458,604. METHOD FOR MAKING ZINC-TUBING. WILLIAM L. WOODWARD, Lakewood, Ohio. Filed Jan. 24, 1921. Serial No. 439,364. 3 Claims. (Cl. 29—156.)



1. The herein described method of making seamless zinc tubes which consists in shaping a strip of zinc into tubular form, welding the joint thereof and subsequently restoring the molecular homogeneity of the tube as a whole.

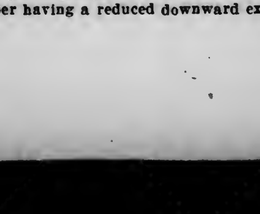
1,458,605. METHOD OF MAKING SEAMLESS TUBES RICH IN ZINC. WILLIAM L. WOODWARD, Lakewood, Ohio. Filed Feb. 21, 1921. Serial No. 446,649. 5 Claims. (Cl. 29—156.)

1. The herein described method of making seamless tubes of material rich in zinc which consists in first producing a crystalline tubular body of a material rich in zinc and then mechanically treating said tubular body to break up the crystalline structure thereof and render said tubular body ductile and malleable.



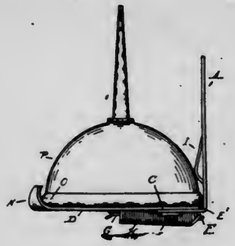
1,458,606. REDUCTION-GEAR DRIVE FOR MEASURING MACHINES. JOHN L. WHEELER, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Delaware. Original application filed July 11, 1919, Serial No. 310,753. Divided and this application filed Nov. 22, 1920. Serial No. 425,646. 2 Claims. (Cl. 235—136.)

1. In a fabric measuring machine having a measuring roller, the combination of a dial, a bracket mounted below the dial, a horizontal arbor fixed in said bracket, a vertical arbor fixed in said bracket projecting through the dial, a bevel gear rotatably mounted on the horizontal arbor and driven by the measuring roller, a bevel gear rotatably mounted on the vertical arbor and driven by the first named bevel gear, a tubular shaft rotatably mounted on the vertical arbor, rigid with the second named bevel gear, a fast-moving pointer carried by the tubular shaft and co-operating with the dial, a slow-moving pointer cooperating with the dial, a sleeve rotatably mounted on the tubular shaft rotatably supported in the dial and carrying the slow-moving pointer, a large internal gear wheel rigid with the sleeve, a small gear wheel superposed on the large gear wheel and meshing therewith, the smaller gear wheel having fewer teeth than the large gear wheel, an eccentric carried by the tubular shaft and rotating in the small gear wheel, means located at a point beyond the periphery of the small gear for guiding the small gear wheel to prevent the same from rotating on its own axis and having a portion encircling the eccentric to impart an oscillatory movement to said small gear wheel, and thereby impart a reduced rotation to the large gear wheel and the slow moving pointer.



1,458,607. COLLAR BUTTON. CHARLES H. ALLEN, Attleboro, Mass. Filed May 5, 1922. Serial No. 558,728. 1 Claim. (Cl. 24—97.)

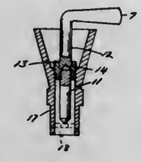
In a collar button, a post, retracted necks upon the ends of the post in parallelism with each other at right angles to the post, laterally projecting pivot members on the extremities of the necks, a head engaging the pivot



members supported by one neck, and a shoe engaging the pivot members supported by the other neck.

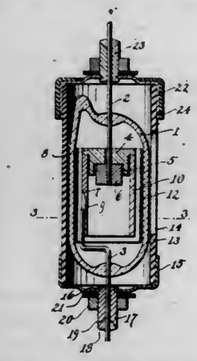
1,458,608. FLEXIBLE COUPLING. CHARLES W. BECK, Detroit, Mich. Filed Feb. 19, 1917. Serial No. 149,514. 4 Claims. (Cl. 64—96.)

1. In a flexible coupling, the combination with shafts arranged end to end, of a flexible member, and connections between said flexible member and said shafts, comprising sheet metal members secured to the shafts and having return-bent ends extending over the flexible member and fixedly secured thereto.



1,458,609. OIL-CAN HOLDER. CHARLES W. BECK, Detroit, Mich., assignor to Beck-Frost Corporation, Detroit, Mich., a Corporation of Michigan. Filed Feb. 17, 1919. Serial No. 277,391. 5 Claims. (Cl. 248—20.)

2. In a device of the character described, the combination with an attaching plate, of a supporting plate pivoted thereupon and extending substantially at a right angle therewith, a spring connecting said plates urging the supporting plate toward the attaching plate, a tongue struck-out of the attaching plate, and a projection upon the supporting plate for acting with said tongue to engage an article upon the supporting plate.

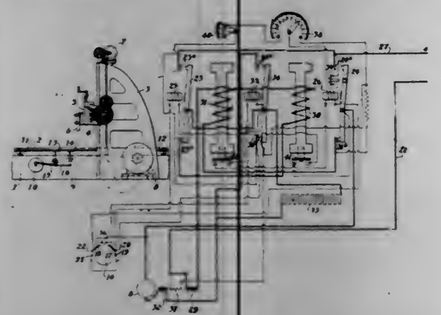


1,458,610. PRIMING CUP. CHARLES W. BECK, Detroit, Mich., assignor to The Beck-Frost Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 24, 1921. Serial No. 439,620. 4 Claims. (Cl. 123—187.5.)

1. In a priming cup, the combination with a cup forming member having a reduced downward extension formed with a discharge passage and having a valve seat in said passage and a threaded portion above said seat, of a valve member having an enlarged portion threaded to engage said threaded portion of the extension, having an operating portion extended above said cup forming member and having a portion extending below said threaded

portion to engage said valve seat, the last mentioned portion being spaced from the surrounding wall of the discharge passage, the threaded portion of the valve member having a passage therethrough for the down flow of the priming fluid from the cup proper.

1,458,611. LIGHTNING ARRESTER. LEON S. BRACH, East Orange, N. J. Filed May 17, 1921. Serial No. 470,374. 7 Claims. (Cl. 175—30.)

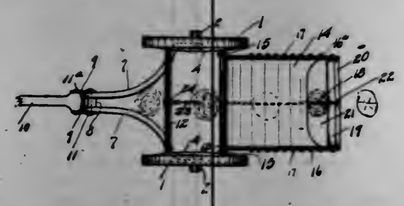


1. In a device of the class described, the combination of an evacuated container, spaced electrodes within said container, leading-in wires sealed through the wall of said container, and a casing for protecting the walls of the container located exteriorly thereof, and extending throughout the length of said container, and extending from one end to the opposite end of said evacuated container.

1,458,612. CLEANING TOOL. CLARENCE R. BERKSHIRE, San Francisco, Calif. Filed Feb. 15, 1922. Serial No. 536,610. 2 Claims. (Cl. 15—128.)

1. A cleaning tool comprising a handle provided with a passage therethrough, a valve controlling said passage, a nozzle member provided with a passage registering with that of said handle and with another passage communicating with said registering passage, and a brush member carried by said nozzle member provided with a chamber in communication with the passages of said nozzle, with ports for discharging fluid through said brush.

1,458,613. PLANER AND SYSTEM OF MOTOR CONTROL THEREFOR. HAROLD L. BLOOD, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 31, 1920. Serial No. 355,318. 15 Claims. (Cl. 172—240.)

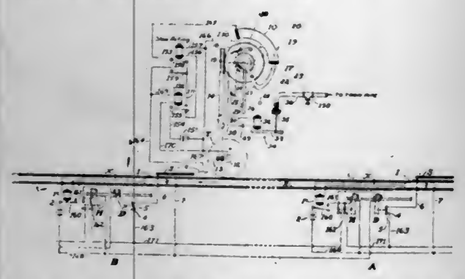


6. In a control system, the combination comprising a motor, two main electro-magnetic switches having circuit connections thereto for operating the motor in a forward and in a reverse direction and for completing a dynamic-braking circuit, and a supplemental magnet associated with each main switch and energized upon operation of the associated main switch, each of said supplemental magnets serving to exert a force tending to move the associated main switch to released position.

1,458,614. TAP. CHARLES W. BOGART, Port Chester, N. Y., assignor to Russell, Burdsall & Ward Bolt and Nut Company, Port Chester, N. Y., a Corporation of New York. Filed Apr. 8, 1919. Serial No. 288,581. 3 Claims. (Cl. 10—141.)

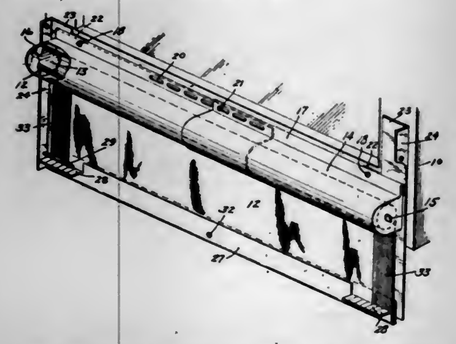
1. A tap having a land provided with a thread chambered to form a conical surface and forming a series of cutting faces having cutting edges of progressively decreasing dimensions from the leading end of the tap, and an auxiliary thread formed in said first thread having a base line inclined to said conical surface and extending below the base line of said first mentioned thread at the leading end of the tap.

1,458,615. BEET HARVESTER. PETER J. DOYLE, Saginaw, Mich. Filed Mar. 3, 1921. Serial No. 449,399. 4 Claims. (Cl. 55—107.)



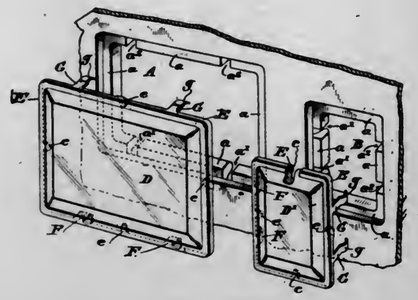
1. A beet harvester comprising, in combination, a pair of spaced apart disks, ground engaging wheels revolubly mounted on said disks, rods for rigidly connecting the said disks in spaced relation, and a topping plate hingedly secured to one of said rods.

2. A beet harvester comprising, in combination, a pair of spaced apart hollow disks, ground engaging wheels revolubly mounted thereon, and draft means detachably secured thereto, rods for holding the said disks in spaced relation, and a curved topping plate hingedly secured to one of said rods.



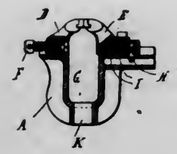
3. A beet harvester comprising, in combination, spaced apart hollow disks having laterally extending hubs integral therewith, ground engaging wheels mounted on the said hubs, and means on the interior of the hub for attaching the draft means thereto, rods connecting said disks, and a curved topping plate hingedly secured to one of said rods, and flexible means for holding said plate in raised position.

1,458,616. TRAFFIC-CONTROLLING SYSTEM. ALBERT V. T. DAY, New Rochelle, N. Y., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 10, 1911. Serial No. 637,773. 19 Claims. (Cl. 246—49.)



4. A railway traffic-controlling system comprising a single automatic traffic-controlling means carried on a railway vehicle which at all times and under all conditions effects the automatic control of the vehicle, said means having a retarding condition and a non-retarding condition, and said means being constructed and arranged to assume retarding condition within a limited interval, and means located in the trackway and responsive to clear traffic conditions of the track in advance of the vehicle to restore the traffic-controlling means away from retarding condition.

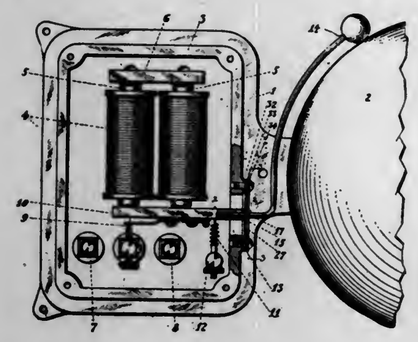
1,458,617. WINDOW SCREEN. JOHN H. DE SMIDT, Minneapolis, Minn. Filed June 22, 1922. Serial No. 570,243. 6 Claims. (Cl. 156—39.)



4. The structure defined in claim 3 in further combination with joint strips on the frame that are overlapped by the stiffened longitudinal edges of the screen.

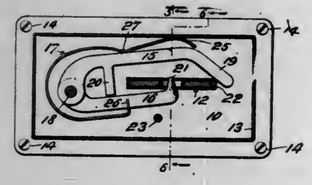
1,458,618. MEANS FOR FASTENING GLASS PANELS TO THEIR SUPPORTS. BERNARD J. DOWD, Hartford, Conn., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed June 27, 1922. Serial No. 571,220. 6 Claims. (Cl. 197—186.)

1. The combination with a glass panel of a metal frame which surrounds the same and fits over one margin of one face of the panel, said frame having tongues which may be bent to engage the other face, and also having hooks and resilient tongues for connecting the same to a support by direct pressure alone.



1,458,619. PARALLEL VISE. JULIUS EHRENFEUCHTER, Hanover-Wulfel, Germany. Filed Apr. 14, 1919. Serial No. 290,076. 1 Claim. (Cl. 81—17.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A parallel-vise comprising, in combination, an integral U-shaped frame of T-section having long parallel lateral members and a passage-hole in its lower end, head-planes of equal level on said frame, a front vise-jaw and a rear vise-jaw guided on said head-planes in dovetail fashion, a rotatable pressure-spindle in the front member of said frame and engaging the front vise-jaw only, a rack on the underside of the rear vise-jaw, and a laterally withdrawable locking-pawl in said frame located to engage said rack, substantially as set forth.

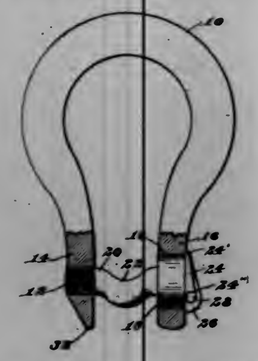


1,458,620. FLUID-TIGHT APPARATUS. GEORGE FUSSNER, Menominee, Mich., assignor to Signal Electric Mfg. Co., a Corporation of Michigan. Filed Oct. 12, 1920. Serial No. 416,448. 6 Claims. (Cl. 177—7.)

1. Electric apparatus comprising in combination, an electromagnet coil, an armature member therefor, a member connected to and controlled by said armature, an enclosure for one of said latter elements, the other of said elements projecting through an opening in said enclosure, a flexible diaphragm constituting a fluid-tight closure for said opening, means clamping said diaphragm against

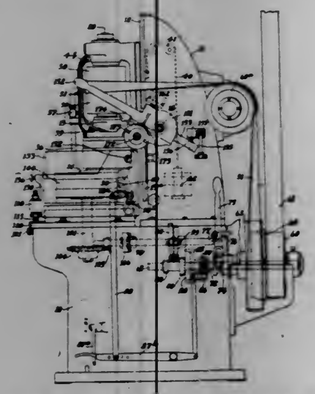
said armature, said clamping means extending lengthwise of the diaphragm along a diameter thereof to determine an axis of flexure thereof.

1,458,621. COIN-CONTROLLED VENDING MACHINE. HARVEY GILES, Brooklyn, N. Y., assignor to Artemas Ward, New York, N. Y. Filed June 22, 1922. Serial No. 570,100. 7 Claims. (Cl. 194—97.)



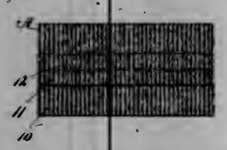
1. In a coin-controlled machine having a plate containing a slot for the entrance of coins into the machine, washer catcher mechanism located at the reverse side of said plate adjacent to said slot comprising an actuating arm extending along one side of said slot and pivoted at its shank end and at its free end slantingly crossing one end of said slot to be engaged by the edge of a coin or the like introduced into said slot, a washer catcher arm extending along the other side of said slot and pivoted at its shank end and at its free end having a prong or dog extending therefrom toward and adapted to be projected across said slot, one of said arms having a stop normally engaging the other arm to keep said arms normally spaced apart, and spring means tensioned against said actuating arm to yieldingly press the same to its operative position and against said washer catcher arm to turn it toward the coin slot when the actuating arm is turned outwardly from the slot by an introduced coin or the like.

1,458,622. SHACKLE. JOHN M. HIGGINS, Boothbay Harbor, Me. Filed July 27, 1921. Serial No. 487,957. 11 Claims. (Cl. 59—86.)



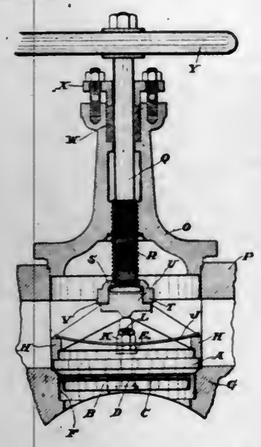
1. A shackle comprising a bail and a pin passing through and connecting the jaws thereof; said pin being rotatable for jaw engagement and disengagement and having in its middle a rope engaging surface which is set nearer to its axis than are other parts of the pin's middle, whereby the rope stress prevents its rotation; the point portion of the pin being cylindrical, fitting and filling its

jaw hole; and the part of its head portion which is set in the jaw being cylindrical fitting and filling its jaw



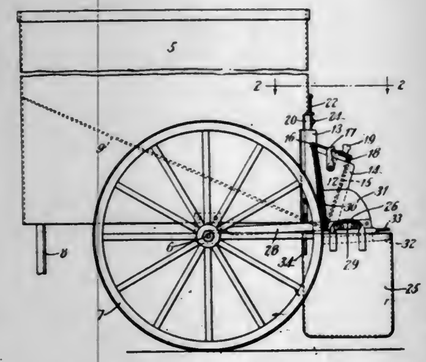
hole; and the said last mentioned hole being cylindrical and of large enough diameter for the said middle portion of the pin to pass through it.

1,458,623. SURFACE-GRINDING MACHINE. CARROLL KNOWLES, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed June 16, 1920. Serial No. 389,431. 46 Claims. (Cl. 51—118.)



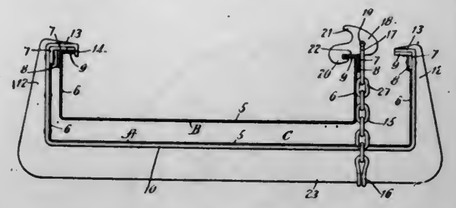
1. A wheel adjusting and feeding means for surface grinding machines comprising in combination, a wheel slide, a lever for operating said slide, and means to vary the position of said lever relative to said slide.

1,458,624. CRAPE-STRIP DECORATION. JAMES J. MACDAID, Jr., Allston, Boston, Mass., assignor to Denison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Filed Mar. 25, 1922. Serial No. 546,699. 12 Claims. (Cl. 41—10.)



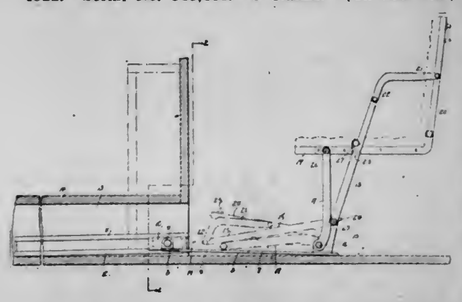
1. A strip decoration comprising a plurality of superposed ribbons of paper correspondingly tucked transversely and united together by longitudinal stitching.

1,458,625. PLATE-VALVE LIFTER. CHESTER W. METZGAR, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 20, 1922. Serial No. 562,373. 3 Claims. (Cl. 251—144.)



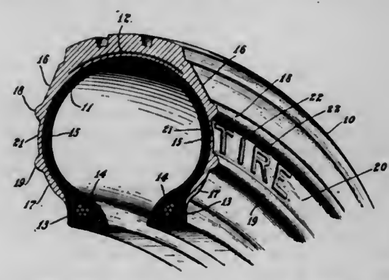
1. A plate valve lifter, comprising a plate valve including its seat, stop plate and stud adapted to lie in a valve opening in the cylinder wall of a compressor, a valve stem yoke over the valve seat, a valve holder for holding the plate valve and its associated parts to the yoke, a bonnet adapted to be secured to the compressor outer casing opposite the said valve opening, a valve stem carried by said bonnet and connected to the valve stem yoke, and means for actuating said stem to lift the plate valve and its associated parts.

1,458,626. BAG-FILLING DEVICE. ENOCH E. NEAL, Malden, Mass. Filed Feb. 11, 1921. Serial No. 444,153. 7 Claims. (Cl. 225—58.)



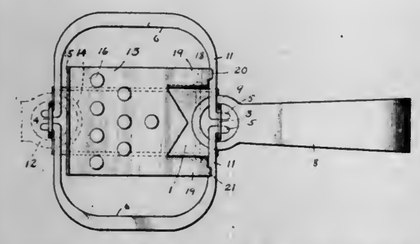
1. A bag filling device having, in combination, a receptacle, a delivery chute projecting therefrom, means to control the passage of material from said receptacle through said chute, a support pivotally mounted adjacent to said delivery chute and embodying therein a pair of oppositely disposed handle rests adapted to have a bag suspended therefrom by the handles thereof, means to yieldingly support the outer end of said support, means yielding downwardly in unison with said bag support to guide material from said delivery chute into said bag, means to hold the mouth of said bag open and means to limit the downward movement of said support.

1,458,627. FASTENING DEVICE FOR COAL CHUTES. ENOCH E. NEAL, Malden, Mass. Filed Oct. 27, 1921. Serial No. 510,907. 3 Claims. (Cl. 193—6.)



1. A fastening device for coal chutes having, in combination, a flexible member, a hook attached thereto at one end thereof and a member attached to said flexible member at the other end thereof provided with a plurality of oppositely disposed hook portions of different contours formed integral therewith.

1,458,628. AUXILIARY SEAT FOR AUTOMOBILES. RAYMOND F. PARDY, Bridgeport, Conn. Filed Mar. 31, 1922. Serial No. 548,461. 4 Claims. (Cl. 155—13.)

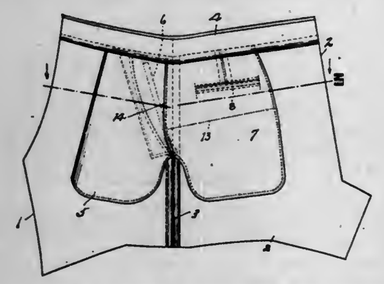


1. An auxiliary seat for automobiles, comprising a base frame formed at its rear with upwardly-projecting brackets, front legs pivoted to said brackets near said base, rear legs independently connected with said brackets at points above and in rear of said front legs, a seat with which said legs are pivotally connected, and means to limit the rearward movement of the legs.

1,458,629. VEHICLE TIRE. HARRY K. RAYMOND, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 20, 1922. Serial No. 601,968. 1 Claim. (Cl. 152—13.)

A pneumatic tire comprising a carcass and a covering of tread and side rubber vulcanized thereon and including a pair of concentric, annular, substantially-continuous, side chafing ribs embracing between them a zone over the side salient of the carcass having a width sufficient to include the usual molded designations, the floor of said zone being mainly a relatively-thin and highly-flexible portion of said rubber covering of substantially less projection than the ribs.

1,458,630. TRAP. NILS M. ROSENDAHL, Duluth, Minn., assignor of one-half to S. Geo. Stevens, Duluth, Minn. Filed Apr. 1, 1922. Serial No. 548,745. 4 Claims. (Cl. 43—92.)



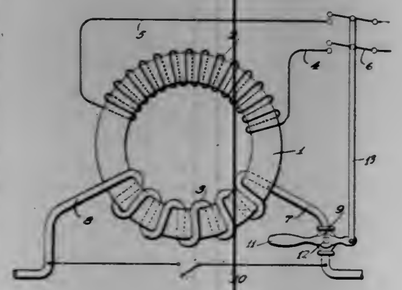
3. The combination with a trap of the character described having a pair of pivotally mounted pinching jaws, and a U-shaped expansive spring for controlling the action of said jaws, of a base for said trap comprising a single piece of rectangularly shaped metal having its opposite side edges turned downwardly forming side walls longitudinally thereof, upwardly turned lugs at the opposite ends of the base and centrally thereof forming pivotal supports for the jaws of the trap, and a trip pan, having claw engaging holes therein, for said trap having downwardly turned brackets at one end thereof straddling the base of the trap and pivotally mounted in the sides thereof, and ears projecting from the trip pan adjacent said brackets for engagement with the jaws of the trap when holding same open.

1,458,631. SOUND-ABSORBING PLASTER. PAUL E. SABINE, Geneva, Ill., assignor of one-half to Riverbank Laboratories, Geneva, Ill. Filed Apr. 29, 1921. Serial No. 465,372. 8 Claims. (Cl. 106—29.)

1. A sound absorbent plaster for walls, ceilings, and the like, comprising granular particles of irregular shape to prevent close packing and leave voids therebetween, and a bonding material of such nature as to not completely fill the voids between said particles, said plaster being capable of application directly to a wall, ceiling, or the like with ordinary plastering tools.

1,458,632. TROUSERS. MORRIS L. STERN, Detroit, Mich. Filed Oct. 1, 1921. Serial No. 504,631. 3 Claims. (Cl. 2—122.)

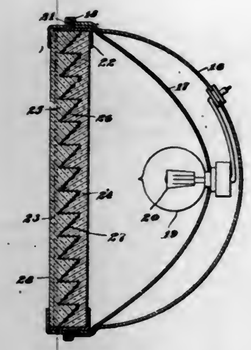
3. A pair of trousers including a front portion and a back portion united in a side seam, a front pocket for



the front portion and a rear pocket for the rear portion, said front pocket having a portion of one side thereof extended rearwardly to the side seam with the edge of said portion inturned against the forwardly extended inturned edge of the side seam and the rear pocket having a portion of a side thereof extended forwardly to overlie said side seam, and a stiffening lining for said rear pocket extended forwardly to overlie the said side seam, the extended portions of the pocket side and lining and the inturned edge of the front pocket being united to the forwardly extending inturned edge of the side seam.

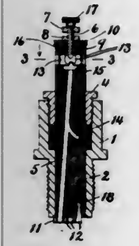
1,458,633. LATHE TOOL HOLDER. PAUL F. VOKAL, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 10, 1919. Serial No. 329,839. 6 Claims. (Cl. 29—99.)

1. In a lathe tool holder, the combination of a body comprising a shank and a spring head formed integrally with an open ended slot between them, the said body having an aperture extending transversely thereof, and an element adjacent the open end of the slot entirely supported in the aperture and rotatably movable therein to one position to permit resilient action of the head and to another position to prevent such resilient action.



1,458,634. TRANSFORMER COOLER AND ELECTRIC HEATER. ALVIN H. WAAGE, Rosedale, N. Y. Filed Nov. 10, 1921. Serial No. 514,124. 2 Claims. (Cl. 219—47.)

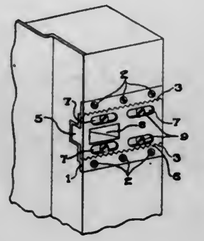
1. A transformer provided with primary and secondary windings, both of which are tubular to permit the flow of liquid therethrough.



1,458,635. HEADLIGHT SCREEN. LYMAN F. WHITNEY, Boston, Mass., assignor to Kalmus, Comstock & Wescott, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Oct. 25, 1920. Serial No. 419,194. 3 Claims. (Cl. 240—48.4.)

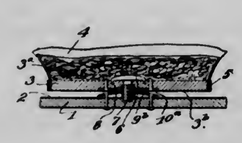
1. A screen for headlights comprising transparent media having total-reflecting surfaces for transmitting light therethrough by successive reflection from said surfaces, and light-obstructing means behind said surfaces

for substantially preventing direct transmission of light passing through said surfaces.



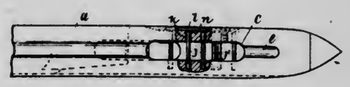
1,458,636. SPARK PLUG. JOSEPH J. WISNIOWSKI, Chicopee, Mass. Filed Sept. 23, 1920. Serial No. 412,292. 1 Claim. (Cl. 123—169.)

The combination, in a spark-plug, with a shell having a ground electrode at the bottom, of an insulator in said shell, central electrode in said insulator, protruding from the bottom of the same at a point remote from the axial center thereof, and having a triangular bottom, and a plurality of jump-spark conductors moulded in said insulator, and projecting below the bottom thereof between the protruding terminal of said lower central electrode member and said ground electrode, the protruding terminals of said lower member and said jump-spark conductors being in a circle which is concentric with the bottom of the insulator, and inside of said ground electrode, and the bottoms of said jump-spark conductors being triangular, and so arranged relative to each other and to said protruding terminal of said lower member that a side of one is in apposition to a side of another.



1,458,637. ADJUSTABLE KEEPER PLATE. GEORGE E. ANDERSON, Montpelier, Vt. Filed June 21, 1922. Serial No. 569,998. 1 Claim. (Cl. 292—340.)

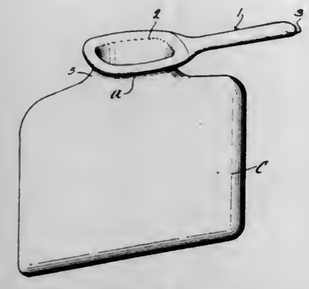
An adjustable keeper, comprising a fixed plate having outwardly projecting inwardly directed teeth adjacent to the edges thereof and having threaded openings inward of said teeth, a second plate having its edges toothed to be received between the toothed portion of the first mentioned plate to co-engage with the teeth thereof, said second mentioned plate having a latch receiving socket



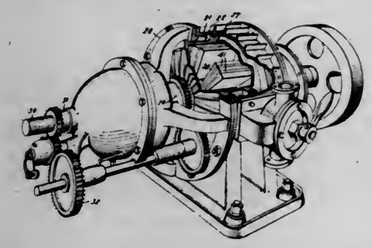
and elongated openings to aline with the threaded openings of the first mentioned plate, and headed bolts passing through these openings to bind the plates together.

1,458,638. HAT HOLDER. REUBEN A. BOGLEY, Washington, D. C. Filed Feb. 18, 1922. Serial No. 537,634. 1 Claim. (Cl. 206—8.)

In a device of the class described, the combination of a foundation, a hat holder comprising a base plate, a threaded shank extending through said plate, means on the inner end of said shank for engagement with said plate, an anchoring plate and a spacing plate, said plates being provided with centrally disposed registering threaded openings and being adapted to cooperate with said threaded shank, said anchoring plate being provided with an inverted dished body portion, whereby the hat holder will be spaced from the foundation.



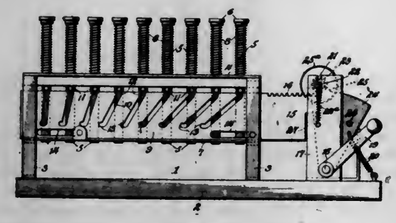
1,458,639. SHUTTLE TENSION. WILLIAM CANOVA, Paterson, N. J. Filed Aug. 4, 1922. Serial No. 579,592. 1 Claim. (Cl. 139—214.)



In combination, a shuttle body having a set of substantially parallel elongated holes entering thereinto from one surface thereof, a set of elongated cylindrical pins freely revoluble and having transverse lost-motion in the holes and forming filling guides, and means at the ends of the pins to retain them against displacement out of the holes, such means at one end of each pin being removable.

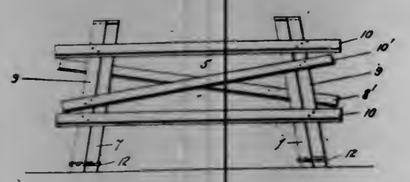
1,458,640. URINAL. GEORGE R. CHASE, Jefferson, Oreg. Filed Oct. 30, 1922. Serial No. 597,900. 2 Claims. (Cl. 4—19.)

1. A urinal comprising an elongated member provided with an extension at one end to provide an operating handle, said member being also provided with an elongated opening, the major axis of the opening being disposed lengthwise of the member, and a container supported by the member and having an induction opening in communication with the opening of the member.



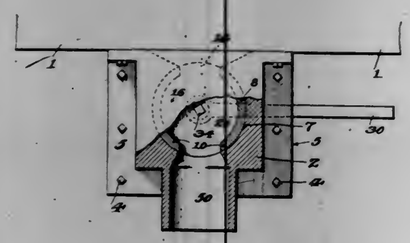
1,458,641. ROTARY INTERNAL-COMBUSTION ENGINE. VOJTECH CIZEK, New York, N. Y. Filed Feb. 25, 1921. Serial No. 448,560. 7 Claims. (Cl. 123—11.)

1. A rotary internal combustion engine comprising a cylindrical casing, a driven shaft extending therethrough, a gearing connecting said casing and shaft for continuously rotating said casing, two sets of radial vanes on said shaft within said casing, and a mechanism associated with each set of vanes for alternately keeping the same stationary and fixing the same to said shaft, the two mechanisms associated with said vanes working in opposition.



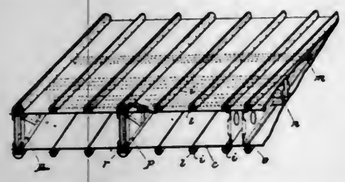
1,458,642. ADDING MACHINE. FREDERIC COLLINS, Philadelphia, Pa. Filed Apr. 21, 1921. Serial No. 463,142. 9 Claims. (Cl. 235—60.)

1. In an adding machine, a manually operable key, a rack bar movable in one direction by depression of said



key, a number wheel, a pinion adapted to be engaged by the rack bar for rotating the number wheel, and operator controlled means for holding the pinion out of the path of the rack bar until after the rack bar has been moved by the key, said operator controlled means when moved permitting engagement of the rack bar with the pinion, and means carried by the operator controlled means for engagement with the rack bar to return said rack bar to its initial position, during which movement the number wheel is turned to an extent determined by the movement imparted to the rack bar by the key.

1,458,643. CURING RACK. PHILIP H. J. COVERDALE, Beaumont, Tex. Filed Dec. 2, 1921. Serial No. 519,423. 6 Claims. (Cl. 34—26.)

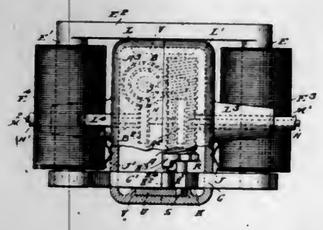


1. A support or rack, comprising two similar panels formed wholly of longitudinal bars and uprights which have end portions which project crosswise of and beyond the longitudinal bars and which are spaced wider apart in one panel than in the other, said bars and uprights being secured back to front and being relatively broad in proportion to their thickness, said panels being adapted to be stood loosely together at an angle to each other and with the backs of the uprights of each panel bearing pivotally against one corner of the adjacent longitudinal bar of the other panel and thereby holding the panels in position so that they will support a load.

1,458,644. GATE VALVE. JOSEPH EDITH DEMPSEY, Acme, Okla. Filed Mar. 4, 1920. Serial No. 363,298. 1 Claim. (Cl. 251—96.)

The combination with a casing having a cylindrical chamber formed with oppositely arranged openings, extending to the bottom wall of the casing, of a valve rotatable in said cylindrical chamber and having spaced depending arcuate wings, the edges of which are arranged in spaced relation to form passages adapted for communication with said openings, said passages being extended out through the end of the valve, the upper end of said casing being provided with a laterally projecting flange, a closure secured to said flange and flatly abutting the adjacent side of said valve, and an operating member connected to said valve.

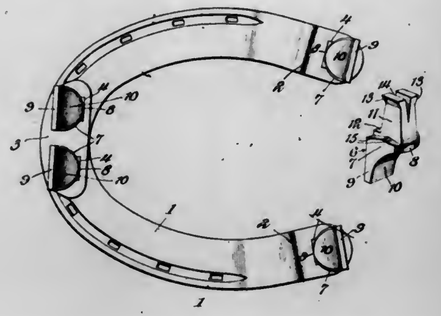
1,458,645. METALLIC STRUCTURE FOR AIRCRAFT. CLAUDIUS DORNIER, Friedrichshafen, Germany, assignor to Zeppelinwerke Lindau, Gesellschaft mit beschränkter Haftung, Lindaureutin, Germany, a German Corporation. Filed Mar. 31, 1921. Serial No. 457,543. 7 Claims. (Cl. 244—31.)



1. In a flying machine supporting surface in combination, a plurality of longitudinal ribs and sheet metal strips extending in parallel with and between said ribs near the upper and lower edges, respectively, thereof, but so as to be set back relatively to said ribs.

1,458,646. PROCESS FOR ABSORBING ETHYLENE AND ITS HOMOLOGUES. RUDOLF ENGELHARDT, Leverkusen, near Cologne, WILHELM LOMMEL, Wiesdorf, near Cologne, and ANTON OSSENBECK, Cologne-on-the-Rhine, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne, Germany. Filed Sept. 26, 1922. Serial No. 590,707. 4 Claims. (Cl. 260—98.)

1. The process which comprises absorbing, ethylene and its homologues in sulfuric acid containing a silver catalyzer.



1,458,647. ELECTRIC CLOCK. ELBERT FOWLER, Baltimore, Md., assignor, by mesne assignments, to George Rawak, New York, N. Y. Filed July 7, 1919, Serial No. 308,952. Renewed May 5, 1923. 10 Claims. (Cl. 58—26.)

1. In an electrically driven secondary clock, in combination, a drive worm, electrical means for giving said worm a rotary movement, a second worm, a worm wheel connected to said second worm and adapted to be driven by said drive worm, a worm wheel connected to the minute hand of the clock and arranged to be driven by said drive worm, and a worm wheel connected to the hour hand of the clock and arranged to be driven by said second worm.

1,458,648. HORSESHOE CALK. JOSEPH H. FREEMAN, Shickshinny, Pa. Filed Mar. 29, 1922. Serial No. 547,796. 3 Claims. (Cl. 168—41.)

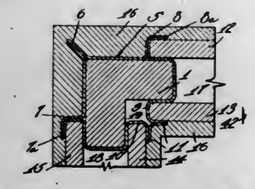
1. The combination with a metallic shoe provided with a rectangular socket having two opposite walls converging throughout their length from the bottom to the top, and the other two walls converging from the bottom for a major portion of their length and terminating at the top in outwardly-flared seats, of a calk comprising a body member adapted to bear against the lower face of the shoe and having an upwardly-tapering tenon

of resilient material extending therefrom and fitting the socket, said tenon having at its upper end a transverse V-shaped cleft between the flared seats of the socket to permit the insertion or removal thereof.

1,458,649. TIME CALCULATOR. RICHARD N. GARDNER, San Francisco, Calif. Filed Apr. 12, 1922. Serial No. 551,799. 1 Claim. (Cl. 235—70.)

A slide rule calculator comprising a body member having a fixed scale; a movable slide having a scale for indicating the arithmetical difference between any two given points on the fixed scale; and a second movable slide, said second slide having a scale for indicating in terms of a predetermined coefficient the arithmetical difference between any two given points on the scale of the first slide.

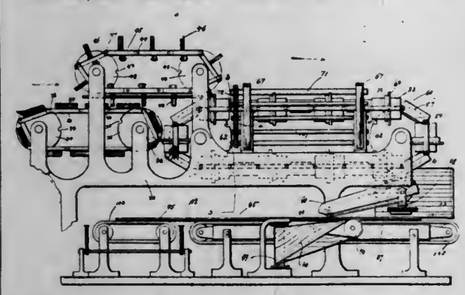
1,458,650. PROCESS FOR THE PRODUCTION OF CALCIUM CHLORIDE. VICTOR MORITZ GOLDSCHMIDT, Christiania, Norway. Filed Jan. 13, 1922. Serial No. 529,062. 2 Claims. (Cl. 23—13.)



1. Process for the production of calcium chloride consisting in reacting upon a solid unfused mass comprising the calcium oxide with gas containing free chlorine in the absence of substantial amounts of reducing substances at a temperature between 350 and 650° C.

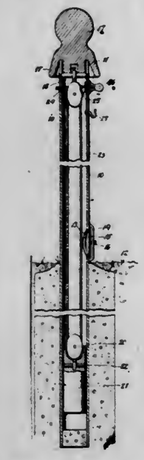
1,458,651. PROCESS FOR THE PRODUCTION OF CALCIUM CHLORIDE. VICTOR MORITZ GOLDSCHMIDT, Christiania, Norway. Filed Jan. 13, 1922. Serial No. 529,063. 4 Claims. (Cl. 23—13.)

1. Process for the production of calcium chloride which consists in reacting upon heated calcium carbonate with chlorine gas in the absence of substantial quantities of reducing substances at temperatures, at which the charge to be reacted upon is in a solid condition.



1,458,652. FIREPROOF PARTITION. JAMES C. GOODING, Wellston, Ohio. Filed Apr. 19, 1922. Serial No. 555,580. 2 Claims. (Cl. 72—31.)

1. A wall of the class described comprising a stud in the form of a rigid, solid core, a metal sheathing encasing said core and folded to form combined plate receiving seats and anchors, some of the walls of said



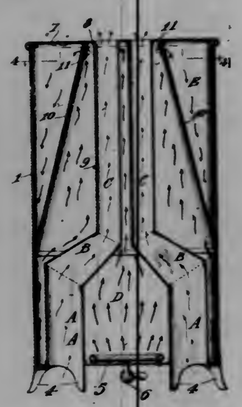
seats being double, the members of which lie in contact with each other whereby the walls are reinforced to resist strains.

1,458,653. SAUSAGE LINKING AND HANGING MACHINE. OTTO C. L. HIRSCH, Chicago, Ill., assignor to Sausage Linking Machine Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 9, 1920. Serial No. 429,501. 62 Claims. (Cl. 17—6.)

3. A sausage linking mechanism comprising a sectional feeding mechanism and a twisting mechanism comprising a sectional carrier, the sections of said feeding mechanism being longer than those of the carrier.

1,458,654. CLOTHESLINE POST. WALTER LEO HOTOPP, Jersey City, N. J. Filed Apr. 7, 1921. Serial No. 459,389. 2 Claims. (Cl. 68—3.)

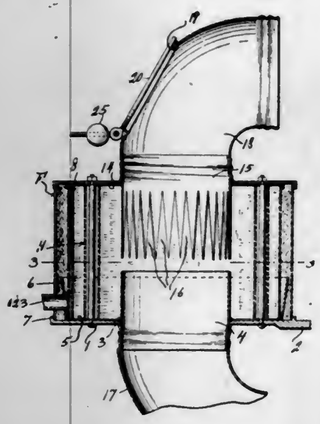
1. A clothes drying device including a shell provided at its upper end with slots opening through the



upper end edge of the shell, a removable cap closing the post at its upper end overlying said slots, a cross pin removably received in said slots, and a weight-retracted clothes line suspended from said cross pin.

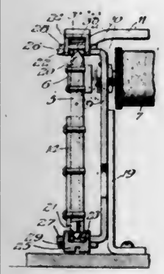
1,458,655. AGRICULTURAL IMPLEMENT. MAX H. JAHN, Gloversville, N. Y. Filed Apr. 27, 1922. Serial No. 556,882. 6 Claims. (Cl. 55—1.)

1. In an implement for the purpose set forth, the combination of a supporting frame, a beater shaft mounted thereon, means for continuously rocking said shaft, and beater arms secured to and projecting rearwardly and downwardly therefrom.



1,458,656. PORTABLE HEATER. CHARLES MELVIN JOHNSON and E MELVIN JOHNSON, Sacramento, Calif. Filed Nov. 2, 1922. Serial No. 598,549. 3 Claims. (Cl. 126—90.)

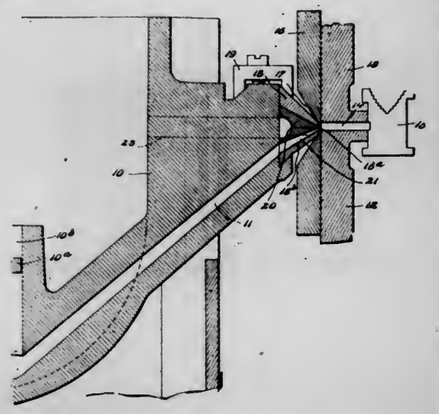
1. A heater having a burner in its lower portion, hot air flues, each formed of three sections, the intermediate one being angled upwardly and inwardly over the burner, and adapted to be surrounded by the products of combustion, a vent for products of combustion, a perforated conical partition surrounding the upper portion of the flues and between the burner and the vent, and a top for the heater having openings registering with said flues.



1,458,657. HUMIDIFYING AND FILTERING DEVICE FOR INTERNAL-COMBUSTION ENGINES. EUGENE E. LA ROSE, Niagara Falls, N. Y., assignor to Lasco Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Mar. 23, 1922. Serial No. 546,919. 29 Claims. (Cl. 183—8.)

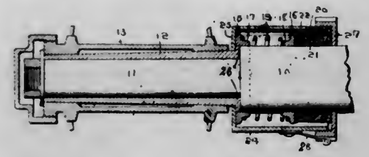
1. A humidifying and filtering device comprising a casing, the peripheral wall of the casing being perforated, a filtering element associated with said peripheral wall, tubes extending within the casing through the top and bottom walls thereof, the inserted ends of said tubes being substantially in alinement and spaced one

from the other, and a humidifying element within the casing surrounding the tubes and bridging the space between said tubes.



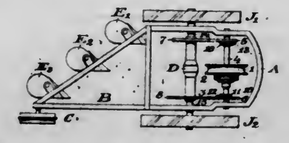
1,458,658. AUTOMATICALLY-ADJUSTABLE BEARING. OSCAR M. LEICH, Genoa, Ill., assignor to Leich Electric Company, Genoa, Ill. Filed Apr. 24, 1918. Serial No. 230,446. 3 Claims. (Cl. 64—49.)

1. A device of the character described comprising a shaft having tapered ends and adjustable ball bearings for both ends of said shaft, said shaft being provided with means to automatically take up wear and permit a slight lateral play of said shaft, said means comprising a spring pressed follower engaging one set of said bearings and adapted to move the same against the tapered end of said shaft, and thereby move the opposite tapered end of said shaft against the other of said ball bearings, said spring yielding to permit said tapered ends to ride along said balls to allow slight lateral play of said shaft.



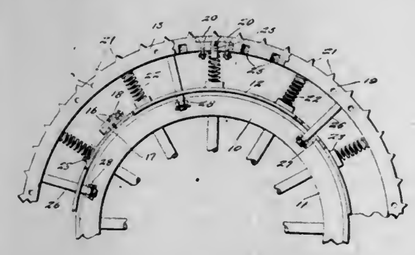
1,458,659. CASTING MECHANISM FOR TYPOGRAPHIC MACHINES. FREDERICK W. LETSCH, Baltimore, Md. Filed May 25, 1920. Serial No. 384,131. 7 Claims. (Cl. 22—70.)

1. In a mechanism of the kind described, a mold having a cavity therein, a pot for containing molten metal having a mouth portion provided with an outlet for conducting molten metal from said pot to said cavity, a rib arranged in said outlet and extending from the upper to the lower wall thereof, whereby molten metal entering said cavity through said outlet is separated into a plurality of streams, said mouth portion of the pot



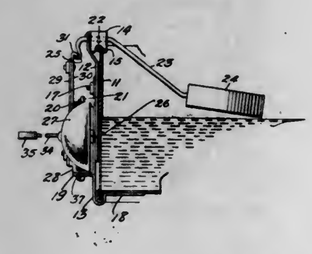
having a passage for the escape of air from said cavity as molten metal is supplied thereto, the opening from said cavity into said passage being arranged in said rib.

1,458,660. PACKING. KARL W. LIEBAU, Fresno, Calif. Filed Sept. 1, 1920. Serial No. 407,385. 1 Claim. (Cl. 288—1.)



A packing comprising a cylindrical body of compressible material having outwardly directed stop ribs at the ends, a coil of wire embedded in the walls of the body and surrounding the opening thereof and spaced from the inner and outer faces of the same, and a binding coil of wire surrounding the outer face of the body and maintained in position by the stop ribs.

1,458,661. POWER-OPERATED PLOW OR OTHER AGRICULTURAL IMPLEMENT. JOSEPH MALONYAY, Debrecen, Hungary. Filed Apr. 13, 1921. Serial No. 461,052. 3 Claims. (Cl. 97—25.)

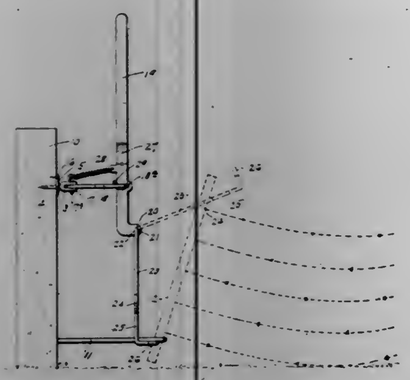


1. An agricultural machine of the class described having a pair of driving shafts each provided with a ground wheel, differential gears connecting said shafts, a countershaft, a pulley loose on the countershaft and adapted to receive power from an external source, means to lock said pulley to the countershaft at will, and power transmission connections between the countershaft and said driving shafts and each including means to compensate for variations in the speed of rotation of the driving shafts.

1,458,662. TIRE. JOHN WALTER MILLER, Kensett, Ark. Filed Dec. 9, 1922. Serial No. 605,947. 3 Claims. (Cl. 152—38.)

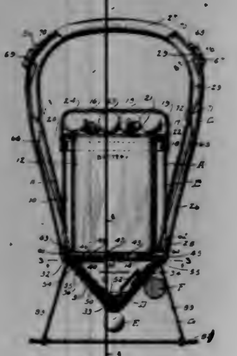
3. A resilient tire comprising an inner annular member, an outer member, said outer member comprising a plurality of segmental sections, reduced extremities at each end of each section for overlapping engagement with an adjacent section, means for securing the sections together to provide an annular member, means for securing the inner member upon the rim of a wheel, resilient elements spaced around and located between the inner and outer members to hold the same yieldingly spaced, the inner annular member having spaced elongated slots arranged in pairs with one slot of each pair disposed upon each side of the wheel and guide rods having their outer ends secured to the outer member and their inner ends passing through the elongated slots.

1,458,663. DRIP-PAN SIGNAL. WILLIAM H. MORLEY, Manchester, N. H. Filed Aug. 17, 1922. Serial No. 582,430. 5 Claims. (Cl. 116—110.)



5. A drip-pan alarm including means for attachment to a drip-pan, a frame mounted for swinging movement on the attaching means, a bell carried by the attaching means, a striker carried by the frame, a float carried by the attaching means and provided with means for releasably holding the frame in one position, and spring means for moving the frame toward and away from the bell a plurality of times.

1,458,664. GATE FASTENER. HENRY H. SCHAEFER, Weldona, Colo. Filed Jan. 14, 1922. Serial No. 529,251. 9 Claims. (Cl. 292—247.)



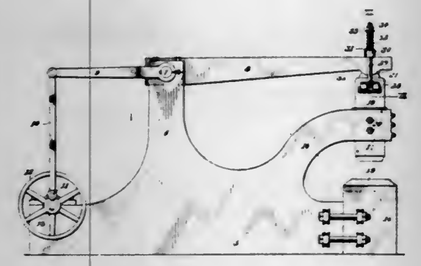
1. In a wire gate fastener or tightener, the combination with a support, of a securing member attached to the support, a lever pivotally connected therewith, a book

pivotally connected with the lever and adapted to engage the gate stick, said hook and lever combining to encircle the gate stick when the hook is engaged with

the gate stick and the lever swung to the fastening position and means carried by the hook for securing the lever in fastening position.

1,458,665. SIGNAL LANTERN. GEORGE W. STEWART, Chicago, Ill. Filed Mar. 29, 1922. Serial No. 547,810. 10 Claims. (Cl. 240—8.5)

1. An electric hand lantern embodying a case, a battery removably fitted in the case, a handle secured to the case, a depending inverted conical reflector carried by the case, and lamps secured to the reflector one at the apex portion of the reflector and one at the side of the cone.

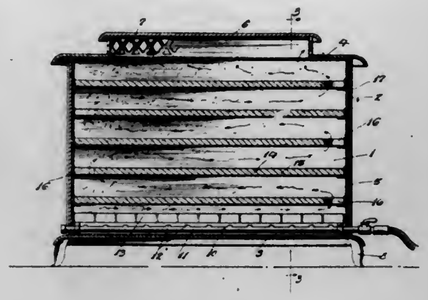


1,458,666. CLAMP. RALPH F. STOPPELLO, Providence, R. I. Filed Dec. 6, 1921. Serial No. 520,299. 1 Claim. (Cl. 304—40.)

A clamp of the class described comprising a box-like body formed of sheet metal, integral flanges formed longitudinally upon one side of said body and arranged near the center of the body and projecting laterally therefrom, clamping bolts passing through said flanges, and stop bolts passing transversely through said body intermediate the ends of the body for limiting the move-

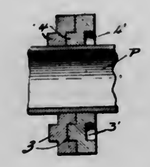
ment of an end of a support through the clamp and constituting an abutment for two adjoining ends of alined support sections.

1,458,667. POWER HAMMER. JOSEPH SUSTARICH, Chicago, Ill. Filed Oct. 6, 1921. Serial No. 505,854. 5 Claims. (Cl. 78—32.)



1. In a power hammer wherein a helve is provided and mounted for vertical swinging movement and wherein a hammer is slidably guided for vertical movement adjacent the free end of the helve, a yoke extending through said hammer and upwardly along opposite sides of the helve, and a transverse cross head slidably mounted upon the yoke above the helve and pivotally mounted transversely in the upper surface of the latter.

1,458,668. HEATING STOVE. CORNELIUS L. TAYLOR, Huntington, W. Va. Filed July 30, 1921, Serial No. 488,645. Renewed Apr. 4, 1923. 1 Claim. (Cl. 126—85.)



In a heating stove of the class described, a body having side walls, end walls, and a bottom, a burner arranged longitudinally on the bottom, a narrow apertured flame spreader secured to the burner and extending longitudinally thereof, said body being provided with air intake openings located adjacent the bottom, a dome on the top of the body having openings through its sides, supporting ledges upon the end walls of the body, and flat baffle slabs resting horizontally upon said ledges and having their edges abutting the respective walls of the

body, said slabs being each provided with a recess in one end and the slabs being arranged in spaced relation one above the other with said recesses alternately at

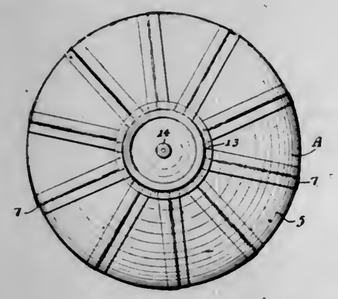
opposite ends of the body, said flame spreader being situated between said burner and the lowermost one of said slabs.

1,458,669. SECTIONAL FIRE GRATE. AUSTIN TERRY-BERRY, Duluth, Minn. Filed Sept. 12, 1919. Serial No. 323,273. 5 Claims. (Cl. 126—180.)

2. The combination of a fixed supporting member and a plurality of substantially U-shaped grate sections, said U-shaped sections being adapted to be slipped over the supporting member from opposite sides, and mortise and tenon means carried by each of said sections to interlock the same to prevent independent rotary or radial movement of any section, the assembled sections being rotatable upon said supporting member.

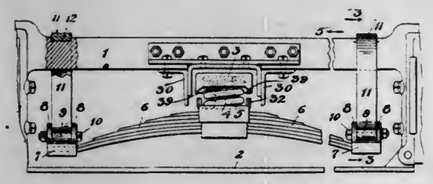
1,458,670. MANUFACTURE OF ALKYLIZED DERIVATIVES OF HYDROCUPREINE. HEINRICH THRON, Frankfort-on-the-Main, Germany, assignor to The Firm of Vereinigte Chininfabriken Zimmer & Co., G. m. b. H., Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Apr. 9, 1921. Serial No. 460,025. 5 Claims. (Cl. 260—26.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A process for the manufacture of alkyl derivatives of hydrocupreine, characterized by hydrocupreine oxide, being alkylized by the usual alkylizing means, the alkylized products being converted by reducing means into alkyl-derivatives of hydrocupreine.



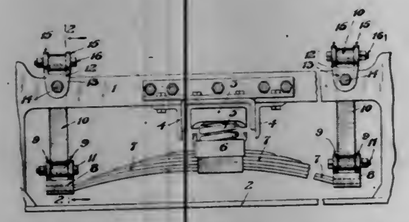
1,458,671. SAW CONSTRUCTION. ANTON WESTGARD, Chicago, Ill., assignor of one-half to Anna H. Westgard, Chicago, Ill. Filed Dec. 31, 1921. Serial No. 526,217. 10 Claims. (Cl. 143—151.)

1. In a saw, a body provided with recesses to receive saw teeth and locking means therefor, saw teeth, and a locking means comprising serrated members adapted to



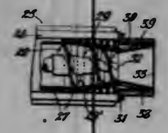
be forced against said tooth by engagement with said saw body as said members are drawn one toward another.

1,458,672. BALL. CHARLES C. WITMER and BECKWITH HAVENS, Hammondsport, N. Y., assignors to Airships Incorporated, Hammondsport, N. Y., a Corporation of New York. Filed Nov. 17, 1921. Serial No. 515,930. 3 Claims. (Cl. 46—4.)



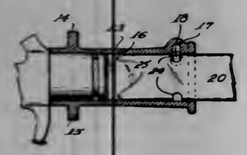
1. A ball formed of balloon cloth consisting of a plurality of gores having their edges arranged in overlapping relation and cemented together, disc shaped end walls cemented to the terminals of the gores, and reinforcing and sealing strips disposed over the meeting edges of the gores and end walls.

1,458,673. CAR TRUCK. WALTER S. ADAMS, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 608,420. 6 Claims. (Cl. 105—192.)



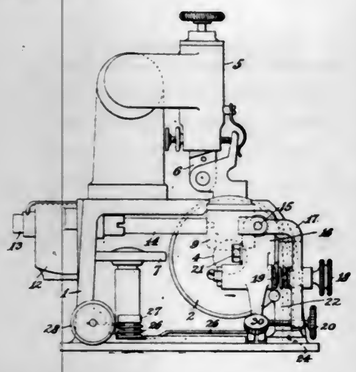
2. In a car truck, a truck frame, a hanger resting on the upper edge of said frame and having its side members extending downwardly on opposite sides thereof, said hanger being free to oscillate on said frame, a spring seat secured to the lower end of said hanger and free to swing independent of said hanger, a leaf spring having its end supported on said seat, a bolster supported by said spring and a link extending between said bolster and spring for retaining said spring in a horizontal position.

1,458,674. CAR TRUCK. WALTER S. ADAMS, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed Dec. 22, 1922, Serial No. 608,420. Divided and this application filed Feb. 17, 1923. Serial No. 619,553. 4 Claims. (Cl. 105—192.)



1. In a car truck, a truck frame, a bracket secured thereon, a link having one of its ends pivoted in said bracket and extending downwardly on one side only of said frame, and a spring seat pivotally secured to the lower end of said link.

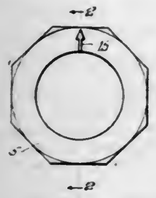
1,458,675. APPARATUS FOR FORMING STRIPS OF ASBESTOS-CEMENT MATERIAL. ROBERT H. ANDERSON, Ambler, Pa., assignor to Asbestos Shingle, Slate & Sheathing Company, a Corporation of Pennsylvania. Filed July 6, 1921. Serial No. 482,692. 1 Claim. (Cl. 25—11,)



In apparatus for forming asbestos-cement slabs and the like the combination with an auger machine adapted to feed a plastic mixture of asbestos and cement, of a die having its entrance orifice matching vertically and horizontally the outlet from said auger machine and having a pair of guiding surfaces contracting the die passage in the direction of flow and a second pair of guiding surfaces diverging in the direction of flow, said four guiding surfaces at the discharge forming a relatively narrow orifice shaping the asbestos cement material into a flat ribbon.

1,458,676. LIFTING JACK. EDMUND C. BATES, Alliance, Ohio, assignor to The Buckeye Jack Manufacturing Company, Alliance, Ohio, a Corporation of Ohio. Filed Apr. 28, 1922. Serial No. 557,090. 12 Claims. (Cl. 254—111.)

1. In a device of the class described, the combination with an operating lever for a jack having a notched handle associated therewith, said lever having a slot therein, and means movable in the slot and adapted to engage the notch for clamping the member and the lever together.

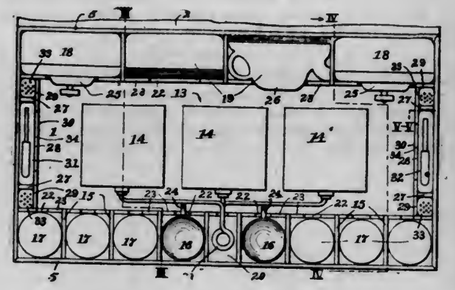


1,458,677. SKIVING MACHINE. AUGUST BERRER, Feuerbach, Germany, assignor to Fortuna Machine Company, New York, N. Y., a Corporation of New York. Filed Sept. 2, 1921. Serial No. 498,093. 8 Claims. (Cl. 69—95.)

1. In a skiving machine, the combination of a housing, an annular knife, a feed roll cooperating therewith, a vertical spindle fixed in the housing, a carrying member capable of being rocked about the spindle, a lever supported by the carrying member on a horizontal axis normally at right angles to the axis of the annular knife, and a second lever mounted on the first named lever on an axis at right angles to the axis of the first named lever and supporting the feed roll.

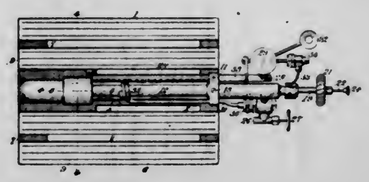
8. In a skiving machine, the combination of a housing, an annular knife, a feed roll cooperating therewith, a lever supporting the feed roll and mounted on an axis normally parallel with the axis of the knife, a second lever supporting the first named lever and mounted on a horizontal axis normally at right angles to the axis of the knife, a carrying member supporting the second named lever, and a vertical spindle fixed in the housing and upon which the carrying member is capable of being rocked about a vertical axis.

1,458,678. BUSHING FOR RADIATORS. ALBERT A. BEST, Chicago, Ill. Filed Feb. 7, 1921. Serial No. 443,018. 2 Claims. (Cl. 137—75.)



1. A radiator bushing having a single pipe connecting passage therethrough, a deflecting wall for interposition between the first and second loops of the radiator and serving to direct the incoming water upwardly in the first loop, and a by-pass interconnecting the first and second loops.

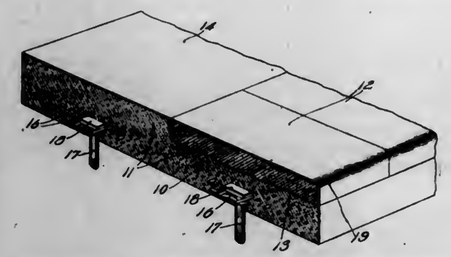
1,458,679. CAMP AND LUNCH KIT. ARTHUR H. BISHOP, New York, N. Y. Filed Oct. 9, 1920. Serial No. 415,856. 2 Claims. (Cl. 206—4.)



1. A portable lunch kit having a receptacle, strips fixed along the bottom of said receptacle and arranged

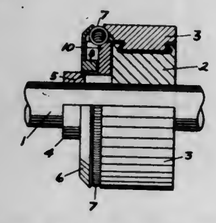
parallel to the walls thereof, partitions dividing the space between said strips and the walls into separate racks for holding utensils, there being a notch in each of said

strips between adjacent partitions for receiving projecting portions of the utensils when mounted in said racks, and a cover for said receptacle adapted, when closed to retain said utensils in the receptacle racks.



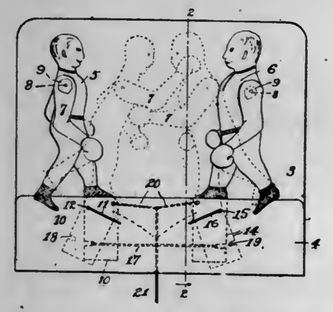
1,458,680. HYDROCARBON GENERATOR AND BURNER. GEORGE N. BLANCHARD and CLARENCE F. COLMAR, San Francisco, Calif., assignors to Colmar Burner Company, San Francisco, Calif., a Corporation of California. Filed Oct. 19, 1920. Serial No. 418,033. 2 Claims. (Cl. 158—53.)

2. A gaseous fuel burner construction consisting of a burner member, formed in a single casting having a hollow interior and substantially rectangular in plan, said casting provided on each side of its longitudinal center with a plurality of parallel burner channels separated intermediate their ends by an air passage affording a cooling chamber, the upper surface of said burner channels being substantially flat and disposed in the same plane and provided with a plurality of parallel spaced longitudinally extending burner slots, a mixing dome formed integral with the casting and disposed centrally thereof, a generator and tube overlying the burner casting and discharging into said mixing dome, and valve controlled means for supplying liquid fuel to said generator.



1,458,681. SLIPPROOF STAIR UNIT. ARTHUR BONIFACE, New York, N. Y., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 10, 1919. Serial No. 281,770. 1 Claim. (Cl. 72—96.)

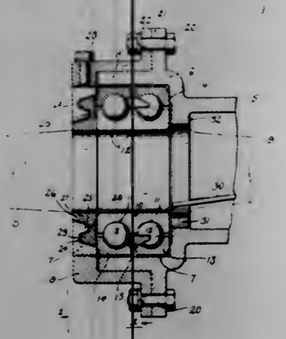
A unitary, integral stair slab comprising a supporting portion of cement, a row of wear-resisting, anti-slipping tiles of ceramic bonded abrasive grains forming the forward part of the tread surface of the slab, said tiles being rough and porous and having plane upper surfaces, rounded abrasive edges forming the nose of the slab and under surfaces integrally adhering to the cement, a portion comprising cement in the rear of the tiles having



a plane tread level and continuous with the surface of the tiles and a securing device embedded in said slab for fastening it to a foundation.

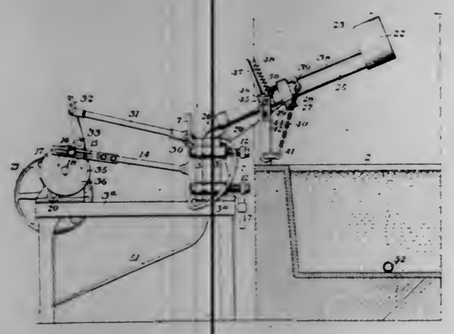
1,458,682. SHORT-CIRCUITING DEVICE. HERBERT L. BAUMP, Dayton, Ohio, assignor to The Dayton Fan & Motor Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 4, 1922. Serial No. 549,572. 2 Claims. (Cl. 172—279.)

1. In an alternating current motor, an armature shaft, a commutator mounted thereon, a cup-shaped disc mounted on said shaft to face the commutator, guiding projections on said disc, centrifugal weights mounted between the disc and commutator and free to move outwardly along said projections, and a flexible element adapted to be moved outwardly by the centrifugal weights, when the armature shaft attains a certain speed, to make contact between the rim portion of the cup-shaped disc and the commutator for the purpose of short circuiting the latter.



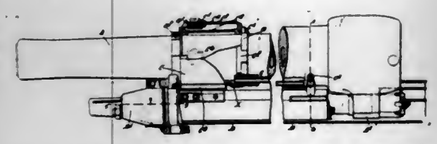
1,458,683. TOY FIGURE. ARVID F. CARLIN, Mamaroneck, N. Y. Filed Dec. 17, 1921. Serial No. 523,032. 2 Claims. (Cl. 46—40.)

1. A figure toy comprising a pair of upright adjacent supports, a pair of figures each pivoted between the sup-



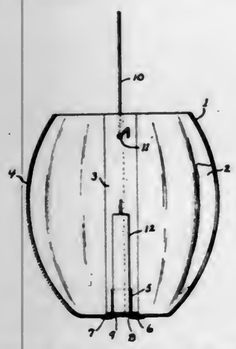
ports at the foot portion and having an extension on the foot portion beyond the pivot portion, an elastic member connecting such extensions between the supports to draw them together and thereby swing the figures apart, a flexible member connecting said foot portions between the supports above the pivot portions, an actuating member attached to the flexible member to draw the figures together and thereby tension the elastic member, whereby on operation and release of the actuating member the tensioned elastic member will rock the figures on their pivots and swing them apart, and a loop member on said supports engaging the extensions to limit their approach caused by the elastic member.

1,458,684. AXLE CONSTRUCTION. EVERETT J. COOK, Oshkosh, Wis., assignor of one-half to Wisconsin Parts Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Aug. 28, 1920. Serial No. 406,722. 4 Claims. (Cl. 64—24.)



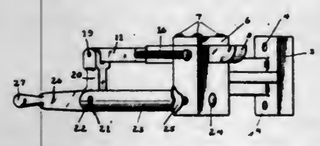
1. In a device of the class described, the combination with a casing having a bearing compartment, a bearing member mounted therein and a shaft journaled in said bearing member, of means comprising a passage within said casing for supplying lubricant to the bearing compartment, and a spinner member mounted on said shaft within the bearing compartment whereby its rotation will retain the lubricant in said compartment by centrifugal force.

1,458,685. CASTING MACHINE. WALTER T. DAVIS, Wheeling, W. Va., assignor to Wheeling Stamping Company, Wheeling, W. Va., a Corporation of West Virginia. Filed May 20, 1921. Serial No. 471,105. 12 Claims. (Cl. 22—57.)



1. The combination with a tank or vessel adapted to contain molten metal, of a mold mounted adjacent thereto, an oscillating ladle having means normally preventing discharge therefrom, and means for oscillating said ladle to alternately immerse it in the tank to be filed and to bring it into discharging relation to the mold, said first mentioned means being automatically moved to inoperative position when the ladle reaches said discharging relation, substantially as described.

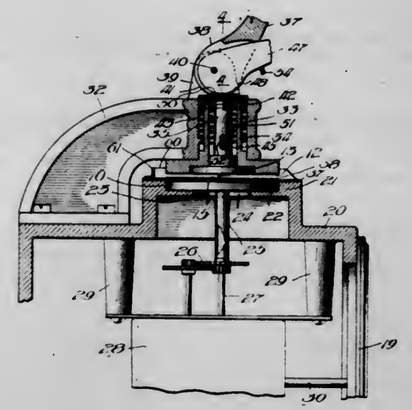
1,458,686. ORDNANCE RECOIL APPARATUS. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, England. Filed July 9, 1919. Serial No. 309,786. 10 Claims. (Cl. 89—43.)



1. In ordnance, the combination with the gun barrel and the recoil cylinder, of a tank for containing liquid, means for establishing communication between said tank and said cylinder, means for connecting said tank to the gun barrel, and an isolating valve for cutting off communication between said tank and cylinder when required.

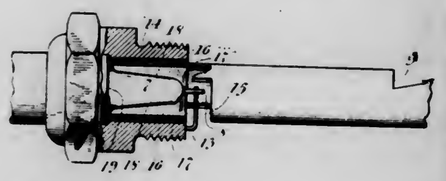
1,458,687. DECORATIVE LANTERN. VICTOR E. DESSART, Brooklyn, N. Y. Filed Oct. 17, 1922. Serial No. 595,035. 1 Claim. (Cl. 240—16.)

A decorative lantern comprising in combination a front member, an outwardly extending peripheral band secured to said front member, a back member arranged to fit over the band on said front member to close said lantern, a candle socket provided with means for locking the lower ends of said front and back members; and a handle provided with means for locking the upper ends of said front and back members.



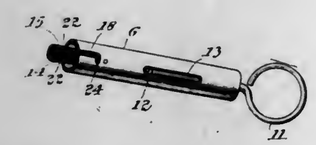
1,458,688. SAFETY DEVICE FOR POWER PRESSES. JAMES F. DUXBURY, Providence, R. I. Filed Aug. 24, 1922. Serial No. 583,979. 2 Claims. (Cl. 74—39.)

1. The combination with a press, having its controlling lever located at one side, of a detent support comprising



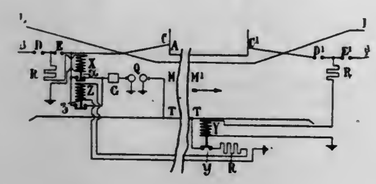
a base at one end and a guide block at the other, there being a guide formed in said guide block, a detent slidably mounted in said guide, a link pivotally attached to one end of said detent, a bell crank lever, a support for said bell crank lever detachably secured to said guide block, one arm of said bell crank being pivotally attached to the said link, a handle on the other arm of said bell crank, and springs which hold one end of said detent normally projected beyond the face of the guide block.

1,458,689. ELAPSED-TIME RECORDER. CHARLES S. ELLIS, Chicago, Ill. Filed Apr. 9, 1920. Serial No. 372,409. 12 Claims. (Cl. 234—55.)



1. An elapsed time recorder for printing over a permanent dial of a card time elapsed indicating markings of a rotating member, comprising a single rotative clock-driven die having a printing face composed of an annular series of time graduations and a single relatively fixed radial marker, relatively movable platens coaxial with each other and the die, one within and of smaller diameter than the other, and means to move said platens simultaneously towards the die, and one of them separately towards said die, whereby the imprint of said marker from the latter platen is shorter than the imprint produced by the coaction with said marker from both platens.

1,458,690. SPARK-PLUG CLEANER. FRANKLIN H. ELWELL, Chicago, Ill. Filed Aug. 21, 1920. Serial No. 405,184. 9 Claims. (Cl. 15—104.01.)



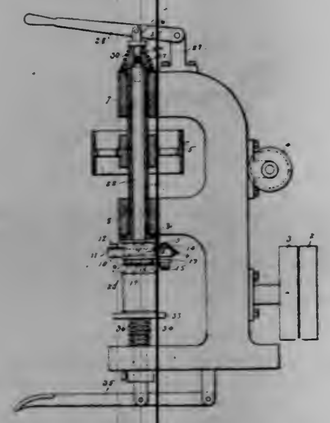
1. A spark plug cleaner provided with an inwardly projecting blade, a support therefor, said blade having a cutting edge shaped to conform to the outer surface of the spark plug insulator.

1,458,691. SPARK-PLUG CLEANER. FRANKLIN H. ELWELL, Chicago, Ill. Filed Sept. 7, 1920. Serial No. 408,434. 10 Claims. (Cl. 15—104.01.)

1. A spark plug cleaner, provided with a brush the bristles of which are normally straight and arranged longitudinally in a hollow circular form and adapted to substantially surround and thereby adapted to remove deposits of carbon and other material from substantially the entire surface of the insulator for a spark plug.

1,458,692. CONDUCTOR ARRANGEMENT OF ELECTRIC TRACTION SYSTEM. CHARLES EDWARD FAIRBURN, London, England. Filed Sept. 22, 1920. Serial No. 412,097. 4 Claims. (Cl. 191—3.)

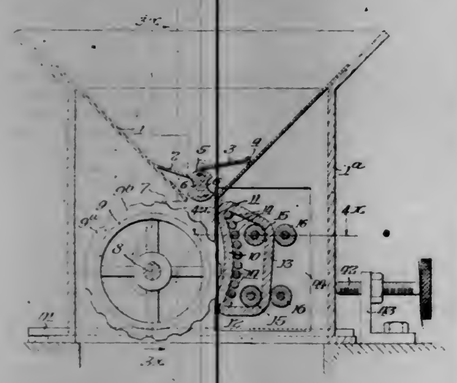
1. In a conductor arrangement for an electric traction system comprising a main conductor and a supplementary conductor fixed in position and to be made alive when a vehicle is about to enter the section comprising the supplementary conductor, the combination of an electro-magnetic device having a coil normally separated from both the main and supplementary conductors but connectible with the main conductor by the agency of the vehicle and an electric connection closed thereby when the device is energized and serving to make the supplementary conductor alive, a second electro-magnetic device energized from the supplementary conductor when it is alive and serving to keep this conductor alive, and means for deenergizing the said second electro-magnetic device, said de-energizing means comprising a third electro-magnetic device fed from the conductor system through the collector arrangement of the vehicle when it is near the point at which it leaves the supplementary conductor.



1,458,693. MANUFACTURE OF RUBBER. WILLIAM FELDENHEIMER, London, WALTER WILLIAM PLOWMAN, East Sheen, and PHILIP SCHIDROWITZ, London, England. Filed Aug. 12, 1921. Serial No. 491,829. 16 Claims. (Cl. 106—23.)

1. The process for the manufacture of rubber compositions which comprises the incorporation of clay in conjunction with a saponaceous material in the dry state with a rubber mixture.

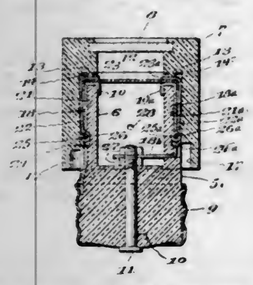
1,458,694. CAN-CLOSING MACHINE. ROBERT FLANIGAN, Baltimore, Md. Filed Aug. 3, 1922. Serial No. 579,329. 7 Claims. (Cl. 113—24.)



1. A can closing tool comprising a head, a ring revolubly mounted on one end of said head, a tool member

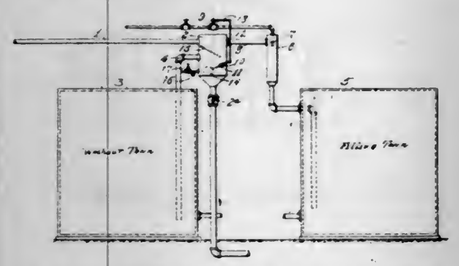
adapted to be reciprocated in said head, and a spinning wheel carried by said tool member and adapted to co-

operate with said ring to close the can seam, and a plunger operating within the head on said tool member.



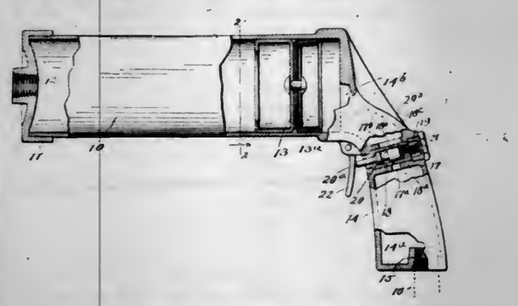
1,458,695. ALMOND-BLANCHING MACHINE. JULIUS FRANK and JOE DAVIS PIRTLE, Chicago, Ill. Filed Mar. 15, 1922. Serial No. 543,861. 12 Claims. (Cl. 146—32.)

1. In a nut blanching machine, the combination of a revolving cylinder and a traveling belt having a concaved path adjacent to the periphery of said cylinder; means being provided for driving said cylinder and belt at different speeds.



1,458,696. FUSE. HALL GOODWIN, Chicago, Ill. Filed Feb. 9, 1922. Serial No. 535,265. 5 Claims. (Cl. 200—130.)

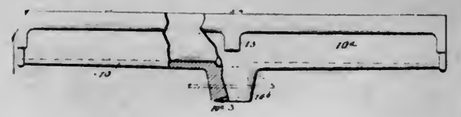
1. An electric fuse comprising a chambered plug of insulating material, the chamber opening through one end of the plug, a fusible element extending across the outer end of the chamber, conductor members carried by the plug, with which members the ends of the fusible element are in contact, pivoted clamping members carried by the conductor members and engageable with the ends of the fusible member for holding the same in contact with the conductor members, and a cap removably mounted on the end of the plug through which the cham-



ber opens, the interior of said cap engaging the clamping members for maintaining the contact between the conductor members and the ends of the fusible element.

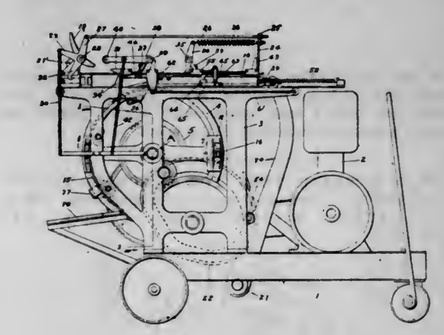
1,458,697. CONDENSER FOR BOILER-WASHING SYSTEMS. LESLIE B. GRAHAM, East Chicago, Ind. Filed Oct. 17, 1919. Serial No. 331,284. 9 Claims. (Cl. 122—396.)

1. In combination with a hot water system, a receptacle receiving hot water, a condenser connected to receive vapor arising from the water in said receptacle, means in said receptacle for controlling the admission of water to said condenser that is in turn controlled by water in said receptacle and continues under control thereof during the presence of said water therein, and means for effecting a delayed discharge of water from the receptacle.



1,458,698. PNEUMATIC GREASE GUN. LOUIS W. GREVE, Cleveland, Ohio, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 11, 1918. Serial No. 261,991. 2 Claims. (Cl. 221—78.)

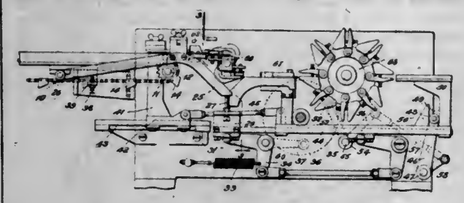
1. In a lubricating device of the character described, a barrel adapted to be filled with lubricant and provided



at its forward end with a discharge opening, and a piston adapted to be moved lengthwise of the barrel under air pressure, said barrel having at its rear end a hollow grip forming a continuation of the barrel to which an air supply member is adapted to be connected, said grip being provided with a valve between the point of supply of the air and the barrel, said valve comprising a valve chamber, a movable valve member, and inlet and exhaust ports through which air is supplied to or exhausted from the barrel.

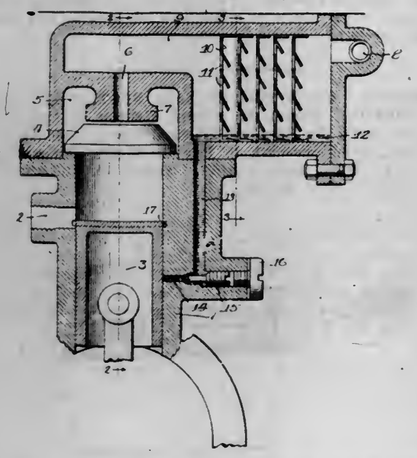
1,458,699. METHOD OF FORMING METAL ARTICLES. LOUIS W. GREVE, Cleveland, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 3, 1922. Serial No. 558,183. 3 Claims. (Cl. 78—81.)

1. The method of producing metal articles which consists in forging a member with an elongated body and with a protuberance between the ends, and upsetting the protuberance to form a laterally extending flaring or conical supporting head.



1,458,700. METHOD OF AND APPARATUS FOR DECORTICATING FIBROUS STOCK. WINFIELD S. GROVE, Manila, Philippine Islands. Filed July 15, 1919. Serial No. 310,897. 14 Claims. (Cl. 19—34.)

13. In a machine of the class described, the combination of means for decorticating one portion of the stock while the stock is held stationary, means for decorticating the remainder of the stock while the stock is in motion, and means for moving said last-named decorticating means into operative position during the first-mentioned decorticating operation and without moving the stock.

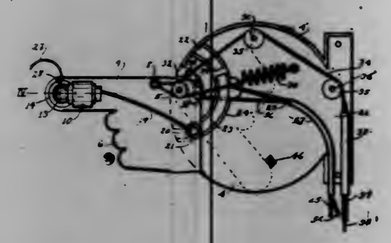


1,458,701. CONVEYER MECHANISM. EDWARD HAAS, Brooklyn, N. Y.; assignor of one-half to Milford B. Ferguson, Brooklyn, N. Y. Filed Mar. 17, 1922. Serial No. 544,466. 12 Claims. (Cl. 198—24.)

1. A conveyer mechanism for conveying a series of articles to a machine provided with a plunger for introducing the articles one at a time into the machine, comprising a conveyer provided with a series of lugs for carrying forward the series of articles, a pair of horizontally-disposed jaws for receiving the articles one at a time from the conveyer, means on which the lower jaw is fixedly mounted and on which the upper jaw is yieldingly

mounted, and means for moving the jaws from the point of receiving the articles to the point where they are introduced into the machine.

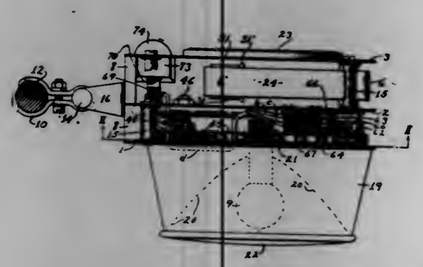
1,458,702. COMPRESSOR. CHARLES C. HANSON and JOHN TWARDOWSKY, Chicago, Ill., assignors, by mesne assignments, to Universe Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1921. Serial No. 473,781. 11 Claims. (Cl. 230—6.)



1. In a compressor and in combination, an oil reservoir, oil-separating means in the discharge passage of the compressor, and oil return means operatively connecting the oil-separating means automatically with the oil reservoir only during the discharge of compressed fluid from the compression chamber.

11. In a fluid compressor and in combination, an oil reservoir, oil-separating means disposed in the discharge passage of the compressor, means actuated by the pressure of the compressed fluid adjacent to the oil-separating means for returning separated oil to the oil reservoir; and a compression chamber interposed between the compressor and the oil-separating means and having a restricted opening towards the latter so as to reduce the speed with which the compressed fluid passes the oil-separating means.

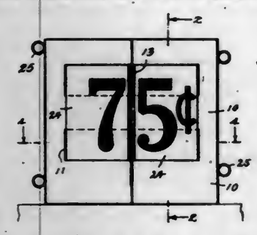
1,458,703. COMBINED SIGNAL, SPOTLIGHT, AND MIRROR. DANIEL L. HARRIS, GEORGE L. COFFMAN, and HEIM W. RESNICK, Wichita, Kans.; said Harris assignor of one-sixth to Ray G. Rogers, Ponca City, Okla. Filed Mar. 14, 1921. Serial No. 452,356. 1 Claim. (Cl. 116—52.)



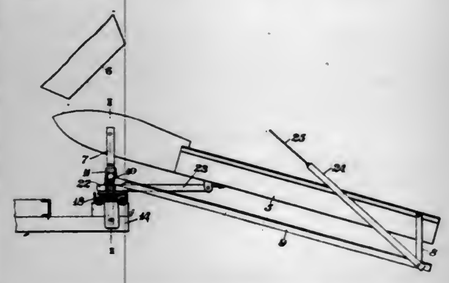
In a combined signal, spot light and mirror, a housing member having a slot in the outer edge portion thereof;

a hollow semaphore in the shape of a human hand pivotally mounted within the housing and normally concealed therein by spring means; means for outwardly and arbitrarily pivoting said semaphore through said slot against said spring resistance; an electric bulb in an electric circuit within the extended forefinger portion of the hand;

colored lenses arranged on opposite sides of the bulb in openings through the side walls of the housing with slits adjacent thereto facing the point of pivot; and conducting segments concentric with the pivot cooperating with means on the pivotable semaphore for opening and closing the electric circuit to said bulb.



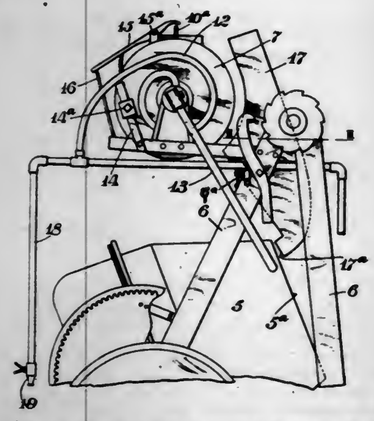
1,458,704. COMBINED SIGNAL, SPOTLIGHT, AND MIRROR. DANIEL L. HARRIS, GEORGE L. COFFMAN, and HEIM W. RESNICK, Wichita, Kans.; said Harris assignor of one-sixth to Ray G. Rogers, Ponca City, Okla. Filed May 2, 1921. Serial No. 466,326. 2 Claims. (Cl. 116—54.)



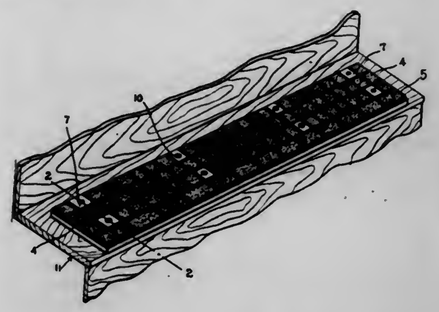
1. A combined electric signal, spot light and mirror a housing having three plates spaced apart in parallelism to form front and rear compartments; a mirror on the rear surface of the back plate and a spot light and housing forwardly positioned from the front plate; a cover plate closing the compartments having a slot; a signaling pointer in the form of a hollow hand pivotally arranged in and concealed within one compartment and adapted to be projected outwardly through said cover plate slot into visible positions; an electric bulb within the hollow hand, and prism means for deflecting light to illuminate the inner parts of the hollow hand.

1,458,705. PRICE MARKER. MAX HOPP and MAX LEVINE, New York, N. Y. Filed July 19, 1922. Serial No. 575,985. 2 Claims. (Cl. 40—86.)

1. In a price marker, a body having a window, said body being provided with rearwardly projecting stiffening members having pairs of aligned bearing holes, one hole of each pair being larger than the other, a pair of parallel rollers journaled in said holes opposite the ends of the window and back of the same, each roller comprising two leg portions fitted close together in one of said holes and sprung apart in the other of said holes, and a carrier for price characters attached to said rollers and adjustable endwise along the window to bring any selected section of the carrier in position to be visible at the window.

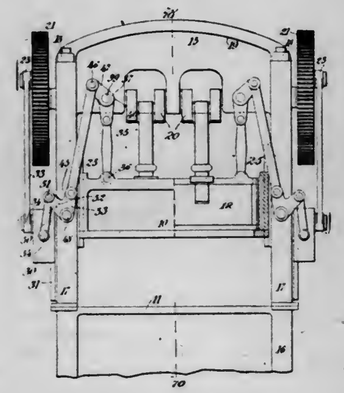


1,458,706. SPOUT FOR CONCRETE-MIXING MACHINES. GEBHARD JAEGER, Columbus, Ohio. Filed Apr. 8, 1921. Serial No. 459,691. 2 Claims. (Cl. 198—220.)



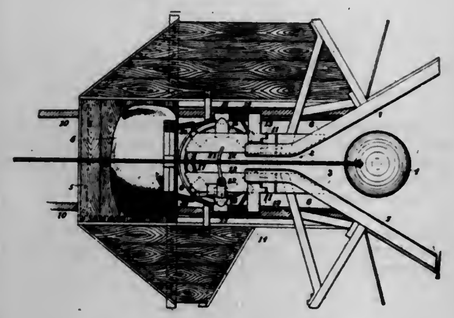
1. The combination of a distributing spout, eccentric means for reciprocating the same longitudinally and means for driving said reciprocating means adapted to permit horizontal swinging of the spout.

1,458,707. WATER TANK FOR CONCRETE-MIXING MACHINES. GEBHARD JAEGER, Columbus, Ohio. Filed Nov. 14, 1921. Serial No. 514,949. 6 Claims. (Cl. 83—73.)



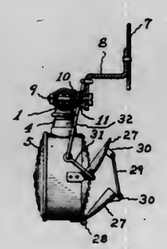
1. The combination with a mixing drum, of means for supplying water thereto including a tank, means for swinging the same to discharging and charging position and means carried by the tank for automatically supplying and controlling the supply of water to said tank in the charging position.

1,458,708. SAFETY-TREAD UNIT. GEORGE N. JEPPSON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 8, 1921. Serial No. 499,278. 4 Claims. (Cl. 20—79.)



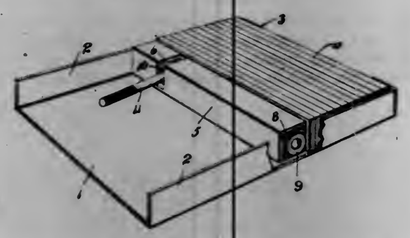
1. An anti-slipping stair tread unit comprising a metallic base having an upturned front edge, a cementitious matrix thereon, a set of bonded abrasive tiles embedded therein and arranged in the rear of and projecting above said edge to form a substantially plane top surface and the nosing of the tread, and means whereby the unit may be secured to a stair floor.

1,458,709. PRESS. WILLIAM KLOCKE, Woodhaven, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Nov. 30, 1920. Serial No. 427,419. 16 Claims. (Cl. 113—38.)



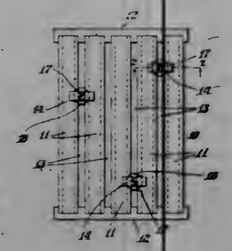
1. A press, comprising a frame having a side part, a blank holder or die-carrying slide, and means for operating the same, said means comprising a driving part, an actuating slide, connections between said slide and driving part, and connections between said actuating slide and blank holder slide, said connections being pivoted to said actuating slide on axes at right angles to one another, said connections between said actuating slide and blankholder slide comprising a toggle having a bearing at one end on the side frame of the press adjacent said actuating slide and turning around an axis parallel with said side frame.

1,458,710. DEVICE FOR CATCHING MAIL AND FUEL BY AN AIRPLANE IN FLIGHT. STEPHEN W. KOLCZEWSKI, Buffalo, N. Y. Filed June 19, 1918. Serial No. 240,840. 18 Claims. (Cl. 258—1.)



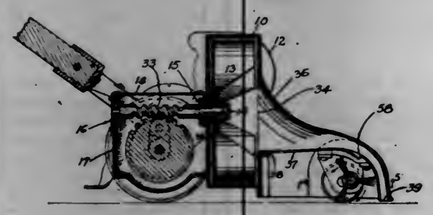
1. Supply means for aircraft, comprising guide means including a throat, releasing mechanism located at said throat and including a pair of spring arms arranged to hold a suspending ring of a receptacle in position, said suspending ring having an entrance in coincidence with said throat for receiving a weighted cable pendent from an airplane, and bosses carried by said ring engaged by said spring arms to hold the ring in position and enabling the releasing of said ring from the releasing mechanism when the weight on the cable engages the ring.

1,458,711. VEHICLE DIRECTION INDICATOR. FLOYD KOPPENHAFER, Shinrock, Ohio. Filed Nov. 1, 1920. Serial No. 420,928. 7 Claims. (Cl. 177—439.)



1. A vehicle direction indicator including a bracket arm, a signal lamp carried thereby, a semaphore mounted thereon, a plunger slidably mounted upon the bracket arm and operatively connected to the semaphore, and an electric circuit including the signal lamp and provided with spaced contacts, arranged at one side of the plunger in a direction parallel to the movement thereof, the plunger being formed with an offset portion which is arranged to automatically bridge the contacts and flash the signal lamp when the semaphore is moved into operative position.

1,458,712. GALLEY LOCK. JAMES EDGAR LEE, Grand Haven, Mich., assignor to The Challenge Machinery Company, Grand Haven, Mich., a Corporation of Michigan. Filed Apr. 3, 1922. Serial No. 549,271. 6 Claims. (Cl. 276—43.)



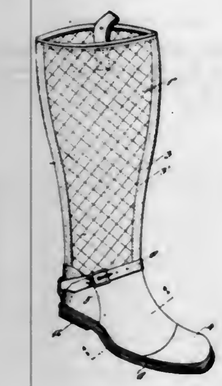
1. A galley lock comprising an elongated hollow body, a rod oppositely threaded at its ends located within and lengthwise of the body, nuts on the ends of the rod located at the ends of the body, and means for manually turning the rod from outside of the body.

1,458,713. COPYHOLDER. HOWARD SPENCER LEVY, Philadelphia, Pa. Filed July 14, 1921. Serial No. 484,590. 5 Claims. (Cl. 129—28.)

5. A copy holder comprising a frame provided with substantially parallel guideways therein, flat spring engaging members overlying said guideways and projecting beyond the opposite edges of said guideways, a depending stem carried by said flat spring and provided with an adjustable nut at its free end, and a coil spring surrounding said stem and having one of its ends seated against said nut and the opposite end thereof seated against the under surface of said frame at each side of said guideways, whereby said engaging members may be moved axially of said guideways and with respect to the surface of said frame.

1,458,714. VACUUM CLEANER. WALDEMAR LINNE LINDGREN, Chicago, Ill., assignor to Alfred A. Norton, Chicago, Ill. Filed Aug. 5, 1921. Serial No. 489,964. 3 Claims. (Cl. 15—8.)

1. In a vacuum cleaner, the combination with a nozzle casing, of means for producing a vacuum in said casing, a brush rotated over the floor as the cleaner moves, a main nozzle opening into said casing adjacent the floor line, and an auxiliary inlet to said casing located well above the floor line and the main nozzle so as to draw into the casing material lifted from the floor and carried thereto by the brush, said auxiliary inlet having one edge adapted to contact with the periphery of the brush as it rotates past it to loosen the dirt thereon.

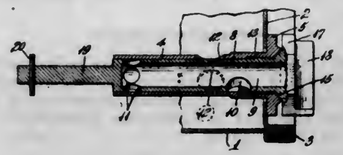


1,458,715. PROCESS FOR MAKING NITROBENZOIC ACID AND INTERMEDIATES. ELLIS A. LLOYD, New York, and VICTOR P. GERSHON, Brooklyn, N. Y., assignors to William M. Grosvenor, New York, N. Y. Filed Mar. 23, 1920. Serial No. 368,162. 5 Claims. (Cl. 260—108.)

2. The process of making mono-nitro-benzoic acid in which mono-nitro-toluol is treated with nitric acid and adding further nitric acid after the reaction has progressed, to build up the strength of the acid which oxydizes the mono-nitro-toluol to mono-nitro-benzoic acid.

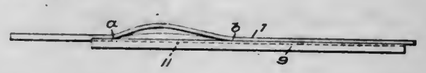
1,458,716. MANUFACTURE OF COAL OR LIKE BRIQUETTES. HENRY GARDINER LLOYD, Surbiton, England. Filed June 1, 1921. Serial No. 474,202. 13 Claims. (Cl. 44—19.)

13. The method of making briquettes, which consists in frothing a bituminous binder with heat and water and applying the same to the particles to be briquetted while the binder is in a frothing state.



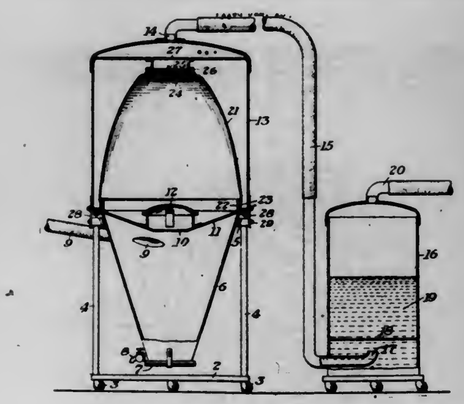
1,458,717. SHOE. ALEXANDER MICHEL LOCHWITZKY, Austin, Tex. Filed Feb. 28, 1920, Serial No. 361,965. Renewed May 8, 1923. 3 Claims. (Cl. 36—1.)

1. A foot covering consisting of a laminated structure comprising layers of fabric, each alternate layer being tightly drawn and the intermediate ones being loosely laid thereon so as to form when quilted together by cross ranges of stitches a series of adjacent air chambers.



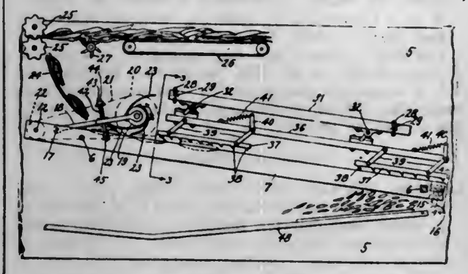
1,458,718. FAUCET. LAWRENCE S. LORD, Lakewood, Ohio. Filed Nov. 24, 1919. Serial No. 340,120. 3 Claims. (Cl. 251—8.)

3. A faucet for liquid containers, comprising a cylindrical shell adapted for connection to a container, said shell having a series of circumferentially spaced openings in its wall, a plug in said shell provided with an axial chamber having a discharge opening at one end and a series of circumferentially spaced openings near its other end, a sealing member on said plug, and a cooperating seat on said shell, the number of spaced open-



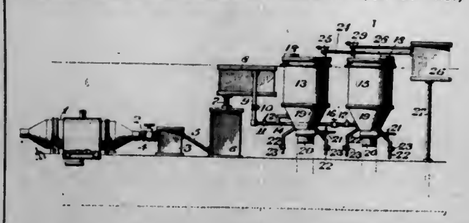
ings in said shell being less than the number of spaced openings in said plug and having a greater aggregate discharge capacity than the openings in said plug.

1,458,719. SHOE. GEORGE T. MCLEOD, Boston, Mass., assignor to Thomas G. Plant Company, Roxbury, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 18, 1920. Serial No. 404,314. 8 Claims. (Cl. 36—17.)



1. In a shoe an insole comprising an inner layer having a peripheral lip extending continuously around the forepart and shank thereof, an outer layer having a portion underlying the shank of said inner layer and secured marginally to said lip, an intermediate portion of the lip being severed from the body of the said inner layer at the inner side of the shank, an upper and an outsole, said upper and outsole being secured to said lip.

1,458,720. VACUUM-CLEANING APPARATUS. JAMES P. MALONE, Pittsburgh, Pa. Filed Jan. 25, 1922. Serial No. 531,610. 5 Claims. (Cl. 183—58.)



1. In a vacuum cleaning apparatus, a separating tank having a tangential inlet whereby entering air is given a whirling motion and a centrally located restricted outlet for said air, a baffle cooperating with said outlet, a flexible hood receiving the air from said outlet, means for causing said hood to deflate and inflate, and means independent of the hood structure for limiting movement of the free end thereof upon deflation and inflation and thereby imparting a cleaning jar to said hood both during deflation and inflation.

1,458,721. CORN-HUSKING MACHINE. HENRY L. NELSON, Cannon Falls, Minn. Filed Dec. 1, 1922. Serial No. 604,420. 6 Claims. (Cl. 130—5.)

1. In a corn husking machine and mounted in suitable frame work, a series of pairs of inclined rollers, means for delivering unhusked corn upon the upper ends of the rollers, a downwardly spring-pressed roller arranged transversely across the husking rollers near their upper portions and means for rotating the husking roller and said spring pressed roller and a series of resilient elements carried by the spring-pressed roller and peripherally arranged about it in line with each pair of the husking rollers.

1,458,722. APPARATUS FOR RENDERING. CHRISTOPHER OFFENHAUSER, Philadelphia, Pa. Filed June 4, 1920. Serial No. 386,622. 4 Claims. (Cl. 87—13.)

1. An apparatus for rendering, comprising a sulphur burner, a commingling device to which the gas is led from the sulphur burner and having means to spray water into the incoming gas, a collection tank for the gas solution, a digester, means to pump the gas solution from said tank into said digester, and means to introduce steam into said digester.

1,458,723. REFRACTORY COMPOSITION. JOHN L. OHMAN, deceased, late of Niagara Falls, N. Y., by Charles A. White, administrator, Buffalo, N. Y., assignor to Buffalo Refractory Corporation of Buffalo, N. Y., a Corporation of Delaware. Original application filed Nov. 1, 1917, Serial No. 199,792. Patent No. 1,356,939. Divided and this application filed Oct. 9, 1920. Serial No. 415,874. 11 Claims. (Cl. 106—9.)

1. A refractory composition for heat resisting articles, comprising crystalline alumina, and crystalline graphite.

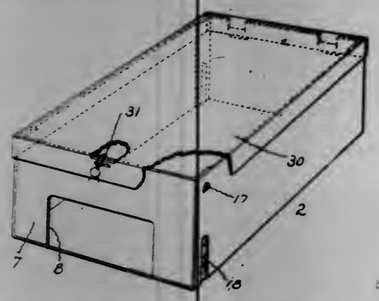
1,458,724. REFRACTORY COMPOSITION. JOHN L. OHMAN, deceased, late of Niagara Falls, N. Y., by Charles A. White, administrator, Buffalo, N. Y., assignor to Buffalo Refractory Corporation, Buffalo, N. Y., a Corporation of Delaware. Original application filed Nov. 1, 1917, Serial No. 199,792. Patent No. 1,356,939. Divided and this application filed Oct. 9, 1920. Serial No. 415,875. 13 Claims. (Cl. 106—9.)

1. A refractory composition for heat resisting articles, comprising silicon carbide and crystalline alumina, and and crystalline graphite.

1,458,725. REFRACTORY COMPOSITION. JOHN L. OHMAN, deceased, late of Niagara Falls, N. Y., by Charles A. White, administrator, Buffalo, N. Y., assignor to Buffalo Refractory Corporation, Buffalo, N. Y., a Corporation of Delaware. Original application filed Nov. 1, 1917, Serial No. 199,792. Patent No. 1,356,939. Divided and this application filed Oct. 9, 1920. Serial No. 415,877. 13 Claims. (Cl. 106—9.)

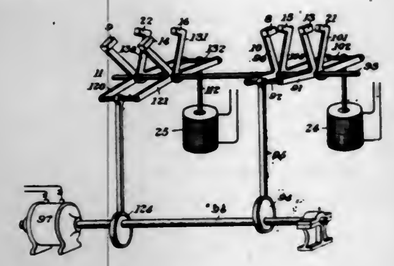
1. A refractory composition for heat resisting articles, comprising crystalline alumina and fused silicon oxide, and crystalline graphite.

1,458,726. REFRACTORY COMPOSITION. JOHN L. OHMAN, deceased, late of Niagara Falls, N. Y., by Charles A. White, administrator, Buffalo, N. Y., assignor to Buffalo Refractory Corporation of Buffalo, N. Y., a Corporation of Delaware. Original application filed Nov. 1, 1917, Serial No. 199,792. Patent No. 1,356,939. Divided and this application filed Oct. 9, 1920. Serial No. 415,878. 13 Claims. (Cl. 106—9.)



1. A refractory composition for heat resisting articles, comprising silicon carbide, crystalline alumina, and silicon oxide, and crystalline graphite.

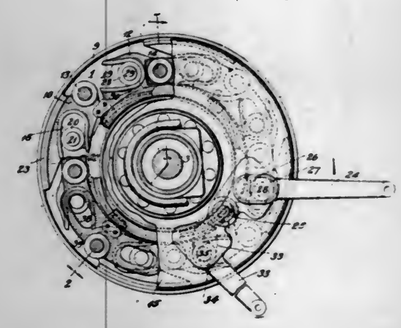
1,458,727. COMBINED FENDER AND SPARE-TIRE HOLDER FOR VEHICLES. FREDDIE VERNETT ROSENBROOK, Chicago, Ill. Filed Apr. 17, 1922. Serial No. 554,032. 1 Claim. (Cl. 280—152.)



In a combined fender and spare tire holder for vehicles, a channeled body member forming a shield at one end, the opposite end of said body member being upturned, a head hinged to the upturned end of said body member and in one position being adapted to rest thereupon and to form, in effect, a continuation thereof, a strap carried by said body member, a strap carried by said head, and means for locking said head and body member together in their aligned positions.

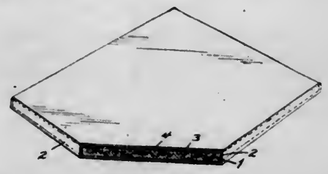
1,458,728. ELECTRIC-APPLIANCE-RECEIVING AND METER-PROTECTING BOX OR CASING. JOSEPH SACHS, Hartford, Conn. Filed Apr. 2, 1918. Serial No. 226,254. 13 Claims. (Cl. 247—2.)

3. A meter installation comprising an appliance-receiving casing, a meter adjacent thereto, an adapter member and a cover for the casing, said casing and the adapted being mutually provided with interlocking means to latch said adapter member in place and said cover being organized to engage said interlocking means to obstruct opening movement of the same and thereby to prevent the removal of the adapter member when the cover is closed.



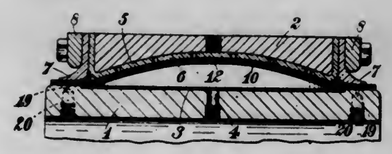
1,458,729. INTERRUPTER. BYRAMJI D. SAKLATWALLA and ARTHUR N. ANDERSON, Crafton, Pa., assignors, by mesne assignments, to Vanadium Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1919. Serial No. 292,284. 8 Claims. (Cl. 200—90.)

3. An interrupter for an electric circuit, comprising two contacts, means for continuously moving one contact so as to intermittently strike the second contact when in its path of movement, and means for moving the second contact into and out of the path of movement of the first contact, substantially as described.



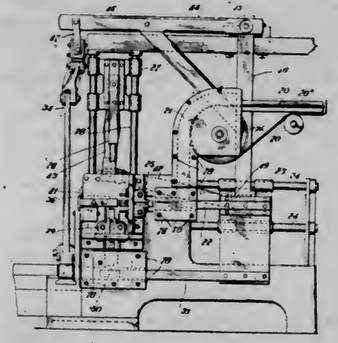
7. An interrupter for an electric circuit, comprising a contact, means for moving the contact back and forth, a second contact normally out of the path of movement of the first contact, yielding means for bringing the second contact into the path of back and forth movement of the first contact so as to be struck thereby, the second contact yielding when struck by the first contact, and means for adjusting the amount of yielding of the second contact, substantially as described.

1,458,730. AUTOMOBILE BRAKE. RICHARD SCHMITZ, Chicago, Ill. Filed Dec. 9, 1920. Serial No. 429,398. 4 Claims. (Cl. 188—79.)



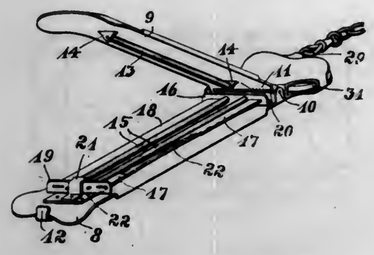
1. A brake comprising an inner and an outer brake drum, a series of friction shoes, means to move said shoes outwardly into engagement with the inner surface of the outer drum, a second series of shoes, means to move them inwardly into engagement with the periphery of the inner drum, and means to actuate either series of shoes.

1,458,731. TABLE PAD. HENRY SILVER, Herkimer, N. Y. Filed Oct. 1, 1921. Serial No. 504,658. 2 Claims. (Cl. 91—68.)



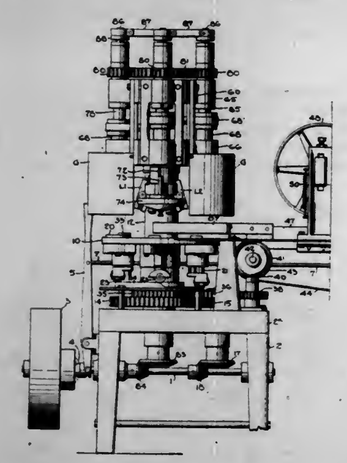
1. As an improved article of manufacture, a table mat or pad comprising a rigid body of fibrous material impregnated and coated on one side only with paraffin wax, the opposite side having thereon a coating of adhesive material.

1,458,732. METHOD OF AND APPARATUS FOR MANUFACTURING ARTICLES COMPRISING SUPERPOSED LAYERS OF FABRIC. THOMAS SLOPER, Devizes, England. Filed June 17, 1921. Serial No. 478,318. 24 Claims. (Cl. 154—14.)



2. A method of manufacturing a compound fabric including superposed layers of rubbered fabric disposed in a flat condition, comprising the steps of mechanically contracting a layer of fabric, which after such contraction is still in flat condition, and superposing on such contracted flat layer and securing thereto at least one additional layer of uncontracted fabric.

1,458,733. METHOD OF AND APPARATUS FOR ELIMINATING SHARP EDGES AND CORNERS ON TOY BLOCKS. ANDREW SMITH, Chicago, Ill., assignor to Halsam Products Company, Chicago, Ill., a Corporation of Illinois. Filed June 14, 1920. Serial No. 388,842. 39 Claims. (Cl. 144—134.)

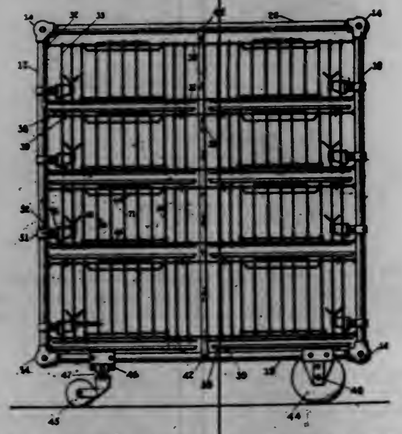


1. The method of eliminating sharp edges on a block which comprises passing the block successively through sets of rollers adapted to compress its edges with nonparallel faces of the block successively in the lead.

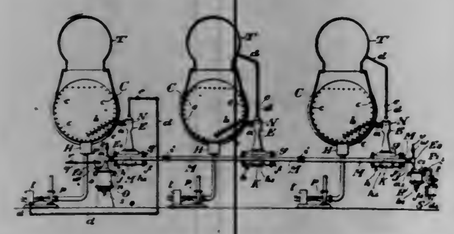
1,458,734. SAFETY BILL HOLDER. JOHN L. SMITH, Los Angeles, Calif. Filed Dec. 8, 1921. Serial No. 521,019. 4 Claims. (Cl. 150—38.)

1. In a device of the class described, cover plates having hinge connection at one end and having a lock at the opposite end, and rollers on the inner faces of the cover plates.

1,458,735. MULTIPLE-SPINDLE CRIMPER FOR CAPPING CONDENSED-MILK CANS AND THE LIKE. GEORGE H. STEWARD, Rutland, Vt. Filed Apr. 13, 1920. Serial No. 373,661. 15 Claims. (Cl. 113—24.)



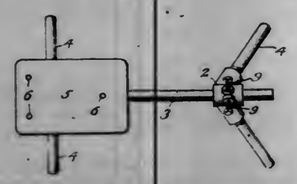
1. In a machine for crimping caps on outwardly flanged openings in can heads, a stem, means for holding said stem against rotation relative to the can, a disk on the end of the stem somewhat smaller than the recess in a cap, a rotating sleeve about said stem, and a plurality of crimper rolls mounted on said sleeve to move towards and away from said disk at such an angle that as they approach the disk they also move towards its outer end and vice versa, the crimper rolls being so related to the disk that the axes thereof if prolonged would at all times intersect the axis of the disk stem.



1,458,736. DEMOUNTABLE POULTRY-FEEDING BATTERY. WILLIAM J. STEWART, Clinton, Iowa. Filed Mar. 30, 1922. Serial No. 548,181. 5 Claims. (Cl. 119—17.)

1. In a poultry battery a plurality of corner uprights, means to detachably connect said uprights at their ends, channels on said connectors, end frames of wire mesh locked in said channels, means passing through the up-

rights to secure said end frames, a plurality of sections which form the sides, said sections comprising an upper and lower rod the ends of which enter openings formed in the uprights, nuts on said rods which abut said uprights, a central partition, two channeled uprights in which the sides of the central partition are held, upper and lower channels for said central partition secured to the side connections, bolts which hold said channels in place.



1,458,737. SYSTEM OF VACUUM PRODUCTION. ROBERT SUCZEK, Philadelphia, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 18, 1922. Serial No. 544,815. 30 Claims. (Cl. 230—13.)

1. The combination with a plurality of condensers, of vacuum-producing apparatus therefor comprising ejector apparatus for augmenting the vacua in said condensers, and vacuum-producing means common to said condensers for further raising the pressure of the fluid discharged by said ejector apparatus.

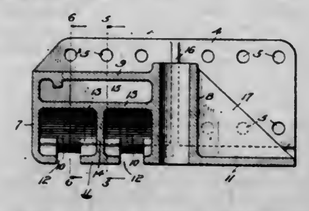
1,458,738. DEMOUNTABLE WORKBENCH. EDWARD TEEKEN, Louisville, Ky. Filed Mar. 21, 1921. Serial No. 454,122. 7 Claims. (Cl. 81—44.)

1. A demountable work bench comprising front and rear fittings, legs detachably connected to each of said fittings, a bar connecting said fittings, a table top rigid with said front fitting adapted to support a vise, and work holding means carried by the said rear fitting.

1,458,739. MEANS FOR MOUNTING APPARATUS ON A HOISTING BOOM. CHARLES A. WEBER, Lorain, Ohio, assignor to The Thew Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed Jan. 6, 1921. Serial No. 435,546. 7 Claims. (Cl. 212—144.)

1. In combination, a hoisting boom, angle iron side members for the hoisting boom, relatively yielding spacing means between the said angle iron side members, a boom separator member adjustably mounted between the said pair of side members, a bed-plate, apparatus mounted on the said bed-plate, means to secure the said bed-plate to the said side members and to the said boom separator, said means comprising a pair of bolts securing one end of the said bed-plate to the said side members, and a third bolt substantially equidistant from the said pair of bolts to secure the other end of the said bed-plate to the said separator.

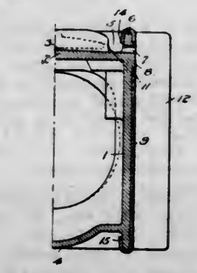
1,458,740. CONNECTING DEVICE FOR FUSES AND BLASTING CARTRIDGES, ETC. FRANK WELLS, Kingston, England. Filed Mar. 10, 1922. Serial No. 542,725. 3 Claims. (Cl. 102—9.)



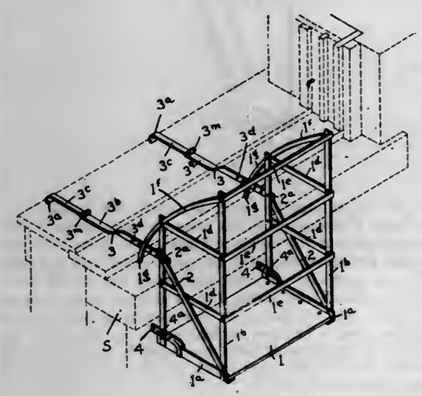
2. An appliance for connecting a fuse with a detonator attached thereto to a blasting cartridge or primer, comprising a tubular envelope closed at one end, said envelope being of elastic and waterproof material and of smaller diameter than the cartridge and adapted to be drawn over the said cartridge, a rim around the open end of the envelop, a tubular sleeve having corrugations formed therein and constructed of elastic and waterproof material, said sleeve being normally in the rolled up condition, but being adapted to be rolled over the cartridge and the tubular envelope, the corrugations preventing said sleeve from rolling up after it has been extended, a normally extended tubular portion attached to said tubular sleeve, said tubular portion being of smaller diameter than the tubular sleeve and also of smaller diameter than the fuse, the fuse with the detonator attached thereto being adapted to be passed through said tubular portion, and a rim at the end of the tubular sleeve.

1,458,741. JOURNAL BOX. DONALD S. BARROWS, Rochester, N. Y., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed May 3, 1920. Serial No. 378,529. 8 Claims. (Cl. 64—23.)

1. The combination with a journal box, of a lid pivotally connected thereto, a locking member slidably mounted in a recess provided in the said lid, and means integral with said lid for operatively connecting the locking member thereto, said recess extending below the said locking member and being adapted to receive means for operating the said member.

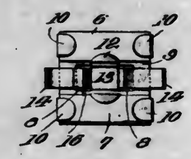


1,458,742. DRAFT-RIGGING BACKSTOP. DONALD S. BARROWS, Rochester, N. Y., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 24, 1921. Serial No. 509,800. 9 Claims. (Cl. 213—59.)



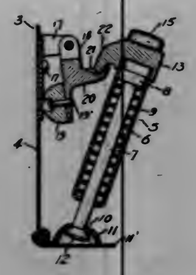
1. A draft rigging backstop comprising side walls adapted to be secured to spaced car sills, a forward end wall united to said side walls and adapted to form an abutment for a movable part of the draft rigging, a horizontally disposed web connecting the lower portions of said side walls, and downwardly divergent longitudinally extending webs uniting said end wall and said horizontally disposed web.

1,458,743. JOURNAL BOX. DONALD S. BARROWS, Rochester, N. Y., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 21, 1922. Serial No. 583,212. 11 Claims. (Cl. 105—225.)



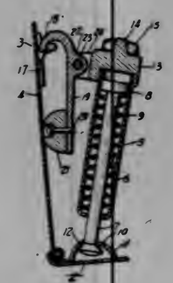
1. The combination with a railway car journal box having a pedestal guide way and oil reservoir, of a wear plate or liner for said guide way, and means including a perforated projection provided on the side wall of the journal box adapted to engage the liner, the perforation serving to conduct lubricating material from said reservoir to the wearing surface of said wear plate.

1,458,744. WINDOW-WASHER PLATFORM. JAMES C. BREWSTER, Fort Madison, Iowa. Filed Mar. 8, 1922. Serial No. 542,100. 7 Claims. (Cl. 304—24.)



1. In a window washer apparatus comprising a frame having ends, outer side, and bottom portions, bars connected to the ends of the frame extending beyond the inner edges thereof, and curved to form hooks adapted to rest upon the top of the outer sill of the window; bars adjustably and pivotally connected to the inner sides of the frame adjacent the said hooks adapted to project through the window frame and having hooks on their inner ends adapted to engage the inner edge of the window frame sill; and bars adjustably connected to the lower inner corners of the frame adapted to engage the wall beneath the sill to prevent the frame rocking upon the outer edge of the sill and prying forward the hooks; whereby the apparatus is bodily hung on the sill, and is held in a safe and rigid position with the main points of contact and weight on the outer sill.

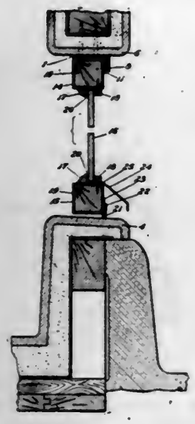
1,458,745. RAILWAY SIGNAL TORPEDO. FRANK W. BROWN, Wilkinsburg, and ARCHIE R. MARSHALL, Pittsburgh, Pa., assignors to Central Railway Signal Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Mar. 4, 1922. Serial No. 541,180. 10 Claims. (Cl. 246—487.)



1. An improved railway signal torpedo, comprising a case having inwardly folded extending portions, an explosive within the case, a clip carried by the torpedo below the inwardly folded portions thereof, the clip having openings for the passage of a rail-engaging member, and the inwardly folded extended portions folded inwardly upon the clip and held in their folded positions thereby.

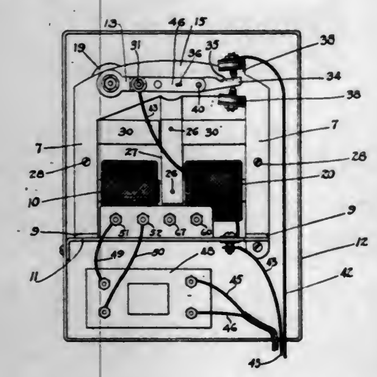
1,458,746. AUTOMOBILE HOOD FASTENER. JOHN F. CARPMILL, New Britain, Conn. Filed Oct. 5, 1922. Serial No. 592,555. 2 Claims. (Cl. 292—114.)

1. In an automobile hood fastener, the combination of a tube, a piston rod in the tube having a head in slidable engagement therewith and extending from the tube, a coiled spring surrounding the piston rod and engaging said head and also engaging the lower end of the tube, a part to which the piston rod is pivoted, a cap closing the upper end of the hood, and provided with lateral branches, and a bracket having means by which it can be held in engagement with the hood of an automobile and a soft pad pivoted to the bracket and adapted to engage said hood.



1,458,747. AUTOMOBILE HOOD FASTENER. JOHN F. CARPMILL, New Britain, Conn. Filed Oct. 5, 1922. Serial No. 592,556. 2 Claims. (Cl. 292—114.)

1. In a device of the class described, the combination of a hold-down member, a catch member to be attached to the side of an automobile hood, and a shank pivotally connected to the hold-down member, having a soft pad to engage the side of said hood.

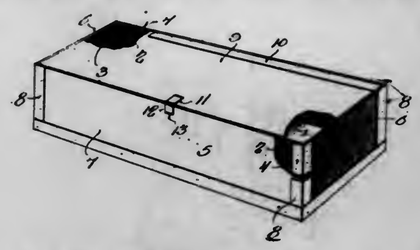


1,458,748. DOOR CONSTRUCTION. JOHN H. CRIST and LOUIS G. CRIST, Pittsburgh, Pa., assignors to Crist & Schilken Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 9, 1921. Serial No. 513,895. 2 Claims. (Cl. 20—11.)

1. In a water tight door construction, the combination with a rectangular framing providing a door opening, of a metallic frame member L-shaped in cross-section having a base secured against the opposite sides and top of the door opening framing and a flange projecting at right angles from said base, a resilient sealing member secured against said flange, an inner supplemental holding flange engaging said sealing member, and a swinging door connected by hinges secured to the oppo-

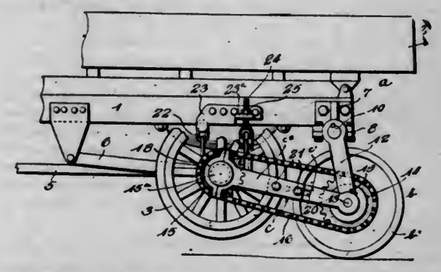
site edge portion of the base at one side of the opening adapted when closed to bear against the sealing members of the side and top frame members.

1,458,749. SWITCH MECHANISM. FREDERICK S. DENISON, Minneapolis, Minn., assignor to Minneapolis Heat Regulator Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Dec. 2, 1920. Serial No. 427,851. 11 Claims. (Cl. 175—375.)



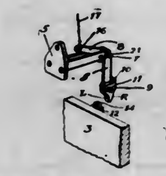
5. The combination of a feed line circuit, a primary circuit and secondary circuits, a motor and a primary switch in the primary circuit, a secondary switch in a secondary circuit and fixedly connected to said primary switch, means for operating said secondary switch, and means for controlling the operation of said secondary switch operating means.

1,458,750. PAPER-BOX CONSTRUCTION. CASPER FAUST, Oshkosh, Wis. Filed Sept. 16, 1921. Serial No. 501,053. 1 Claim. (Cl. 229—23.)



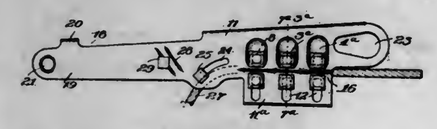
A paper box comprising an inner member having integral bottom end and side walls, means binding the adjacent vertical edges of said side and end walls, an outer shell having side and end walls surrounding and extend-

ing upwardly beyond the side and end walls of said inner member and secured thereto, and a flat cover adapted to rest upon the side and end walls of said inner mem-



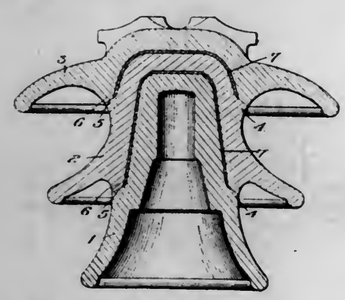
ber and within said outer member, said cover having a flexible hinge flap secured between the side walls of said inner member and said outer shell.

1,458,751. ROLLER ATTACHMENT FOR POWER-DRIVEN MACHINES. WILLIAM H. GAILOR, Saratoga Springs, N. Y. Filed Nov. 29, 1921. Serial No. 518,737. 3 Claims. (Cl. 180—20.)



1. The combination with a motor vehicle having a chassis frame, a rear axle and traction wheels, of a roller at the rear of said wheels and having a shaft, links suitably connected to the chassis frame and to said shaft and adapted to support the frame, drawbars connecting said axle with said shaft, driving connections between said axle and shaft, and means for supporting said traction wheels from the chassis frame.

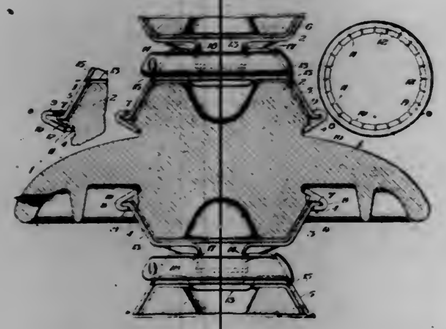
1,458,752. DOOR-OPERATING MECHANISM. ALPHEE J. GALLANT, Portland, Me. Filed Feb. 11, 1922. Serial No. 535,880. 1 Claim. (Cl. 74—5.)



In a door operating mechanism, of the class described, the combination, with a door swingingly mounted in a door-casing, of a member rigidly secured to and mounted near the top of said door, a hole drilled in the top of said member, a pin seated in said hole, means for rigidly holding said pin in said hole in different vertical positions within said hole, a bifurcated bracket secured to the door casing adjacent the top of said door, and centrally positioned over and in alignment with said member on said door when the latter is in closed position within said door casing, a bell-crank lever pivoted within the bifurcations of said bracket, means for securing a cable or wire rod to the end of one of the arms of the said bell-crank lever, a projecting stop on the inner edge of said arm to bear on said bifurcated bracket and restrict the movement, in one direction, of said arm, a spring operating to yieldingly hold said stop against said bracket, a pawl pivotally hung to the end of the other arm of the said bell-crank lever, a spring adapted to hold the heel of said pawl yieldingly against the arm of said bell-crank lever and restrain the movement of said pawl, around its axis, in one direction and allow of certain movement in the opposite direction, substantially as described.

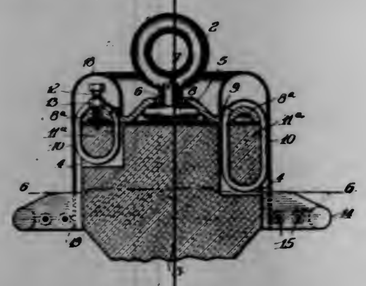
1,458,753. STRAIN CLAMP FOR ELECTRICAL CONDUCTORS. WALTER T. GODDARD, Victor, N. Y., assignor, by mesne assignments, to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Dec. 8, 1917, Serial No. 206,207. Renewed Jan. 15, 1923. 9 Claims. (Cl. 24—135.)

8. A strain clamp for electrical conducting cables consisting of an integral blank bent upon itself affording opposite clamping walls in spaced relation to each other, the walls having outwardly flared portions forming a seat for a conductor, inwardly flared portions with bolt openings therein arranged on one side of said seat and forming seats for clamping devices, flat portions with bolt openings therein on the other side of the conductor seat forming seats for outermost clamping devices, and an extended curved edge portion on one of the walls having elongated bolt openings extending from a point adjacent to its outer edge to a point substantially opposite the inner extremities of the cooperating openings in the other wall.



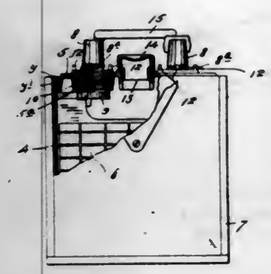
1,458,754. INSULATOR. WALTER T. GODDARD, Victor, N. Y., assignor, by mesne assignments, to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Dec. 8, 1917. Serial No. 206,208. 6 Claims. (Cl. 173—318.)

6. A pin type insulator comprising a plurality of nested insulating sections each of which is provided with a hollow central portion having a threadless conical exterior surface, and each of which is also provided with an annular bearing shoulder inclining upwardly toward the center of the insulator, the said inclined shoulder on at least one of said sections projecting outwardly beyond the base of the said conical central portion of the section upon which it is formed and being adapted



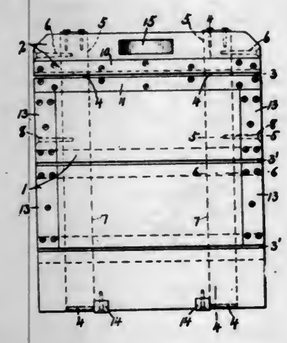
to cooperate with the said inclined bearing shoulder on the adjacent insulating section, the adjacent conical surfaces of said sections being spaced apart at all points above the surface of contact of said shoulders.

1,458,755. INSULATOR. WALTER T. GODDARD, Victor, N. Y., assignor, by mesne assignments, to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Apr. 11, 1918. Serial No. 227,917. 5 Claims. (Cl. 173—318.)



2. The combination with an insulator provided with a central attaching head or lug having an annular undercut shoulder, of a two-part strain member loosely connected to the attaching head, said strain member comprising a cup-shaped body portion having an outwardly directed peripheral flange and an attaching ring, said ring being adapted to embrace the flange of the cup-shaped body portion and being provided with a plurality of independently yielding fingers having supporting engagement with the annular shoulder of the said head.

1,458,756. STRAIN INSULATOR. WALTER T. GODDARD, Hamilton, Ontario, Canada, assignor, by mesne assignments, to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Oct. 25, 1919. Serial No. 333,157. 5 Claims. (Cl. 173—318.)



4. In a strain insulator, the combination with a frangible element of insulating material having apertures therein and a connected element, one of which is supported by the other through the medium of a continuous flexible member laced through the apertures in the frangible element, of a jack screw threaded into the connected element and bearing against the frangible element to exert a separating strain operating to stretch the flexible member and distribute its application of force among its bearing points.

1,458,757. PILLAR-POST STRUCTURE FOR BATTERIES. PAUL GOLDSBOROUGH, Minneapolis, Minn. Filed Mar. 19, 1921. Serial No. 453,549. 1 Claim. (Cl. 204—29.)

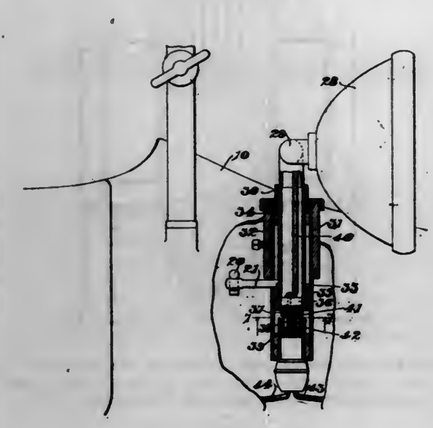
In a battery, the combination with a cover having a post-receiving pocket with an inwardly projecting annular flange at its lower extremity, of a pillar post extended through said pocket in close contact with the annular bottom flange thereof and provided with threads spaced from the walls of said pocket, a nut working on the threaded portion of said pillar post, said nut having an outstanding flange that engages the top of said cover and having a sleeve-like portion extended into said pocket and spaced from the walls thereof and terminating above the bottom of said pockets, and plastic sealing material filling the space between said pocket and the sleeve portion of said nut and directly engaging with threads of said pillar post.

1,458,758. BALING-PRESS FOLLOWER BLOCK. LEO M. GRAY and MILTON H. TERPENING, Fulton, N. Y. Filed Apr. 23, 1921. Serial No. 464,014. 17 Claims. (Cl. 100—24.)

1. A dividing block for baling presses, said block being composed of separable sections arranged edgewise one above the other with a wire-receiving-space between the adjacent edges, and a break-strip fastened to one of the sections and extending across the wire-receiving-space and slidably engaging the other section for normally holding the other section in the same plane.

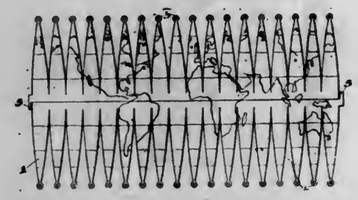
1,458,759. WHEEL. ADAM GRIESEMER, St. Louis, Mo., assignor to Simplex Steel Stamping & Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 19, 1920. Serial No. 375,081. 2 Claims. (Cl. 301—63.)

2. In combination with an axle having an annular peripheral groove, a wheel rotatably mounted on said axle, and means to prevent lateral displacement of said wheel on said axle, said means comprising a ring split transversely and made of a single piece of material seated in said groove and extending substantially around the axle, so as to retain itself in said groove, the outer margin of said ring being extended from said groove to form an abutment for the wheel.



1,458,760. SASH FASTENER. ELLSWORTH E. HAINLINE and EVERETT C. CULP, Kansas City, Kans. Filed Jan. 22, 1921. Serial No. 439,100. 1 Claim. (Cl. 292—44.)

In a sash fastener, a supporting member adapted to be attached to the upper side of the upper rail of a sash and having two horizontal parallel holes spaced apart from each other at equal distances from the bottom of the supporting member, a pivot pin adapted to be inserted in either of said holes, and a sharpened wedge arranged to be mounted on said pin, and adapted to penetrate and lockingly engage a frame in which the sash is mounted, the wedge being adapted to be swung on the pin so as to bear upon the upper side of the supporting member, substantially as set forth.

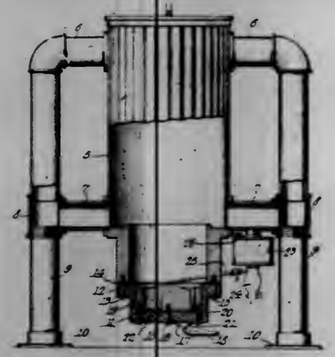


1,458,761. DIRIGIBLE HEADLIGHT. VICTOR A. HANCOCK, Oakland, Calif. Filed Aug. 31, 1921. Serial No. 497,235. 6 Claims. (Cl. 240—62.)

1. In combination with the steering mechanism of an automobile, a pair of headlights mounted upon vertical axes, an arm extending from the vertical spindle of each of said lights, a connecting rod secured to the ends of said arms, spring means for normally holding said rod and arms in an intermediate position, an operating arm

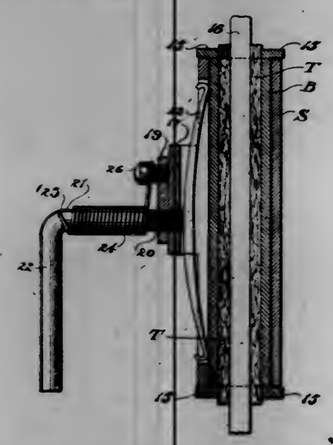
secured to the rod, and a cam operated by the steering mechanism and engaging said arm whereby rotation of the cam in opposite directions will produce alternate shifting movement of the connecting rod and swinging movement of the spindle arms.

1,458,762. GLOBE MAP. FREDERICK D. HARTMAN, Toronto, Ontario, Canada, assignor to The Geoplanus Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed July 15, 1922. Serial No. 575,385. 3 Claims. (Cl. 35—5.)



1. A map formed of a flat sheet cut to form a plurality of lunes integrally connected at the equatorial belt of the map, the ends of the lunes being provided with apertured tabs for the passage of an axis, the said lunes being sufficient in number to give the equatorial belt a substantially circular form when its ends are joined, and the sides of the lunes being shaped to contact on meridian lines, which are substantially circular.

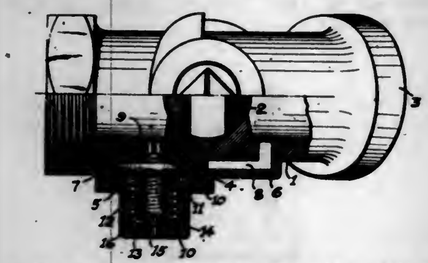
1,458,763. ELECTRIC RADIATOR. CECIL A. HEAD, Royal Oak, Mich. Filed June 26, 1922. Serial No. 570,797. 3 Claims. (Cl. 219—41.)



1. An electric heater comprising a nonconducting receptacle, a centrally arranged electrode mounted therein, an annular electrode also mounted in the receptacle and spaced from the central electrode, and two electrodes

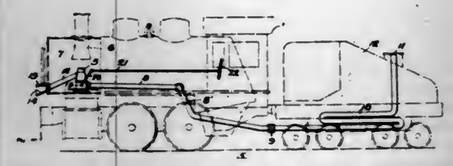
being adapted to be electrically connected by a body of liquid contained in the receptacle, the receptacle being

provided with spaced gutters between the electrodes to provide a continuous cup of water in the receptacle after the main body of water has been evaporated.



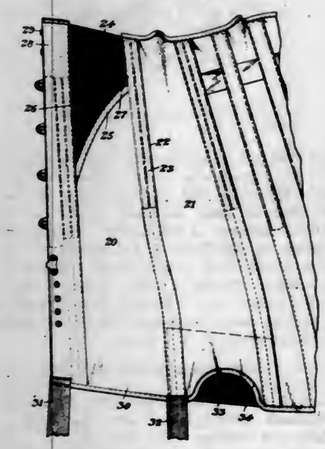
1,458,764. FRICTION CLAMP FOR TAMPING BARS. NELS A. JOHNSON, Van Nuys, Calif. Filed Jan. 21, 1922. Serial No. 530,796. 6 Claims. (Cl. 25—37.)

1. A clamp for tamping bars comprising a sleeve, friction strips sustained within the sleeve and adapted to receive therebetween the shank of a tamping bar, a spring for urging said strips to yieldingly retain the shank of the tamping bar between the strips, means constantly acting to urge said spring inwardly of the sleeve comprising a shaft contacting with the spring, and a second spring constantly acting to rotate the shaft so as to feed the shaft inwardly against the first spring.



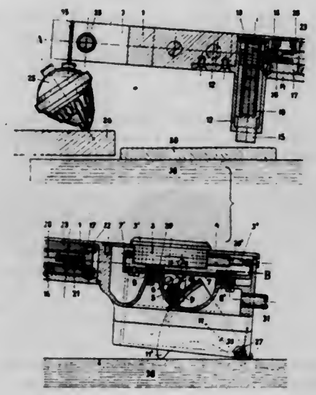
1,458,765. BY-PASS VALVE FOR ANGLE COCKS. JOHN P. KELLY, Pittsfield, Mass. Filed Jan. 15, 1921. Serial No. 437,416. 7 Claims. (Cl. 303—86.)

1. A by-pass valve device for angle cocks, comprising a brake pipe cock, a passage around said cock, for establishing communication from one side of the cock to the other, a valve for controlling said passage, a piston attached to said valve and exposed on one side to the brake pipe pressure at the hose side of the cock, a fluid pressure chamber at the opposite side of the piston, means for sealing said chamber when the piston moves



to the open position, and a spring acting to close said valve.

1,458,766. DRAFT DEVICE FOR LOCOMOTIVES. RALPH REUBEN KOHN, Philadelphia, Pa. Filed June 15, 1920. Serial No. 389,117. 5 Claims. (Cl. 110—147.)



1. In a locomotive draft mechanism, the combination of a locomotive smoke pipe, a stack leading therefrom, a petticoat pipe connected with the stack, a blast pipe beneath the petticoat pipe, a vane pivoted in the blast pipe and adapted to receive the blast upon its under side, means for diverting the blast from the blast pipe laterally without passing it through the petticoat pipe, and an air blast connection leading into the blast pipe from the front of the engine and for which the vane forms a baffle to divert the air blast up the stack.

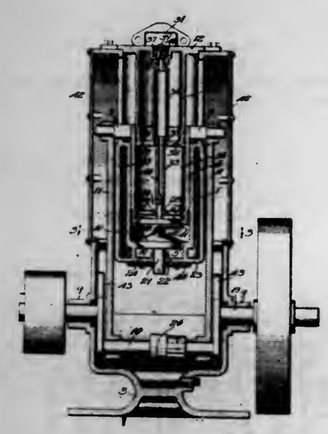
1,458,767. APPAREL CORSET. DANIEL KOPS, New York, N. Y., assignor to Kops Brothers, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 15, 1922. Serial No. 536,648. 3 Claims. (Cl. 2—73.)

3. In an apparel corset and in each front portion thereof, a front steel section, a front steel therein, the front steel section having an extension above the end of the front steel, a front section comprising two relatively wide members extending lengthwise of the garment, and a V-shaped gore of elastic fabric material formed in the upper part of the member of the front section adjacent the front steel section attached thereto and to the front steel section in the upper extension thereof and also to the rear member of the said front section whereby the underlying parts of the body of the wearer are permitted to assume a natural position and are more or less supported therein.

1,458,768. APPARATUS FOR CUTTING DIAMONDS. EMILE FERDINAND ADELIN CHARLES LEPERRE, Antwerp, Belgium. Filed Jan. 8, 1921. Serial No. 436,008. 5 Claims. (Cl. 51—229.)

1. Apparatus for supporting precious stones for grinding in a grinding machine and for automatically lifting the carrier for the precious stone on the required extent of grinding having been effected, comprising a bar adapted to be freely supported at one end and at the other to support the said carrier in position over the grind-stone, mechanism mounted upon the said bar and operable on the variation of its inclination as the grinding of the precious stone proceeds, and means for lifting the end of the said bar supporting the said carrier on a determined inclination being reached, substantially as described.

1,458,769. TIE BRACE FOR CONCRETE FORMS. RAY A. MCHALE, Syracuse, N. Y., assignor to Lois T. McHale, Syracuse, N. Y. Filed Feb. 4, 1921. Serial No. 442,421. 4 Claims. (Cl. 25—131.)



1. In a tie brace for concrete forms the combination of a pair of blocks, a tie rod connecting the blocks, each block being formed with an internal cavity and with a radial slot in its end wall, the slot opening into the cavity, and tension rods arranged substantially in alinement with the tie rod, each tension rod having a hook at its inner end arranged to pass through the slot into the cavity and interlock with the end wall thereof upon successive endwise and partial rotary movements of the tension rod, substantially as and for the purpose described.

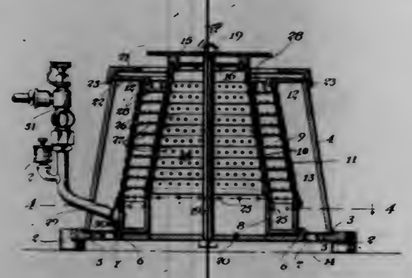
1,458,770. ROOF CONSTRUCTION. HERBERT E. MARKS, Sewickley, Pa. Filed Mar. 9, 1922. Serial No. 542,278. 6 Claims. (Cl. 108—6.)

1. A roof of the character described comprising a frame, a series of plaster-board supporting members carried by said frame, a layer of plaster boards having their oppositely disposed sides supported by said members, additional plaster boards overlapping and strengthening the contiguous ends of said layer of plaster boards, and a cementitious body moulded on the plaster boards and bonded therewith and thereby forming a continuous monolithic roof slab including the plaster boards.

1,458,771. INTERNAL-COMBUSTION ENGINE. WILLIAM F. PAGEL, Sycamore, Ill. Filed Oct. 17, 1919. Serial No. 331,415. 11 Claims. (Cl. 123—65.)

1. The method of burning fuel gases for the production of pressure which consists in filling a receiving space with the fuel gases the gases entering at the top of said space, slightly heating the gases in said space, removing the gases from the lower end of said space by suction and entering them into a second space at the upper end thereof, slightly compressing the gases within said second space and discharging them from the lower end of said second space into the upper end of a combustion space, compressing the gases in the combustion space by the downward movement of a compression element and causing the compressed gases to be ignited.

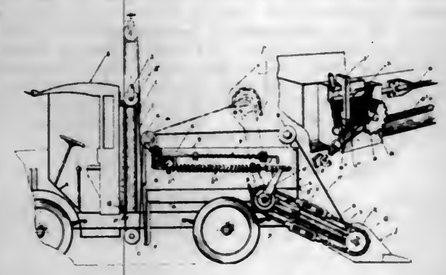
1,458,772. COMPOSITION FOR FACILITATING THE FITTING OF BEARINGS. CHARLES PATRICK MERRY, New Orleans, La. Filed June 3, 1922. Serial No. 565,750. 6 Claims. (Cl. 51—280.)



1. A composition for facilitating the fitting of bearings comprising a mixture of a mineral abrasive, white lead, zinc and boracic acid.

1,458,773. COTTON-PICKER'S SACK. ADOLPH E. MEYER, Webster Groves, Mo., assignor to Textile Products Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 1, 1919. Serial No. 341,762. 6 Claims. (Cl. 150—2.)

1. A cotton picker's sack comprising a body portion having two main walls, and a top extension wall member permanently secured at its ends to said body portion adjacent the side edges of the latter, said top extension wall member being attachable to and detachable from the upper ends of both of said main walls.

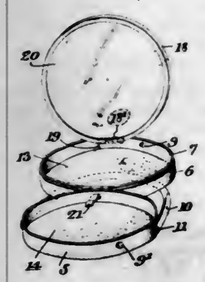


1,458,774. WICKLESS OIL BURNER. WILLIAM MEYERS, Lima, Ohio, assignor of one-half to Charles L. Ackerman, Lima, Ohio. Filed Sept. 1, 1922. Serial No. 585,733. 8 Claims. (Cl. 158—87.)

1. An apparatus of the character described including a burner base plate, a burner shell rectangular in cross-section mounted on the base plate, a combustion chamber spaced inwardly from the burner shell, said combustion chamber formed of two spaced walls rectangular in cross-section, an air chamber on each side of the combustion chamber, the walls of the combustion chamber provided with small holes to permit passage of air from the outer and inner air chamber to the combustion chamber.

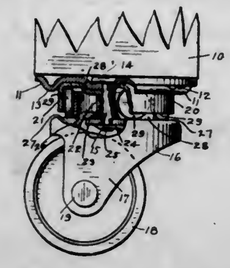
1,458,775. LOADING ATTACHMENT FOR TRUCKS. HAROLD G. NILSON, Detroit, Mich. Filed Dec. 19, 1921. Serial No. 523,265. 8 Claims. (Cl. 214—78.)

1. A loading device for vehicles comprising a scoop, swinging arms attached to the vehicle body upon which said scoop is mounted, means for lifting said arms to swing the scoop over the body, means for preventing the



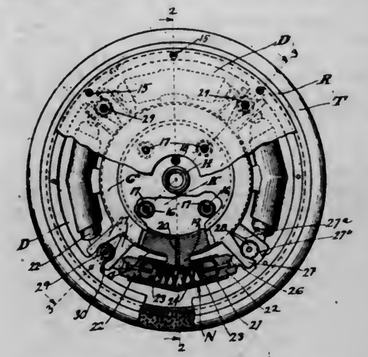
scoop from turning during the swinging movement, and releasing means for permitting the turning of the scoop to dump the load when above the body.

1,458,776. BALL AND PROCESS FOR MAKING SAME. HARRY NYE, Akron, Ohio. Filed Jan. 12, 1922. Serial No. 528,610. 6 Claims. (Cl. 154—16.)



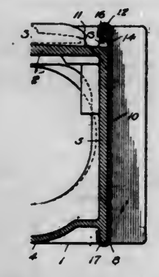
3. A process of making a ball which comprises preparing a pulp-like mass composed of rubber and fabric, subjecting a quantity of said mass to a partial cure in a mold to form a ball, applying a two-part cover of a fabric containing rubber to the ball, and subjecting it to a final cure in a mold to vulcanize the cover to the body of the ball.

1,458,777. TOILET CASE. ALBERT T. REID, Leavenworth, Kans. Filed Feb. 16, 1923. Serial No. 619,469. 7 Claims. (Cl. 132—83.)



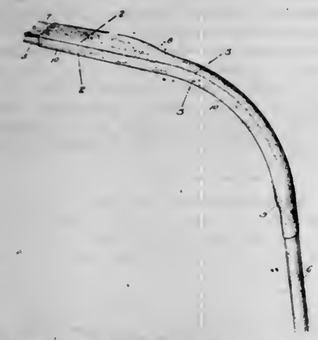
1. In a toilet case, a casing section adapted for the reception of a rouge compact, a second casing section adapted for the reception of a powder compact and hinged to the first named casing section, one casing section being adapted to be folded into close relation to the other casing section for providing a closed case, a mirror adapted to be arranged within the closed case between the said compacts and a spring actuated hinge pivotally connecting the mirror with one casing section at a point spaced from the hinged connection between said casing sections, said spring actuated hinge serving to automatically shift the mirror to an open position when released, said mirror when in the open position being so located with respect to the opened casing sections that the same face of the mirror is adapted for use with both casing sections.

1,458,778. ROLLER-BEARING CASTER. FRANK L. ROWNTREE, Meriden, Conn., assignor to Foster, Merriam & Company, Meriden, Conn., a Corporation of Connecticut. Filed July 14, 1921. Serial No. 484,573. 3 Claims. (Cl. 16—22.)



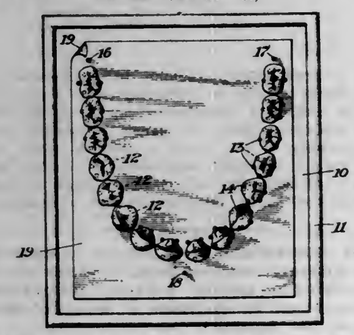
1. A caster comprising an inverted cup having a roller raceway, rollers mounted in said raceway, a ring loosely mounted inwardly of the side walls of the cup and forming therewith opposed guides for the rollers, an axle within the cup, and a wheel carrying horn mounted to turn on the axle and having a raceway for the rollers, said ring being adapted to yield laterally independently of both the horn and cup under lateral pressure from the rollers.

1,458,779. WHEEL FOR MOTOR VEHICLES. JOSEPH B. RUATTI, Los Angeles, Calif. Filed Feb. 3, 1922. Serial No. 533,869. 6 Claims. (Cl. 152—38.)



5. A resilient wheel comprising a hub, a rim, a hollow casing formed on the hub, discs carried by the rim and slidably associated with the casing, a series of piston and cylinder units sustained on the casing and interposed between the latter and said rim and between said discs, each of said units including a pair of opposed cylinders having communication with the interior of said casing, pistons within the cylinders, and springs between each pair of pistons, a pair of rings rotatably associated with the casing, cam arms formed at intervals on each of the rings and in such manner that one cam arm of one ring is disposed adjacent one cam arm of the other ring, means for operatively connecting said arms with said pistons, and rollers carried by the rim and interposed between said arms for effecting actuation of said pistons inwardly of the cylinders when said rim is moved radially.

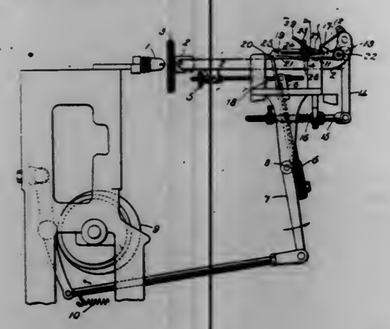
1,458,780. JOURNAL BOX. AUGUST G. SANDMAN, Baltimore, Md. Filed Aug. 2, 1922. Serial No. 579,263. 30 Claims. (Cl. 105—225.)



1. The combination with a railway car journal box having a pedestal guide way the side walls of which are outwardly flared, and a wear plate or liner adapted to engage said tapered guide way.

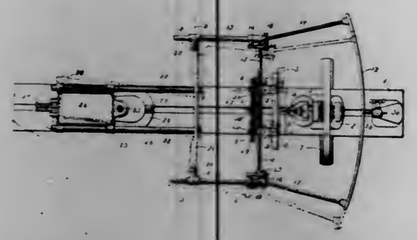
1,458,781. BOW AND BOW COVER FOR VEHICLE TOPS. ROBERT C. SCHEMMEL, Union City, Ind., assignor to The Backstay Machine & Leather Company, Union City, Ind., a Corporation of Indiana. Filed Nov. 25, 1922. Serial No. 603,379. 6 Claims. (Cl. 296—118.)

1. A bow cover for vehicle tops comprising a tubular bow-enclosing envelope made of elastic textile fabric adapted to automatically conform to the varying transverse dimensions of the bow covered.



1,458,782. DENTAL APPARATUS. HARRY H. SHAPIRO, New York, N. Y. Filed Mar. 1, 1922. Serial No. 540,327. 10 Claims. (Cl. 35—6.)

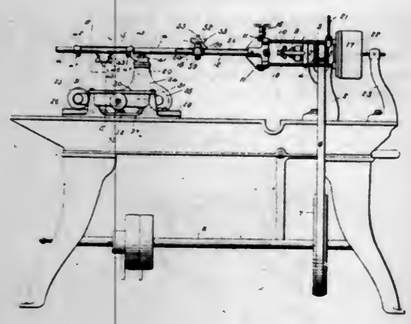
1. A dental apparatus comprising a plate having a series of holes arranged in an occlusal arch curve there-



in, a chart, and a set of artificial crowns adapted to be arranged in various positions in the plate with the chart intervening between the same and the plate.

1,458,783. BRUSH-MAKING MACHINE. ARTHUR HAMMOND SHIPLEY, Leicester, England. Filed Sept. 10, 1920. Serial No. 409,472. 2 Claims. (Cl. 300—11.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a brush-making machine, in combination, a slidable rest, means to automatically lock said rest in the operative position, a lever to control said locking means, mechanical means to operate said lever to effect locking and unlocking said rest, and a manually operable cam-lever pivotally mounted in the controlling lever adapted upon being turned in one direction to move the controlling lever so that it renders the locking means inoperative and, upon being turned in the opposite direction, to move said lever so that it makes said locking means operative.

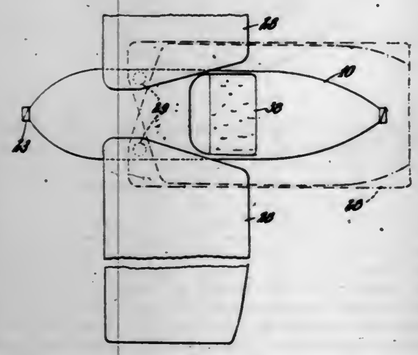


1,458,784. BRUSH-MAKING MACHINE. ARTHUR HAMMOND SHIPLEY, Leicester, England. Filed Sept. 10, 1920. Serial No. 409,473. 8 Claims. (Cl. 144—96.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a brush-making machine, in combination, supporting means capable of oscillation about a supporting centre or centres, a work-holder capable of movement on said supporting means to change the position of the work relatively to the centre or centres about which said means are oscillated transversely to a radius but in the plane of oscillation and means adapted to rapidly move said work-holder from one position to another.

1,458,785. BRUSH-MAKING MACHINE. ARTHUR HAMMOND SHIPLEY, Leicester, England. Filed Sept. 10, 1920. Serial No. 409,474. 5 Claims. (Cl. 144—196.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

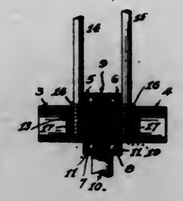
1. In a brush-making machine, in combination, a drill, a work carrying frame, a pivot upon which said work carrying frame turns, a carriage on which said pivot is mounted, a track along which said carriage travels to and fro in line with the drill, means to hold said car-



riage down on the track, a plate supporting said track, and a bed, said plate being movable to different positions on the bed for the purpose described.

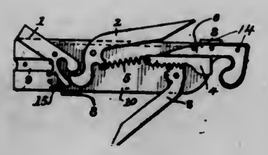
1,458,786. SEMIELLIPTICAL SPRING. GIULIO TERZAGHI, Turin, Italy. Filed Jan. 5, 1922. Serial No. 527,252. 2 Claims. (Cl. 267—28.)

1. A semi-elliptical spring, comprising a main spring adapted to directly support the load, an auxiliary spring having a greater radius of curvature than the main spring and rigidly connected at its center to the center of the main spring, and means to resiliently connect the free ends of the auxiliary spring to the main spring.



1,458,787. COMBINED AUTOMOBILE AND AEROPLANE. DAN WALDEN, Scalp Level, Pa. Filed Feb. 6, 1922. Serial No. 534,312. 5 Claims. (Cl. 244—12.)

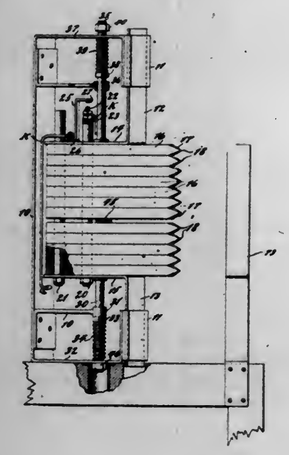
1. A machine of the class described comprising a body, a pair of wings pivoted to said body and extending



oppositely therefrom and adapted to be folded backward thereover, and spiral guiding elements engaged with said wings whereby one is lowered bodily and the other raised bodily as they are folded backward.

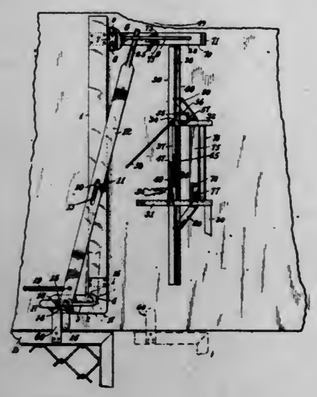
1,458,788. JOINT FOR ARTIFICIAL LIMBS. WILLIAM H. WAMBSGANS, Peoria, Ill. Filed June 27, 1921. Serial No. 480,566. 2 Claims. (Cl. 3—6.)

1. In an ankle joint, the combination with the ankle and foot members of an artificial limb, of a pair of tubular members disposed in axial alignment and lying transversely of and between the said members, said tubular members having spaced relation, a solid main body portion enclosed by the tubular members, a pair of stems depending from the said ankle member, each passing through one of the said tubular members and both extending into the main body portion perpendicular to the axes of those parts, said stems permanently spacing apart the said tubular members, and a stem arising from the foot member, the same enclosing the main body portion and adapted to turn upon it and having a working position between the facing ends of the said spaced tubular members.



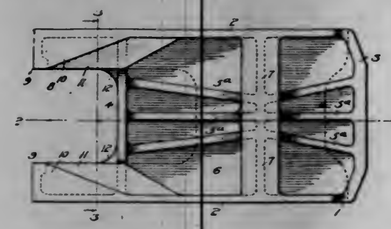
1,458,789. MINER'S KNIFE. JOSEPH PHILIP WIDAS and FRANK STEPHEN WIDAS, Caspian, Mich. Filed Sept. 16, 1922. Serial No. 588,710. 4 Claims. (Cl. 86—22.)

3. A device of the character described, comprising a main handle, a sliding knife formed with a rack, a lever having a pinion working in the rack, a knife pivoted in the handle, a lever to operate the same, means to hold the knives normally out of operation, a hole to receive a fuse to be slit, and a guide for the sliding knife.



1,458,790. SAFETY APPARATUS FOR ELEVATORS. POWHATAN J. WOOLDRIDGE, Pewee Valley, Ky. Filed May 10, 1919, Serial No. 296,259. Renewed Nov. 1, 1922. Serial No. 598,437. 12 Claims. (Cl. 187—31.)

1. The combination with an elevator shaft, a shaft door, a car, and electrical car controlling means including a circuit, the interruption of which is effective to stop the car, of a breaker for said circuit, and means actuated by the door when the car is near the corresponding landing to positively engage and actuate the breaker regardless of

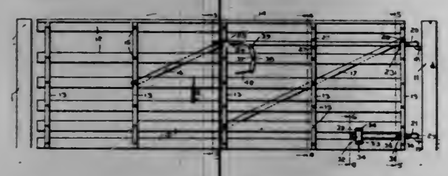


slight movement of the car adjacent to the landing and to remain in positive engagement with the breaker and to maintain said circuit open until the door is closed.

1,458,791. SAFETY APPARATUS FOR ELEVATORS. POWHATAN J. WOOLDRIDGE, Pewee Valley, Ky. Filed June 13, 1919, Serial No. 303,890. Renewed Nov. 1, 1922. Serial No. 598,438. 16 Claims. (Cl. 187—31.)

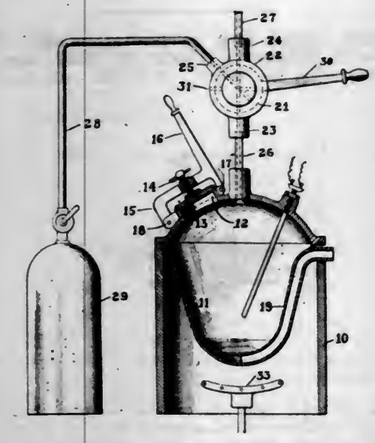
1. In safety mechanism for elevators, the combination with an elevator shaft, a shaft door, a car movable in the shaft and a control circuit including a circuit breaker, of a vertical, movable rail carried by the car and connected with the circuit breaker, a horizontally swinging arm located on the shaft wall and adapted to cooperate with the rail when the car is near the landing, an approximately vertical lever connected with the arm, and cooperative means carried by the lever and the shaft door to move the arm and operate the rail and circuit breaker when the door is opened with a part of the rail opposite the arm.

1,458,792. DRAFT RIGGING. IRA ORVILLE WRIGHT, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 30, 1921. Serial No. 525,981. 4 Claims. (Cl. 213—57.)



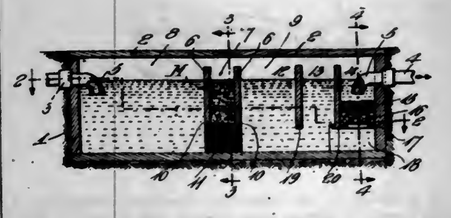
1. A reversible backstop having opposite face formations adapted for use with different kinds of draft rigging.

1,458,793. BRAKE-ROD TAKE-UP. PHILIP C. AGEE, Pomeroy, Wash. Filed Jan. 11, 1922. Serial No. 528,425. 3 Claims. (Cl. 188—196.)



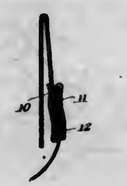
3. In combination, a connecting rod, a lever pivoted thereto, a toothed bar loose upon the connecting rod and in cooperative relation with said lever to hold the same in the required adjusted position, a spring connection between the toothed bar and lever, a second spring connection between the toothed bar and connecting rod, and means extending from said lever to a convenient point of operation whereby the said lever may be adjusted from a distant point.

1,458,794. ADJUSTABLE GATE. EDWARD E. ANSON, Clarksville, Ohio. Filed Oct. 27, 1920. Serial No. 419,883. 1 Claim. (Cl. 39—82.)



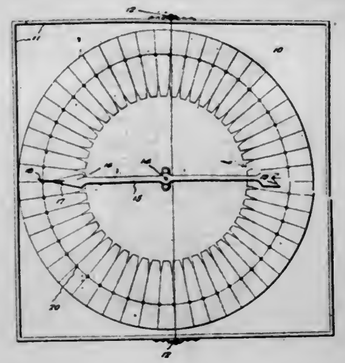
A gate including longitudinal and vertical bars, means securing said vertical bars to said longitudinal bars and to each other, a hinge bar connected with the upper edge of said gate, a hinge bar at the lower edge of said gate having openings therein and extending between a pair of said vertical bars, a plate connecting said pair of vertical bars and engaging said hinge bar, a block connecting a pair of said longitudinal bars, said block having an opening therethrough through which said second named hinge bar extends, and a pin selectively engageable in the openings in said second named hinge bar and engageable with the rear pair of vertical bars to resist thrusts of the gate toward the gate support and to compensate for changes in adjustment of the gate.

1,458,795. DIE-CASTING MACHINE. JAMES BATE, Ypsilanti, Mich. Filed Feb. 13, 1922. Serial No. 536,207. 1 Claim. (Cl. 22—60.)



A die casting machine comprising a hollow casing, a receptacle having an inlet opening therein mounted in the casing, a lid pivotally mounted on said opening, an operating lever on said lid, a tube vertically mounted thru the wall of the receptacle adapted to alternately supply compressed air and gas thereto, a three way valve supported by the tube and connected therewith to control the supply of air and gas to the receptacle, and a discharge duct leading from the receptacle to a mold, said duct being formed on the interior walls of the receptacle and conforming to the curvature of the sides thereof from the bottom to a point near the top.

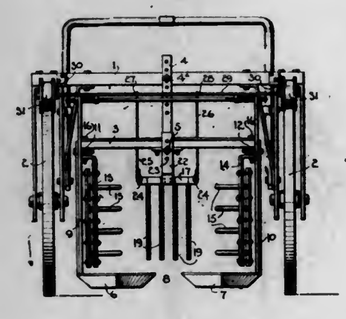
1,458,796. SEPTIC TANK. CARL W. BAUMGARDNER, Tiffin, Ohio. Filed Apr. 14, 1922. Serial No. 552,703. 2 Claims. (Cl. 210—5.)



1. A septic tank provided intermediate its ends with a pair of transverse partitions in close spaced parallelism to provide a pocket adapted to receive bacteria breeding material, the lower portions of said partitions extending to and contacting with the bottom of the tank and being formed in their lower ends with oppositely disposed relatively small notches forming a passage from one compartment to another, and an arched wire mesh guard extending transversely through said notches to span the space between the partitions to hold the breeding material in the pocket and permitting the liquid to rise between the partitions to thoroughly saturate the breeding material.

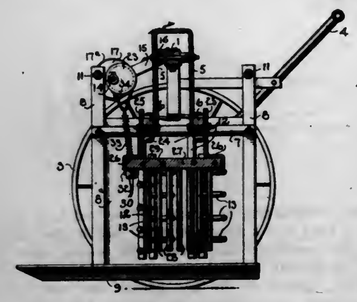
1,458,797. COLLAR-RETAINING DEVICE. CHARLES MARTIN BEALE, Minneapolis, Minn. Filed July 14, 1922. Serial No. 574,948. 1 Claim. (Cl. 24—101.)

A fastener, comprising a central portion, and resilient jaws reversely arranged, and extending on opposite sides of the central portion the jaws and central portion being each deflected in the form of a compound curve, the end of one jaw being turned outwardly and the end of the other jaw being turned inwardly.



1,458,798. GAME. FRED BETHKE and EVELYN HICKE, Visalia, Calif. Filed Sept. 19, 1921. Serial No. 501,541. 2 Claims. (Cl. 46—56.)

1. A game of the character described comprising a game board, a post rising centrally therefrom, an arrow rotatable upon said post and including a pointed head and a tail provided with spaced horns, a plurality of upstanding pins on said board arranged in circular series concentric to the path of travel of the arrow, a plurality of legends arranged upon the game board inwardly of and opposite the spaces between the successive pins, in combination with a deck of playing cards adapted to be laid in fortuitous arrangement upon the board outwardly of and opposite the spaces between the successive pins, the spaced horns of the tail of the arrow pointing always to two successive cards, certain of the combinations of successive cards pointed to by said horns giving advantages and others entailing penalties.

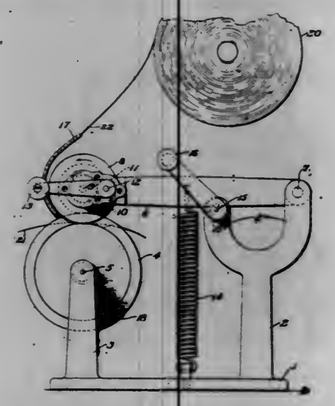


1,458,799. BOLL-WEEVIL MACHINE. ARTHUR BRIGDEN, Birmingham, Ala. Filed Aug. 12, 1922. Serial No. 581,480. 14 Claims. (Cl. 43—143.)

1. A device of the class described, comprising a wheeled supporting frame, a separate frame supported thereby and carrying depending substantially parallel fingers arranged in longitudinal rows, the fingers of each row being staggered with respect to those of an adjacent row, a pair of connecting members connected to the

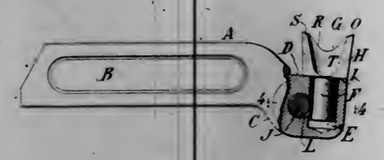
separate frame on opposite sides of its pivot, and means for pulling on each of the connecting members alternately to oscillate the fingers transversely of the supporting frame.

1,458,800. BOLL-WEEVIL MACHINE. ARTHUR BRIGDEN, Birmingham, Ala. Filed Aug. 29, 1922. Serial No. 584,969. 8 Claims. (Cl. 43—143.)



1. An attachment for boll weevil machines, comprising a supporting frame, ground wheels, a transverse drive shaft, means for driving said shaft from the ground wheels, eccentric wheels on said drive shaft, a transversely rocking frame carried by the supporting frame and having depending fingers adapted to swing transversely across the plants, spaced weevil-catching pans at each side of the supporting frame, coiled springs connected to the rocking frame, and chains connected to said springs and to said eccentric wheels.

1,458,801. BATH-CAP-REENFORCING MACHINE. JAMES W. BRUNDAGE, Akron, Ohio. Filed Jan. 3, 1922. Serial No. 526,828. 9 Claims. (Cl. 154—1.)

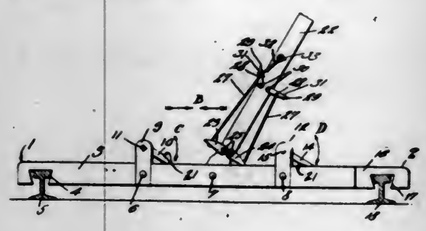


7. An apparatus for the purpose described comprising a base, a bearing member supported thereby, an idle roll rotatably carried by said member and having a wedge shaped periphery, a standard supported by said base having a forked upper end, an arm pivoted to one of said forks, a roll journaled at the free end of said arm having a V-shaped periphery coacting with the periphery of said

first named roll, a spring action on said arm tending to hold said rolls in contact, a cam carried by the other

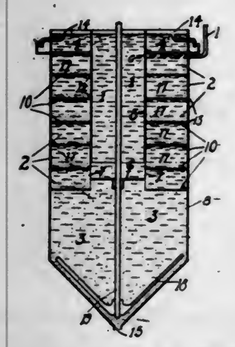
fork and bearing on the under side of said arm and provided with operating means, means for operating said arm, and means for rotating one of said rollers.

1,458,802. TOOL HOLDER AND TOOL. GEORGE W. BUFFORD, Buffalo, N. Y., assignor to J. H. Williams & Co., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 2, 1919. Serial No. 314,983. 15 Claims. (Cl. 29—100.)



1. The combination of a tool holder and tool, the tool having a head and a shank, and the tool holder having a socket for receiving the shank, the socket and shank shaped to permit multiple angular adjustments of the head with relation to the tool holder, and means engaging the shank for clamping the tool in the holder.

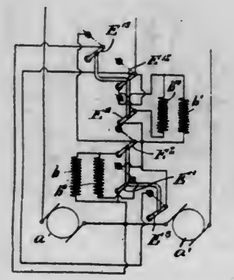
1,458,803. INSULATED ELECTRIC WIRE. HARRY B. BURLEY and HENRY E. ROONEY, Brookline, Mass., assignors to Boston Insulated Wire and Cable Company, a Corporation of Massachusetts. Filed Feb. 6, 1922. Serial No. 534,469. 3 Claims. (Cl. 173—264.)



2. A high voltage rubber insulated electric wire comprising a conductor, a plurality of layers of rubber compound enclosing said conductor, and a continuous interlayer of an insulating material of a conductivity substantially greater than the conductivity of the rubber separating the successive layers of rubber, whereby the voltage carrying capacity of the wire is increased.

1,458,804. RAIL SPREADER. GROVER W. BURLISON, Grundy, Va. Filed Nov. 3, 1921. Serial No. 512,544. 2 Claims. (Cl. 254—43.)

1. In a device of the class described, first and second members, connected for relative longitudinal sliding movement, the second member having a rack; reversible dogs carried by the first member and adapted to engage the rack; a lever mounted to swing on the first member; pawls carried by the lever and adapted to cooperate one at a time with the rack; and means for holding either pawl out of engagement with the rack.



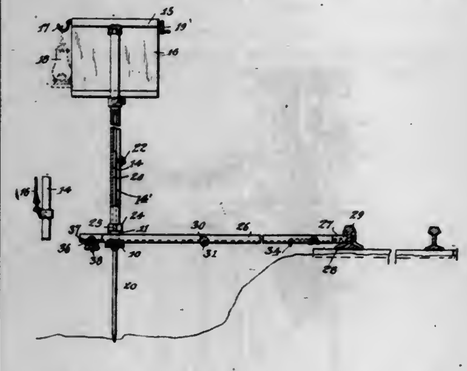
1,458,805. APPARATUS FOR THE SETTLEMENT OF SOLID PARTICLES SUSPENDED IN LIQUIDS. NIELS C. CHRISTENSEN, Salt Lake City, Utah. Filed Dec. 13, 1920. Serial No. 430,244. 4 Claims. (Cl. 210—51.)

1. In an apparatus for the settlement of solids suspended in liquid, the combination of a container having suspended therein a number of similar parallel sloping settling surfaces separated by similar settling spaces, said settling spaces opening at their upper ends into an overflow space arranged to allow an overflow of clarified liquid, and said settling spaces opening at their lower ends into a discharge space arranged to receive settled solids and to discharge said solids therefrom, and each of said settling spaces opening in a lower part of a side thereof into a supply container arranged to allow a lateral inflow of the suspension to be settled into said settling spaces.

1,458,806. ELECTRIC GENERATING GROUP. EMMANUEL LOUIS PAUL COLARDEAU, Paris, France, assignor to Henry Crochat, Paris, France. Filed Oct. 22, 1918. Serial No. 259,220. 2 Claims. (Cl. 171—223.)

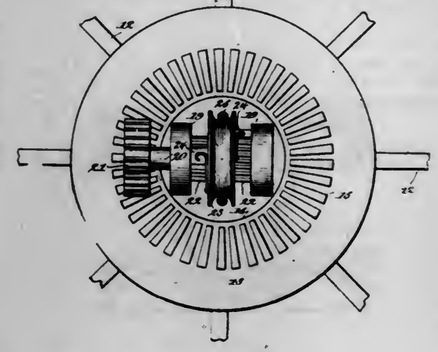
1. An electric installation comprising a plurality of shunt dynamos constituting a dynamo system, said dynamos being capable of running at different speeds and of stopping individually, an auxiliary series field winding system for starting purposes associated with said dynamo system, said field winding system comprising auxiliary field winding elements so arranged that the current of each dynamo passes, during the starting period, through at least a part of the field winding elements of all the other dynamos of the dynamo system, said auxiliary

winding elements being all of cumulative effect with respect to the shunt field of each dynamo, and means to cut out said auxiliary field winding elements when the starting period of the dynamo system is over, said means being also capable of switching said auxiliary winding elements for starting action when a part of the dynamo system is out of action.



1,458,807. HOOK AND EYE. FRANK D. COLLINS and THOMAS H. COKER, Hartsville, S. C. Filed Dec. 23, 1921. Serial No. 524,472. 1 Claim. (Cl. 24—228.)

A fastener of the class described comprising an eye member and a substantially U-shaped hook member, said hook member having its bight bent back upon itself forming arms of substantially parallel inner and outer members, eyes formed on the extremities of the outer members, a tongue forming part of one of the arms extending towards and having its end in contact with the inner member of the opposite arm, said tongue being adapted to be moved from said contact by inward movement of the outer arms.

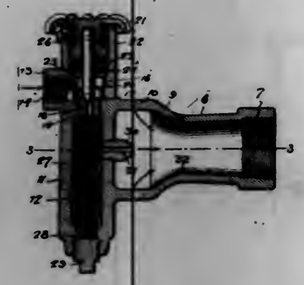


1,458,808. SIGNAL-FLAG SUPPORT. JOSEPH M. CONLEY, Greenville Junction, Me., assignor of one-half to A. M. Bird, Megantic, Province of Quebec, Canada. Filed Mar. 19, 1923. Serial No. 626,089. 6 Claims. (Cl. 246—477.)

1. A signal support comprising a base member, bracket devices attached to said base member and including vertical portions having studs extending from their confronting faces, a mast mounted to swing upon said studs and adapted to carry a signal device, means for locking said mast to said brackets, an extension member, means for locking said extension member adjustably to said mast, bars swingingly connected at their outer portions

to said brackets and adapted to be coupled at their inner ends to a railway rail, and means for locking said bars to said railway rail.

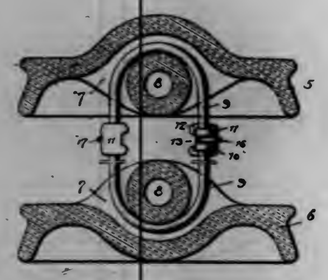
1,458,809. ENSILAGE PACKER. LORENZO D. DARROW, North Plainfield, N. J. Filed Nov. 5, 1921. Serial No. 513,064. 5 Claims. (Cl. 100—57.)



1. A device of the class described, the combination of a body portion formed with gear teeth, a gear cooperative with said teeth, a pulley, and means between said gear and pulley.

5. A device of the class described, comprising a rotatable tamping body, a member rotatably mounted in said body, a ratchet carried by the lower end of said member, a shaft rotatably supported on the upper portion of said member, a pulley loose on said shaft, means whereby said pulley may operate said shaft, and means whereby said shaft may operate said body.

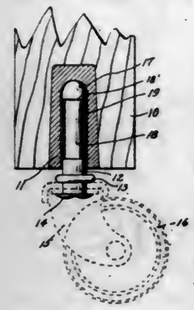
1,458,810. INJECTOR. CLARENCE A. DAWLEY, Plainfield, N. J. Filed Mar. 25, 1921. Serial No. 455,671. 6 Claims. (Cl. 230—13.)



1. A device of the type described, comprising a casting cored to afford an elongated pressure chamber, a perforated screw plug at the inlet end of said chamber, a screw plug at the opposite end of the chamber, a cylindrical screen engaged between said plugs and sur-

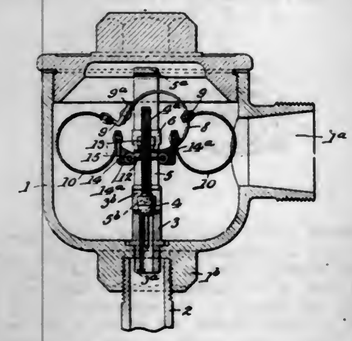
rounding the perforation in the inlet plug, a nozzle screwed in the side wall of said pressure chamber, and a discharge tube integral with the pressure chamber

and spaced therefrom by tie webs, said tube lying substantially at right angles to the pressure chamber and coaxial with the laterally projecting nozzle.



1,458,811. INSULATOR CONNECTOR. GRANDON E. ECKERT, East Liverpool, Ohio, assignor to The R. Thomas & Sons Co., East Liverpool, Ohio, a Corporation of Ohio. Filed Sept. 30, 1920. Serial No. 413,855. 8 Claims. (Cl. 287—113.)

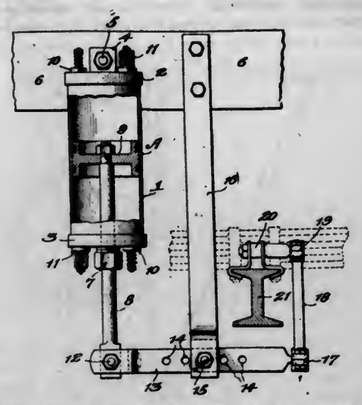
1. A cotter pin for use with an apertured supporting member, said pin being formed from a strip of spring sheet metal of materially greater width than thickness, and comprising a pair of legs integral with and connected by spring bends to the head end of the pin, said legs being spaced apart and oppositely offset to form retaining abutments adapted to automatically engage the walls of the apertured supporting member and to prevent accidental disengagement of the pin after its insertion.



1,458,812. CASTER. EDWARD F. FAY, Meriden, Conn., assignor to Foster, Merriam and Company, Meriden, Conn., a Corporation of Connecticut. Filed Nov. 10, 1921. Serial No. 514,289. 1 Claim. (Cl. 16—38.)

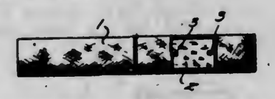
A caster comprising a socket member having a substantially cylindrical socket therein, a pintle reduced in diameter for the greater portion of its length to provide shoulders adjacent its inner and outer ends, a substantially cylindrical, resilient retaining sleeve embracing the reduced portion of the pintle and split longitudinally throughout its length and at one side only, said sleeve forming a bearing for the pintle throughout substantially its entire length and being normally of greater

diameter than the socket so that when it is inserted in the same it frictionally engages the walls of the socket, and said pintle being also provided with a top bearing in the socket and a side bearing in the socket below said sleeve.



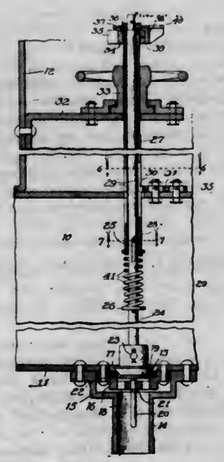
1,458,813. THERMOSTATIC VALVE. JESSE L. FERRIS, Fort Dodge, Iowa. Filed Apr. 18, 1922. Serial No. 554,619. 7 Claims. (Cl. 236—59.)

5. In a thermostatic valve a casing and valve seat, a frame of substantially inverted U-shape within said casing, a double set of curved thermostatic members supported from said frame, a valve carrier supported by said members, and a valve adjustably carried by said carrier.



1,458,814. SHOCK ABSORBER. NEVIN S. FOCHT, Pottstown, Pa. Filed Nov. 15, 1922. Serial No. 601,110. 4 Claims. (Cl. 188—88.)

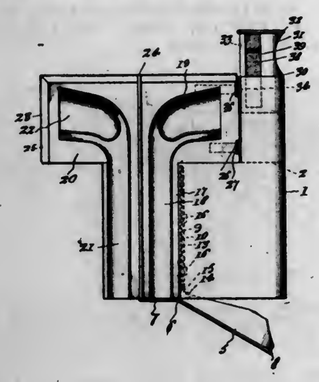
1. A shock absorber including a cylinder having air intake and exhaust valves at opposite ends thereof, a plunger operating within the cylinder, a post carried by the frame of the vehicle, a lever fulcrumed to said post and operatively connected with the plunger, and a



bracket carried by the axle of the vehicle and operatively connected with said lever.

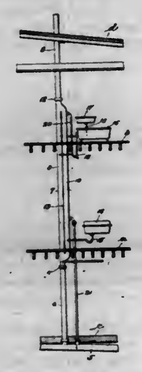
1,458,815. TRANSMISSION BAND. VAL F. FRANCK, Louisville, Ky., assignor of one-third to Charles A. Rowland and one-third to William H. Rowland, both of Louisville, Ky. Filed Sept. 2, 1922. Serial No. 585,944. 5 Claims. (Cl. 188—259.)

5. A transmission band comprising a woven tube and a cork filler within the tube having openings at intervals in its length to provide pockets for holding a quantity of lubricant, said tube and filler being saturated with a composition of graphite and paraffin.



1,458,816. TANK-OUTLET VALVE. FRANK C. FYKE and JOHN E. HUNT, Elizabeth, N. J., assignors to Standard Development Company, a Corporation of Delaware. Filed Nov. 26, 1920. Serial No. 426,424. 4 Claims. (Cl. 137—21.)

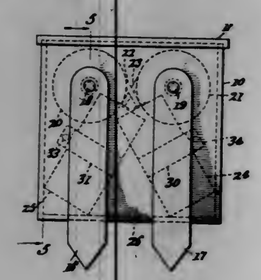
2. In a car tank, an outlet secured to the bottom thereof, a reciprocable valve within the tank and adapted



to close said outlet, a vertical rod secured to said valve, a sleeve surrounding said rod, means for reciprocating said sleeve relative to the rod, and coacting means on said sleeve and rod for raising the rod relative to the sleeve, said coacting means being inoperative when the sleeve is lowered relative to the rod.

1,458,817. PIPE-SMOKER'S KIT. SYDNEY BURT GARDNER, Benson, Minn. Filed Mar. 2, 1921. Serial No. 448,964. 6 Claims. (Cl. 206—38.)

1. A smoker's kit comprising a case having a compartment for receiving tobacco opening through one end of the case and being of substantially the same thickness as the case, a compartment for a pipe opening through the side of the case and extending along one side and along a portion of the bottom of the tobacco receptacle, and a match holder slidable in the case through the other end thereof and lying at one side of the pipe compartment and beneath the tobacco receptacle and being of substantially the same thickness as the case, substantially as described.



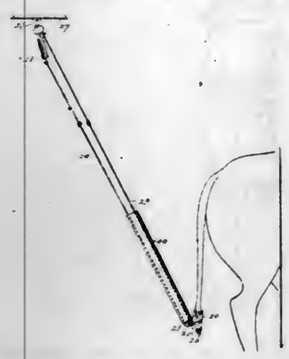
1,458,818. PLUMBING SYSTEM. PETER J. GARVIN, New York, N. Y. Filed Oct. 3, 1921. Serial No. 504,917. 1 Claim. (Cl. 4—21.)

In a plumbing system, a sewer pipe connection, a combined soil and vent element of a length to extend from said sewer pipe connection through a series of rooms of a building and project above the roof of a building, an auxiliary combined soil and vent pipe section of a length as to extend in a series of rooms of the building

and having its ends opening into and formed integral with said element at the upper and lower portions of the latter, said auxiliary section arranged parallel with and in close relation to said element, waste pipe connections leading to said element, a vent pipe leading from one of said connections to the upper portion of said pipe section, a vent pipe connection leading from said sewer pipe connection to said auxiliary section, and a waste pipe connection leading to said auxiliary section.

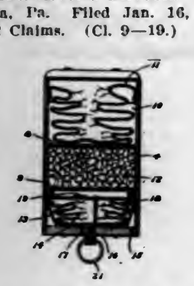
1,458,819. VEHICLE SIGNAL. JOHN SISSON GRAHAM, U. S. Navy. Filed July 1, 1921. Serial No. 481,915. 3 Claims. (Cl. 177—329.)

1. A vehicle signal comprising a casing closed at its bottom and sides and open at its top, a removable cover for the top, a pair of normally drooping signal arms lying on the outside of one of the casing walls and being spaced apart to opposite sides of the center thereof whereby to act conjointly in signaling, shafts for supporting and raising the signal arms in opposite directions, said shafts entering said casing and each having a sheave, the sheaves therein disposed in separated planes, a flexible connection for each sheave, the connections being wound in opposite directions on the respective said sheaves, solenoids mounted in said casing in off-set relation and being inclined in opposite directions, means detachably held in the casing for removably holding the solenoids in a unitary assembly, and cores in the solenoids connected to the ends of said flexible connections.



1,458,820. KEYED-SHAFT COUPLING. RICHARD H. GRIFFITH, Bellevue, Ohio, assignor to The Ohio Cultivator Company, Bellevue, Ohio, a Corporation of Ohio. Filed July 17, 1922. Serial No. 575,708. 3 Claims. (Cl. 287—52.)

1. A member provided with a key-way for Woodruff type keys having outwardly flaring bottom and side walls for receiving and guiding the key as said keyed member is passed over the keyed shaft.

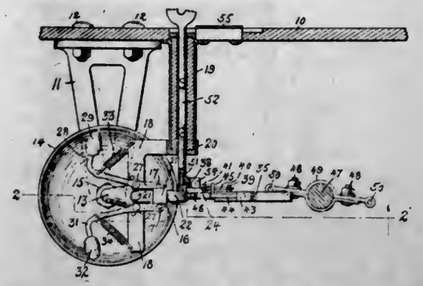


1,458,821. COW-TAIL HOLDER. JOSEPH HAERING, Louisville, Ky. Filed Dec. 2, 1921. Serial No. 519,454. 1 Claim. (Cl. 119—105.)

A cow tail holding device consisting of a clasp having a flexible member provided with a stud, and a plurality of eyes for selective engagement with the stud, a key detachably engaged with the stud for holding an eye in engagement therewith, anchoring and releasing cords for connection with an overhead support and also having connection respectively with the flexible member of the

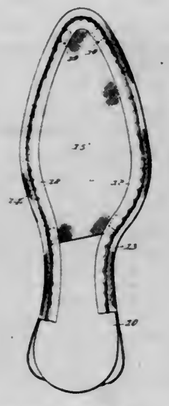
clasp and said key, the anchoring cord including an elastically extensible member, and a protective sheath embracing the anchoring and releasing cords adjacent to the clamp for preventing the entangling of the cow tail therewith.

1,458,822. LIFE-SAVING DEVICE. ELIJAH T. HALTER, Philadelphia, Pa. Filed Jan. 16, 1922. Serial No. 529,636. 2 Claims. (Cl. 9—19.)



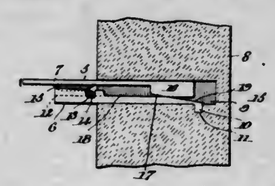
2. In a device of the class described, the combination of a main casing, a plurality of apertured partitions therein, a cover hingedly mounted at one end, a gas bag secured to said main casing and normally contained therein between said cover and one of said partitions, gas forming material between said partitions, a water bag secured in said main casing and operable to supply water to said gas forming material, an end member secured to said water bag, a finger-piece for operating said end member, automatic means for returning said end member to normal position, and valve mechanism associated with the aforesaid elements as and for the purpose set forth.

1,458,823. AUTOMOBILE THEFT ALARM. JACOB MATHEW HERAUCOURT, New Orleans, La. Filed June 22, 1922. Serial No. 570,161. 6 Claims. (Cl. 116—33.)



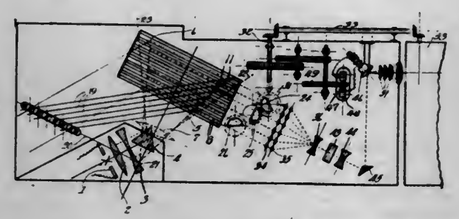
5. In an apparatus of the class described, a rotating member, a gong, a bracket device supporting said gong, and including a key guide, jointed links pivoted respectively to said bracket device and to said spring controlled portion and operating when in longitudinal alinement to hold the spring controlled portion in the path of said rotating member to cause the rotating member to actuate the hammer levers, a catch carried by said swinging member, a resilient member attached to said spring controlled portion and engageable with said catch when said spring

controlled portion is disposed in withdrawn position, a key member insertible through said key guide and having a lateral ward adapted to engage said links and withdraw said spring controlled member from the path of



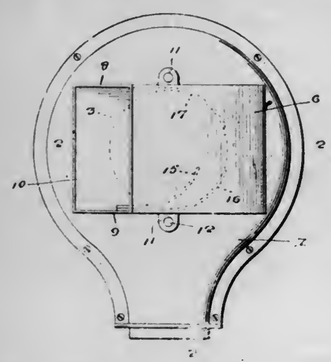
said rotating member and engage said resilient member with the catch when rotated in one direction, and disconnect the resilient member from the catch and release the spring controlled member when rotated in the opposite direction.

1,458,824. SHOE. MEYER S. HESS, Baltimore, Md. Filed Oct. 22, 1921. Serial No. 509,601. 2 Claims. (Cl. 36—18.)



1. A turned shoe having a laminated sole consisting of inner and outer layers of relatively stiff material which is bendable on transverse lines to permit of turning, the latter having a rib and groove, and the peripheral edge of the former being fitted in the groove in contact with the base of the rib, and provided with spaced flexible attaching tabs secured to the rib.

1,458,825. WIRE FASTENER FOR FENCEPOSTS. JAMES IRVING, Jr., Cold Brook, N. Y. Filed July 7, 1922. Serial No. 573,333. 3 Claims. (Cl. 256—50.)

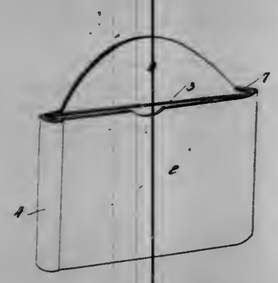


1. A wire fastener for fence posts having a mortise therein, said fastener comprising two elements, one of said elements adapted to be held stationary within the mortise and having a longitudinal groove, a transverse recess inwardly of said groove for the reception of a wire, the other of said elements being provided on its under side with a wedge for co-action with the groove of the first mentioned element for clamping the wire in said recess.

1,458,826. METHOD OF AND MEANS FOR PROJECTING COLORS. FERDINAND JANOVJAK, deceased, by Josef Janovjak, administrator, Chicago, Ill. Filed June 28, 1920. Serial No. 392,280½. 16 Claims. (Cl. 88—16.4.)

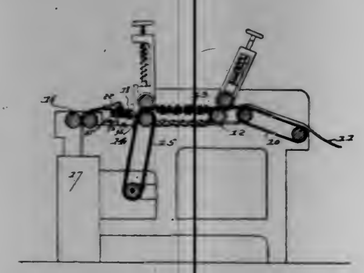
1. The method of projecting colors, including the steps of separating a white light ray into its primaries, deflecting the primaries, and oscillating each primary to cover an area on a screen.

1,458,827. HAND-OPERATED BLOWER. WILLIAM JEWETT, Richmond, Va. Filed Oct. 22, 1921. Serial No. 509,511. 2 Claims. (Cl. 230—11.)



1. In combination with a hand operated blast blower having an opening communicating with its fan chamber; of a casing having a flared entrance mouth arranged transversely over and partly covering the opening, spaced upwardly arched members secured to the bottom of the casing for directing air currents against one of the blades of the fan, and a downwardly arched deflector on the top of the casing opposite one of said directors.

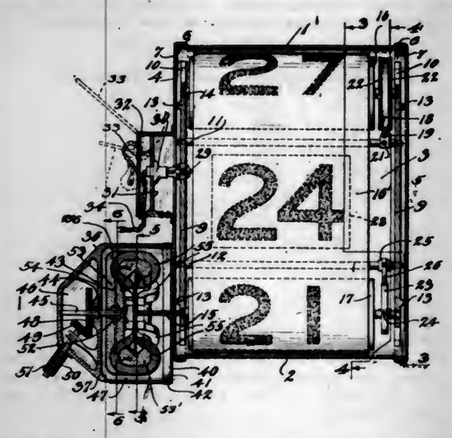
1,458,828. ANTISLIP COMPOSITION. FRANK A. JOHNSON, Norfolk, Va. Filed Nov. 28, 1921. Serial No. 518,255. 1 Claim. (Cl. 134—13.)



An anti-slipping covering for pulleys, composed of a piece of fabric treated with a compound formed of powdered aluminum ammonium sulphate, cane sugar, lamp black, sodium carbonate, India gum, sheet isinglass, gelatine, and flour, in substantially the proportions stated.

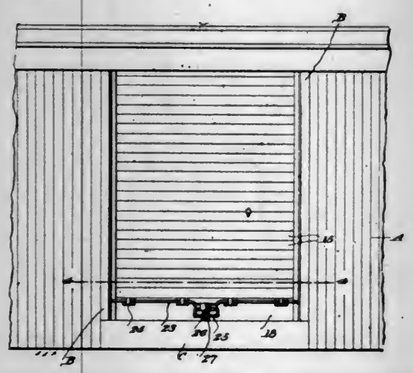
1,458,829. DUPLEX ENVELOPE. WILLARD H. KACKLEY, Byesville, Ohio. Filed Apr. 27, 1922. Serial No. 556,883. 1 Claim. (Cl. 229—72.)

A duplex envelope comprising a single blank embodying a front, a back, and a member connecting the inner edges of the front and back and adapted to form a partition when the blank is folded, said front, back and partition member being of uniform size, a sealing flap at the upper edge of the front, closing flaps at the outer edge and bottom of the front, and other closing flaps at the outer edge and bottom of the back, the flap at the bottom edge of the front being secured to the outer lower edge portion of the partition, the flap at the outer edge of the front being secured to the back, and the flaps at the back being secured to corresponding edge portions of the front.



1,458,830. CAN-GILL GUIDE. ONESIME LADEBAUCHE, Woonsocket, R. I. Filed Sept. 13, 1922. Serial No. 587,997. 4 Claims. (Cl. 19—129.)

4. A guide attachment for worsted gill boxes adapted for interposition between the faller mechanism and the calender rolls, the same comprising guide funnels, a transverse guide bar, and brackets supporting said bar and adjustable to move the bar toward and from the plane of the calender rolls.

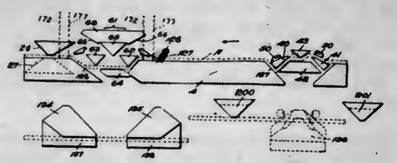


1,458,831. SPEEDOMETER. ERNEST OTTO LANGE, Philadelphia, Pa. Filed Apr. 28, 1921. Serial No. 465,153. 3 Claims. (Cl. 40—90.)

1. A speedometer comprising a housing, indicating means including a frame in said housing, upper and lower rollers each having a shaft rotatably carried by said frame, a curtain wound upon said rollers, a coiled spring positioned about the shaft of the upper roller and anchored to the shaft, a disk rigid upon the shaft of the lower roller, bearing brackets carried by said frame, a spring strip engaging the disk, adjusting screws carried by the bearing brackets and having engagement with the coiled spring and spring strip, and

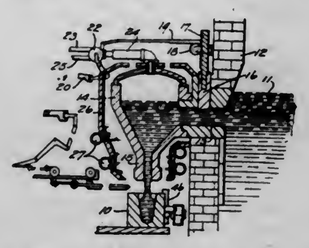
a magnetic drive for imparting rotary movement to the shaft of the lower roller including a rotary carrier and magnets carrie thereby in operative relation to said disk.

1,458,832. FREIGHT-CAR DOOR. ALBERT A. LARSON, Onawa, Iowa. Filed Mar. 31, 1922. Serial No. 548,506. 4 Claims. (Cl. 20—32.)



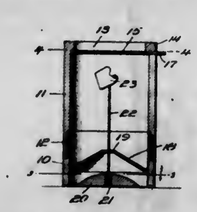
1. In combination with the door jambs of a freight car provided on their confronting faces with guides, a door structure comprising a spring roller secured above the door opening, a rolling door carried by the spring roller and having its edges slidable along said guides, and a latching device for holding the door at a selected position consisting of an extensible rod mounted upon the door, and cam means mounted on the door engageable by the rod upon partial rotation thereof for forcing the end portions of said rod longitudinally in opposite directions to engage said guides.

1,458,833. KNITTING MACHINE AND PROCESS OF PRODUCING SPLIT-FABRIC. ROBERT H. LAWSON, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Sept. 25, 1922. Serial No. 590,238. 88 Claims. (Cl. 66—21.)



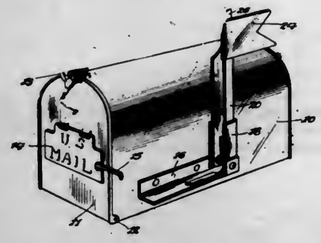
88. That method of knitting a stocking throughout upon a single series of needles, which includes producing

a leg portion by rotary knitting; simultaneously producing segmental portions of the stocking by recipro-



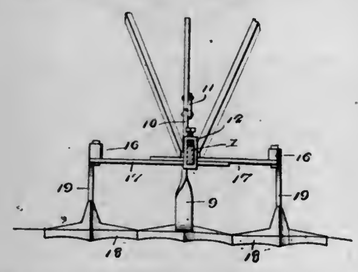
cating knitting, and during the production of said segmental portions joining simultaneously knitted segmental portions by oblique lines of suture loops.

1,458,834. APPARATUS FOR PRODUCING CHARGES OF MOLTEN GLASS. CLYDE R. LOTT, Washington, D. C., assignor, by mesne assignments, to The Owens Bottle Company, a Corporation of Ohio. Original application filed Sept. 27, 1909, Serial No. 519,678. Divided and application filed July 13, 1918, Serial No. 244,684. Divided and this application filed Jan. 7, 1922. Serial No. 527,650. 13 Claims. (Cl. 49—55.)



1. The combination with a receptacle to contain molten glass and having a discharge opening in the bottom thereof through which the glass discharges downwardly, a mechanical cutter, means to periodically operate the cutter to sever charges of glass at a point a short distance below the discharge opening and then withdraw the cutter, a burner located at one side of the path of the glass, and means to shift the burner beneath the discharge opening after the cutter withdraws and direct a flame against the freshly cut surface of the glass.

1,458,835. DENTAL CASTING FLASK. NATHAN O. LYNN, Tucson, Ariz. Filed Nov. 19, 1921. Serial No. 516,448. 4 Claims. (Cl. 22—97.)

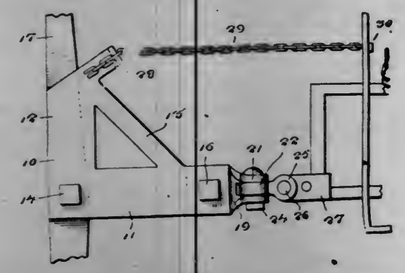


1. In a casting flask as characterized, a flask body open at one end and having a sprue hole opening centrally of the closed end thereof, said flask body being formed to provide upper and lower separable sections one in threaded engagement with the other, a sprue former adapted for insertion into said flask through the sprue hole in the closed end thereof, a pattern carried at the inserted end of said sprue former and adapted to be embedded in a plastic material filling said flask body, and a removable perforated plate carried at the open end of said flask body for reinforcing the plastic filling during the casting operation, the separable sections of said flask body being relatively adjustable for effecting the proper positioning of said pattern within the plastic filling therein.

1,458,836. SIGNAL ATTACHMENT FOR MAIL BOXES. WILLIAM A. MCDOWELL, Stout, Iowa. Filed Dec. 31, 1921. Serial No. 526,124. 4 Claims. (Cl. 232—35.)

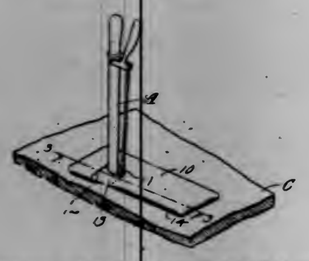
1. An automatic signal of the class described comprising a casing secured on a mail box, an arm movably mounted therein, stops for engaging the arm in housed and display positions respectively, a spring for holding the arm in display position and means for locking the arm in housed position.

1,458,837. CULTIVATOR. ROBERT E. L. MAY, Hinesville, Ga. Filed Mar. 29, 1919. Serial No. 286,060. 1 Claim. (Cl. 97—172.)



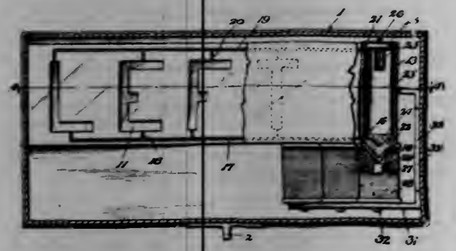
The herein described cultivator comprising a longitudinal central beam having transverse recesses in its lower edge adjacent to its ends, clamping bodies receiving the beam and having vertical, threaded apertures in their upper bars and also having transverse rectangular apertures in their vertical side bars, binding screws bearing in said threaded apertures of the clamping bodies and on the beam, longitudinal side beams in parallelsim adjustable laterally toward and from each other, shovels connected with and carried by the draft beam and the side beams, respectively, and transverse bars of rectangular form in cross-section carried by the side beams and arranged in lapped relation snugly in the transverse recesses of the draft beam and in the transverse apertures in the vertical bars of the clamping bodies and supported by said bodies and also arranged in lapper relation at opposite sides of the clamping bodies.

1,458,838. HITCH. JOHN L. MILLER, Randall, Kans. Filed Nov. 5, 1921. Serial No. 513,109. 2 Claims. (Cl. 278—18.)



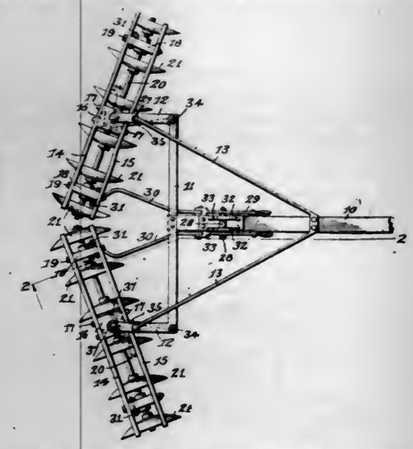
1. A draft equalizer comprising a hitching plate including right angularly disposed relatively rigid arms,

means located at the juncture of the arms for pivotal connection with a draft gear, horizontally and vertically



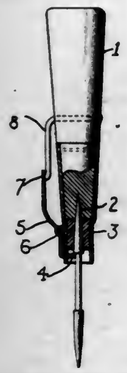
pivoted attaching means secured to one of the arms and a flexible member having one end adjustably secured to the outer end of the other arm.

1,458,839. BRAKE-LEVER SLOT CLOSURE. FRANK E. MILLER, Robinson, Ill. Filed Apr. 17, 1922. Serial No. 553,674. 1 Claim. (Cl. 74—81.)



As a closure means for a slot in which a control element operates, in combination with a frame surrounding the slot and rising from the member in which the slot is provided, a closure plate of bendable material having a slot for disposition of the element therein, said closure plate having a downwardly extending flange surrounding said frame to raise the plate with respect to the frame by engagement with said member, said closure plate being slit outwardly from one end of the second mentioned slot to the marginal edge of the plate to provide a single relatively long portion integral with the plate and bendable to facilitate attachment thereto and removal from the element, and said flange extending along said portion to reinforce it.

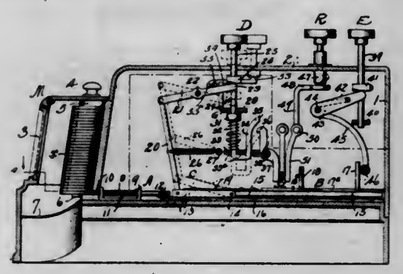
1,458,840. SIGNAL. JOHN N. MONTGOMERY, GEORGE D. MONTGOMERY, and HERBERT A. DIXON, Washington, D. C. Filed Jan. 23, 1922. Serial No. 531,250. 10 Claims. (Cl. 40—132.)



1. In a sign, a sign plate pervious to light rays and having a closed space defining a sign character, a liquid reservoir in communication with said space, a liquid in said reservoir normally standing, by gravity, at a level below the space, a plunger in the reservoir movable to displace the liquid and cause the same to enter and fill the space, the plunger constituting an armature, and an electro-magnet disposed in position to attract said plunger and move the same within the reservoir in a direction to eject the liquid therefrom when the magnet is energized.

1,458,841. DISK HARROW. AUSTIN MOORE, Mount Pleasant, Iowa. Filed Mar. 6, 1922. Serial No. 541,456. 2 Claims. (Cl. 55—81.)

1. In a harrow, a draft tongue having rearward extensions in spaced relation, a frame formed of spaced side members and connecting blocks at the ends and intermediate the ends, said blocks having bearings at their lower ends, shafts engaging said bearings and carrying harrow disks, a pivot device connecting the rearward extension members with each of the intermediate blocks and on which said frames swing, means for swinging said frames and the shafts and harrow disks carried thereby upon the pivots, and means for locking said frames and their attachments in adjusted position.

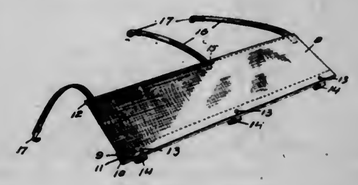


1,458,842. AWL. SAM OVERGARD, Winifred, Mont. Filed Mar. 28, 1922. Serial No. 547,534. 1 Claim. (Cl. 223—37.)

In a sewing awl, the combination with a handle having an inwardly flared socket at one of its ends, a

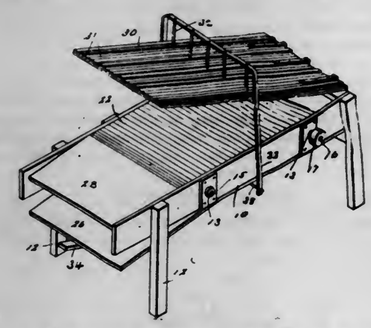
catch member including a spring influenced jaw entering the socket, said catch including an operating tail arranged exteriorly of the handle, and a needle having its ends pointed, its center flattened and provided with an eye and forming shoulders at the terminals of the pointed ends, and said pointed ends designed to be reversely received in the socket of the handle, and the shoulders thereof engaged by the jaw of the catch, as and for the purpose set forth.

1,458,843. CHANGE-MAKING DEVICE. ANGELO PAPOULIAS, Steubenville, Ohio. Filed Jan. 17, 1922. Serial No. 529,891. 14 Claims. (Cl. 133—2.)



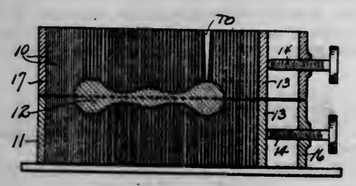
2. In a change making device, a money changing unit including a coin holder, an ejector for the holder, a sliding plunger adapted to normally engage with said ejector, key operated means for actuating said sliding plunger and selective key operated connections for causing said plunger to avoid the ejector.

1,458,844. SUBMARINE BOAT. FREDERICK STANLEY PERKINS, Milwaukee, Wis. Filed Sept. 1, 1921. Serial No. 497,724. 3 Claims. (Cl. 114—16.)



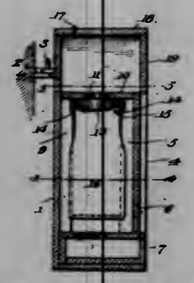
1. In a submarine boat, a hull substantially in the shape of a fish and having a flexible tail portion, a rotary propeller carried in front of the hull, means for inclining the axis of the propeller to direct the course upwardly or downwardly, and means for flexing the tail portion of the hull to change the course toward the right or left.

1,458,845. SHADE ATTACHMENT. WINFORD D. PICKARD, Norman, Okla. Filed July 10, 1922. Serial No. 574,028. 2 Claims. (Cl. 296—97.)



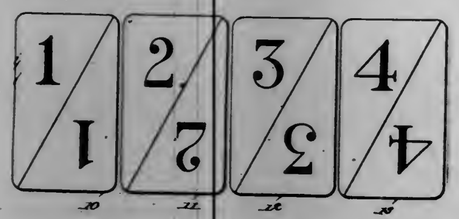
1. A shade attachment for wind shields of motor vehicles, comprising a rectangular body of non-transparent material adapted to be mounted against one face of the upper section of a wind shield, a plurality of rearwardly opening yoke-shaped coupling members having their upper legs or arms arranged against the lower face of said body at the forward portion thereof, said members projecting beyond the forward edge of said body and adapted to overlap one edge of the wind shield section for securing said body therewith, means for securing the upper legs of said coupling members to said body, and a plurality of resilient elements secured to the lower face of said body at the rear thereof and projecting beyond the rear edge of said body, each of said resilient elements having its free end provided with a hook detachably engaging with that edge of the wind shield section to which the coupling members are connected, the said upper legs or arms of the coupling members spacing said body from the wind shield section whereby the hooks when mounted in engaging position will be interposed between said body and the wind shield section.

1,458,846. LEATHER-FINISHING MACHINE. CHARLES WARREN PIERCE, South Duxbury, Mass., assignor of one-half to Charles Driscoll, Brockton, Mass. Filed Nov. 16, 1920. Serial No. 424,397. 3 Claims. (Cl. 149—19.)



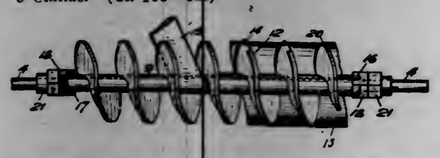
1. In a machine for finishing leather, a frame, an endless belt mounted for movement therein, a plurality of transverse elements fixed to the belt, a surface element of yielding material for each of said transverse elements, and a pressure device for engaging that side of a sheet of leather opposite to that engaged by said surface elements said pressure means including a hingedly mounted element, a U-shaped frame passing around the hinged element and the frame first named, devices connecting various portions of the U frame and the hinged element, and means for depressing the U frame.

1,458,847. MOLD. ALF PIPPING, Altoona, Pa. Filed Mar. 10, 1921. Serial No. 451,254. 3 Claims. (Cl. 22—188.)



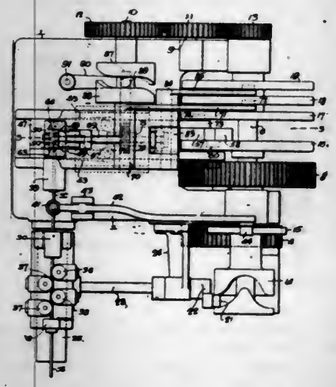
3. A mold forming device including a drag, a plurality of rods of uniform length arranged parallel to each other within the drag and adapted to be shifted longitudinally to conform to the face of a pattern while loosely held in the drag, and means for binding the rods together to hold them rigidly in set molding position, the portion of said rods projecting beyond the drag after setting being cut off.

1,458,848. CABINET. VICTOR J. PLOPLIS, Port Carbon, Pa. Filed Sept. 13, 1921. Serial No. 500,466. 2 Claims. (Cl. 206—15.1.)



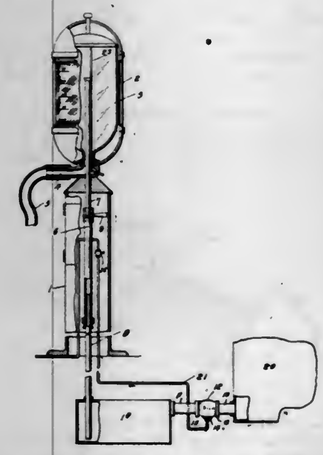
1. A cabinet for tooth brushes and other toilet requisites comprising a box-like body having an open front, a slidable plate partly closing the front, a shelf in the cabinet supported below the upper edge of the front plate and having spaced openings therethrough, threaded annular flanges on the bottom of the shelf surrounding the respective openings, the receptacles having threaded mouth portions engaged by the threaded flanges, and said receptacles designed to receive an antiseptic solution for tooth brushes inserted through the openings in the shelf, a top hinged to the back of the cabinet and having an outer flange designed to cover the open upper portion of the front, and means for locking the said flange to the said front.

1,458,849. CARD GAME. WALLACE H. PRIME, Brooklyn, N. Y. Filed Jan. 20, 1922. Serial No. 530,705. 4 Claims. (Cl. 46—25.)



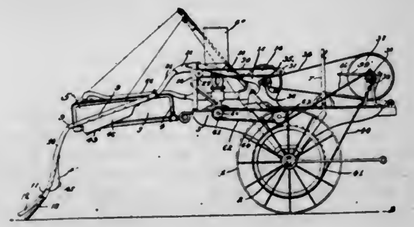
1. A card game characterized by the dealer of the cards winning the number of points respectively the other player loses or the other players lose, and by the dealer losing the number of points the other player wins or the other players win, said card game comprising a deck of cards comprising a plurality of sets of cards, each card of one set having number-indicia on one face thereof, and each card of the other set having distinctive explanatory-indicia respectively on the opposite faces thereof.

1,458,850. WATER ELEVATOR. HENRY C. RATH, Appleton, Wis. Filed Apr. 18, 1922. Serial No. 554,483. 9 Claims. (Cl. 103—91.)



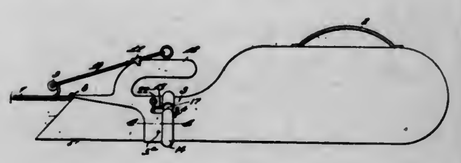
1. A water elevator comprising a shaft, a spiral conveyor blade arranged upon said shaft, a spacing strip wound along said shaft between the succesive convolutions of said blade, and means cooperating with said shaft for drawing the convolutions of said blade and strip into tight relationship.

1,458,851. CHAIN-MAKING MACHINE. MARTIN O. REHFUSS, Philadelphia, Pa., assignor to United States Chain and Forging Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 8, 1920. Serial No. 379,790. 17 Claims. (Cl. 59—16.)



1. The combination in a chain making machine of a slide having two sets of posts; a king post; means for feeding a predetermined length of wire between said two sets of slide carried posts; means for actuating said slide to cause one set of posts to bend the ends of said wire about the king post into substantial parallelism; and means for rotating the second set of posts to further bend said ends to complete the link.

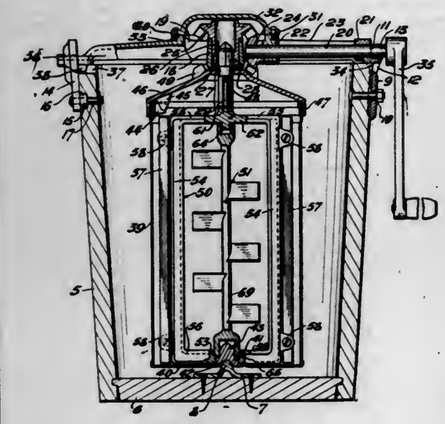
1,458,852. SUPPLY DEVICE FOR FILLING STATIONS OR STANDS. CHARLES A. RUSSELL, Jr., Orange, Tex. Filed Feb. 17, 1921. Serial No. 445,685. 4 Claims. (Cl. 221—100.)



1. A supply device for filling stations comprising a stand, a container carried by said stand, a combined supply and overflow pipe connected to the container, an auxiliary tank connected to said pipe, a storage tank located in a plane above the auxiliary tank, a valve casing connecting said tank, a tube extending into the valve casing, a valve slidably mounted on said tube and adapted to engage a valve seat in the valve casing under pneumatic pressure and having a vent opening, and a pneumatic pressure pipe connected to said tube for seating the valve and for forcing liquid from the auxiliary tank to the container.

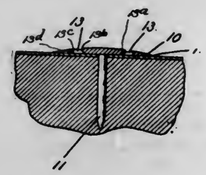
1,458,853. GATHERING ATTACHMENT FOR BOLL-WEEVIL EXTERMINATORS. JOSEPH M. SALADINER, Bryan, Tex. Filed May 5, 1922. Serial No. 558,740. 5 Claims. (Cl. 43—140.)

1. The combination with a portable structure, of means for creating a suction, flexible hose in communication with said means, diverging tubular fingers carried by and communicating with each of said hose, said fingers having inlet openings, and adapted to trail on the surface of the ground, receptacles beneath and supported by the hose, there being openings in the hose for delivering particles from the hose to the receptacles.



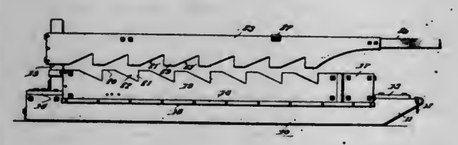
1,458,854. SEED AND POISON POUCH. JOSEPH M. SALADINER, Bryan, Tex. Filed July 1, 1922. Serial No. 572,133. 3 Claims. (Cl. 83—60.)

1. In a device of the class described, a tubular filling member having a hinged closure at one end, a sifter removably mounted in the other end of said member, said member and sifter having cooperating clamping elements to hold them engaged, and a container having a mouth for insertion between said sifter and member and to be clampingly held thereby.



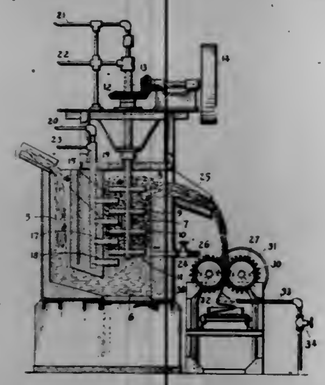
1,458,855. ICE-CREAM FREEZER. EATON D. SARGENT, Nashua, N. H., assignor to The White Mountain Freezer Co., Inc., Nashua, N. H., a Corporation of New Hampshire. Filed Mar. 31, 1923. Serial No. 629,121. 15 Claims. (Cl. 259—51.)

1. In an ice cream freezer, a tub, a can rotatably and removably mounted in the tub, a double rotating agitating and mixing means removably mounted in the can and consisting of an outer beater and an inner beater, the inner beater being loosely and as a whole confined within and



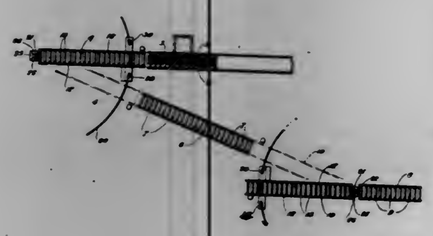
laterally separable from the outer beater, and mechanism supported by the tub in separable relation to the can and agitating and mixing means for operating the latter.

1,458,856. TACK. SIG SCISOREK, Newark, N. J. Filed Oct. 6, 1922. Serial No. 592,792. 1 Claim. (Cl. 85—16.)



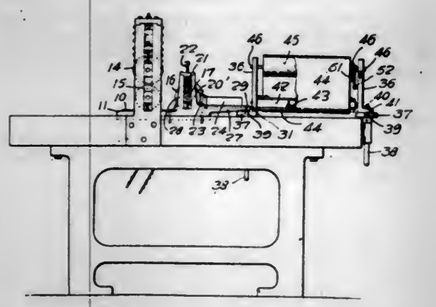
A thumb tack having a plano-convex head provided with a relatively thick central portion tapering outwardly to define a knife edge and having slots upon opposite sides of the central portion, said slots extending entirely through the head, and having downwardly and inwardly tapered walls.

1,458,857. BOLL-WEEVIL EXTERMINATOR. CHARLES R. SCOTT, Bells, Tex. Filed Oct. 14, 1922. Serial No. 594,621. 4 Claims. (Cl. 43—133.)



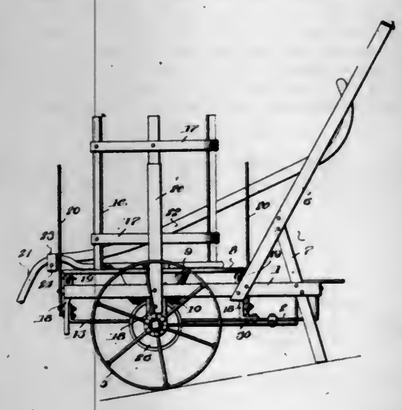
1. A boll weevil exterminator comprising a collecting pan mounted upon skids provided with draft means, forwardly extending divergent arms mounted at the rear end of the machine and projecting beyond the sides of the pan at their forward ends, the upper edges of the sides of the pan being formed with ratchet teeth.

1,458,858. PROCESS OF PRODUCING HOMOGENEOUS POROUS MATERIALS. MATHIAS OVROM SEM, Christiania, Norway, assignor to Det Norske Aktieselskab for Elektrokemisk Industri, Norsk Industri-Hypotekbank, Christiania, Norway. Filed May 15, 1920. Serial No. 381,717. 16 Claims. (Cl. 49—77.5.)



14. In the manufacture of porous materials from melts by producing a foam therein the process which comprises subjecting such foam having a temperature of 1000° C. to the action of a water cooled roller capable of rapidly lowering the temperature of the foam to 800° C., rolling the foam to form a sheet of five millimeters thickness, running the material so treated into a mould and cooling until solidification.

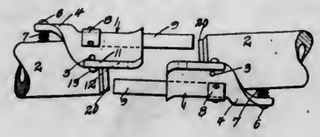
1,458,859. CONVEYING MECHANISM. ANDREW W. SODERBERG, Munhall, Pa. Filed Mar. 24, 1921. Serial No. 455,181. 3 Claims. (Cl. 198—92.)



1. In a conveyer for rolling mills a swinging transfer table comprising a body portion having conveying rollers journaled therein, said body portion having its one end pivotally mounted on a fixed pivot stand, traction wheels journaled adjacent the other end of said table adapted to support and move said table on a suitable curved track, an operating shaft geared to all of said conveying rollers, a motor carried by said table for driving said operating shaft, and a second motor for driving said traction wheels.

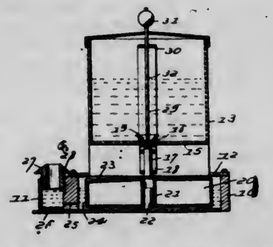
1,458,860. APPARATUS FOR CONSERVING INK. RANDOLPH SOLOMON, Washington, D. C. Filed Oct. 6, 1920. Serial No. 415,057. Renewed Jan. 30, 1923. 3 Claims. (Cl. 101—167.)

1. An apparatus for removing and conserving ink applied in excess to a moving engraved printing plate comprising a wiper roller, an ink reservoir and scraper combined as a unitary structure, and means to adjust said unitary structure relative to the roller.



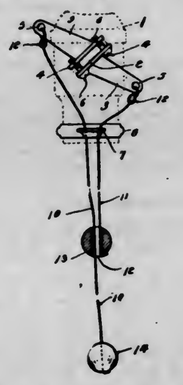
1,458,861. SELF-WINDING HOSE REEL. WILLIAM A. SPRINGOWSKI, Lorain, Ohio. Filed Oct. 21, 1922. Serial No. 596,088. 3 Claims. (Cl. 242—88.)

1. In a device for the purpose set forth, a wheeled frame, a table thereabove, antifrictional bearings therefor, spaced rods secured on the table, rings surrounding and connecting the rods, and said rods and rings providing a hose reel, guard rods to the sides and to the front of the reel supported from the frame, means for revolving the table when the frame is wheeled, means for rendering the said mentioned means inoperative, and means for directing a hose on to or from the reel to coil or uncoil said hose.



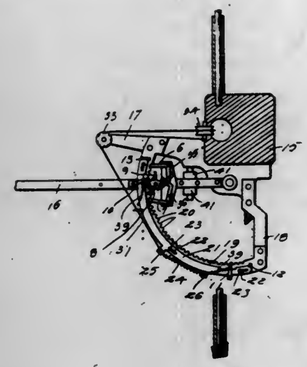
1,458,862. AIR-HOSE COUPLING. JOHN STENGER, McKeesport, Pa. Filed June 25, 1921. Serial No. 480,399. 6 Claims. (Cl. 285—58.)

1. In a coupling, in combination with two aligned pipe sections, coupling members rockably mounted on the adjacent ends of the pipe sections and each adapted to enclose one half of the end portion of the other pipe sec-



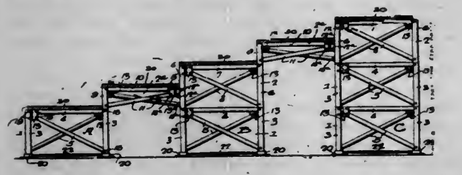
tion, means for forcing the outer end portions of said members toward each other, and means for detachably securing said members in coupled relation.

1,458,863. FOUNTAIN INKWELL. JACOB K. ULLMAN, New Haven, Conn. Filed June 15, 1921. Serial No. 477,754. 3 Claims. (Cl. 120—59.)



1. An ink well having a dispensing chamber with a communicating dip socket accessible by a penpoint, a closed tank or reservoir in communication with the dispensing chamber, a float actuated valve controlling the point of communication between the tank and the dispensing chamber, and a trip or cleaning rod having one extremity arranged at the point of communication between the tank and the dispensing chamber and in engagement with the valve for unseating the latter and opening up the passage constituting the point of communication, the remaining extremity of the trip being exteriorly exposed for access by the operator.

1,458,864. PULL ATTACHMENT FOR ELECTRIC-SWITCH KEY SOCKETS. JOHN M. UPTON, Louisville, Ky. Filed Aug. 15, 1921. Serial No. 492,296. 3 Claims. (Cl. 240—123.)

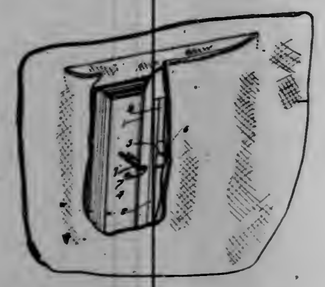


1. A pull attachment for electric switch key sockets, the same comprising a sectional lever consisting of two sections adapted to be positioned one at each side of the switch key, each of said sections having a flange at its inner end adapted to engage a side of the key, adjustable fastenings connecting the flange of one section to the flange of the other section and adapted to clamp the sections to the key, said adjustable fastening providing means whereby the attachment may be applied to keys of different shapes, and pull elements having connection with the outer ends of the lever.

1,458,865. WINDMILL GOVERNOR. LUI C. VERGANO, Berkeley, Calif. Filed Jan. 21, 1922. Serial No. 530,983. 7 Claims. (Cl. 170—41.)

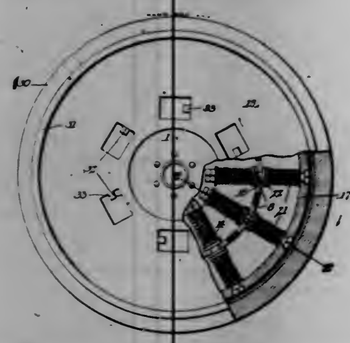
1. In a windmill embodying a pivoted rudder arm, means for securing the rudder arm at the limit of its movement in each direction, a trip bar for effecting release of the rudder arm at either extreme position thereof, means normally holding the trip bar at the limit of its movement in one direction, and float operated means for effecting positive movement of the trip bar in a reverse direction.

1,458,866. PORTABLE STRUCTURE. CHARLES H. WETZEL, Wayne, Pa. Filed July 28, 1921. Serial No. 488,162. 11 Claims. (Cl. 189—2.)



1. A structural unit comprising a plurality of uprights and adapted for end to end attachment to like units with the uprights of one unit in substantially vetrical alignment with those of another, and cross bars connecting said uprights and extending beyond the ends thereof to overlap the joints where the aligned uprights meet, thereby to prevent displacement of the units with respect to each other.

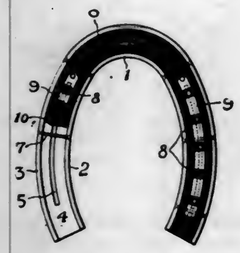
1,458,867. POCKET SAFETY DEVICE. OSCAR N. WIMberly, Jacksonville, Fla. Filed Feb. 19, 1921. Serial No. 446,403. 7 Claims. (Cl. 24—3.)



1. Safety means of the character specified, comprising complemental members, a rod rotatably mounted upon one of the members and provided with a laterally extending

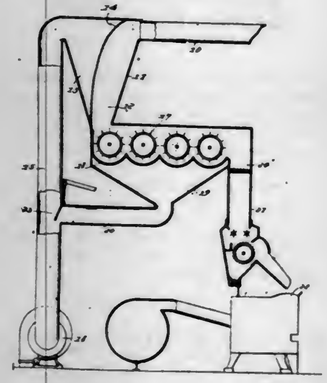
locking finger, and an elongated finger piece secured to the rod and having a lug disposed approximately in a

plane at a right angle to the locking finger and engaging the member to hold the locking finger in locking position.



1,458,868. WHEEL. JACOB WOLLMANN, Freeman, S. Dak. Filed May 19, 1921. Serial No. 470,808. 1 Claim. (Cl. 152—28.)

A spring wheel of the character described comprising a hollow hub section, a hollow tire carrying section surrounding the hollow hub section, and having its sides lapping and in contacting engagement with the side walls of the hollow hub section, overlapping flanges forming the rim of the hollow hub section and being provided with spaced elongated openings, bolts radiating from the hollow tire carrying section and passing through the openings, thereby arranging a portion of each bolt in each section, anti-friction elements arranged in each section surrounding the bolts and engaging the flanges, adjusting means carried by the inner ends of each bolt, a spring surrounding the portions of each bolt disposed in the hollow tire carrying section and having its end convolutions engaging the rim of the hollow tire carrying section and the adjacent anti-friction element respectively, a spring surrounding the portion of each bolt disposed in the hollow hub section and having its end convolutions engaging the other anti-friction members and the adjusting means respectively, outstanding lugs formed on one side wall of the hollow hub section and one side of the tire carrying section having elongated slots for receiving the lugs.

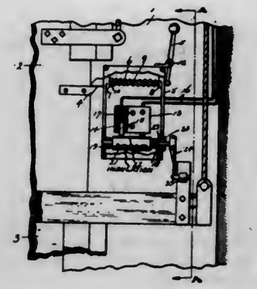


1,458,869. HORSESHOE. ICHITARO YOSHIDA and KICHIGORO MATSUBAYASHI, Osaka, Japan. Filed Mar. 10, 1922. Serial No. 542,694. 3 Claims. (Cl. 168—13.)

1. A horseshoe comprising a metallic base provided with a channel on its under side, a yieldable filling member deposited in said channel and extending beyond the under side of said metallic member to form a tread surface, and means for securing said yieldable member in said channel, said yieldable member being composed of

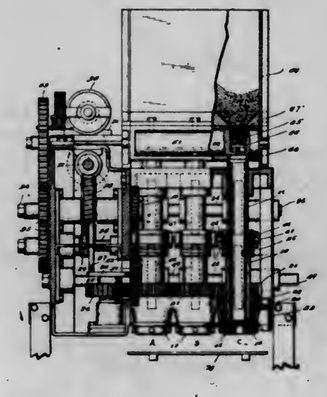
a plurality of sections placed on edge tightly in said channel, the medially positioned sections being recessed below said tread surface to form grooves adapted to house said securing means.

1,458,870. COTTON CLEANER. AUGUST ZOELLER, Sacred Heart, Okla. Filed July 6, 1922. Serial No. 573,192. 3 Claims. (Cl. 19—80.)



1. A cotton cleaning apparatus having main and auxiliary vacuum boxes of which the latter receives cotton from the former and is provided with spiked rollers and a cooperating sectionally breasted auxiliary screen and is in communication with the distributor, a suction conveyor having main and branch members in communication respectively with said main and auxiliary suction boxes, and a controlling valve located at the intersection of said main and branch members for arrangement in relative cut-off relation respectively therewith.

1,458,871. ELEVATOR LOCK. JOHN BAER, Toronto, Ontario, Canada. Filed July 1, 1921. Serial No. 481,894. 1 Claim. (Cl. 187—31.)



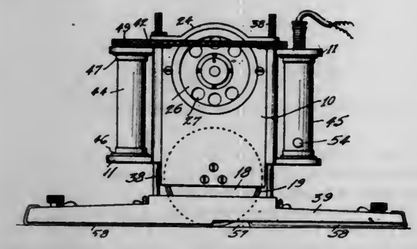
In elevator locks for two members movable in relation to one another, an electric safety device and mechanical means for operating the same comprising a cam fixedly secured to one member and formed with an inclined riding surface, an electric contact inserted lengthwise in an insulated block made in the form of a roller and journalled in the other member, an arm extending from said contact roller and carrying a roller at the end thereof riding on said inclined surface and a plurality of electrical contacts slidably supported and

spring-held in contact with said contact roller and permanently connected to an electric operating circuit and

forming a switch mechanism actuated to make or break the electric circuit on the movement of a member aforesaid.

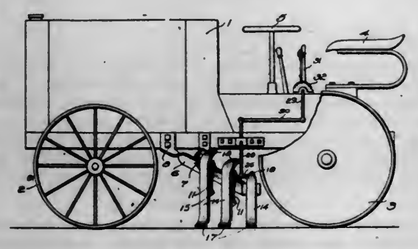
1,458,872. FOOD MACHINE. WILLIAM E. BROBST, Jr., Noblesville, Ind. Filed Aug. 26, 1920. Serial No. 406,087. 10 Claims. (Cl. 107—2.)

1. A machine for producing coiled-shred food-products, comprising a rotatable die having holes therethrough, and a plunger reciprocable in said die and rotatable therewith to force out in the form of shreds through the holes in the die material supplied to the die, so that by the rotation of the die such shreds are deposited in coils.



3. In a machine for producing coiled-shred food-products, the combination of a rotatable die having an annular space, said die being provided with outlet holes leading from said annular space, a hollow plunger rotatable with said die and reciprocable with relation to said die into and out of such annular space to intermittently isolate it, and means for supplying food material to said annular space when such plunger is withdrawn therefrom, so that as the die rotates and the plunger enters into such annular space the material in such annular space is forced out through such holes in the form of shreds which are deposited in coils by the rotation of the die.

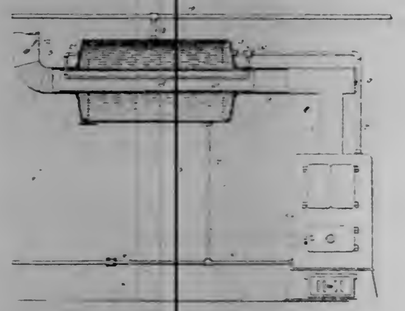
1,458,873. BUTTON. ALEC BROOKE, Glasgow, Scotland. Filed Feb. 7, 1922. Serial No. 534,699. 5 Claims. (Cl. 24—90.)



1. A button comprising a body part and a shank, the latter consisting of two oppositely disposed hooks spaced apart and arranged side by side, the hooks forming an eye.

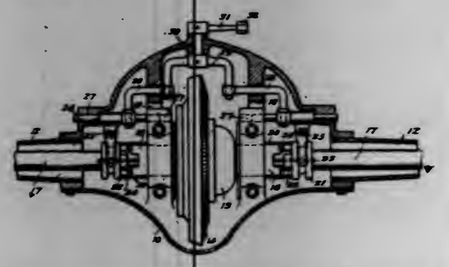
1,458,874. MOTOR-DRIVEN SURFACE-TREATING MACHINE. ALEX A. CLARKE, Dallas, Tex. Original application filed Feb. 13, 1920, Serial No. 358,485. Divided and this application filed Jan. 22, 1921. Serial No. 439,185. 1 Claim. (Cl. 51—174.)

In a machine of the character described, a frame having a horizontal transverse chamber formed integral within the upper end thereof, said chamber having its wall formed imperforate and provided in its lower portion with an opening, a horizontal bracket secured to the lower portion of said wall and extending into said opening, plates detachably held within the ends of the chamber, bearing devices carried by said plates, a motor mounted in the chamber and embodying an armature shaft journaled in said bearing devices, a rotating surface treating element rotatably mounted within the lower portion of said frame, a gear mounted upon the surface treating element and arranged within said frame, an intermediate gear arranged within said opening within the frame and mounted upon said horizontal bracket, a gear mounted upon the armature shaft and arranged within said chamber and engaging the intermediate gear, and supporting means for the frame.



1,458,875. CORNSTALK LIFTER. LOUIS T. COLLIN, Sacred Heart, Minn. Filed Dec. 28, 1920. Serial No. 433,568. 4 Claims. (Cl. 56—51.)

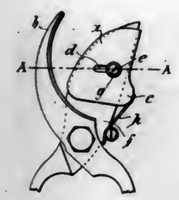
1. The combination with a vehicle of a corn stalk lifter comprising a frame adapted to be secured to the side of the vehicle, supporting members arranged there-



on, the inner supporting member being rigidly secured to said frame, the other supporting members being pivotally secured to said frame, and tines pivotally mounted on said supporting members.

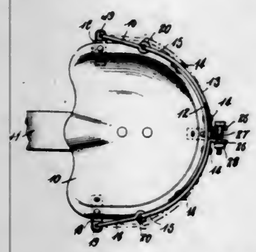
1,458,876. BOILER AND WATER HEATER. JOE CONFER, New York, N. Y. Filed Jan. 15, 1923. Serial No. 612,829. 1 Claim. (Cl. 126—365.)

In combination with a boiler and its chimney, a water drum surrounding a portion of said chimney, said chimney passing through the water drum, a pipe leading from the boiler to the water drum, and a second pipe connected to said first-mentioned pipe at a point exterior of the water drum and chimney, said second-mentioned pipe passing into the chimney extending longitudinally thereof to a point beyond the end of the water drum and then passing through the chimney and connected to that end of the water drum opposite to the end to which the first-mentioned pipe is connected.



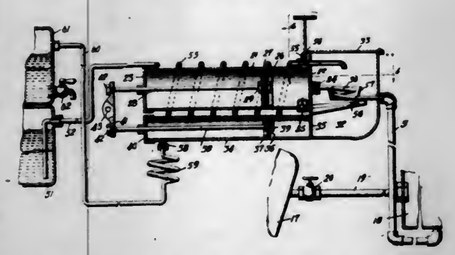
1,458,877. ATTACHMENT FOR DIFFERENTIAL GEARS. JOHN HENRY DAIR, Keyport, N. J. Filed Jan. 31, 1922. Serial No. 533,024. 1 Claim. (Cl. 74—100.)

Operating means for the movable clutch members of the differential gear lock adapted to be contained within the differential housing and comprising a rotatable shaft journaled in the housing, a double crank carried by said shaft within the housing, a link pivotally connected to each arm of the crank, a shaft for each clutch member slidably arranged in the housing, each shaft being connected to one of said links, and a shifting fork carried by each shaft and engaged with a clutch member.



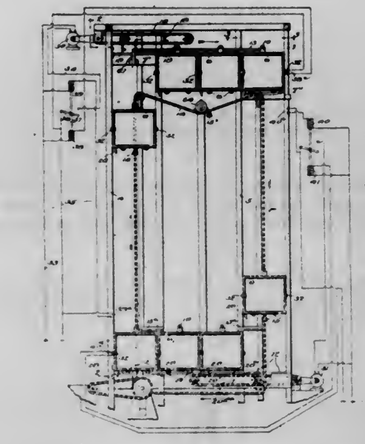
1,458,878. SCISSORS OR PRUNERS FOR CUTTING FRUIT, FLOWERS, OR THE LIKE. FRANK DEXTER, London, England. Filed June 16, 1919. Serial No. 304,432. 2 Claims. (Cl. 30—24.)

1. A cutting device of the type specified, comprising in combination, two blades, a jaw mounted on one of said blades, two transverse and parallel slots in said jaw, two pins projecting laterally from said blade and engaging said slots, a recess extending from the back of said jaw between and parallel with said slots, and a



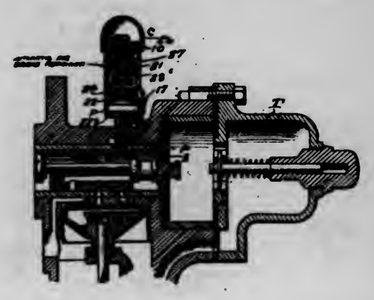
spring located within said recess and bearing with one end against said jaw and with the other end against said blade in such manner as to force it resiliently towards the other of said blades.

1,458,879. ADJUSTABLE SEAT BACK. JOSEPH P. GARVER, Charleston, Ill. Filed Aug. 24, 1922. Serial No. 584,049. 6 Claims. (Cl. 155—152.)



1. The combination with a seat of a back, means for connecting said back to said seat, a pair of strap-like members provided with angular ends secured to said back and an adjusting bolt for engaging the angular ends of said straps for flexing said back.

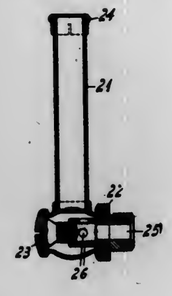
1,458,880. LIFEBOAT APPARATUS. FRANK ARCHIE GRAHAM, Harbor Springs, Mich. Filed Aug. 13, 1920. Serial No. 403,375. 16 Claims. (Cl. 9—3.)



5. In an apparatus of the class described, the combination with a life boat, of a compressed air cylinder, a piston slidably mounted in said cylinder, means for manually reciprocating said piston in said cylinder so as to form compressed air, means for manually creating a vacuum, means associated with said cylinder for preheating salt water utilizing the heat of the compressed air in said cylinder, means for distilling said salt water utilizing the heat of said compressed air, means for condensing the steam from said salt water for use as drinking water, and means for utilizing said compressed air for the propulsion of said life boat.

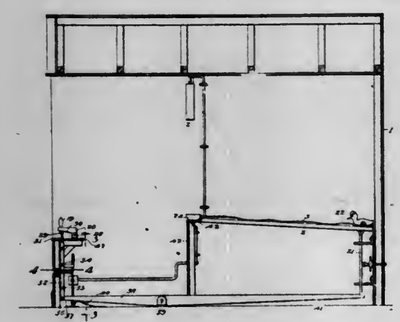
1,458,881. ELEVATOR SYSTEM. WOLFGANG GRÖMER, New York, N. Y. Filed Sept. 28, 1922. Serial No. 591,121. 10 Claims. (Cl. 104—28.)

1. In an elevator system, a plurality of cages, guiding means for the cages including vertical and horizontal guideways, and means for controlling the rate of descent of a sage in the vertical guideway and for simultaneously shifting a cage along the horizontal guideway.



1,458,882. AIR-BRAKE VALVE. FRANK EMERSON HARRIS, Laramie, Wyo. Filed May 17, 1921. Serial No. 470,421. 6 Claims. (Cl. 303—78.)

1. In an air brake apparatus of the character described, including a triple valve, an auxiliary reservoir and a brake cylinder, in combination, a valve connected with the exhaust of said triple valve and adapted to establish an exhaust for said triple valve when the triple valve is in its released position and also adapted to establish communication with the auxiliary reservoir and the brake cylinder upon the pressure within the auxiliary reservoir reaching a predetermined degree.

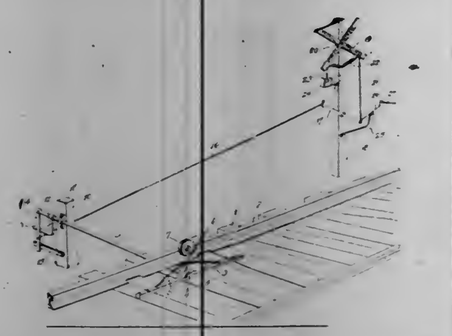


1,458,883. CLOSURE FOR RECEPTACLES. FRANZ HUNZIKER, Lucerne, Switzerland. Filed Mar. 30, 1921. Serial No. 456,866. 6 Claims. (Cl. 220—82.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. Transparent closing for easily penetrable fluids such as oil, petroleum and such like, characterized by the circumstance that same consists of elastic transparent

material so that it can be made tight by pressure against the connecting body without the use of packing material.

1,458,884. AMUSEMENT DEVICE. JACOB IRSCH, Long Island City, and JAMES MARKEY, New York, N. Y. Filed Feb. 7, 1922. Serial No. 534,694. 8 Claims. (Cl. 46—56.)

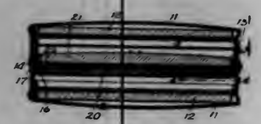


1. An amusement device of the character described comprising a traveling member, a track for said traveling member, a projectile carried by said traveling member, manually actuated means for controlling the movement of said traveling member, a signal member, and an electric circuit for operating said signal member, said electric circuit including a pair of contacts adapted to be closed by said projectile when discharged by said traveling member at the proper point.

1,458,885. CROSSING SIGNAL FOR RAILROADS. JOHN R. JOHNSON, Portland, Oreg. Filed Oct. 11, 1921. Serial No. 507,079. 2 Claims. (Cl. 246—293.)

1. A railroad signal apparatus comprising the combination with railway rails, and a signal including pivotally mounted cross arms, means for holding the cross arms in a fixed position, a trip wheel arranged near one of the rails to be engaged by the wheels of the train, an operating shaft connected to the trip wheels, an operating arm secured to the outer end of the shaft, a swinging lever loosely connected to the said shaft and adapted to be engaged by the operating lever when the latter swings in one direction, means to limit the movement of the swinging arm in the opposite direction, a lever pivotally mounted upon the signal post supporting

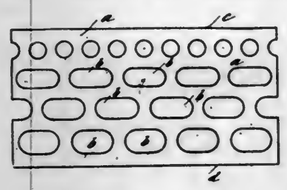
the cross arm, means connecting the said cross arms with the said lever, and a flexible cable connecting the



said swinging arm with the said lever whereby the said swinging signal arms may be intermittently swung as the wheels pass over the said trip wheel.

1,458,886. VANITY CASE. WILLIAM G. KENDALL, Newark, N. J. Filed Feb. 17, 1922. Serial No. 537,273. 7 Claims. (Cl. 132—83.)

4. A holder for powder compacts comprising a flanged plate and a plurality of retaining fingers, said fingers being offset with respect to the upper edge of said flange.



1,458,887. VANITY CASE. WILLIAM G. KENDALL, Newark, N. J. Filed Dec. 18, 1922. Serial No. 607,657. 8 Claims. (Cl. 132—83.)

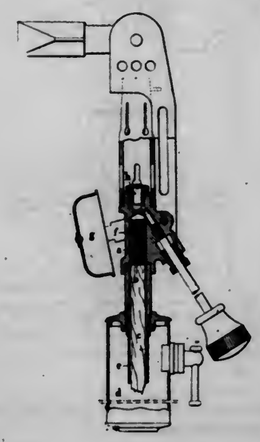
1. In a vanity case, a split ring, means for removably securing said split ring within the vanity case, and means formed integral with the split ring for supporting a plurality of cosmetic compacts in position in the vanity case.

1,458,888. BUILDING BLOCK. ACHILLE KNAPEN, Brussels, Belgium. Filed Sept. 2, 1921. Serial No. 498,072. 1 Claim. (Cl. 72—41.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A building block formed with a number of inert air spaces arranged in a plurality of rows with the air spaces of one row in staggered relation with the air spaces of adjacent rows, the said air spaces being of progressive thickness from the outer to the inner face of the block, whereby said air spaces exert their maximum effect in that part adjacent to the inner face of

the block and whereby the density of the block is greater in that part adjacent to the outer face of the block and gradually decreases forward the inner face of such block.

1,458,889. CHILD'S GARMENT. DAVID LANG, Brooklyn, N. Y. Filed May 3, 1922. Serial No. 558,116. 1 Claim. (Cl. 2—145.)

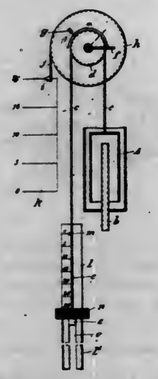


1. A child's garment comprising a waist portion having a skirt, the lower portion of said skirt folded upwardly within the skirt to form a tuck or hem extending entirely around the skirt, a continuous band of material folded over at its upper end, said folded over end extending between the upper end of the tuck or hem and the inner face of the skirt, said folded over end and tuck or hem permanently secured to the inner face of the skirt, and a plurality of fastening devices located on the outer side of said band adapted to removably secure a nether garment.

1,458,890. FLY-PAPER HOLDER. DAVID LEVY, New York, N. Y. Filed Nov. 22, 1921. Serial No. 517,059. 2 Claims. (Cl. 43—115.)

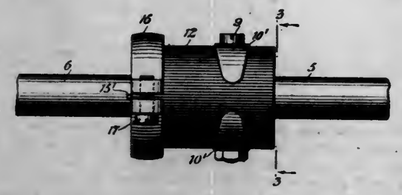
1. A holder for a strip of fly paper, comprising a frame open at the top and presenting a substantially trough-shaped structure, said frame having the side walls thereof of greater height at each end than at the center, said side walls at the ends being formed with openings, a rotatable member arranged in each of said openings, a spool mounted on one of said rotatable members, said spool being adapted to carry a coiled supply of fly paper, a connecting member secured to one end of said supply supply paper adapted to connect said fly paper with the other of said rotatable members, and manually actuated means for rotating the last mentioned rotatable member, said manually actuated means acting as a guide for guiding said paper whereby it may be wound on the last mentioned rotatable member.

1,458,891. VAPORIZER FOR LIQUID-FUEL BURNERS. JULES EUGÈNE MALIVERT, Paris, France, assignor to The Societe Anonyme des Appareils J. E. Malivert, Paris, France. Filed Dec. 14, 1921. Serial No. 522,452. 4 Claims. (Cl. 158—27.)



1. An improved gasifying device for soldering lamps, comprising a member having a central passage and longitudinal hollow ribs opening into the central passage, and a throttle-washer at the inlet end of the said member.

1,458,892. UNDERGARMENT. JOHN HOFFECKER MOFFAT, Indianapolis, Ind. Filed Mar. 24, 1922. Serial No. 546,384. 2 Claims. (Cl. 2—144.)

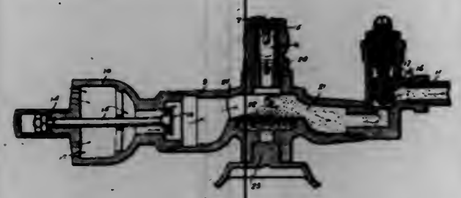


2. A union garment comprising a shirt and drawers, a pair of straps, each strap secured at one end within the shirt at each side of the median line of the back of the shirt, the drawers having slots in their waistband to the front and rear of the hip points, said straps adapted to be interlaced through said slots and over the hips to connect the shirt and drawers, fastening means at the free ends of the straps, and cooperating fastening means on the front of the shirt at each side of the front opening thereof for securing said straps and shirt together, said drawers including a rear drop flap, and means for securing the free edge of the drop to the waistband of the drawers adjacent the rear slots in the waistband.

1,458,893. REGISTERING MECHANISM OF GAS-ANALYSIS APPARATUS. OLOF RODHE, Stockholm, Sweden, assignor to Svenska Aktiebolaget Mono, Stockholm, Sweden. Filed Oct. 31, 1918. Serial No. 260,548. 6 Claims. (Cl. 284—34.)

1. In a gas-analyzing system, the combination of a gas-analyzer, comprising a bell gasometer for measuring residual gas after absorption of a given constituent, registering means associated with a chart arranged to normally register on said chart when a predetermined minimum volume of unabsorbed gas is left after absorption of the absorbable portion of the gas mixture being tested, a lost motion connection between the bell of said gasometer and said registering means, with means for measurably diminishing by a predetermined amount the lost motion of the said lost motion connection.

1,458,894. FLEXIBLE COUPLING. ERNEST SCHWARZ, New York, N. Y. Filed May 21, 1921. Serial No. 471,403. 1 Claim. (Cl. 64—96.)



A flexible coupling for alined shaft members, comprising a collar keyed to one of said shaft members, said collar having a roughened outer surface, a flexible tubular member having its ends open, one of which ends is adapted to receive said collar having the roughened outer surface, a band for clamping said tubular flexible member about said collar, a collar carried by the opposite shaft member and having openings adapted to be brought into alinement formed radially through said shaft member, a bolt adapted to pass through the flexible member and through said alined openings, and clamping bands carried by said bolt and adapted to bind the flexible tubular member to the collar carried by the second-mentioned shaft member to provide a flexible coupling for the two shafts.

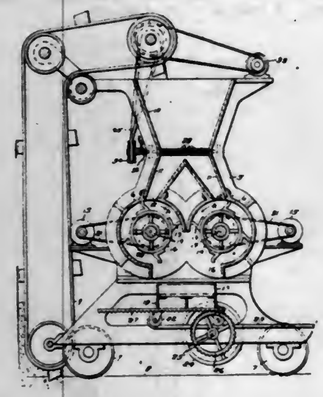
1,458,895. LUBRICATING DEVICE. HARVEY C. SHAMBLIN, Miami, Okla. Filed July 6, 1921. Serial No. 482,735. 3 Claims. (Cl. 184—56.)

3. A lubricating device including a conduit, a reservoir formed with an outlet end connected to said conduit,

said reservoir being adapted to receive a lubricating fluid which will drop across said conduit, said conduit being adapted to have a current of air passing through its length whereby the flow of lubricant into said conduit will be intersected by the flow of air thereby surcharging

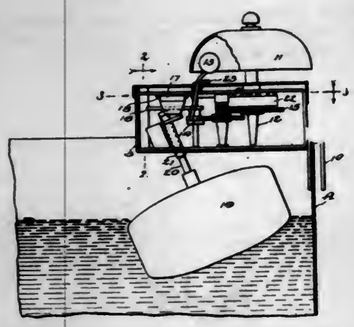
the latter with lubricant, and means within said conduit and adjacent the point of connection of the reservoir therewith for increasing the velocity of the flow of air through said conduit and at a point underlying the outlet end of said reservoir.

1,458,896. CLOTH-LAYING MACHINE. GEORGE SOVLIAN, Brooklyn, N. Y., assignor of one-fourth to Nathan Moss, New York, N. Y. Filed Nov. 18, 1920. Serial No. 424,893. 5 Claims. (Cl. 270—31.)



1. A cloth laying machine comprising a supporting table, a carriage mounted on the table, means for automatically moving the carriage back and forth across the table, said means continuously moving the carriage at a slow rate of speed adjacent each end of the table and at a high rate of speed intermediate the ends, a gripping member at each end of the table for gripping the respective ends of a pile of laid cloth, and laying bars on the carriage for forcing the looped ends of the cloth into the respective gripping members.

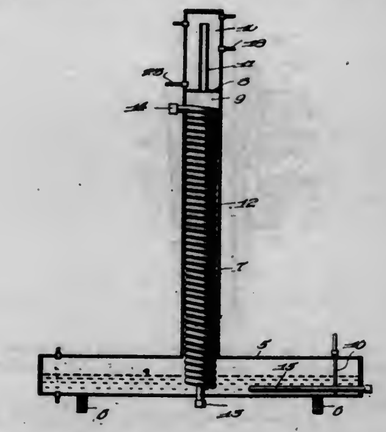
5. A cloth laying machine comprising a table, a carriage arranged on the table adapted to be moved back and forth thereon within certain limits, means on the carriage for laying successive layers of cloth to produce a pile, and a clamping structure arranged to engage each end of said pile, each of said clamping structures comprising a clamping plate and a plurality of pointed members extending through said plate adapted to engage said cloth for preventing displacement thereof.



1,458,897. MOLDING MACHINE. JOSEPH STONE and BEN G. PERRY, Bessemer, Ala. Filed June 1, 1922. Serial No. 565,101. 3 Claims. (Cl. 22—36.)

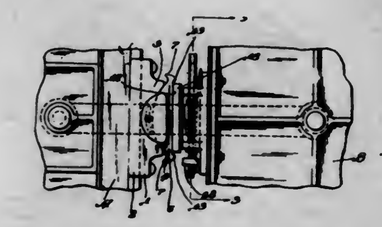
1. In combination a wheeled frame, a pair of fixed cylinders thereon, a pair of rotative elements in said cylinders, a sand hopper above said cylinders delivering sand into said cylinders, said cylinders having openings at their inner and lower sides, a trackway upon the frame

and a flask carrier mounted upon the trackway for movement to bring it into and out of operative position with respect to said cylinders.



1,458,898. DRIP-PAN ALARM. ANTHONY WALLACE, New York, N. Y. Filed Nov. 17, 1922. Serial No. 601,510. 2 Claims. (Cl. 116—111.)

1. A drip pan alarm including a casing having means to mount the same on a drip pan, an audible alarm supported by said casing, said alarm including a clock train and pallet, a lateral arm rigid with the pallet, a gravity latch plate hinged at one end in the casing above side arm and having a downwardly directed end normally disposed in front of the path of vibration of said arm to prevent movement of the arm, a bearing in the casing beneath the latch plate, and a float below the casing and having a stem extending through said bearing and adapted to engage said latch plate and disengage the same from said lateral arm with the rising of the float.

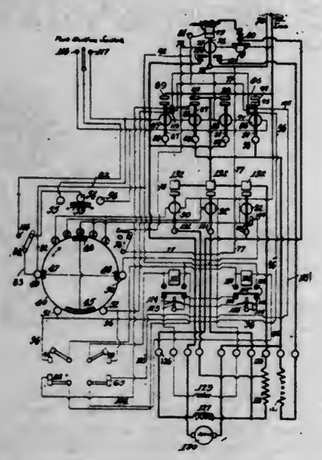


1,458,899. REFRIGERATING APPARATUS. HARRY W. WOLFE, Philadelphia, Pa. Filed Oct. 26, 1921. Serial No. 510,461. 6 Claims. (Cl. 183—32.)

1. In apparatus of the character set forth, the combination with a hollow base, of a condensing tower mounted thereon and having an open bottom in open communication with the upper portion of the base, means for subjecting the tower to the action of a cooling medium,

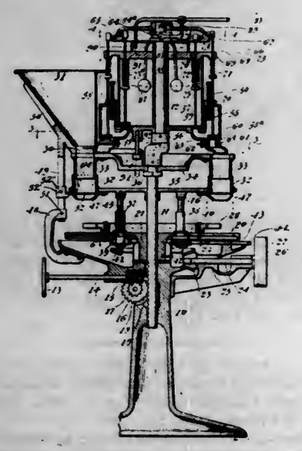
an oil separating chamber, and a stand pipe connecting the upper portion of the separating chamber with the upper portion of the condensing tower.

1,458,900. CHAFING IRON. FELIX ZYH, Chicago, Ill. Filed Apr. 14, 1922. Serial No. 552,732. 4 Claims. (Cl. 213—3.)



1. In a chafing iron for railroad rolling stock, a tender carried section provided with a concave forward surface, an intermediate section provided with a convex surface engaging said concave surface, said surfaces being curved on a horizontal arc and mounted for limited lateral rocking movement relative to each other, said intermediote member provided with a flat forward side, and an engine carried abutment plate abutting said flat side and adapted to move vertically relative to the intermediate member.

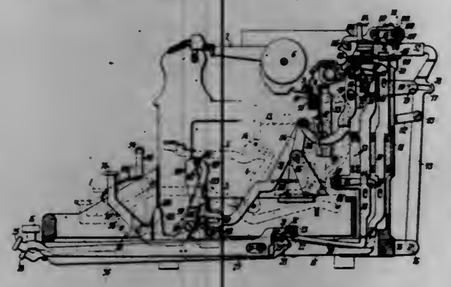
1,458,901. BATTERY TERMINAL. ALVIN E. BUCHENBERG, Toledo, Ohio, assignor to Electric Auto-Lite Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Apr. 4, 1918. Serial No. 226,659. 1 Claim. (Cl. 173—259.)



An article of manufacture comprising a tube, one end portion of which is adapted to receive a conductor, the other end portion of which is tapered on its exterior adapting it to fit into a tapered socket and internally screw threaded for the reception of a binding screw.

1,458,902. CONTROLLER FOR REVERSING MACHINES. EDWARD L. DUNN, Worcester, Mass., assignor by mesne assignments, to Merchants National Bank, Worcester, Mass., a Corporation of Massachusetts. Filed July 20, 1918. Serial No. 245,878. 14 Claims. (Cl. 172—240.)

1. The combination with a machine, of an electric motor connected with the machine for operating it, a motor controller operated by the machine, a series of accelerating magnets, means operated by the controller for bringing said magnets into action one after the other, a switch connected with the last one to close as the stroke proceeds, and connections to said switch for feeding it and its motor accelerating magnet through the controller.



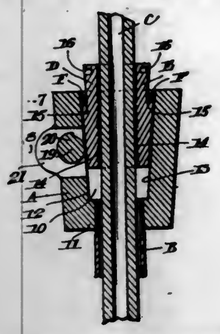
1,458,903. CAN-FILLING MACHINE. AUGUST HOLMQUIST, Sr., Hoopeston, Ill., assignor to Sprague Canning Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed June 26, 1918. Serial No. 241,921. 54 Claims. (Cl. 226—96.)

1. In a machine for filling cans, means for measuring a quantity of one material and discharging the same into a

can, and means for measuring a quantity of other material and discharging the same through the body portion of said first-named measuring means into the can.

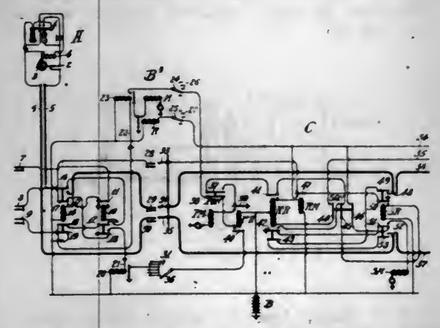
1,458,904. TYPEWRITING MACHINE. ALFRED G. F. KUBOWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 6, 1920. Serial No. 378,784. 27 Claims. (Cl. 197—177.)

1. In a typewriting machine, the combination with a traveling carriage, of tabulating means therefor comprising a series of column-stops on the carriage, each of said column-stops being selectively settable to a plurality of effective positions, and a counter-stop to co-operate with effectively-positioned column-stops, said counter-stop having a uniform throw.



1,458,905. FOOT-CONTROL SNARE CONTROL FOR SNARE DRUMS. ULYSSES G. LEEDY, Indianapolis, Ind., assignor to Leedy Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed July 11, 1921. Serial No. 483,790. 7 Claims. (Cl. 84—415.)

1. The combination with a snare drum of a shiftable mounting for one end of the snares whereby the snares may be withdrawn from or tensioned upon the drum head, a pedal, means for supporting the pedal, and a connection between the pedal and the shiftable snare holder, whereby the snares may be foot controlled.

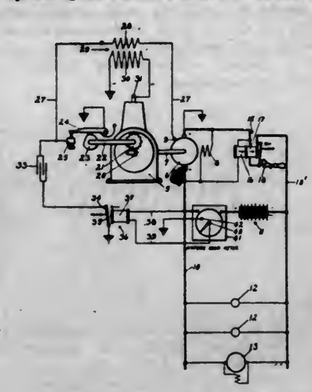


1,458,906. SAFETY CLAMP FOR DIAMOND-DRILL RODS. NAPOLEON WILFRED MORISETTE, Coleman Township, Ontario, Canada. Filed Aug. 3, 1922. Serial No. 579,449. 3 Claims. (Cl. 24—263.)

1. A clamp of the character described comprising a casing having a threaded neck designed to engage the top of the casing of a diamond drill rod, the diamond drill rod being designed to pass through the casing, bevel faces formed on the inner side of the casing, a pair of bevel jaws mounted in the casing and designed to grip the drill rod, and means for limiting the outward movement

of the said jaws, the said means comprising a spring fork extending transversely through the casing and shoulders on the jaws designed to engage the fork.

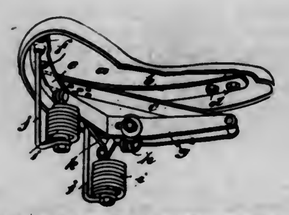
1,458,907. AUTOMATIC TELEPHONE SYSTEM. GEORGE E. MUELLER, Aurora, Ill., assignor, by mesne assignments, to Kellogg Switchboard & Supply Company, a Corporation of Illinois. Filed June 25, 1908, Serial No. 440,309. 57 Claims. (Cl. 179—18.)



1. A selector for telephone systems comprising a metallic circuit, a pair of relays bridged to opposite sides of said circuit, one of said relays being relatively slow to release its armature, a second relay slow to release its armature jointly controlled by said first mentioned relays, and means for producing rapid intermittent interruptions in said circuit.

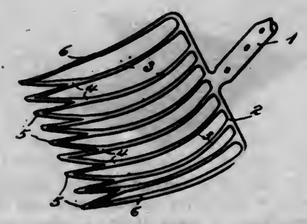
1,458,908. IGNITION SYSTEM. HARRY R. PATTERSON, Toledo, Ohio, assignor to Electric Auto-Lite Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Aug. 28, 1919. Serial No. 320,374. 5 Claims. (Cl. 290—35.)

1. In a battery charging system comprising an internal combustion engine having an ignition circuit including an interrupter and a condenser connected across the interrupter contacts, a generator and a storage battery, the method of controlling the amount of charge given to said battery which consists in integrating the current delivered to said battery and when its integrated value reaches a predetermined amount of successively rendering said condenser and interrupter ineffective.



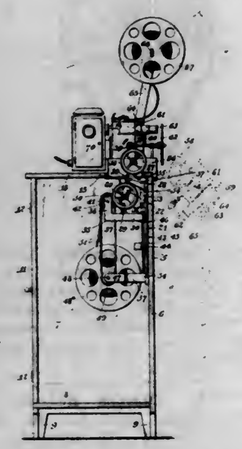
3. In combination an internal combustion engine, an ignition system therefor including an interrupter and a condenser connected thereto, a generator operatively

connected to said engine, a storage battery adapted to be charged by said generator and means including an ampere



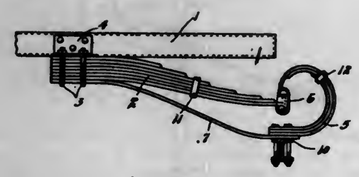
hour meter in circuit with said battery for opening the circuit of said condenser.

1,458,909. SADDLE OR SEAT OF MOTOR CYCLES, CYCLES, AND THE LIKE. ROBERT WALKER SMITH, Redditch, England. Filed June 30, 1920. Serial No. 393,159. 1 Claim. (Cl. 208—15.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



A saddle, a longitudinal reinforcing strip thereunder, having its front end secured thereto, a transverse reinforcing strip secured under the rear portion of the saddle, the rear end of the longitudinal strip being secured to the transverse strip, a leaf spring having its rear end secured to the first named strip, an underframe to the front end of which the front end of said spring is attached, strut members having their upper ends secured to said transverse strip and tension springs connecting the rear portion of the underframe to the lower portions of said strut members.

1,458,910. POTATO FORK. WILHELM TONKE, Mittelsteine, Germany, assignor to Firm Roeder & Co., Hanover, Germany. Filed Sept. 22, 1913, Serial No. 791,092. Renewed Apr. 7, 1923. 2 Claims. (Cl. 294—49.)

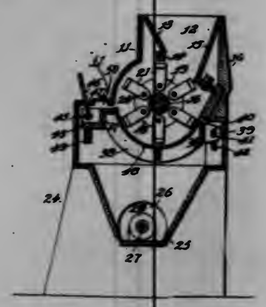


1. In a potato shovel in combination, a transverse bar and slightly curved slender prongs extending substantially at right angles to said bar parallel to one another, the ends of said prongs being bifurcated and adjoining arms of said prong ends being united to form V-shaped points.

1,458,911. MOVING-PICTURE MACHINE. WILLIAM J. BLANKENBERG, Buffalo, N. Y. Filed June 30, 1920. Serial No. 392,936. 16 Claims. (Cl. 88—17.)

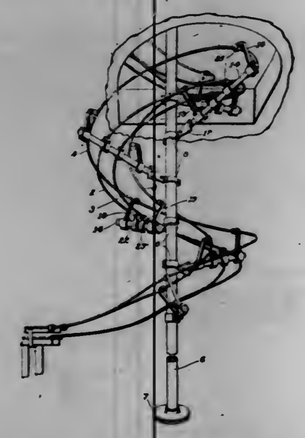
1. A moving picture machine, comprising a cabinet having a hinged top, mechanism wholly confined within said cabinet and having a part thereof adjustable to project outwardly from said cabinet when said top is open and to rest upon said top when closed.

1,458,912. SHOCK ABSORBER. EMIL R. DRAVER, Richmond, Ind. Filed Oct. 28, 1921. Serial No. 511,009. 6 Claims. (Cl. 267—46.)



1. The combination with the body, frame and axle structure of a vehicle, of a cantilever spring anchored to said frame with its free end extended toward the axle and making an angle approximating a right angle therewith, and a curved leaf spring rigidly secured to said axle extending upwardly therefrom and having its free end connected to the free end of said cantilever spring, said latter spring lying in a plane extending at approximately a right angle to the axle.

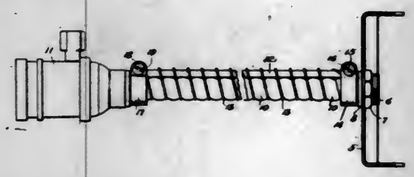
1,458,913. NONRECRYSTALLIZED REFRACTORY MATERIAL. WILLIAM A. FARISH, Buffalo, N. Y., assignor to Buffalo Refractory Corporation, Buffalo, N. Y., a Corporation of New York. Filed Oct. 9, 1920. Serial No. 415,871. 7 Claims. (Cl. 106—9.)



1. A non-crystallized refractory material for heat resisting articles comprising silicon carbide, crystalline graphite, a carbonizing binder, and sand.

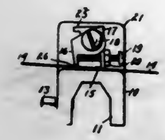
1,458,914. CRUSHER. EDWARD H. FRICKEY, St. Louis, Mo., assignor to Dixie Machinery Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 30, 1919. Serial No. 314,245. 2 Claims. (Cl. 83—11.)

1. A crusher of the class described comprising a casing having an opening with a closure therefor, rotary beaters in said casing, a frame in said casing, removable supports at the ends of said frame, a screen supported freely on said frame and adapted to be removed through said casing opening when said frame is lowered by the removal of said supports.



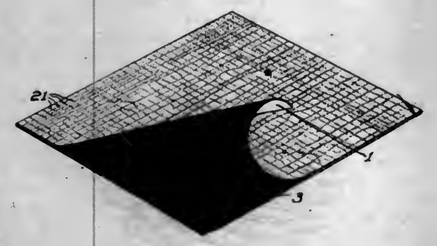
1,458,915. CHUTE. CHARLES MARSHALL MUMFORD, Newton Center, Mass. Filed Aug. 10, 1921. Serial No. 491,126. 20 Claims. (Cl. 193—12.)

1. In an apparatus of the character described, the combination of a plurality of rails extending substantially parallel with and closely adjacent to each other and cooperating to form a chute, and means supporting said rails for adjustment to vary the relationship between them.



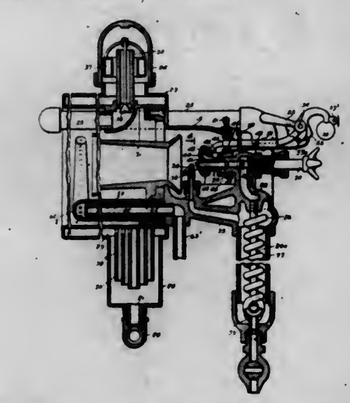
1,458,916. ADJUSTABLE ARMORED BRACKET. ARCHIBALD T. SAMPSON, Lynn, Mass., assignor to Sampson Axcess System, Inc., Lynn, Mass., a Corporation of Massachusetts. Continuation of application Serial No. 166,813, filed May 7, 1917. This application filed Mar. 23, 1918, Serial No. 224,395. Renewed Aug. 21, 1919. Serial No. 319,044. 11 Claims. (Cl. 248—7.)

7. A supporting arm or bracket of the kind described, comprising a spirally formed flexible metallic conduit, a reenforcing member extending parallel to, exterior of and substantially throughout the length of said flexible member, means for binding said reenforcing member intermediate its ends to said flexible conduit, and means for anchoring said reenforcing member at each end of said flexible conduit, whereby said flexible conduit is longitudinally strengthened.



9. A supporting arm or bracket, comprising a flexible conduit, a lengthwise reinforcing member therefor, means for anchoring the reinforcing member at each end of the conduit, and yielding binding means for holding the reinforcing member and conduit in engagement with each other, and constructed and arranged to permit relative frictional movement of said reinforcing member and conduit.

1,458,917. YARN CLEANER. ANTON C. BERGREN, Jamestown, N. Y. Filed Aug. 20, 1921. Serial No. 493,940. 3 Claims. (Cl. 28—64.)



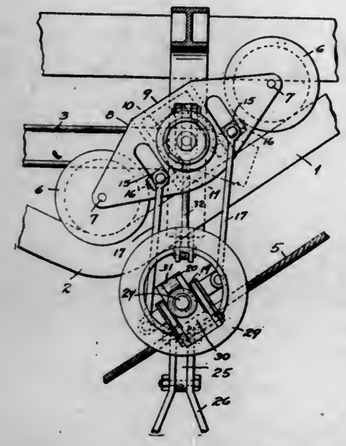
1. In a device of the class described, a frame and means for attaching said frame to a winding frame, a fixed portion of said frame for the yarn to run over, a slub catcher having two independently movable leaves hinged on said frame above said fixed portion to shut thereonto, and means on one of said leaves to cause the other leaf to shut onto the yarn and clamp it against said fixed portion when said first named leaf is engaged by the slub.

1,458,918. COMPOSITE FABRIC. GEORGE OTIS COOMBS, Providence, R. I. Filed May 5, 1921. Serial No. 466,887. 6 Claims. (Cl. 154—52.)

6. As an article of manufacture, a composite reinforced stiffened fabric for making boxes and other purposes, comprising a paper layer, a cheap paper pulp board substantially thicker than the paper layer, an adhesive layer between and securing the paper layer and stiffening board together, and a series of reinforcing or strengthening unspun fibres extending in general parallel relation between the paper layer and the stiffening board and embedded in the adhesive layer.

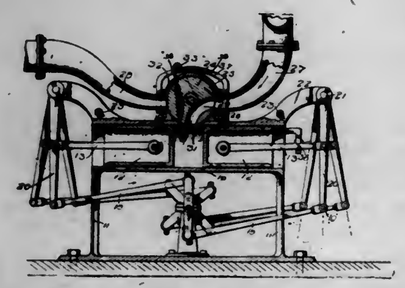
1,458,919. OIL-BURNING ATTACHMENT. ACHILLE KAISERMAN and ALBERT ZAUGG, Detroit, Mich. Filed Apr. 15, 1921. Serial No. 461,515. Renewed Apr. 5, 1923. 16 Claims. (Cl. 158—28.)

16. A burner of the class described, including a fuel nozzle, a nozzle discharging adjacent to the fuel nozzle and adapted to connect with a supply of atomizing fluid, a swingable valve at the outlet of said nozzle, a lever connected with said valve for adjusting the same, a spring acting on said lever, means to vary the adjusting action of the lever on said valve, and means to act on said spring to vary the effect of the spring on the lever.



1,458,920. ROAD-BEARING METER. FREDERICK J. TROLL, Baltimore, Md., assignor to The Loadometer Company, a Corporation of Delaware. Filed Oct. 25, 1919. Serial No. 333,315. 19 Claims. (Cl. 265—47.)

1. A manually portable road bearing pressure meter, comprising a portable base of short vertical dimension, a weight supporting member with guiding means in the base, a resilient member within the base beneath said supporting member, the same having sufficient resistance to support the wheel of a loaded truck, and means for indicating the weight on said member.



1,458,921. ROPEWAY CAR. YUSUKE TAMAMURA, Tokyo-fu, Japan. Filed Dec. 27, 1922. Serial No. 609,361. 10 Claims. (Cl. 104—208.)

2. A ropeway car, comprising a carriage, a clip, a receptacle, means for interconnecting the said members in such a way that they will adjust themselves relatively to each other to maintain the internal equilibrium as the external conditions vary, said means including a main shaft about which all said three members are angularly movable and a quadrilateral interconnecting the three members, and means automatically operative to

effect gripping and releasing of the hauling rope by the clip, including wheels in the carriage and an auxiliary rail disposed in the path of the carriage wheels.

1,458,922. HYDRAULIC MOTOR. RUBÉN RIVERA, Sonsonate, Salvador. Filed June 12, 1919. Serial No. 303,801. 1 Claim. (Cl. 121—100.)

In a hydraulic motor, a valve box having intake and exhaust openings, a valve rotatable in said valve box and having a fluid opening for communication with said valve box openings, a valve operating shaft projecting from said valve, an arm secured to and projecting upwardly from the valve shaft, an arm loosely mounted on the valve shaft and depending therefrom, a spring connecting the free ends of said arms, a piston actuated valve slide movable below said valve box, said valve slide being pivotally connected adjacent one end to the lower end of the loose valve arm, and an inverted U-shaped frame carried by the said end of the slide and upstanding alongside the valve box, said frame having laterally projecting pins positioned at relatively opposite sides of the first mentioned valve arm to engage and shift the latter from intake to exhaust position and vice versa, and said valve box having spaced laterally projecting pins to receive the said valve arm thereagainst and form stops for said valve arm in the intake and exhaust positions.

Patents Nos. 1,458,923 to 1,459,709.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 311—No. 3. TUESDAY, JUNE 19, 1923. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

ADJUDICATED PATENTS.

(U. S. C. C. A. N. Y.) Nusbaum patent, 1,258,438, for cheese blend, valid and infringed. *P. E. Sharpless Co.* v. *Crawford Farms*, 287 Fed. Rep., 655.

(U. S. C. C. A. Ohio.) Nesbitt patent, 1,297,226, for separable core used in building automobile tires, *Held* infringed as to certain claims and not infringed as to others. *Lauritzen* v. *Banner Mach. Co.*, 287 Fed. Rep., 692.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,406,808, O. Antonelli, Motion-picture apparatus, decided May 8, 1923, claim 7.

Pat. 1,426,465, E. G. Danielson, Variable resistance, decided Apr. 28, 1923, claims 1, 2, 3, 4, 13, and 14.

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, June 8, 1923.*

Reed, Walsh & Lange, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Duffy-Mott Company, Inc., of No. 502 West Twenty-fifth Street, New York, N. Y., to effect the cancellation of trade-mark registration No. 28,448, registered June 23, 1896, to Reed, Walsh & Lange, of Nos. 65 and 67 South Water Street, Chicago, Ill., and the notice of such proceeding sent by registered mail to said Reed, Walsh & Lange at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Reed, Walsh & Lange, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

Important Information.

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:

Application as originally filed. (Petition, specification, oath, and drawings as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)

Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)

Original application. (Facsimile petition, specification, oath, and drawings at present time.)

Specification as originally filed. (As received in Office.)

Specification as amended. (With amendments entered.)

Specification as allowed. (As passed by the Examiner for issue.)

Original specification. (Facsimile at present time.)

File-wrapper. (File-wrapper only.)

File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)

File-wrapper, contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be specially ordered.)

Assignment. (Give the liber and page of the record as well as the name of the inventor.)

Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)

Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

Remittances to the Patent Office.

Checks should be certified. Cash should be registered; if by ordinary mail at risk of sender. Postage stamps not receivable.

Condition of Applications Under Examination at Close of Business June 8, 1923.

(Total number of applications awaiting action, excluding Trade-Mark Division, 74,094; Trade-Mark Division, 3,918; Oldest new case, June 20, 1922; oldest amended, June 6, 1922. The dates given are 1922 except where * indicates 1923.)

DECISIONS IN PATENT AND TRADE-MARK CASES.

U. S. Circuit Court of Appeals—Fifth Circuit.

TRAPPEY ET AL. *v.* MCILHENNY CO.

Decided May 23, 1923.

[281 Fed. Rep., 23.]

1. TRADE-MARKS AND TRADE NAMES AND UNFAIR COMPETITION—CANCELLATION OF REGISTRATION DOES NOT EXTINGUISH RIGHTS WHICH THE REGISTRATION DID NOT GIVE.

Cancellation of the registration of a trade-mark, at the instance of a competitor, as a geographical name does not preclude the registrant from asserting the exclusive right to the use of the name to designate its product to which the name is applied.

2. SAME—LONG USE MAY GIVE EXCLUSIVE RIGHT IN GEOGRAPHICAL NAME.

Where one has marked his goods with a geographical name for so long a time that they have become known in the market by that name, the use of that name to describe goods of a subsequent maker will be restrained as unfair competition.

3. SAME—UNFAIR COMPETITION—ACTUAL INTENT TO MISLEAD NOT ESSENTIAL.

To warrant relief against unfair competition, an actual intention to mislead the public need not be proved; but it is enough if such result is probable.

4. SAME—UNFAIR COMPETITION TO USE TRADE NAME OF ANOTHER.

That one's name is added to the trade name of another is not a sufficient distinction to prevent a probable deception.

5. SAME—COMPLAINANT HELD ENTITLED TO PROTECTION IN USE OF "TABASCO" AS TRADE NAME.

Complainant and its predecessor for nearly 30 years was the sole manufacturer of a pepper sauce sold under the trade name "Tabasco," which became widely known to users as designating complainant's product. *Held* that the use by defendant on the labels of a pepper sauce made and sold by him of the name "Tabasco," in a manner calculated to lead purchasers to believe that it was complainant's product, constituted unfair competition, against which complainant was entitled to an injunction.

APPEAL from the District Court of the United States for the Eastern District of Louisiana; Rufus E. Foster, judge.

Suit in equity by the McIlhenny Company against B. F. Trappey and others. Decree for complainant, and defendants appeal. Affirmed.

Mr. E. Howard McCaleb, Mr. William L. Symons, and *Mr. Emmet Alpha* for the appellants.

Mr. Walker B. Spencer, Mr. Philip S. Gidiere, Mr. Esmond Phelps, Mr. Joseph S. Clark, and *Mr. Edward S. Rogers* for the appellee.

Before WALKER, BRYAN, and KING, Circuit Judges.

KING, *Cir. J.:*

This appeal is prosecuted to reverse a decree of the United States District Court for the Eastern District of Louisiana, enjoining the appellants (defendants below) from using the word "Tabasco" to describe a pepper sauce made by them. The facts, briefly stated, show that about 1850, Col. Maunsell White began growing in Louisiana certain peppers coming from Mexico, which were called Tabasco peppers. From these peppers he made a pepper sauce known as "Maunsell White Sauce," and sometimes as "Tabasco Pepper-Sauce." These sales appear to have ceased by the year 1867.

Beginning with the year 1868, E. McIlhenny began the manufacture and sale of a red pepper sauce from peppers supposed to have come from Tabasco, Mexico, which he labeled "Tabasco Pepper-Sauce"; the word "Tabasco" being separated from the words "Pepper Sauce" and the condiment being styled "Tabasco." This sauce was manufactured by McIlhenny, and after his death by his wife and children, by whom the complainant company was formed, which has succeeded to this continuous business, its rights and goodwill.

The defendant, B. F. Trappey, was for years employed as a blacksmith on the plantation of the McIlhennys on which these peppers were grown. In this way he became acquainted with the formula for making the sauce, and was well aware of the large business which the McIlhennys had built up in the manufacture and sale of this sauce.

Until the year 1896, for nearly 30 years, the McIlhennys conducted this manufacture and sale without interference as to the name "Tabasco," and largely extended the same, and the evidence warrants the conclusion that by the efforts of the McIlhennys this sauce, under the name of "Tabasco," became widely known and used, so much so that the consumer, in asking for it, called for "Tabasco," and by such designation meant the "Tabasco" manufactured by the McIlhennys. They and their successors in title have continuously pursued and are still carrying on such manufacture and sale.

The district court found as facts that plaintiff and its predecessors in title have manufactured a red pepper sauce, which has been put on the market and extensively advertised and sold by them under the trade-mark "Tabasco" for over 50 years; that as far back as 1850 a red pepper sauce was made by Col. Maunsell White from peppers known as "Tabasco" and sold to the retail trade at New Orleans under that name; that in 1851 advertisements of real extract of red Tabasco peppers appeared in the Daily Delta, a New Orleans newspaper, and similar advertisements and sales of pepper sauce under the name "Tabasco" occurred at various times up to 1867; that it was not shown that any persons except the McIlhennys used the word "Tabasco" thereafter for many years to identify their pepper sauce; that, conceding its former use, it had been abandoned by all persons when the McIlhennys adopted it; that the word "Tabasco," as applied to pepper sauce, indicates origin of manufacture, and the sauce to which it relates is the sauce made by E. McIlhenny, of New Iberia, La., and his successors in title.

[1] Appellants insist that the predecessors of McIlhenny Company registered the word "Tabasco" as a trade-mark under the Federal statutes, and such registration had been canceled on the ground that Tabasco was a geographical term, and could not therefore be properly registered as a technical trade-mark, such cancellation being approved by the Court of Appeals in the District of Columbia (*McIlhenny Co.* v. *New Iberia, etc., Co.*, 34 App. D. C., 430; *McIlhenny Co.* v. *Trappey*, 51 App. D. C., 216; 277 Fed., 615; 297 O. G., 800); that this action is conclusive against the right of appellee to the exclusive use of the word "Tabasco." This contention was considered by this court in *McIlhenny Co.* v. *Gaidry* (253 Fed., 613, 616; 165 C. C. A., 239, 242), where it is said:

> The cancellation, on the opposition of a competitor, of the registration by the defendant's predecessor of the word "Tabasco" as a trade-mark under the Federal Trade-Mark Act of February 20, 1905 (33 Stat., 724, c. 592 [9 U. S. Comp. Stat. Ann. 1916, section 9485 et seq.]), does not stand in the way of the assertion by the defendant that it has the exclusive right which it claims in this suit. That act, which made provision for the registration of trade-marks "used in commerce with foreign nations, or among the several States, or with Indian tribes," and which conferred certain benefits upon registrants thereunder, did not purport to make registration under it the prerequisite to the acquisition or continued existence of an exclusive right to use a word or symbol as a trade-mark. If the defendant's predecessor had the exclusive right which the defendant asserts in this suit, that right was not extinguished by the cancellation of the registration mentioned. If the trade-mark exists, it exists independently of the registration. The cancellation of a registration does not extinguish a right which the registration did not confer. (*Edison* v. *Thomas A. Edison, Jr., Chemical Co.*, C. C., 128 Fed., 1013; *Capewell Horse Nail Co.* v. *Mooney*, 172 Fed., 826; 97 C. C. A., 248.) Neither of the incidents relied upon by the plaintiff is inconsistent with the assertion in good faith by the defendant that it has the exclusive right to use the word "Tabasco" in connection with pepper-sauce.

We adhere to this ruling. After the complainant and its predecessors had conducted its business for many years, and had built up a large demand for "Tabasco," the defendant began the vending of a pepper sauce made from similar peppers to those used by the complainant. The name applied to this sauce was Tabasco—Pepper-Sauce. The word "Tabasco" was printed on a line alone, with a heavy dot or circle before and after the word, thus separating it from the words "Pepper-Sauce," on the line below. It is evident that the purpose was to designate the sauce by the single word "Tabasco." This, whether intended or not, was calculated to mislead the consumer into believing that he was receiving the sauce manufactured by complainant, and to take advantage of the trade which complainant and its predecessors in title had built up by years of effort.

While it is true that geographical names generally cannot be appropriated as trade-marks—

> the rule is, that a subsequent trader may not use even common terms or symbols, his own name, or a geographical or descriptive word, in such a manner as to cause his goods to be known in the market by the same name as that by which a prior trader's similar goods are already known and called for by the purchasing public. The trade name for the goods of a particular trader may not be used by another as the trade name for his similar rival goods. The subsequent trader, however, may use such terms descriptively, to tell the truth about his goods, describing them, telling by whom they were manufactured and other like matters, because such terms are publici juris in their primary sense, and cannot be exclusively appropriated by any one. But use, as a name or title, is not a permissible use, because by reason of the acquired meaning such a use carries with it a false representation that the goods of that name are those of the prior trader. (38 Cyc. 722, 771, 772.)

[2] Where one has marked his goods with a geographical name for so long a time that they have become known in the market by that name, the use of that name to describe goods of a subsequent maker will be restrained as unfair competition. (*Wotherspoon* v. *Currie*, L. R. 5 H. L., 508; *Thompson* v. *Montgomery*, L. R. 41 Ch. D., 35; *American Waltham Watch Co.* v. *United States Watch Co.*, 173 Mass., 85; 53 N. E., 141; 43 L. R. A., 826; 73 Am. St. Rep., 263; *Baglin* v. *Cusenier Co.*, 221 U. S., 580; 31 Sup. Ct., 669; 55 L. Ed., 863; 169 O. G., 449.) The Waltham Watch case is instructive on this point. In that case an injunction was sought—

> to enjoin the defendant from advertising its watches as the "Waltham Watch" or "Waltham Watches," and from marking its watches in such a way that the word "Waltham" is conspicuous. The plaintiff was the first manufacturer of watches in Waltham, and had acquired a great reputation before the defendant began to do business. It was found at the hearing that the word "Waltham," which originally was used by the plaintiff in a merely geographical sense, now, by long use in connection with the plaintiff's watches, has come to have a secondary meaning as a designation of the watches which the public has become accustomed to associate with the name. * * * The defendant's position is that, whatever its intent and whatever the effect in diverting a part of the plaintiff's business, it has a right to put its name and address upon its watches; that to require it to add words which will distinguish its watches from the plaintiff's in the mind of the general public is to require it to discredit them in advance; and that, if the plaintiff by its method of advertisement has associated the fame of its merits with the city where it makes its wares, instead of with its own name, that is the plaintiff's folly, and cannot give it a monopoly of a geographical name, or entitle it to increase the defendant's burdens in advertising the place of its works.
>
> In cases of this sort, as in so many others, what ultimately is to be worked out is a point or line between conflicting claims, each of which has meritorious grounds and would be extended further were it not for the other. (*Ferrule Co.* v. *Hills*, 159 Mass., 147, 149, 150; 34 N. E., 85.) * * * It is desirable that the defendant should be free to manufacture watches at Waltham, and to tell the world that it does so. The two desiderata cannot both be had to their full extent, and we have to fix the boundaries as best we can. On the one hand, the defendant must be allowed to accomplish its desideratum in some way, whatever the loss to the plaintiff. On the other, we think the cases show that the defendant fairly may be required to avoid deceiving the public to the plaintiff's harm, so far as is practicable in a commercial sense. It is true that a man cannot appropriate a geographical name; but neither can he a color, or any part of the English language, or even a proper name to the exclusion of others whose names are like his. Yet a color in connection with a sufficiently complex combination of other things may be recognized as saying so circumstantially that the defendant's goods are the plaintiff's as to pass the injunction line. (*New England Awl & Needle Co.* v. *Marlborough Awl & Needle Co.*, 168 Mass., 154, 156; 46 N. E., 386.) So, although the plaintiff has no copyright on the dictionary, or any part of it, he can exclude a defendant from a part of the free field of the English language, even from the mere use of generic words, unqualified and unexplained, when they would mislead the plaintiff's customers to another shop. (*Reddaway* v. *Banham*, [1896] A. C., 199.) So the name of a person may become so associated with his goods that one of the same name coming into the business later will not be allowed to use even his own name without distinguishing his wares. (*Brinsmead* v. *Brinsmead*, 13 Times L. R., 3; *Reddaway* v. *Banham*, [1896] A. C., 199, 210. See *Singer Mfg. Co.* v. *June Mfg. Co.*, 163, U. S., 169, 204; 16 Sup. Ct., 1002; 75 O. G., 1703; *Cream Co.* v. *Keller*, 85 Fed., 643.) And so, we doubt not, may a geographical name acquire a similar association with a similar effect. (*Montgomery* v. *Thompson*, [1891] A. C., 217.) Whatever might have been the doubts some years ago, we think that now it is pretty well settled that the plaintiff, merely on the strength of having been first in the field, may put later comers to the trouble of taking such reasonable precautions as are commercially practicable to prevent their lawful names and advertisements from deceitfully diverting the plaintiff's custom. (*Amer. Waltham Watch Co.* v. *United States Watch Co.*, 173 Mass., 85, 86, 87; 53 N. E., 141, 142 (43 L. R. A. 826, 73 Am. St. Rep. 263).)

This is true, even if the name be such that it could not be registered as a technical trade-mark. (*Bissell Chilled Plow Works* v. *T. M. Bissell Plow Co.*, C. C., 121 Fed., 357, 365.) This has been well stated in the United States Circuit Court of Appeals for the Sixth Circuit by Lurton, Circuit Judge, as follows:

> But when the word is incapable of becoming a valid trade mark, because descriptive or geographical, yet has by use come to stand for a particular maker or vendor, its use by another in this secondary sense will be restrained as unfair and fraudulent competition, and its use in its primary or common sense confined in such a way as will prevent a probable deceit by enabling one maker or vendor to sell his article as the product of another. (*Lawrence Mfg. Co.* v. *Tennessee Mfg. Co.*, 138 U. S., 537, 549; 11 Sup. Ct., 396; 34 L. Ed., 997; 55 O. G., 1528; *Chemical Co.* v. *Meyer*, 139 U. S., 540; 11 Sup. Ct., 625; 35 L. Ed., 247; 55 O. G., 287; *Mill Co.* v. *Alcorn*, 150 U. S., 460; 14 Sup. Ct., 151; 37 L. Ed., 1144; 65 O. G., 1916; *Singer Mfg. Co.* v. *June Mfg. Co.*, 163 U. S., 169; 16 Sup. Ct., 1002; 41 L. Ed., 118; 75 O. G., 1703; *Elgin Nat. Watch Co.* v. *Illinois Watch Case Co.*, 179 U. S., 665; 21 Sup. Ct., 270; 45 L. Ed., 365; 94 O. G., 755; *Bennett* v. *McKinley*, 13 C. C. A., 25; 65 Fed., 505.) (*Computing Scale Co.* v. *Standard Computing Scale Co.*, 118 Fed., 965, 967; 55 C. C. A., 459, 461.)

The basis of the right to prevent the use of an unregistered trade-mark is the recognition that—

> where a party has been in the habit of labeling his goods with a distinctive mark, so that purchasers recognize goods thus marked as being of his production, others are debarred from applying the same mark to goods of the same description, because to do so would in effect represent their goods to be of his production and would tend to deprive him of the profit he might make through the sale of the goods which the purchaser intended to buy. Courts afford redress or relief upon the ground that a party has a valuable interest in the good-will of his trade or business, and in the trade marks adopted to maintain and extend it. The essence of the wrong consists in the sale of the goods of one manufacturer or vendor for those of another. (*Canal* v. *Clark*, 13 Wall., 311, 322; *McLean* v. *Fleming*, 96 U. S., 245, 251; 13 O. G., 913; *Manufacturing Co.* v. *Trainer*, 101 U. S., 51, 53; 17 O. G., 1217; *Menendez* v. *Holt*, 128 U. S., 514, 520; 46 O. G., 971; *Lawrence Mfg. Co.* v. *Tennessee Mfg. Co.*, 138 U. S., 537, 546; 55 O. G., 1528.) (*Hanover Milling Co.* v. *Metcalf*, 240 U. S., 403, 412; 36 Sup. Ct., 357, 360; 60 L. Ed., 713; 224 O. G., 1407.)

This may be true of a geographical name:

> The name of a person or a town may have become so associated with a particular product that the mere attaching of that name to a similar product without more would have all the effect of a falsehood. (*Walter Baker & Co.* v. *Slack*, 130 Fed., 514.) An absolute prohibition against using the name would carry trade marks too far. Therefore the rights of the two parties have been reconciled by allowing the use, provided that an explanation is attached. (*Singer Mfg. Co.* v. *June Mfg. Co.*, 163 U. S., 169,200,204; *Brinsmead* v. *Brinsmead*, 13 Times L. R., 3; *Reddaway* v. *Banham*, [1896] A. C., 199, 210, 222; *Amer. Waltham Watch Co.* v. *United States Watch Co.*, 173 Mass., 85, 87; *Dodge Stationery Co.* v. *Dodge*, 145 Cal., 380.) Of course the explanation must accompany the use, so as to give the antidote with the bane. (*Herring, etc., Safe Co.* v. *Hall's Safe Co.*, 208 U. S., 554, 559; 28 Sup. Ct., 350, 352; 52 L. Ed., 616; 134 O. G., 1053.)

[3–5] That there was an actual intention to mislead the public need not be proved. It is enough if such result is probable. (*Bissell Chilled Plow Works* v. *T. M. Bissell Plow Co.*, C. C., 121 Fed., 357, 372, and the cases there cited; 38 Cyc., 773, 784.)

That one's name is added to the trade-name is not a sufficient distinction to prevent the probable deception. (38 Cyc., 792.)

That the sauce had been previously manufactured as "Tabasco Pepper-Sauce" does not, under the facts of this case, prevent the complainant from having acquired a trade name in the word "Tabasco." The proof shows that whatever manufacture had been had was quite restricted, that the maker had not used the word "Tabasco" as the trade name of his product, and that it had been abandoned. This left the field open to McIlhenny, who entered thereon, embarked in a wide introduction of this sauce as "Tabasco," built up a large business, and established the name as descriptive of this exclusive production during the business of many years. (*Deitsch et al.* v. *Geo. R. Gibson Co.*, C. C., 155 Fed., 383; *Raymond* v. *Royal Baking Powder Co.*, 85 Fed., 231; 29 C. C. A., 245.)

The appellants insist that, in a conversation had with John A. McIlhenny, representing the then proprietor of appellee's business, it was conceded that appellant Trappey had the right to use the word "Tabasco" to describe the sauce made by him, and that appellee is now estopped to deny such right. This conversation is denied by John A. McIlhenny. But, even if it be conceded to have taken place, we agree with the district court that no estoppel would arise therefrom, in view of the correspondence which followed soon after between the attorney for the McIlhennys and Trappey, in which the exclusive right to the use of the word "Tabasco" was insisted upon in their behalf.

The other points arising in this case are covered by the opinion of this court in *McIlhenny Co.* v. *Gaidry* (253 Fed., 613, 616; 165 C. C. A., 239). Upon the whole case, we think that the complainant was entitled to an injunction restraining the defendant from using the word "Tabasco" as the name, or as part of the name, of the sauce manufactured and sold by him. The injunction should go to the extent of preventing defendant from using the word "Tabasco" as the name or description of the sauce manufactured by him, but should not prevent his stating that the sauce is made from Tabasco peppers. (*Baglin* v. *Cusenier Co.*, 221 U. S., 580, 600; 31 Sup. Ct., 669; 55 L. Ed., 863; 169 O. G., 449.)

The decree granting the injunction in this case is affirmed, so far as it enjoins the appellants from using the word "Tabasco" as the name of the sauce manufactured by them, or in any manner to designate or describe said sauce, or from using the word "Tabasco" otherwise than to state that the sauce manufactured by appellants is made from Tabasco peppers, said statement to be made in such manner as clearly to distinguish the sauce made by appellants from that manufactured by appellee.

As thus modified, the decree of the district court is affirmed.

PATENT SUITS.

Re. 15,517. (See 1,394,037.)

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 19, 1923.

[VOL. 311. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 115,304. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) WATSON MANUFACTURING COMPANY, Lancaster, Pa. Filed Jan. 18, 1919.

Particular description of goods.—Poultry-Raising Appliances—Namely, Incubators, Brooders, Hovers, Portable Hovers, Colony Brooders, Feeders, Drinking Fountains, and Grain Feeders.
Claims use since on or about Oct. 1, 1914.

Ser. No. 130,477. (CLASS 37. PAPER AND STATIONERY.) IDEAL COATED PAPER COMPANY, Brookfield, Mass., assignor to McLaurin-Jones Co., Brookfield, Mass., a Corporation of Massachusetts. Filed Apr. 1, 1920.

DEPENDON

Particular description of goods.—Gummed Paper.
Claims use since January, 1913.

Ser. No. 137,927. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GOLDEN NUGGET SWEETS, San Francisco, Calif. Filed Oct. 5, 1920.

Applicant hereby disclaims the word "Sweets" and the words "Golden Nugget" apart from the trade-mark as shown.
Particular description of goods.—Fudge.
Claims use since Sept. 1, 1920.

Ser. No. 139,134. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SPOHR'S, Chicago, Ill. Filed Nov. 3, 1920.

Friendship

Particular description of goods.—Candy.
Claims use since March, 1915.

Ser. No. 140,683. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SUPPLEE-BIDDLE HARDWARE COMPANY, Philadelphia, Pa. Filed Dec. 6, 1920.

No claim made to the words "Supplee-Biddle Hardware Company, Philadelphia, Pennsylvania U. S. A., R. & W. C. Biddle Established 1837" apart from the mark shown in the drawing, but reserving any common-law right said corporation may have herein.

Particular description of goods.—Phonographs, Talking Machines, and Reproducers, Horns, Needles, and Records Therefor, and Musical Bells.

Claims use since about Mar. 1, 1920.

Ser. No. 142,040. (CLASS 15. OILS AND GREASES.) TETRALIN GESELLSCHAFT MIT BESCHRÄNKTER HAFTUNG, Berlin, Germany. Filed Jan. 10, 1921.

Tetralin

Particular description of goods.—Lubricants and Solvents in the Nature of Oils and Greases, Kerosene, Benzine, Gasoline, and Other Fuels for Internal-Combustion Engines; Illuminating, Heating, and Fuel Oils; Crude Mineral Oils, and Mineral Wax.

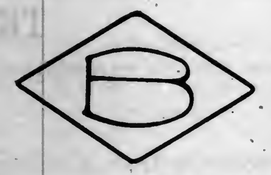
Claims use since Dec. 12, 1906.

Ser. No. 142,041. (CLASS 5. ADHESIVES.) TETRALIN-GESELLSCHAFT MIT BESCHRÄNKTER HAFTUNG, Berlin, Germany. Filed Jan. 10, 1921.

Tetralin

Particular description of goods.—Glue, Mucilage, and Paste.

Claims use since Dec. 12, 1906.



Ser. No. 145,430. (CLASS 39. CLOTHING.) EMILE BOUTON, Paris, France. Filed Mar. 30, 1921. Under ten-year proviso.

PARIS KALLISTA

Particular description of goods.—Hat Linings.

Claims use since 1887.

Ser. No. 145,544. (CLASS 2. RECEPTACLES.) BEMIS BRO. BAG COMPANY, St. Louis, Mo. Filed Apr. 1, 1921.

Particular description of goods.—Cotton, Burlap, and Paper Bags.

Claims use since 1916.

Ser. No. 147,303. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) MILWAUKEE MALTING & GRAIN CO., Milwaukee, Wis. Filed May 6, 1921.

MIL-MALT

No claim made for the word "Malt" apart from the mark as shown.

Particular description of goods.—Concentrated Malt Sirup and Concentrated Malt Extract.

Claims use since Apr. 29, 1921.

Ser. No. 148,932. (CLASS 38. PRINTS AND PUBLICATIONS.) DAVID DAVIDSON, Providence, R. I. Filed June 10, 1921.

David Davidson

The name appearing in the drawing is a facsimile signature of the applicant.

Particular description of goods.—Pictures.

Claims use since May, 1901.

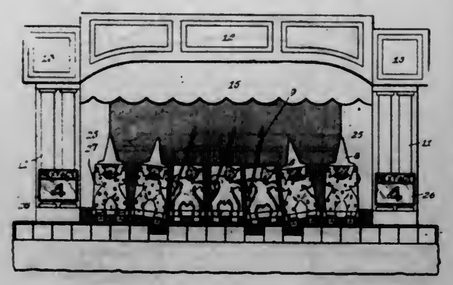
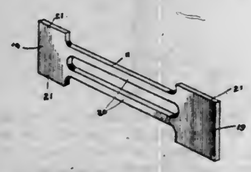
REISSUES.



JUNE 19, 1923.

15,628. SUIT HANGER. WILLIAM F. WAGNER, Washington, D. C. Filed Apr. 3, 1923. Serial No. 629,721. Original No. 1,416,143, dated May 16, 1922, Serial No. 508,104, filed Oct. 17, 1921. 6 Claims. (Cl. 45—13.)



1. A device of the class described comprising a stamped metal base, having a central longitudinal rib pressed therefrom; and a hanger supporting member formed of a length of wire bent to provide two parallel portions, one being of a greater length than the other, extending from the base at opposite ends thereof and at right angles thereto, and a third connecting portion, joining the outer ends of the said two end portions, the said third portion being bent upon itself at spaced intervals to form outwardly projecting loops to support the hangers thereon.

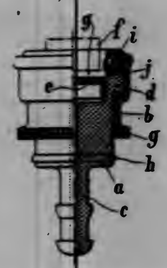
15,629. AMUSEMENT DEVICE. WALTER C. HADLEY, New York, N. Y., assignor to Central Talking Machine Shop, Inc., New York, N. Y., a Corporation of New York. Filed May 10, 1923. Serial No. 638,355. Original No. 1,431,891, dated Oct. 10, 1922, Serial No. 404,969, filed Aug. 20, 1920. 5 Claims. (Cl. 46—40.)

1. An amusement device, comprising a block tapering from the base towards the top, a figure upon one face of the block and parallel projections upon the base of the block spaced apart from each other to rest upon two adjacent keys of a piano.

15,630. WALL STRUCTURE FOR CORNCRIBS AND THE LIKE. JOHN H. IBEY, Muscatine, Iowa, assignor to Portable Elevator Mfg. Co., Bloomington, Ill. Filed Feb. 1, 1922. Serial No. 533,421. Original No. 1,382,362, dated June 21, 1921, Serial No. 328,740, filed Oct. 6, 1919. 3 Claims. (Cl. 72—6.)

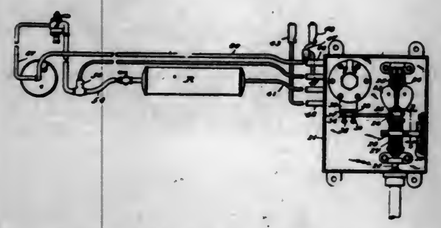
1. A course building element for a directly ventilated wall comprising head portions and connecting air admitting vermin guard parts therebetween, said head portions having parts projected above and below said connecting portions.

15,631. MANUFACTURE OF CORD TIRES. WILLIAM O'NEIL, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 11, 1923. Serial No. 631,478. Original No. 1,437,850, dated Dec. 5, 1922, Serial No. 427,676, filed Dec. 2, 1920. 3 Claims. (Cl. 91—68.)



1. The process of preparing frictioned cord fabric adapted for use in the manufacture of cord tires which consists in treating in the manner hereinafter described a cord fabric comprising a multitude of warp cords and woven in fine filler threads, said warp cords being at such a distance apart as will permit them to move laterally, without coming into contact, to the extent to which they must move when the warp cords are completely straightened and the filler threads are consequently crimped, said treatment consisting in stretching the fabric lengthwise until all of the warp cords are straightened and all of the filler threads are made to bend up and down as they pass over and under alternate warp cords without deflecting said warp cords, and in forcing raw rubber onto both faces of the fabric and into the interstices between the warp cords while the various parts of the fabric are in the condition stated.

15,632. PIPE COUPLING. CAMILLE SENG, Romilly-sur-Seine, France. Filed June 24, 1921. Serial No. 480,235. Original No. 1,322,357, dated Nov. 18, 1919, Serial No. 68,431, filed Dec. 23, 1915. 3 Claims. (Cl. 285—96.)



1. A coupling comprising a tubular member provided at one end with an external annular shoulder, said shoulder having substantially radial seats therein which are open at their inner and outer ends and communicate with the interior of the coupling, a ball in each of the seats, the outer end of each seat being open for the introduction

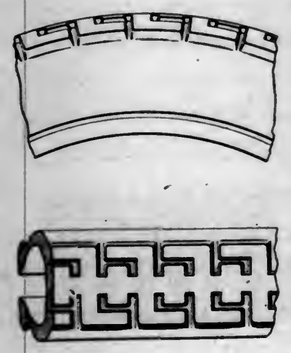
and removal of the ball and the inner end of the seats being restricted to permit of the ball extending a limited distance into the interior of the coupling, said coupling being provided with an internal shoulder inward of the seats, a slidable sleeve embracing the tubular member and normally closing the outer ends of the seats, said

sleeve having an internal shoulder for engagement with the inner end of the annular shoulder on the coupling member to limit movement of the sleeve in one direction, and a ring sprung into an external groove on the coupling member in position to limit movement of the sleeve in the opposite direction.

15,633. AUTOMATIC TRAIN-SPEED CONTROL. MAURICE E. HAMILTON, New York, N. Y., and WILLIAM H. JOHNSON, Terre Haute, Ind. Filed Apr. 19, 1923. Serial No. 633,221. Original No. 1,448,959, dated Mar. 20, 1923, Serial No. 357,217, filed Feb. 9, 1920. 14 Claims. (Cl. 303—21.)

1. The combination in an air brake system, of the main reservoir, the engineer's valve, a valve controlling outflow from the equalizing reservoir, a valve controlling flow from the main reservoir to the equalizing reservoir, speed-controlled means, and means actuated by said speed-controlled means for opening the second-mentioned valve and closing the third-mentioned valve upon the attainment of a desired maximum position by the speed-controlled means.

DESIGNS.

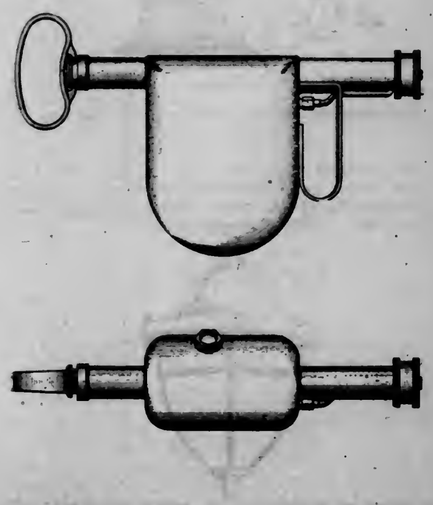


JUNE 19, 1923.

62,531. TEXTILE FABRIC. JOHN S. BOYD and THOMAS F. BOYD, Williamstown, Mass., assignors to John S. Boyd Co. Inc., Williamstown, Mass., a Corporation of Massachusetts. Filed Jan. 9, 1923. Serial No. 4,841. Term of patent 14 years.

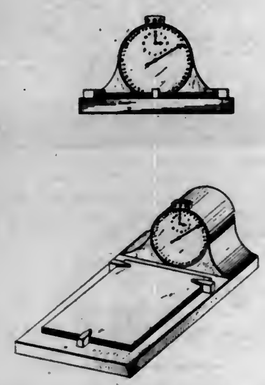
The ornamental design for a textile fabric, as shown.

62,532. AUTOMOBILE TIRE. WILLIAM A. BRUBAKER, Akron, Ohio, assignor to The Lyon Rubber Co., Incorporated, Akron, Ohio. Filed July 6, 1920. Serial No. 394,369. Term of patent 14 years.



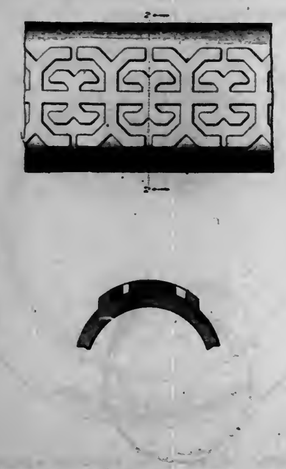
The ornamental design for an automobile tire substantially as shown.

62,533. TEXTILE FABRIC. EMILE ERICSON, Pelham, and ROGER WEISS, New York, N. Y., assignors to The Pennsylvania Textile Mills, Inc., Glenriddle, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 4,678. Term of patent 3½ years.



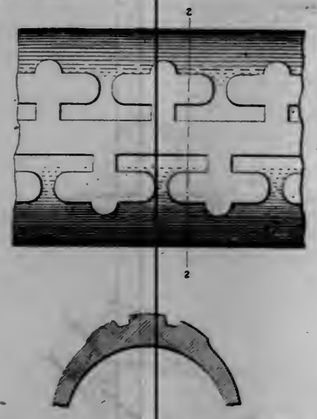
The ornamental design for a textile fabric, substantially as shown.

62,534. FIRE EXTINGUISHER. WILLIAM J. FRISBIE, Chicago, Ill., assignor to Justrite Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 8, 1922. Serial No. 596. Term of patent 3½ years.



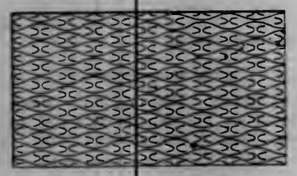
The ornamental design for a fire extinguisher as shown.

62,535. COMBINATION CLOCK STAND AND PAD SUPPORT. STANLEY S. MORRIS, New Orleans, La. Filed June 9, 1922. Serial No. 2,603. Term of patent 7 years.



The ornamental design for a combination clock stand and pad support as shown.

62,536. RESILIENT TIRE. ROBERT IREDELL, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 15, 1922. Serial No. 2,261. Term of patent 14 years.



The ornamental design for a resilient tire as shown.

62,537. TIRE TREAD. HAROLD D. REICHARD, Akron, Ohio. Filed Feb. 8, 1922. Serial No. 606. Term of patent 14 years.

The ornamental design for a tire tread as shown.

62,538. SAFETY PAPER. RUDOLPH RUZICKA, Dobbs Ferry, N. Y., assignor to New Safety Paper Co., Boston, Mass., a Voluntary Association of Massachusetts. Filed Aug. 28, 1922. Serial No. 3,582. Term of patent 3½ years.

The ornamental design for safety paper, as shown.

62,539. RING. FREDERICK A. SHIMP, Philadelphia, Pa., assignor to Skillkrafters Incorporated, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 5, 1923. Serial No. 4,820. Term of patent 3½ years.

The ornamental design for a ring, as shown.

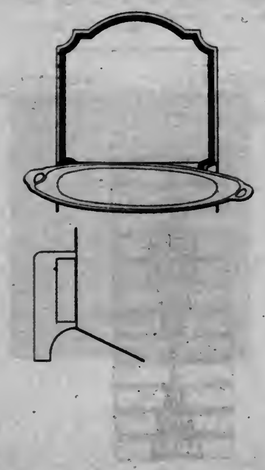
62,540. GIRL'S DRESS. GLADYS MATSON STEWART, Cincinnati, Ohio. Filed Apr. 5, 1922. Serial No. 1,545. Term of patent 3½ years.

The ornamental design for a girl's dress, as shown.

62,541. TOY WHISTLE. JOSEPH YOST, New York, N. Y. Filed Dec. 9, 1922. Serial No. 4,537. Term of patent 3½ years.

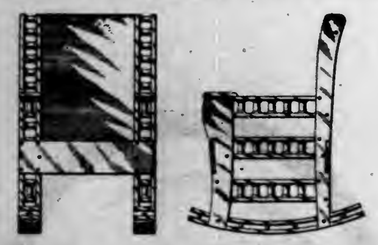
The ornamental design for toy whistle as shown.

62,542. LIGHT FIXTURE. EARL A. ANDERSON, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed July 3, 1922. Serial No. 2,937. Term of patent 14 years.



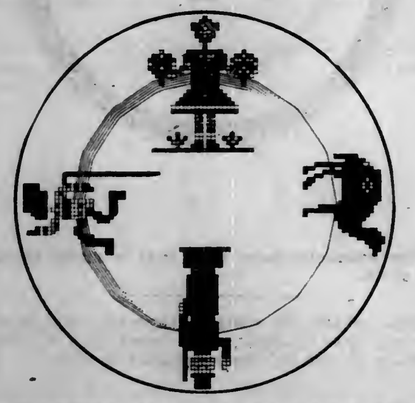
The ornamental design for a light-fixture as shown.

62,543. BASE FOR TERRESTRIAL AND CELESTIAL GLOBES AND THE LIKE. EDWARD H. BUSCH, Chicago, Ill., assignor to Weber Costello Company, Cook County, Ill., a Corporation of Illinois. Filed Mar. 8, 1922. Serial No. 1,004. Term of patent 14 years.



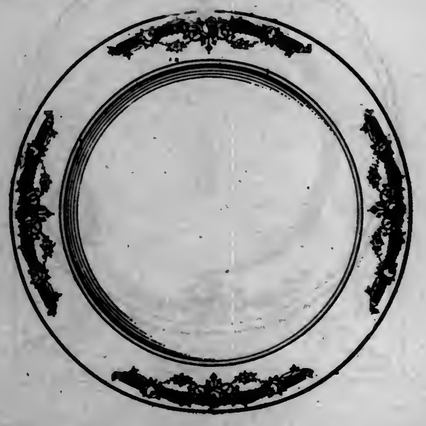
The ornamental design for a base for terrestrial and celestial globes and the like, substantially as shown.

62,544. ADVERTISING STAND. WALTER C. CARLSON, Milwaukee, Wis. Filed July 26, 1922. Serial No. 3,205. Term of patent 3½ years.



The ornamental design for an advertising stand as shown.

62,545. CHAIR. GEORGE DANIELS, St. Louis, Mo. Filed Aug. 8, 1922. Serial No. 3,325. Term of patent 14 years.

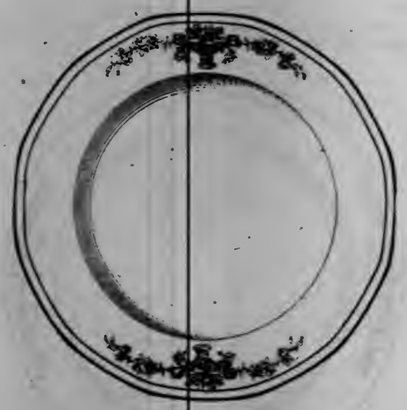


The ornamental design for a chair, as shown.

62,546. PLATE OR SIMILAR ARTICLE. WALTER DE VILLE, East Liverpool, Ohio. Filed Oct. 25, 1921. Serial No. 510,355. Term of patent 14 years.

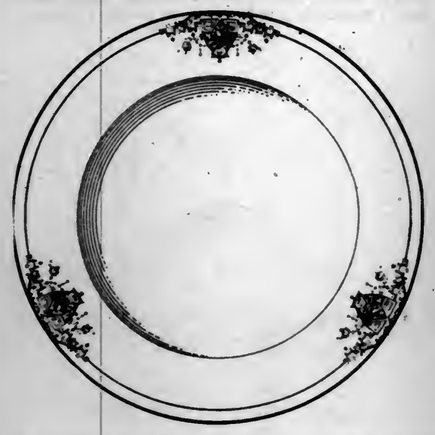
The ornamental design for a plate or similar article, as shown.

62,547. PLATE OR SIMILAR ARTICLE. WALTER DE VILLE, East Liverpool, Ohio. Filed Oct. 25, 1921. Serial No. 510,356. Term of patent 14 years.



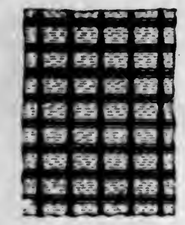
The ornamental design for a plate or similar article, as shown.

62,548. PLATE OR SIMILAR ARTICLE. WALTER DE VILLE, East Liverpool, Ohio. Filed Oct. 25, 1921. Serial No. 510,357. Term of patent 7 years.



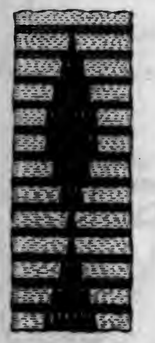
The ornamental design for a plate or similar article, as shown.

62,549. PLATE OR SIMILAR ARTICLE. WALTER DE VILLE, East Liverpool, Ohio. Filed Oct. 25, 1921. Serial No. 510,358. Term of patent 3½ years.



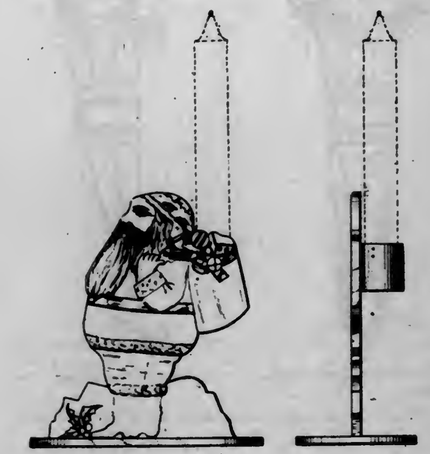
The ornamental design for a plate or similar article, as shown.

62,550. PLATE OR SIMILAR ARTICLE. WALTER DE VILLE, East Liverpool, Ohio. Filed Oct. 31, 1921. Serial No. 511,942. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

62,551. KNITTED FABRIC. HYMAN GUTTMAN, New York, N. Y. Filed Nov. 28, 1922. Serial No. 4,431. Term of patent 3½ years.



The ornamental design for a knitted fabric substantially as shown and described.

62,552. KNITTED FABRIC. HYMAN GUTTMAN, New York, N. Y. Filed Nov. 28, 1922. Serial No. 4,432. Term of patent 3½ years.

The ornamental design for a knitted fabric substantially as shown and described.

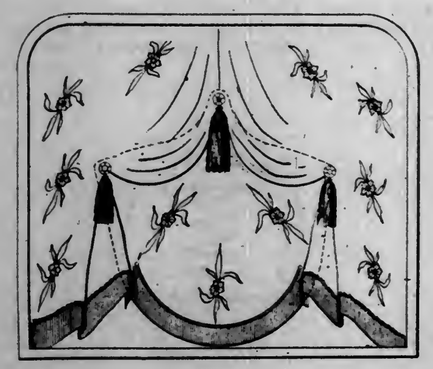
62,553. CANDLEHOLDER. AGNES M. HAWLEY, Syracuse, N. Y., assignor to Will & Baumer Candle Co., Inc., Syracuse, N. Y., a Corporation of New York. Filed July 20, 1922. Serial No. 3,143. Term of patent 14 years.

The ornamental design for a candleholder, substantially as shown and described.

62,554. TEXTILE FABRIC. CHARLES E. LORD, Tarrytown, N. Y. Filed July 3, 1922. Serial No. 2,943. Term of patent 3½ years.

The ornamental design for a textile fabric as shown and described.

62,555. HANDLE FOR A MANICURE ARTICLE. JOHN SALM, Torrance, Calif. Filed Dec. 16, 1920. Serial No. 431,261. Term of patent 3½ years.

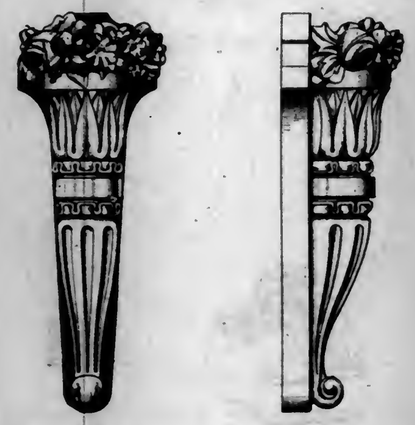


The ornamental design for a handle for a manicure article as shown.

62,556. HANDLE FOR A MANICURE ARTICLE. JOHN SALM, Torrance, Calif. Filed Dec. 16, 1920. Serial No. 431,264. Term of patent 3½ years.

The ornamental design for a handle for a manicure article, as shown.

62,557. AUTOMOBILE CURTAIN. JACOB SIEGEL, Chicago, Ill. Filed Sept. 5, 1922. Serial No. 3,627. Term of patent 7 years.



The ornamental design for an automobile curtain, as shown.

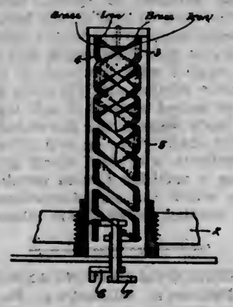
62,558. PEDESTAL. LORENZO ZUNINO, Berkeley, Calif. Filed June 5, 1922. Serial No. 2,525. Term of patent 3½ years.

The ornamental design for a pedestal, substantially as shown.

62,559. PLAQUE OR ORNAMENT. CHARLES T. COLLINS, Chicago, Ill., assignor to Donna Lee Perfumed Deodorant Company, a Partnership consisting of Harvey L. Boyer and Donna Lee Collins. Filed Dec. 19, 1922. Serial No. 4,643.. Term of patent 7 years.

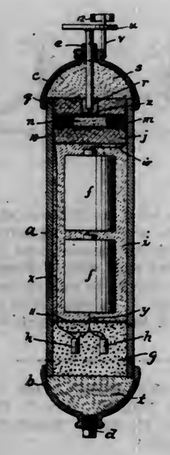
The ornamental design for a plaque or ornament, as shown.

PATENTS



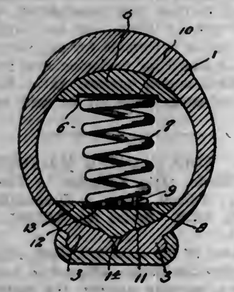
GRANTED JUNE 19, 1923.

1,458,923. ARTIFICIAL ARM. DUNCAN MACKENZIE ANDERSON, Mains, Germany. Filed June 8, 1922. Serial No. 565,760. 2 Claims. (Cl. 3—12.)



2. An artificial arm of the type described and shown comprising in combination with a pull rope attached with one end to a fixed point of the human body and with the other end to the forearm, a large rope pulley, and a small rope pulley, the axle upon which said rope pulleys are mounted situated in the axis of articulation of the shoulder joint, a straight guide for the pull rope, a pivot bolt for the forearm, a pair of arms connected with said pivot bolt having slots and designed to transfer the angular rotation of the rope pulleys to the forearm for making the same oscillate, a jointed cross mounted upon said axle of the shoulder joint, a slotted arm of said joint cross, a linear guide link upwardly extending from the pivot bolt of the forearm, an arm of said linear guide link, a stud projecting from said arm engaging with said slotted arm of the joint cross so that the joint cross is partly revolved, and rods rigidly connecting said joint cross with said pivot bolt for transferring the part rotation of the joint cross to the artificial forearm for oscillaing the same together with the artificial upper arm.

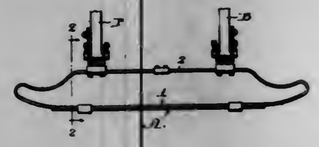
1,458,924. THERMOSTAT. HORACE F. BANAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 20, 1920. Serial No. 352,891. 26 Claims. (Cl. 297—16.)



14. A thermostat comprising two helically-wound bimetallic members, the convolutions of which are mutually interfitting.

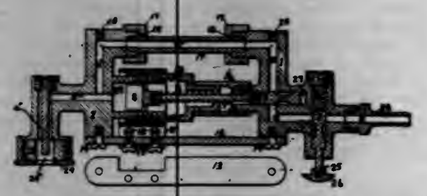
1,458,925. DETONATOR. JACOB BARAB, Atlantic City, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed May 18, 1921. Serial No. 470,591. 9 Claims. (Cl. 102—10.)

8. An electrically operable detonator comprising an explosive charge, a blasting cap, a generator, two disc terminals spaced apart and an open electric circuit from one terminal to the other including the blasting cap and generator, a casing in which the foregoing elements are contained, a circuit closing pin adapted to be driven from one disc terminal to the other and thereby close the electric circuit, and means mechanically controllable from a point outside the detonator to so operate the circuit closing pin.



1,458,926. CUSHION TIRE. JUAN ANTONIO XERES BURGOS, Manila, P. I. Filed July 12, 1922, Serial No. 574,505. Renewed Mar. 7, 1923. 1 Claim. (Cl. 152—8.)

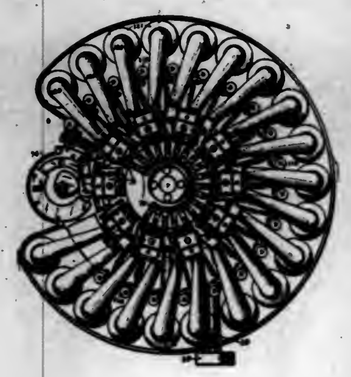
A cushion tire comprising a casing with transverse spaced flanges at the inner side of its outer portion and



with spaced pairs of flanges at the inner sides of its inner portions, outer and inner seats and spacers removably arranged between said flanges and within the casing and having recesses in their opposed sides, wear plates removably arranged in said recesses, and convolute springs interposed between said wear plates and having terminal portions journaled on and connected to the wear plates.

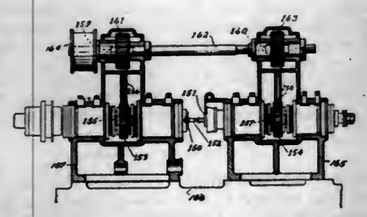
1,458,927. BUMPER-ATTACHING BRACKET. WILLARD E. ERICSON, Evanston, Ill., assignor to Bifex Products Company, Waukegan, Ill., a Corporation of Delaware. Filed Feb. 12, 1923. Serial No. 618,583. 10 Claims. (Cl. 293—55.)

1. A bumper attaching bracket comprising companion plates adapted to be secured on opposite sides and at the end of a vehicle frame member, said plates being provided at their forward ends with U-shaped clips extending inwardly at right angles to said plates, the outer portions thereof foming a vertical abutment face, and means for clamping a bumper bar against said abutment face.



1,458,928. PRESSURE REGULATOR AND CUT-OFF FOR INFLATING TUBES. RAY C. FANCHER, Utica, N. Y. Filed Aug. 15, 1921. Serial No. 492,459. 2 Claims. (Cl. 50—35.)

2. In a pressure regulator and cut off for inflating tubes, a casing having a channel for the passage of air, a valve adapted to close said passageway, a piston connected to said valve, a spring for controlling the movements of said piston, a thimble for adjusting the tension of said spring, a guard for enclosing said thimble, and a manually operated spring pressed valve for controlling the admission of compressed air to said passageway.



1,458,929. ROLL-GAUGING MACHINE. JOHN F. FLAHERTY, Toledo, Ohio, assignor to The Bock Bearing Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 14, 1920. Serial No. 416,935. 22 Claims. (Cl. 83—92.)

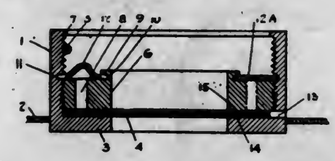
1. In a machine of the class described, the combination of an article-calipering device adapted to hold the article and comprising a movable member, the position of which is determined by the size of the article, and a plurality of devices with which said member is adapted to cooperate in succession, each of said devices having operative connection with said calipering device independent of said member and being adapted to effect the release of

the article and the actuation of each of said plurality of devices being subject to control by said member when in a particular position.

1,458,930. SPINDLE-DRIVING MECHANISM. JOHN F. FLAHERTY, Toledo, Ohio, assignor to The Bock Bearing Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 26, 1921. Serial No. 455,836. 2 Claims. (Cl. 74—7.)

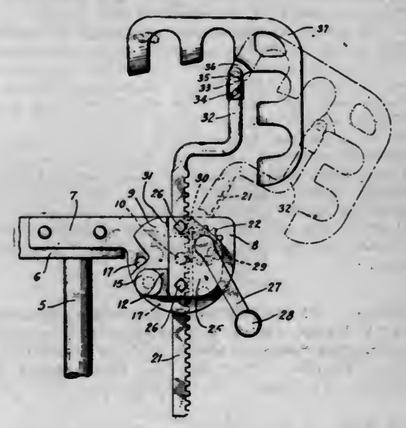
1. In a grinding machine, the combination of a housing, a work-spindle mounted in spaced bearings in said housing, a driven gear on said spindle between said bearings, said housing being formed with a lubricant chamber around said driven gear from which said gear and said bearings are supplied with lubricant, a drive shaft arranged in a plane parallel with the plane of said spindle and mounted in spaced bearings in said housing, a spiral gear on said shaft between the last-mentioned bearings, an intermediate shaft, gears on said intermediate shaft meshing respectively with said spiral gears, and said housing having a partition therein forming a lubricant chamber from which the second-mentioned spiral gear and the gear meshing therewith are lubricated.

1,458,931. METHOD OF FORMING ANNULAR BODIES. LOUIS T. FREDERICK, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 4, 1918. Serial No. 261,120. 4 Claims. (Cl. 154—2.)



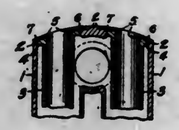
4. The method of constructing annular bodies that comprises superposing convolutions of cord in such

manner that strands wound in one direction intercross with strands wound in another to form the desired body,



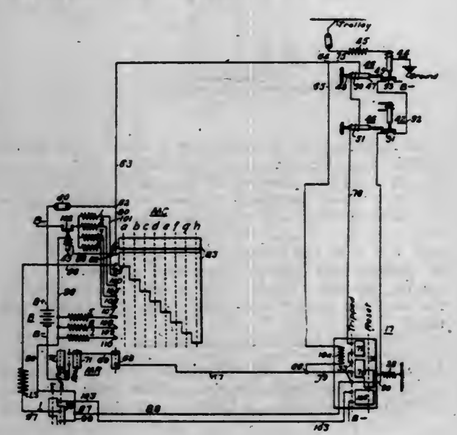
impregnating the body with a phenolic condensation product and subjecting the body to heat and pressure in a mold.

1,458,932. MOUTHPIECE FOR RECEPTACLES TO CONTAIN LIQUIDS AND MEANS FOR SEALING THE SAME. SPIRO DENIS GARRIS, Calcutta, British India. Filed May 19, 1921. Serial No. 470,792. 7 Claims. (Cl. 220—39.)



1. A closure for liquid receptacles, comprising an interiorly threaded cylindrical body provided with an inwardly extending flange, a disk within said body adapted to be seated on said flange, a ring threaded into said body and adapted to compress said disk against its seat, said ring having a boss at the side thereof opposite from said disk, and means secured between the wall of said cylindrical body and said boss for retaining said ring in disk-compressing position.

1,458,933. ADJUSTABLE KNEE SUPPORT. WILLIAM GRAUPE, New York, N. Y., assignor to Hospital Supply Company and Watters Laboratories, Consolidated, both of New York, N. Y. Filed Feb. 8, 1922. Serial No. 533,841. 4 Claims. (Cl. 45—50.)

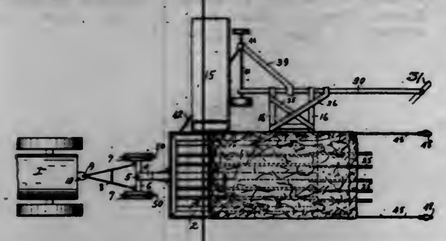


1. An attachment for operating tables and the like, comprising a pair of angular knee supports, offset sustaining bars on which said supports are freely pivoted and mounted to swing in a plane parallel to the table, means for adjusting the angularity of each support individually, means for mechanically raising or lowering each of said supports, and means including a pawl and ratchet for maintaining said supports in vertical adjustment.

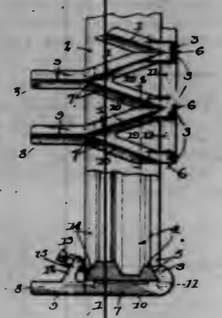
1,458,934. METHOD OF WELDING RADIATORS. JOSEPH WILLIAM GUIMONT, Montreal, Quebec, Canada, assignor of one-half to Mendoza Langlois, Montreal, Quebec, Canada. Filed Dec. 19, 1921. Serial No. 523,505. 1 Claim. (Cl. 113—112.)

The method of securing an inner tube in spaced relation with the outer casing of a radiator, which consists in forming at each end of said inner tube a straight sided annular shoulder, beveling the outer periphery of the end of each shoulder, internally beveling the inner periphery of the opening provided in the outer casing for the reception of the inner tube, so that when said tube is positioned in the casing an annular V-shaped groove is formed, and filling the said groove with molten metal in order to weld the walls together, the weld being flush with the ends of the inner tube and casing.

1,458,935. CONTROL SYSTEM AND APPARATUS. ARTHUR J. HALL, Winchcombe, England, and PAUL L. MARDIS, Swissvale, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 30, 1920. Serial No. 400,146. 13 Claims. (Cl. 171—179.)



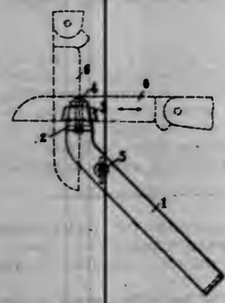
2. The combination with a supply circuit and a dynamo-electric machine, of a plurality of resistors in circuit with said machine, a plurality of switching devices for said resistors, a switch for controlling the connection of said machine to said supply circuit, and means responsible to certain machine conditions for opening said switching devices and said switch in successive steps.



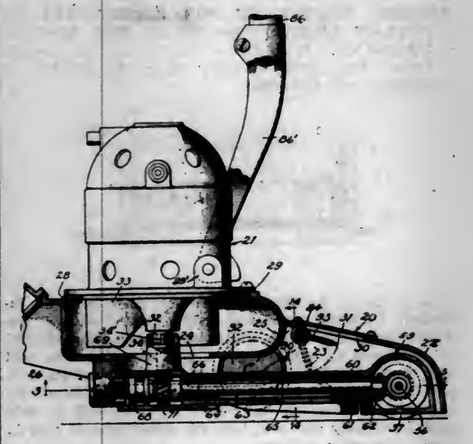
1,458,936. METHOD OF HARVESTING GRAIN. CHARLES W. HART, Charles City, Iowa. Filed Jan. 27, 1919. Serial No. 273,375. 6 Claims. (Cl. 56—425.)

5. The method of harvesting grain consisting in progressively cutting grain along a path of travel and delivering the same laterally, simultaneously moving a

stack support along said path in a position to receive the cut grain, building a stack thereon, bringing the support to rest, connecting the bottom portion of the stack along its front and sides with a fixed ground anchorage, and withdrawing the support from beneath the stack.



1,458,937. TRACTOR-WHEEL FLUKE. CHARLES W. HART, Milwaukee, Wis. Filed Mar. 18, 1920. Serial No. 366,762. 19 Claims. (Cl. 301—44.)



18. A wheel fluke including two divergent arms having bearing lugs adjacent their extremities, hooks carried by said arms and arranged for interaction with the margin of a wheel periphery whereby transverse relative movement between said fluke and periphery may be utilized to bring said lugs into contact, a set screw associated with said fluke and adjustable into contact with a wheel to produce said relative transverse movement, and a bearing surface adjacent said screw and adapted, by the operation thereof, to be forced into contact with said wheel.

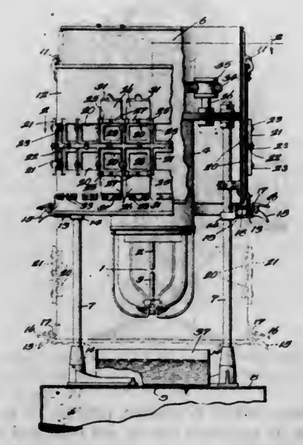
1,458,938. KNIFE SHARPENER. KNUT WALDEMAR HEYMAN, Stockholm, Sweden. Filed June 17, 1921. Serial No. 478,227. 5 Claims. (Cl. 76—87.)

1. A tool for sharpening cutting blades, comprising in combination, a suitable handle and a pair of contacting spherical disks or rollers of hard material, each of said rollers being rotatably mounted upon a pin carried by said handle in such a manner that the blade may be drawn through between them either substantially parallel with or at right angles to their axes of rotation.

1,458,939. VACUUM CLEANER. JOHN T. HUME, Chicago, Ill., assignor to Hurley Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 24, 1921. Serial No. 455,010. 18 Claims. (Cl. 15—8.)

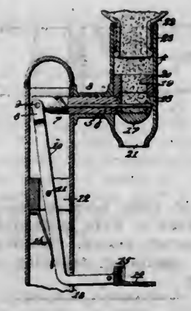
2. In a portable vacuum cleaner, the combination with a casing providing a nozzle and a fan chamber with which the nozzle communicates, a fan in said chamber, a motor driving said fan, and a brush rotatable in said nozzle, connections driven by said motor for operating said brush, a manually operable clutch included in said connections, a main pushing handle movably mounted on the casing and connections between said handle and said clutch to control the clutch by movement of said handle.

11. In a vacuum cleaner, the combination of a casing having a nozzle, sleeves supported in the nozzle ends, wheels mounted on said sleeves and projecting below the nozzle, thimbles mounted in said sleeves and endwise removable therefrom, and a brush structure in the nozzle having its spindle mounted in said thimbles.



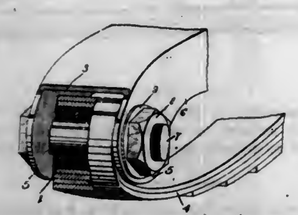
16. In a portable vacuum cleaner having a nozzle, a horizontally-extending air passage therefrom, a fan chamber into which said air passage opens, and a hose-tool receptive orifice constantly open to said passage, a shutter for closing and opening said air passage between said orifice and the nozzle, and separate means for closing said hose-tool receptive orifice from the exterior thereof.

1,458,940. WEATHERPROOF ELECTRIC HEATER. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Oct. 18, 1921. Serial No. 508,543. 11 Claims. (Cl. 219—34.)



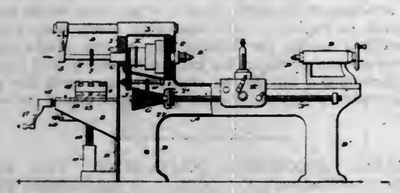
1. A waterproof electric heater comprising a heating conductor, an enclosing and insulating waterproof tube therefor and an external metallic mass applied to the outside of said tube.

1,458,941. APPARATUS FOR TESTING THE FADING ACTION OF LIGHT. CLARENCE W. JAMESON, Lombard, Ill. Filed May 23, 1921. Serial No. 471,946. 9 Claims. (Cl. 88—14.)



1. Apparatus of the class described including an upright hollow light shield open for the circulation of air therethrough; in combination with an electric lamp carried by the light shield with its lighting center below the same; a carrier movable along the light shield to elevate or lower an object upon the carrier with reference to the lamp and light shield; and an electrical heat producing resistance included in the circuit of the lamp and located within light shield.

1,458,942. BROMO-SELTZER DISPENSER. JOHN J. KEGLER, Cedar Rapids, Iowa. Filed Jan. 29, 1921. Serial No. 441,069. 3 Claims. (Cl. 221—106.)



1. In a dispensing device, a receiving chamber, a rotative cup mounted therein, a spiral cam connecting with the cup, and a lever co-operating with said cam to reverse the position of the cup.

1,458,943. BUSHING. J STANLEY KINNEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 10, 1918. Serial No. 244,193. 5 Claims. (Cl. 64—10.)

2. A bushing, washer or the like comprising superimposed convolutions of duck impregnated with a hardened phenolic condensation product containing graphite.

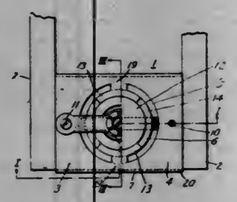
1,458,944. COMBINED MILLING AND TURNING MACHINE. JOHN D. KOHLMANN, Milwaukee, Wis. Filed Aug. 12, 1920. Serial No. 403,014. 1 Claim. (Cl. 29—27.)

In combination with a lathe, a knee mounted for vertical movement upon one leg of the lathe, a saddle for longitudinal movement upon said knee, a milling table mounted upon said table and adapted to move transversely thereof, a mill tool mounted to turn with the spindle of the lathe, a vertical feed screw arranged beneath said knee, a drive shaft journaled upon said knee, a flexible shaft connected thereto and driven from the feed mechanism of the lathe, a secondary shaft carried by said knee and driven by said shaft, a jack shaft carried by said knee adapted to transmit motion from said secondary shaft to said vertically arranged feed screw, a feed screw arranged longitudinally of the knee in connection with the saddle, said feed screw being geared to the secondary shaft whereby the saddle may be actuated automatically, a feed screw connected with said milling table, a worm suitably keyed to said motion drive shaft, a worm suitably keyed to said milling table feed screw and in communication with said worm whereby the milling table is moved transversely of the knee.

1,458,945. REENFORCED-CONCRETE RAILROAD TIE. JULIUS KRUTTSCHNITT, New Canaan, Conn. Filed Sept. 29, 1920, Serial No. 413,610. Renewed May 4, 1923. 7 Claims. (Cl. 238—92.)

1. A reenforced concrete railroad tie having in its upper surface a plurality of recesses, each recess being

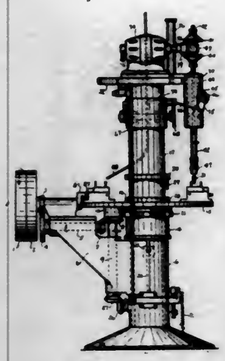
adapted to receive a pair of blocks, means on the tie for holding each of the blocks from movement in one



direction transverse to the axis of the tie and rail-fastening means secured to the blocks adapted to prevent movement of each said block in the opposite direction.

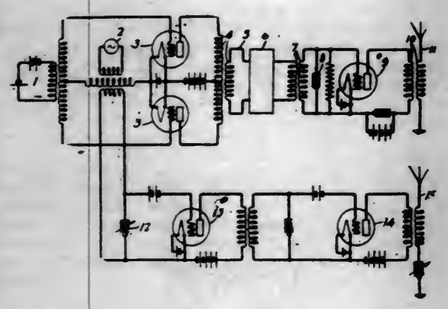
1,458,946. REENFORCED-CONCRETE RAILROAD TIE. JULIUS KRUTTSCHNITT, New Canaan, Conn. Filed Mar. 22, 1922. Serial No. 545,641. 3 Claims. (Cl. 238—89.)

1. A reenforced concrete railroad tie having in its upper surface a plurality of recesses, the axes of which are arranged at an angle to each other, each recess being adapted to receive a rail supporting block, each recess comprising means for holding one of the blocks from movement except along the axis of the block, and means for fastening a rail to the block arranged with the rail to prevent movement of each such block along its own axis.



1,458,947. MEASURING INSTRUMENT. PAUL MACGAHAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1918. Serial No. 254,210. 5 Claims. (Cl. 171—95.)

1. In a measuring instrument, the combination with field-magnet pole pieces and a cylindrical magnetizable member having a cut-away portion at one end thereof, of means secured to the ends of the pole pieces for so engaging the cut-away portion of the cylindrical member as to acurately center the same between the pole pieces.

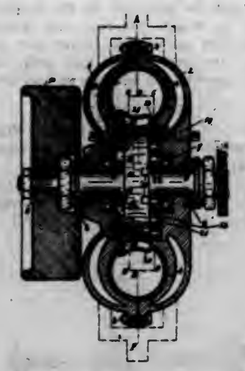


1,458,948. AUTOMATIC MULTIPLE-TAPPING MACHINE. PETER MEYER, Newark, N. J. Filed Nov. 18, 1921. Serial No. 516,057. 7 Claims. (Cl. 10—130.)

4. In combination a series of tapping spindles, a reversing device therefor, a work table, a series of work holders secured thereto, a constantly rotating member, means operated by said member to intermittently position said work table, other means connected to said member to move said work table toward and from said spin-

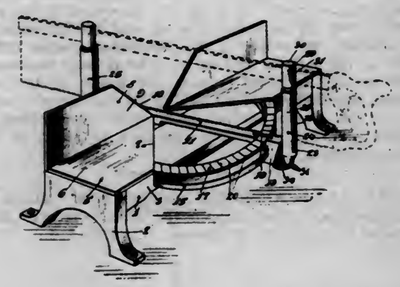
dles, a locking device to prevent rotation of said work table during its movement toward and from said spindles, and means connected to said rotating member to operate said reversing means.

1,458,949. CARRIER RADIOTELEPHONE SYSTEM. HAROLD W. NICHOLS, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 7, 1922. Serial No. 527,792. 12 Claims. (Cl. 250—6.)



2. A method of radio telephone transmission which comprises producing a wave modulated in accordance with speech frequency signals, radiating one side band component, and separately radiating a wave of the carrier frequency.

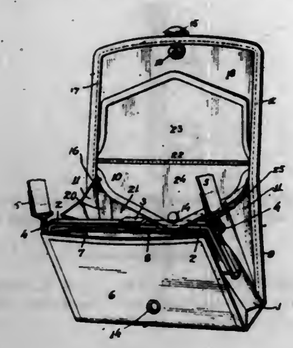
1,458,950. EXPLOSION ROTATING ENGINE. LOUIS ILDEVERT POIRMEUR, Meru, France. Filed Feb. 13, 1920. Serial No. 358,427. 5 Claims. (Cl. 123—11.)



5. In an explosive engine, a casing having a cylinder and a central cavity, pistons in the cylinder, a shaft extending through said casing and cavity, a disk secured to the shaft and rotating within the cavity, radially

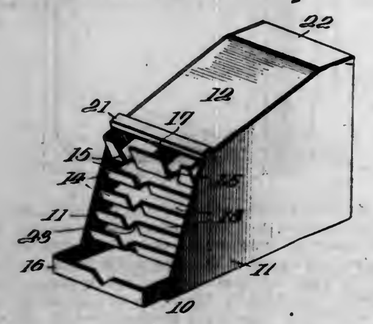
moving means associated with the walls of the cavity for locking the pistons in engagement with the casing,

and a second radially moving means associated with another face of the cavity to lock the pistons in engagement with the disk.



1,458,951. MITER BOX. HARRY POOLE and GEORGE P. ROMAIN, Dillon, Mont. Filed Sept. 15, 1921. Serial No. 500,937. 2 Claims. (Cl. 143—88.)

1. A miter box comprising a bed plate, a saw-supporting bar provided with depending bearings one of said bearings being swiveled to the bed plate whereby the saw-supporting bar may have pivotal movement in a plane parallel with the plane of the bed plate, a shaft journaled in said bearings, saw guides secured to the ends of said shaft and projecting upwardly radially therefrom, means for securing said shaft in a set position, means for securing the saw-supporting bar in a set position, said bar having a recess in its upper side, a guard plate concentric with the pivot of the bar passing through said recess, and a marker on the upper side of the bar bridging said recess.



1,458,952. POCKETBOOK. SAMUEL J. PROKESCH, New York, N. Y. Filed Sept. 23, 1922. Serial No. 590,054. 2 Claims. (Cl. 150—36.)

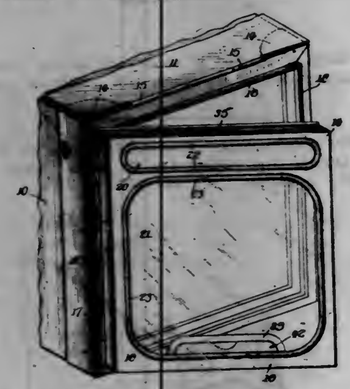
1. A pocketbook comprising a bag-shaped central body, a front and a back attached thereto, the back having a flap extending therefrom to form a lid or cover, the back having a piece secured thereto to form an additional pocket and the flap having a piece secured thereto to form another additional pocket, said pockets presenting their mouths to each other, a piece secured between the mouths of said pockets and forming a pair of covers,

one of which is adapted to close each of said pockets, and fastening devices to secure said covers in closing position.

1,458,953. STATIONERY CABINET. EDNA G. ROBESON, Atlanta, Ga. Filed Aug. 9, 1922. Serial No. 580,687. 2 Claims. (Cl. 211—37.)

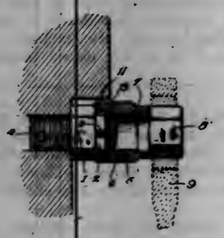
2. A stationery cabinet comprising, in combination, side members having their forward edges sloping rearwardly, shelves between said side members sloping downwardly toward the front of the cabinet, fronts upon and perpendicular to said shelves, their upper edges terminating in alignment with the next higher shelf and flush with the edges of said side members whereby each successively higher front is off set rearwardly to provide a space between the upper edge of each front and the lower edge of the front thereabove, a downwardly and forwardly sloping top upon said cabinet, and a ledge to prevent sliding of an article placed thereon.

1,458,954. ROLLER BEARING. LOUIS ROUANET, Ivry-Port, France, assignor to Compagnie d'Applications Mecaniques, Paris, France. Filed June 23, 1920. Serial No. 391,193. 1 Claim. (Cl. 64—62.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



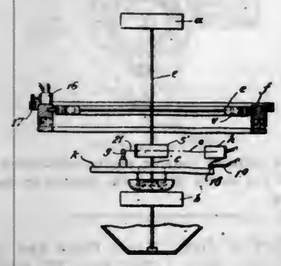
A cage for cylindrical roller bearings comprising an annular sheet piece provided in its cylindrical part with rectangular openings through which the rollers are adapted to extend and on both rims with rectangular notches in line with the said openings, the sheet of metal of said annular piece being folded at right angles

towards the exterior along the lines marking the side edges of said openings and along the lines marking the inner sides of said notches, in such manner that the



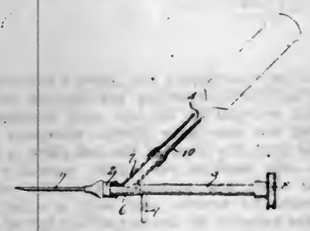
longitudinal strip left between said openings and said notches form walls covering the transverse sides of the rollers.

1,458,955. RECEPTACLE COVER. JACOB I. RUSSAKOV, Chicago, Ill. Filed May 29, 1922. Serial No. 564,311. 5 Claims. (Cl. 220—80.)



1. In a receptacle cover of the character described, the combination of a lid having a sight opening therein, a piece of transparent material substantially surrounded by lid parts of the edges of the transparent plate and overlying the sight opening, and a spring member extending substantially from side to side of the cover and overlying the plate and pressing upon it, the spring member being mounted at one side of the lid for swinging movements away from and toward the plate, and means at the opposite side of the lid for holding the spring member readily releasable in its holding position.

1,458,956. SOCKET WRENCH. JOHN SAYER, Stone Lake, Wis. Filed Apr. 18, 1922. Serial No. 555,191. 1 Claim. (Cl. 81—121.)

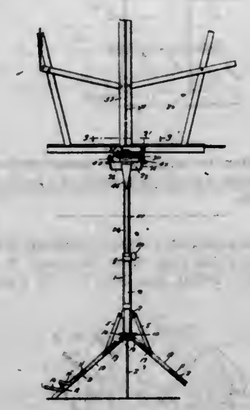


A wrench socket comprising a body provided with an opening extending longitudinally therein and enlarged in diameter at one end of the body to provide a socket to accommodate the notched extension of a castellated nut, and lugs formed radially within the said socket and extending across the bottom wall thereof to engage in said notches, the inner edges of said lugs being flush with the wall of the opening in the body whereby the said opening will be adapted, at the initial application of the socket, to receive the bolt onto which the nut is threaded and thus center the socket and permit of its rotation about the axis of the bolt until the lugs have been brought opposite the notches in the nut.

1,458,957. COURSE DRAFTER FOR MARINE AND AERONAUTIC VESSELS. RICHARD HERMANN SCHACHENMEIER, Karlsruhe, Germany. Filed Aug. 20, 1919. Serial No. 318,804. 8 Claims. (Cl. 234—26.5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. A course-drafter for recording the track traversed by a vessel by integration of the equations of motion comprising, a gimbal, a pendulum suspended in the said gimbal with its weight at the top and its bar pointing downwards, the weight of the pendulum opposing deflections of the vertical axis of the gimbal from its normal position, and members between the weight of the pendulum and the gimbal for taking up the forces exerted due to the mass of the pendulum whilst maintaining its vertical position when the direction or speed of the vessel changes.

1,458,958. BLEEDING APPARATUS. RALPH F. SCHNEIDER, Jersey City, N. J. Filed Oct. 21, 1921. Serial No. 511,718. 3 Claims. (Cl. 128—276.)



1. An apparatus of the class described, including a handle having a passage therein adapted to communicate with a hypodermic needle, a rigid nipple fixed to the handle and communicating with the passage, and a flexible airtight coupling member adapted to hold the reduced breakable end of a vacuum tube within said nipple.

1,458,959. MUSIC-LEAF TURNER. SAMUEL TRACHTENBERG, Cleveland, Ohio. Filed Nov. 7, 1921. Serial No. 513,355. 4 Claims. (Cl. 84—514.)

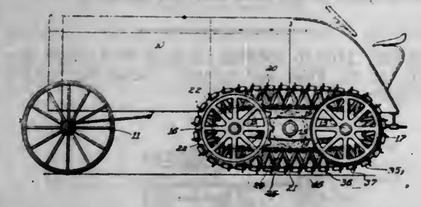
1. In a music-leaf turner the combination of a support, an upright shaft mounted thereon, pedals connected to the shaft to turn the same in either direction, two

sets of oppositely swinging arms mounted on the support, and means actuated by successive turns of the shaft to swing the arms of either set successively in

opposite directions, said means including pawls and a series of stopped turning parts geared to the arms respectively and adapted to be engaged in succession by the pawls respectively.

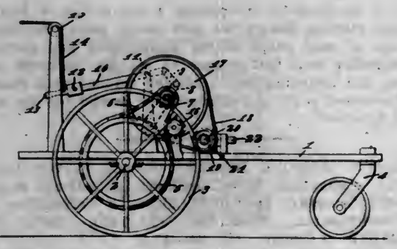
1,458,960. BAR SPACER. WILLIAM E. WHITE, Chicago, Ill. Filed June 25, 1920. Serial No. 391,775. 6 Claims. (Cl. 72—122.)

1. In a spacing device, the combination of a single, continuous straight length of wire, and chairs also composed of wire, said chairs being of U-shape and having a relatively long horizontal base which extends transversely of said wire and which is welded to the wire at the middle portion of said base member, substantially as described.



1,458,961. TOOL. SELDON T. WILLIAMS, Philadelphia, Pa. Filed Mar. 10, 1921. Serial No. 451,336. 4 Claims. (Cl. 81—1.)

1. An impact tool, including a tool carrying element, a striking element, and a helical spring having closely spaced convolutions enclosing said elements and connected thereto at its ends, whereby to forcibly direct the



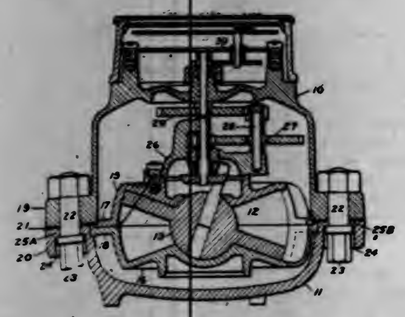
striking element against the tool carrying element when the spring is tensioned and released, and to function as a guide and enclosure for the striking element.

1,458,962. TRACTION MECHANISM. ISAAC H. ATHEY, Chicago, Ill., assignor, by mesne assignments, to Athey Truss Wheel Co., Chicago, Ill., a Corporation of Illinois. Filed May 29, 1920. Serial No. 385,155. 18 Claims. (Cl. 305—8.)

10. An endless supporting and traction chain for vehicles, comprising a plurality of track links pivotally connected together, a truss arm extending inwardly from each track link, a pair of truss links connecting each truss arm with each adjacent truss arm, and means for causing an initial deflection of said links upon the approach of the inner ends of said truss arms toward each other, the said means being ineffective after causing said initial deflection to cause further deflection of said links.

1,458,963. TRACTOR. RILEY J. AULTMAN, Ovid, Mich. Filed May 20, 1921. Serial No. 471,219. 2 Claims. (Cl. 180—70.)

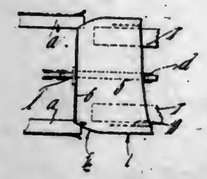
1. In a tractor the combination with independently rotatable supporting wheels, of separate drive pulleys,



separate belt wheels, power transmitting connections between the belt wheels and the respective supporting wheels, belts for transmitting motion from the pulleys to the respective belt wheels, and means for shifting the belt wheels separately or simultaneously to loosen the belts and to bring the belt wheels into frictional driving contact with the respective pulleys, and yielding means for holding the belts normally taut.

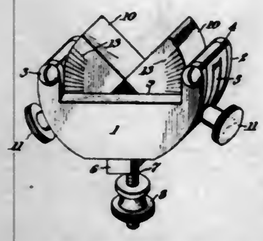
1,458,964. PROCESS OF MANUFACTURE OF COKE FOR METALLURGICAL USES. ANDRÉ HENRI BAILLE-BARRELLE, Paris, France. Filed May 28, 1921. Serial No. 473,341. 4 Claims. (Cl. 202—8.)

4. In a process of manufacture of metallurgical coke, the operation whereby the heating is so effected that at the instant when the surface of the coal is at the temperature of agglomeration T°, the center of the mass shall be at the temperature T—N, N being approximately equal to the product of 15° C. by one-half the thickness of the mass measured in centimeters, and that subsequently the temperature difference between the surface and the center of the mass shall not exceed N°.



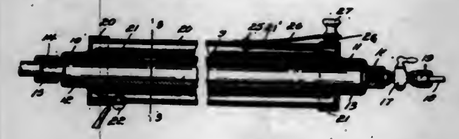
1,458,965. LIQUID METER. ROBERT S. BASSETT, Buffalo, N. Y. Filed Apr. 7, 1922. Serial No. 550,365. 3 Claims. (Cl. 73—98.)

1. A liquid meter comprising a top casing, a bottom casing, meeting flanges for said casing parts, the flange of one of said parts having perforations and recesses surrounding said perforations to provide frangible portions, and fastening means passing through said flanges and recessed portions; substantially as and for the purpose described.



1,458,966. PLAQUE BOARD. ALONZO LINTON BAUSMAN, Springfield, Mass., assignor to National Equipment Company, Springfield, Mass., a Corporation of Massachusetts. Filed Dec. 11, 1920. Serial No. 430,017. 5 Claims. (Cl. 34—17.)

5. A plaque-board, comprising, a relatively thin flat body portion of metal to support the candy laden plaques, and having at opposite corners convergent portions forming cams, runners provided on the under surface of the body portion and extending along the side edges thereof between said convergent portions, and a cam forming

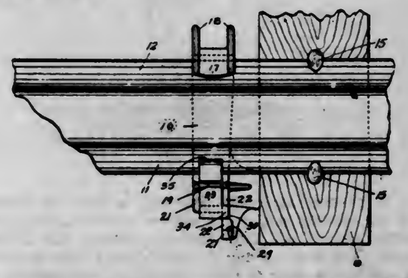


convergent portion to connect the lower surface of each end of each runner to the underside of the body portion adjacent its ends.

1,458,967. ATTACHMENT FOR DENTAL ARTICULATORS. JOSEPH BECKER, West Hoboken, N. J. Filed June 1, 1922. Serial No. 565,114. 8 Claims. (Cl. 32—1.)

8. An attachment for dental articulators, comprising side-plates, and a longitudinally slotted arcuate rim connecting said side-plates the whole constituting a shell, a sector mounted in said shell and a sector-adjusting device projecting through and movable in the slot in the rim and engaging the sector and rim, and a block attached to the shell and closing one of its ends, said block having a beveled end.

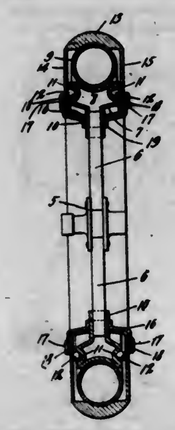
1,458,968. DECARBONIZING TORCH. REGNALD R. BEEZLEY, Memphis, Tenn. Filed Apr. 5, 1921. Serial No. 458,754. 4 Claims. (Cl. 158—27.4.)



1. A decarbonizing torch comprising a gas chamber adapted to communicate with the source of supply, a valve for controlling the gas from said chamber, a torch nozzle communicating with said chamber and controlled by said valve and adapted to abut against the wall of an engine cylinder, or the piston within such cylinder, and an electrical connection between said nozzle and the source of electrical supply and including a choke coil.

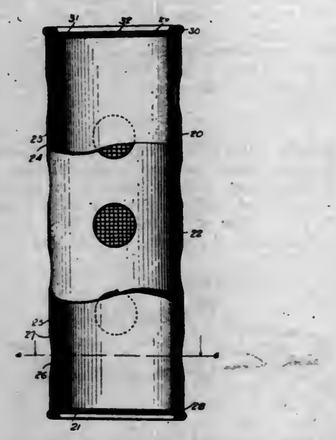
1,458,969. PROCESS OF OXIDIZING AMMONIA AND RECOVERING ACID AS ALKALI-METAL SALTS. FELICE BENSA, Genoa, Italy. Filed Aug. 30, 1920. Serial No. 407,036. 1 Claim. (Cl. 23—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

The herein described process of oxidizing ammonia and recovering acid as alkali-metal salts, said process consisting in subjecting a layer of metalized asbestos and separate layers of oxide of copper, oxide of iron, and oxides of rare earths to the action of a mixture of steam,



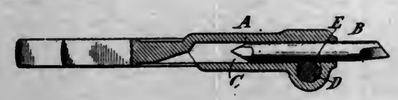
hot ammoniacal gases and air in a retort maintained at a temperature of from 600° to 800° C., passing said mixture of gases through said layers, and then passing said gases to receptacle containing alkaline carbonates, said receptacles being maintained at a temperature of from 300° to 350° C.

1,458,970. RAIL ANTICREEPER. BENJAMIN B. BETTS, St. Louis, Mo. Filed Sept. 23, 1921. Serial No. 502,681. 8 Claims. (Cl. 238—324.)



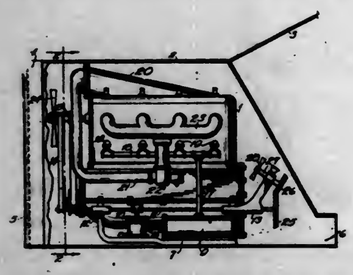
1. A rail anti-creeper comprising a base, a jaw formed integral therewith, a projection having an opening formed on said base, a key of spring material adapted to be inserted through said opening for securing the anti-creeper to a rail, means for preventing the accidental removal of said key when in locked position, and means for holding the key and anti-creeper together.

1,458,971. METAL-CASING WHEEL. CHARLES BLACKWELL, St. Louis, Mo. Filed Mar. 25, 1922. Serial No. 546,753. 1 Claim. (Cl. 152—35.)



In a resilient wheel construction, a hub, spokes radiating from the hub, a hollow felloe connecting the spokes, said hollow felloe having depressions formed in the side walls thereof, balls positioned within the depressions, said felloe having a curved portion providing a seat, a ground engaging section including lateral flanges, said balls adapted to contact with the lateral flanges to permit of movement of the felloe within the ground engaging section, a pneumatic tube disposed within the ground engaging section and resting in the seat formed in the felloe, collars positioned on the spokes, said collars having integral arms embracing portions of the ground engaging section, and means for connecting the arms to the ground engaging section to restrict rotary movement of the ground engaging section with respect to its spokes.

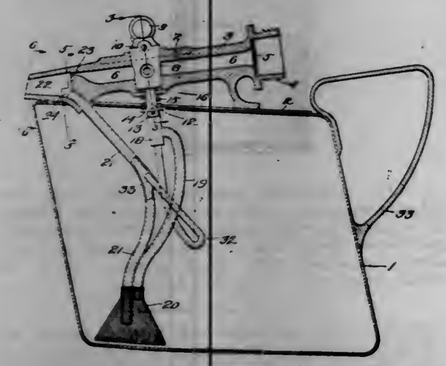
1,458,972. FIRE EXTINGUISHER. PAUL BRAUDE, New York, N. Y. Filed Apr. 8, 1921. Serial No. 459,679. 3 Claims. (Cl. 169—36.)



1. A fire extinguisher including an inner fusible and frangible container, a fire extinguishing fluid therein, and a protective shell therefor consisting of inner and outer layers having aligned perforations, and an intermediate foraminous layer which serves to cover the aligned perforations of the shell layers.

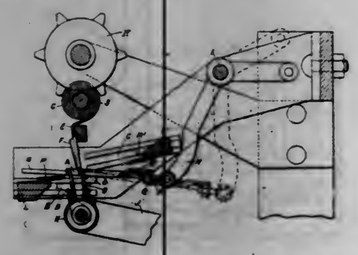
1,458,973. TOOL HOLDER AND TOOL. GEORGE W. BUFFORD, Buffalo, N. Y., assignor to J. H. Williams & Co., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 2, 1919. Serial No. 314,982. 2 Claims. (Cl. 29—96.)

1. The combination of a tool holder and a tool, the tool being circular in cross-section and the tool holder having a socket approximately conforming thereto, and a cam adapted to engage the tool at any point in its circumference, the cam having a curved face which is concaved to fit the side of the tool.



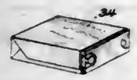
1,458,974. COMBINED COOLING AND CARBURETING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. ALBERT JOHN CHARLTON, Lowden, Iowa. Filed Aug. 16, 1920. Serial No. 403,669. 2 Claims. (Cl. 123—171.)

1. The combination with an internal combustion engine having a cooling jacket, a carburetor and an aux-



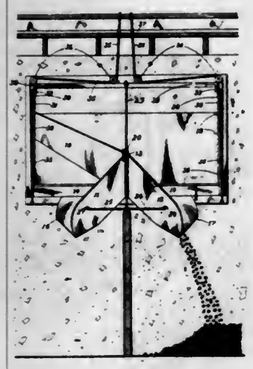
iliary shaft, of a compression tank, an air compressor for maintaining air under pressure in said tank, said compressor being operatively connected with said auxiliary shaft, a plurality of contracted inlets, one connected to each cylinder portion of said cooling jacket and communicating with said compression tank, and a relatively large discharge pipe communicating with the upper part of said cooling jacket and connected to the air intake port of said carburetor.

1,458,975. MIXING APPARATUS. WILLIAM CLAUSON, Everett, Mass., assignor to The Friendly Service Co., Boston, Mass., a Corporation of Massachusetts. Continuation of application Serial No. 329,148, filed Oct. 7, 1919. This application filed Sept. 24, 1920. Serial No. 412,497. 8 Claims. (Cl. 299—84.)



1. A device of the character described comprising a container; a main conduit affording a direct delivery from a source of supply; a second conduit connecting with said source of supply and delivering into said container; a mixture delivering conduit leading from said container; valvular means for controlling the flow through the main and second conduits, and a by-pass conduit having its inlet end connected with said second conduit between the discharge end of the latter and said valvular controlling means and its outlet end connected with said mixture delivering conduit so as to constitute an injector for causing a current in said mixture delivering conduit toward the discharge end of the latter.

1,458,976. LOOM FOR WEAVING TUFTED FABRICS. ARTHUR DAVIS, Kidderminster, England, assignor to Thomas Bond Worth & Sons Limited, Stourport, England. Filed Sept. 4, 1918. Serial No. 252,601. 1 Claim. (Cl. 139—7.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

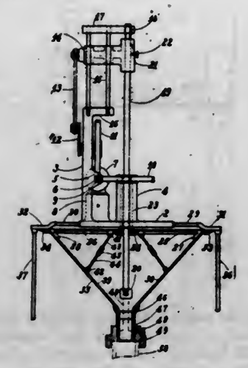


In a weaving machine for tufted fabrics, tubes constituting guiding members for pile yarns, means consisting of blades at the discharge ends of the guiding members for engaging the yarn to prevent its bending, and grippers movable with respect to said blades for grasping the yarn.

1,458,977. PACKAGE STRUCTURE AND METHOD OF MAKING THE SAME. HILARION DE ESCOBALES, New York, N. Y., assignor to H. Escobales Co. Inc., New York, N. Y., a Corporation of New York. Filed Sept. 3, 1920. Serial No. 408,055. 8 Claims. (Cl. 229—7.)

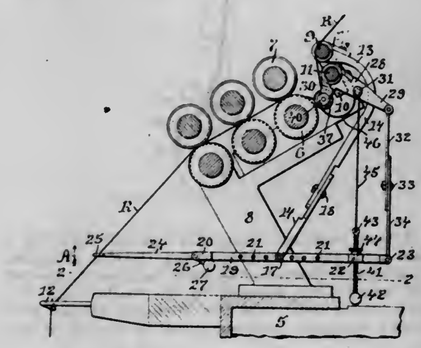
1. A package structure including a cover extending over the delivery end, and a narrow reinforcing strip extending around two sides and the delivery end of the package, the strip having a perforation at the delivery end sufficiently large to remove through it the articles in the package when the cover over the perforation is perforated.

1,458,978. COAL CHUTE. EDWARD FRANCES HEMING, Swan River, Manitoba, Canada, assignor of one-fourth to James Magen Iredale, Winnipeg, Manitoba, Canada. Filed Dec. 28, 1921. Serial No. 525,529. 4 Claims. (Cl. 193—31.)



1. A coal chute comprising a frame adapted to be located in an opening in a wall, a movably mounted body, side members thereon, pivotally mounted chutes, means for controlling the angle of the chutes, said means being movable inwardly or outwardly as occasion requires.

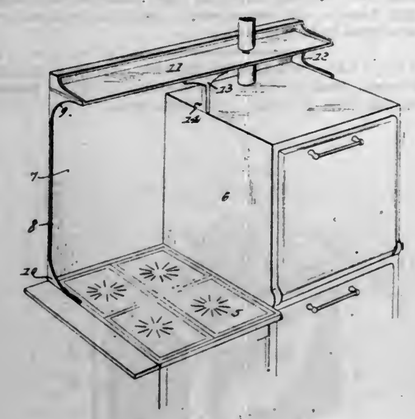
1,458,979. BOTTLE-FILLING MACHINE. GEORGE A. HOWE and JULIUS L. KOSMANN, Pittsburgh, Pa. Filed Oct. 22, 1921. Serial No. 509,574. 5 Claims. (Cl. 226—72.)



1. In a device of the kind described, the combination of a conical hopper provided with a discharge opening therein, a rotary spider, arms attached to said spider and projecting into the hopper, the entire length of said arms lying adjacent and at a substantially uniform distance

from the inner surface of the hopper and constantly extending into the proximity of the discharge opening, a

reciprocating plunger in the hopper disposed between the lower extremities of said arms for discharging material therefrom.

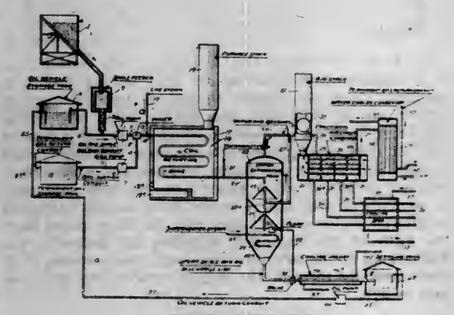


1,458,980. ROVING STOP MOTION FOR SPINNING FRAMES. GREGOIRE K. KAPATAS, Providence, R. I. Filed Oct. 21, 1922. Serial No. 596,107. 4 Claims. (Cl. 117—32.)

1. In a spinning frame having a drawing roll standard, drawing rolls and a bar on the standard, a roving stop-motion having a suspension support secured to the standard bar, and supporting the operative parts of the stop-motion, a rotatable member having an eye through which the roving passes and forming a part of the stop-motion, said rotatable member being adapted to engage with one of the drawing rolls on the breaking of the roving, whereby on the breaking of the roving, the roving will be wound onto the rotatable member of the stop-motion, for the purpose as described.

1,458,981. COOKING STOVE. MARY A. KELLER, Winona, Minn. Filed Aug. 7, 1922. Serial No. 580,184. 2 Claims. (Cl. 126—39.)

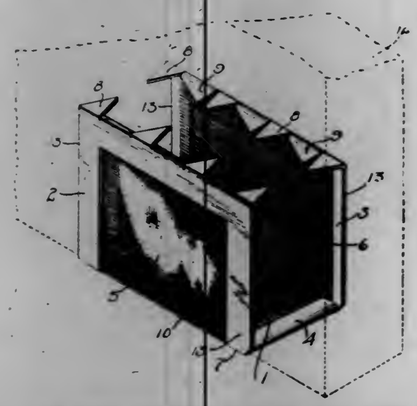
1. In a cooking stove, a burner section and an oven adjacent thereto, a back section supported at the rear of the oven and burner section, brackets extending outwardly at the top and bottom of the back at one end, one of the said brackets resting on the burner section and



constituting a brace for the back, a shelf supported by the upper bracket, and means for supporting the shelf above the oven in spaced relation thereto.

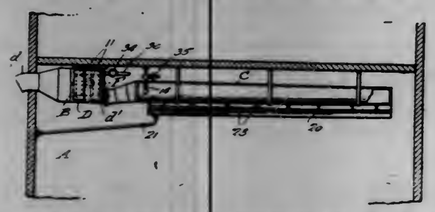
1,458,982. SANITARY SOAP BOX. EDWIN JAMES KENDALL, Beaver Cove, British Columbia, Canada. Filed Dec. 28, 1921. Serial No. 525,460. 1 Claim. (Cl. 146—9.)

A device of the character stated comprising a cutter, its operating shaft, a hollow bracket, and a retaining nut for the operating shaft, the said hollow bracket allowing access to said retaining nut for the purpose of assembling and disassembling the device.



1,458,983. PROCESS AND APPARATUS FOR TREATING OIL SHALES. WILLIAM K. KIRBY, Golden, Colo. Filed Sept. 19, 1921. Serial No. 501,788. 8 Claims. (Cl. 196—21.)

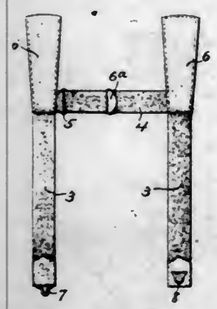
1. The process of producing shale oil, which includes the steps of causing a properly proportioned charge of finely divided oil shale and an entraining high boiling point oil to flow in a stream of restricted cross-sectional



area through an analogously restricted retorting zone, supplying heat to said retorting zone of an intensity to liberate the desired values of said shale in the form of oily vapors, and subsequently liquefying said vapors as separated from said shale.

1,458,984. SCREENED DRAIN. THOMAS CLARK KUNKEL, Madrid, Nebr. Filed June 3, 1922. Serial No. 565,597. 2 Claims. (Cl. 156—14.)

1. The combination with a screen frame having an opening in the bottom thereof, of a U-shaped open frame arranged to receive the bottom portion of the screen frame, and being provided with projections extending inwardly toward the screen frame for attachment thereto, and wire netting carried by the U-shaped frame and arranged to cover said opening.

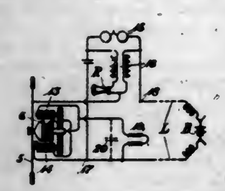


1,458,985. AIR-CONDITIONING APPARATUS. LEO L. LEWIS, Plainfield, N. J., assignor to Carrier Engineering Corporation, Newark, N. J. Filed Sept. 1, 1921. Serial No. 497,752. 10 Claims. (Cl. 183—25.)

1. In an air conditioning apparatus, the combination of a horizontally extending air duct having discharge openings along the bottom thereof, a fan arranged to deliver air to said duct and having inlet connections for return air from the room in which said duct is located and for outside air, adjustable dampers controlling said outside and return air inlets, nozzles and connections adapted to spray water under pressure into said duct in advance of said fan, a water drain trough extending lengthwise under said air duct with its sides spaced from the walls of the duct, and deflectors for deflecting the discharging air downwardly from said duct causing it to issue laterally through the spaces between the duct and said trough.

1,458,986. HOSE SUPPORTER. SARAH E. MCCREARY, Highland, Kans. Filed Oct. 12, 1920. Serial No. 416,379. 1 Claim. (Cl. 241—1.)

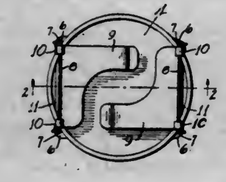
A hose supporter, comprising two elastic straps provided at their lower ends with means for connecting them together below the knee of the wearer, an elastic cross strap connecting the upper ends of said first mentioned straps in position to engage the upper portion



of the hose of the wearer, and an inelastic strap secured to the upper end of each of said first mentioned straps and each of said inelastic straps adapted for independent connection with a garment of the wearer.

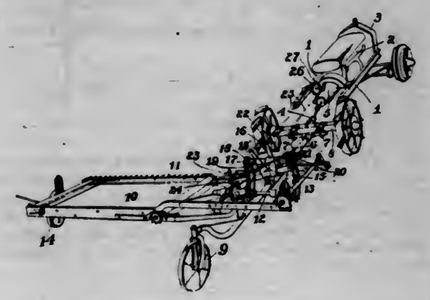
1,458,987. GARDEN IMPLEMENT. PASQUALE DELLA MONICA, Harrison, N. Y. Filed Apr. 28, 1921. Serial No. 465,273. 4 Claims. (Cl. 294—49.)

1. A hand implement comprising a handle including a wooden core, and a metallic casing therefor extending the entire length thereof, and a blade including a threaded shank arranged for insertion in the wooden core, the metallic casing being bent into frictional contact with the shank to prevent rotation thereof in relation to said core.



1,458,988. MEANS FOR EQUALIZING TRANSMISSION OVER LINES OF DIFFERENT ELECTRICAL CHARACTERISTICS. LYMAN F. MOREHOUSE, Montclair, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 29, 1918. Serial No. 260,155. 9 Claims. (Cl. 179—70.)

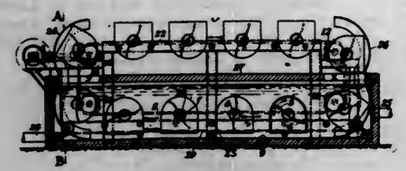
1. In a signaling system, transmission lines of different electrical characteristics, telephone transmitters for each



line, a common source of current supply for said transmitters, and means associated with said transmitters to automatically vary the efficiency thereof in accordance with the current supplied thereto.

1,458,989. LOCKING DEVICE FOR FRUIT CANS OR THE LIKE. HENRY H. ORDUNG, Laporte, Ind., assignor of one-third to Joseph Wade and one-third to Gibson T. Sharp, both of Laporte, Ind. Filed Apr. 13, 1922. Serial No. 552,144. 4 Claims. (Cl. 215—87.)

1. A device of the type described comprising a ring having lugs bent angularly with respect to the plane of the ring, U-shaped wires having their ends pivotally carried by said lugs, and clamping members pivotally secured to said wires, said members having angularly bent portions disposed adjacent to said wires.



1,458,990. FARM IMPLEMENT. CHARLES OWENS, Chattanooga, Tenn. Filed July 14, 1919. Serial No. 310,600. 12 Claims. (Cl. 56—22.)

1. In combination with a tractor and its traction wheels, a bar pivotally connected at its front end to the tractor to rise and fall in a vertical plane in relation thereto, said bar trailing behind the traction wheels of the tractor, a caster wheel at the rear end of said bar, a standard having a pivotal connection with said bar to swing laterally in relation thereto and extending up therefrom, a binder bull wheel shaft journalled in the upper end of said standard, a reaper frame hung from said bull wheel shaft and a driving connection extending rearwardly from the tractor for driving the mechanism located on the reaper, substantially as described.

1,458,991. COOLING AND FREEZING OF FISH AND THE LIKE. JEAN JULIEN PIQUÉ, London, England. Filed Mar. 22, 1922. Serial No. 545,816. 6 Claims. (Cl. 99—2.)

1. In an apparatus for cooling or freezing fish and like foodstuffs, the combination with a receptacle into which the fish may be tumbled, said receptacle having the shape of an oblong box without a lid and being of U-section, of a paddle extending substantially the length of the receptacle and fitting more or less closely against the semi-cylindrical sides thereof, means for rotating said paddles, curved blades arranged radially on said paddles, a conveying chain cooperating with said receptacle, and means for alternately keeping the receptacle in a fixed position on said conveying chain and permitting rotational freedom between the receptacle and said chain, substantially as set forth.

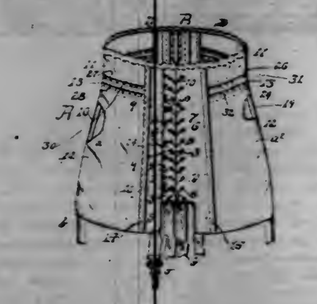
6. In an apparatus for cooling or freezing fish and the like, the combination with a tank containing brine and the like, a plurality of receptacles for fish and the like, an endless chain for conveying said receptacles through said cooling tank, rotatable means within each receptacle, means for successively and automatically charging each receptacle with a predetermined quantity of fish and the like, and means for automatically emptying said receptacles when they leave the cooling tank, of a glazing tank arranged to receive the frozen contents from said receptacles, and an endless conveyer for carrying said contents through the glazing tank and out therefrom and delivering the same into boxes and the like for despatch or storage, substantially as set forth.

1,458,992. PRODUCTION OF CAMPHORIC ACID. WALTER T. SCHEELE, Hackensack, N. J., assignor to H. Mortimer Specht, New York, N. Y. Filed Nov. 24, 1920. Serial No. 426,131. 14 Claims. (Cl. 260—133.)

1. The process of making camphoric acid which consists in treating pinene with an alkaline peroxide, and treating the product with water.

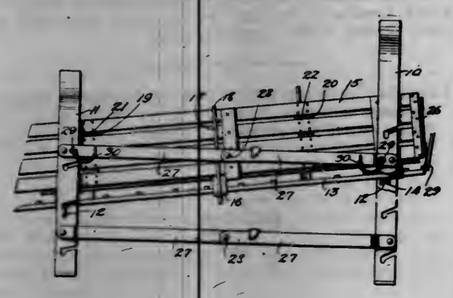
1,458,993. PRODUCTION OF CAMPHOR. WALTER T. SCHEELE, Hackensack, N. J., assignor to H. Mortimer Specht, New York, N. Y. Original application filed Nov. 24, 1920, Serial No. 426,131. Divided and this application filed Mar. 30, 1921. Serial No. 457,035. 9 Claims. (Cl. 260—133.)

1. The method of reducing camphoric acid to camphor which consists of treating the camphoric acid with a finely divided readily oxidizable metal.



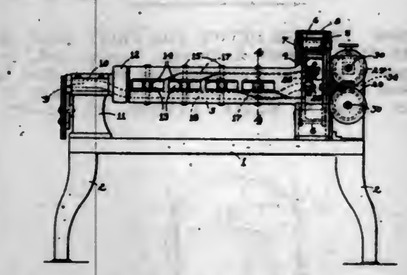
1,458,994. ATTACHMENT FOR ELECTRIC LAMPS. LAMBERT SCHMIDT, Brooklyn, N. Y. Filed June 18, 1921. Serial No. 478,694. 1 Claim. (Cl. 240—128.)

An attachment for electric lamps comprising a sheet metal annulus of angular form in cross section, having a horizontally disposed flange adapted to surround a lamp plug and provided with a split flange extending from the inner edge of said horizontal flange and affording a



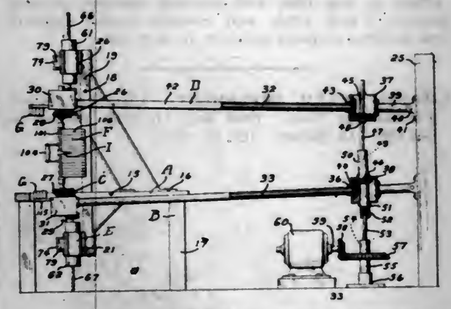
series of resilient tongues for frictional clamping engagement with the plug, said annulus also having a second flange at the outer edge of said horizontal flange inclined inwardly in convergent relation to said split flange and of greater width than the latter, said inclined flange being adapted for frictional clamping engagement with the terminal flange of a lamp shade to support said shade in applied position relative to the lamps.

1,458,995. CORSET. CHARLES H. SCHOPBACH, Aurora, Ill., assignor to International Corset Company, Aurora, Ill., a Corporation of Illinois. Filed Oct. 15, 1921. Serial No. 507,850. 2 Claims. (Cl. 2—73.)



2. A front laced corset, each half of which comprises a main body or hip section, a relatively narrow top section, and an intermediate ventilating section located at the waistline and vertically disposed stiffening strips extending from the top to the bottom of the corset, each ventilating section having a horizontally extending central member and a plurality of spaced apart vertical members extending transversely of the first mentioned member, the top and bottom ends of the transverse members being secured to the adjacent margins of the top and bottom sections, the ends of the horizontally extending member being secured to the front and rear stiffening strips.

1,458,996. HOG RINGING AND LOADING CHUTE. BERT R. SIOLIN, Aurelia, Iowa. Filed June 28, 1922. Serial No. 571,481. 3 Claims. (Cl. 119—82.)



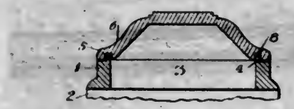
1. A device of the class described including arched supports, a platform extending between and adjustable on the supports, and foldable connections between the supports.

1,458,997. WINDING AND CABLING MACHINE. FRANK H. SLEEPER, Worcester, Mass., assignor to Sleeper & Hartley, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed July 8, 1921. Serial No. 483,265. 11 Claims. (Cl. 117—20.)

1. A machine of the class described, comprising a rotatable flyer having a solid body portion provided with apertures with which are mounted spools.

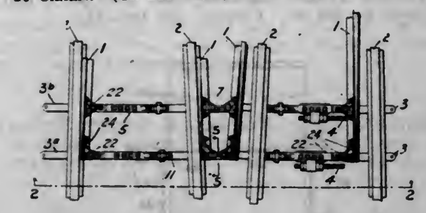
1,458,998. PUMPKIN-PEELING MACHINE. HENRY SLETTO, Atascadero, Calif. Filed Aug. 1, 1922. Serial No. 579,007. 15 Claims. (Cl. 146—43.)

1. In a vegetable paring device, means for engaging the opposite ends of the vegetable to be pared, means for moving said vegetable engaging means into and out of engagement with a vegetable, means for rotating said members in the same direction, paring knives non-rotatably mounted, and movable into and out of engagement with the vegetable to be pared.



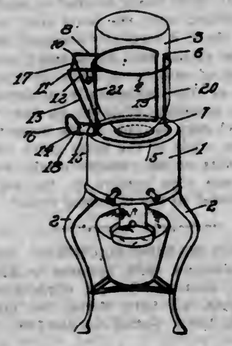
1,458,999. ELECTRIC-LIGHT DEVICE. CAIRO L. SNYDER, Marion, Ind. Filed Jan. 21, 1922. Serial No. 530,890. 3 Claims. (Cl. 173—354.)

1. A lamp socket including a body portion, a tubular housing supported by the body portion, a contact member extending through the body portion and terminating within the housing, a rotatable socket member carrying a finger supported within the tubular housing, a contact member extending through the body portion and being disposed substantially centrally of the socket member,



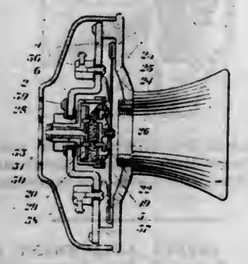
and means for rotating the socket member to bring the finger into engagement with the first mentioned contact member to complete a circuit through a lamp supported within a socket member.

1,459,000. PHONOGRAPH CABINET. WILLIAM A. SOMMERHOF, Erie, Pa. Filed Sept. 8, 1919. Serial No. 322,266. 2 Claims. (Cl. 45—52.)



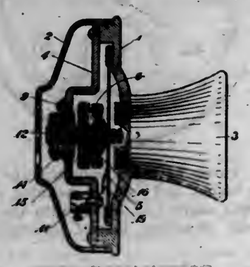
1. The combination with a phonograph cabinet and a cover thereon, of continuous interfitting sealing portion upon the cabinet and the cover for sealing the compartment closed by the cover, the side walls of said interfitting portions being parallel and spaced apart and a continuous strip of soft packing material secured within the cover and adapted to bear on the sealing means upon the cabinet.

1,459,001. SWITCH ROD FOR SLIP SWITCHES. JAMES B. STRONO, Hillburn, N. Y., assignor to Ramapo Ajax Corporation, New York, N. Y., a Corporation of New York. Filed May 24, 1922. Serial No. 563,207. 10 Claims. (Cl. 246—450.)



1. In a switch mechanism, the combination of a switch rail, and a switch rod for operating the switch rail, and a swing dog between the rail and rod, the rod being provided with a forged end having an adjustable bearing surface thereon, and the swing dog engaging said bearing and having a limited swinging movement thereon.

1,459,002. CARTON SUPPORT FOR DRINKING CUPS. WILLARD E. SWIFT, Worcester, Mass., assignor to United States Envelope Company, Springfield, Mass., a Corporation of Maine. Filed Sept. 4, 1920. Serial No. 408,293. 3 Claims. (Cl. 298—20.)

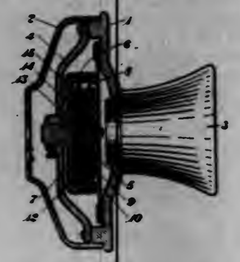


2. A carton holder of the class described, for use with a cylindrical water container mounted on an ice receptacle, comprising an upper resilient arm embracing the water container, a lower curved arm resting upon the ice receptacle, a wire framework adapted for the endwise reception of a carton attached to both the upper and lower curved arms, with the weight of the carton adapted to be supported on the ice receptacle.

1,459,003. MEANS FOR EQUALIZING TRANSMISSION OVER LINES OF DIFFERENT ELECTRICAL CHARACTERISTICS. GEORGE K. THOMPSON, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 29, 1918. Serial No. 260,147. 5 Claims. (Cl. 179—126.)

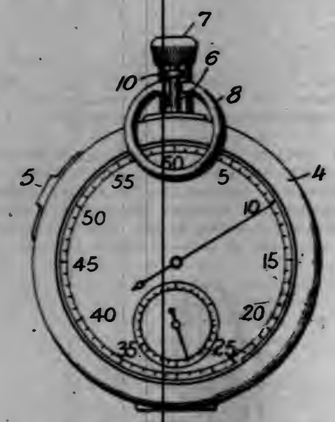
1. A telephone transmitter for use in connection with lines of different electrical characteristics, said transmitter including a single variable resistance button comprising a casing having a unitary mass of granular material therein and also having opposed electrodes movable with respect to each other, one of said electrodes comprising a plurality of sections, and a plurality of terminals for interconnecting said electrodes differently to form a plurality of paths through said granular material in accordance with the electrical characteristics of the line with which the transmitter is to be used.

1,459,004. MEANS FOR EQUALIZING TRANSMISSION OVER LINES OF DIFFERENT ELECTRICAL CHARACTERISTICS. GEORGE K. THOMPSON, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 29, 1918. Serial No. 260,148. 2 Claims. (Cl. 179—124.)



1. A telephone transmitter for use in connection with lines of different electrical characteristics, said transmitter including a resistance button having a plurality of electrodes, and at least one of said electrodes having a non-conducting segment whereby rotation of the electrodes about their axes will vary the effective conducting area of the electrodes to adjust the resistance of the transmitter in accordance with the electrical characteristics of the line with which the transmitter is to be used.

1,459,005. MEANS FOR EQUALIZING TRANSMISSION OVER LINES OF DIFFERENT ELECTRICAL CHARACTERISTICS. GEORGE K. THOMPSON, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 29, 1918. Serial No. 260,149. 2 Claims. (Cl. 179—125.)



1. A telephone transmitter for use in connection with lines of different electrical characteristics, said transmit-

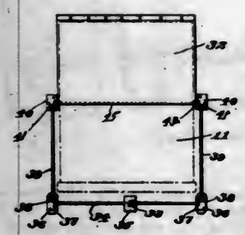
ter including a diaphragm and a resistance element, having a plurality of fixed electrodes embedded in granular material and a non-conducting plunger movable with said diaphragm to vary the resistance of said granular ma-

terial, and means for interconnecting said electrodes differently in accordance with the electrical characteristics of the lines with which the transmitter is to be used.

1,459,006. SAFETY ATTACHMENT FOR STOP WATCHES. HARRY E. VON KERSBURG, New York, N. Y., assignor to R. H. Macy & Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 27, 1921. Serial No. 525,081. 6 Claims. (Cl. 58—95.)

1. A stop watch having a winding and a re-setting stem, a stem casing, and a device mounted wholly within the stem casing adapted to engage with the stem to prevent accidental re-setting thereof, substantially as set forth.

1,459,007. FISH-DRESSING TOOL. ALFRED WETZIG, New Effington, S. Dak. Filed Dec. 30, 1921. Serial No. 525,869. 4 Claims. (Cl. 7—10.)

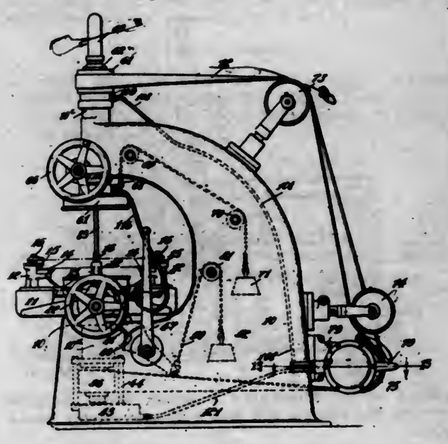


2. A tool for slitting and skinning a fish comprising a pair of skin gripping members, a knife on one of said members in close proximity to the gripping edge of said gripping members, the slitting and skinning occurring simultaneously.

1,459,008. DUST COLLECTOR. ADOLPH J. WILHARM, Ashland, Wis. Filed June 3, 1921. Serial No. 474,641. 5 Claims. (Cl. 183—60.)

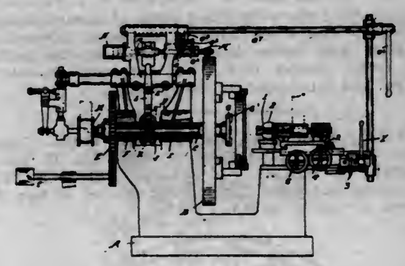
1. In a device of the class described, a casing embodying a screen; a cleaner comprising an endless member movable within the casing and a brush carried by the endless member and cooperating continuously with the screen substantially throughout the entire length of the screen; a guide traversed by a part of the cleaner; a shaft mounted to rock in the casing and under the control of an operator; a crank on the shaft; and means for connecting the crank with the guide thereby to adjust the position of the guide toward and away from the screen, the screen being fixed against movement with respect to the guide.

1,459,009. OPERATING MECHANISM FOR AWNINGS. FRANK R. ASHLEY, Edgewater, Colo. Filed Oct. 1, 1921. Serial No. 504,700. 1 Claim. (Cl. 156—15.)



In a device of the kind described, a combination of a wall, a rotatably mounted shaft extending from the exterior to the interior thereof, a ratchet secured to the inner end of said shaft, an operating arm rotatably mounted on the inner end of said shaft, a pawl pivotally mounted on said operating arm and associated with said bracket, a bevel gear secured to the outer end of said shaft, a horizontal shaft rotatably mounted on the exterior of the wall, bevel gears secured to said shaft, one of said gears meshing with the bevel gear on the outer end of said first shaft, a vertically arranged shaft mounted on the exterior of the wall, bevel gears secured to the ends thereof, one of said bevel gears meshing with the remaining gear on the horizontally arranged shaft, a U-shaped frame pivotally mounted on the exterior of said wall, a bevel gear on one of the arms thereof and meshing with the other of the bevel gears on the vertically arranged shaft on the exterior of the wall, and an awning having one edge secured to the wall and the opposite edge secured to the U-shaped frame.

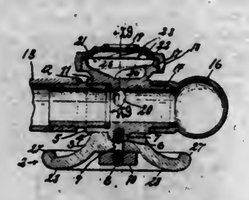
1,459,010. WHEEL-MAKING MACHINE. AUGUST E. R. BLOMQUIST, Cleveland, Ohio, assignor to Kelsey Wheel Company, Inc., Detroit, Mich., a Corporation of New York. Filed Aug. 12, 1916, Serial No. 114,494. Renewed Sept. 14, 1921. Serial No. 500,708. 12 Claims. (Cl. 144—3.)



1. In a machine of the kind described, the combination with a wheel support, of a vertically movable lower rotary cutter, a vertically movable upper rotary cutter, an adjustable stop device arranged upon the support and

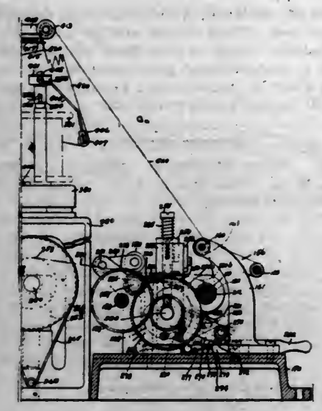
adapted to stop the lower rotary cutter at a predetermined point of its vertical movement, and an adjustable stop

device for stopping the upper rotary cutter at a predetermined point of its vertical movement, said stop devices being connected together.



1,459,011. WHEEL BORING AND FACING MACHINE. WILLIAM N. BOOTH, Detroit, Mich. Filed July 5, 1918. Serial No. 243,274. 8 Claims. (Cl. 144—3.)

1. In a wheel facing machine, the combination with a cutter for one face of the wheel variably movable, of a cutter for facing the opposite side of the wheel, and means positioned by the first-mentioned cutter for limiting the movement of the last-mentioned cutter.

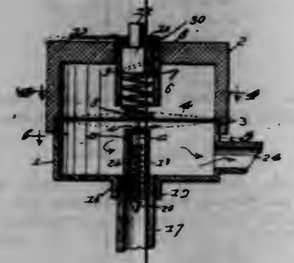


1,459,012. LAWN AND GARDEN SPRINKLING APPARATUS. ADOLPH K. BRAUER, Los Angeles, Calif., Serena Dorathea Brauer, executrix of said Adolph K. Brauer, deceased, assignor to Serena Dorathea Brauer, Los Angeles, Calif. Filed June 4, 1919. Serial No. 301,803. 10 Claims. (Cl. 299—55.)

1. In a spraying apparatus, a weighted disk, an upward extension on said disk, a concave recess in said extension, a barrel having a portion of its periphery fitting into said concave recess and a stud bolt securing said barrel to said extension, an upward extension on said barrel, a chamber in the upward extension of said barrel, there being a passageway from said barrel to said chamber, there being a spiral channel in said chamber, a cap enclosing the top of said chamber, and a

spray nozzle in said cap, said barrel being open at both ends to receive hose connections for the purpose as set forth.

1,459,013. COIL-WINDING MACHINE. EDWIN F. CREAGER and SAMUEL ROGERS, Anderson, Ind., assignors to The Remy Electric Company, a Corporation of Indiana. Filed Nov. 25, 1918. Serial No. 263,989. 74 Claims. (Cl. 242—10.)



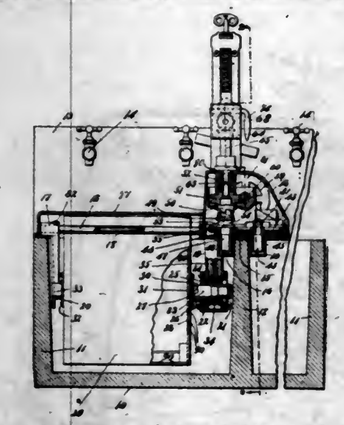
56. In a coil winding machine, the combination with a rotatable arbor upon which paper and wire are to be wound; of a wire guide shiftable in either direction longitudinally of said arbor; provisions for rotating said arbor while feeding said wire guide in one direction; automatic means for stopping said provisions; means for holding a supply roll of paper; means for feeding paper to the arbor from said paper roll, for winding said paper upon said arbor, for cutting off said paper, and for causing said provisions, when again set into operation, to effect the feeding of the wire guide in the opposite direction; and devices for rendering said provisions operative, said devices being ineffective until after the cutting operation has been substantially completed.

1,459,014. PRESSURE GAUGE. CHARLES R. CROSNO, Albuquerque, N. Mex. Filed Nov. 23, 1920. Serial No. 426,062. 2 Claims. (Cl. 50—23.)

1. A tire inflating pressure gauge comprising a casing having an upper and lower section, a diaphragm interposed between said sections, an integral stud formed concentrically with the upper face of said diaphragm, an inlet and outlet port arranged in the lower section of said casing, a valve for said inlet port and arranged therein, means for operatively connecting said valve with the lower face of said diaphragm, an interiorly projecting sleeve carried by the said upper section of the casing and concentrically thereof, said sleeve having

spiral grooves on its inner periphery, a rotatable head slidably carried in said sleeve, a reduced shank formed with said head, a pin carried by said head and adapted to travel within said groove whereby a vertical movement is imparted to said head upon rotation thereof, a coil spring arranged within said sleeve between said head and diaphragm, said stud of the diaphragm projecting within the lower end of the spring to prevent dis-

placement of the latter, a graduated dial arranged upon the upper face of said casing and an indicator carried by the reduced shank of said head and adapted to be moved to a predetermined point whereby the diaphragm is placed under a predetermined pressure through action of the coil spring substantially and in the manner described.

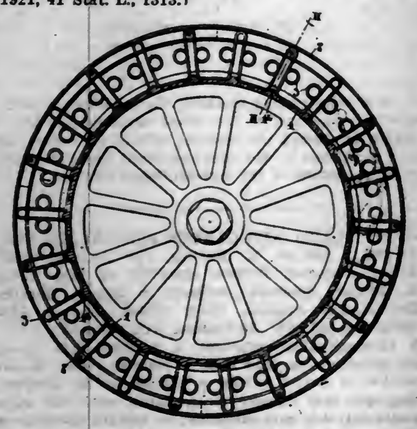


1,459,015. ARCH SUPPORT. MARTIN R. CROSSMAN, Boston, Mass. Filed Mar. 4, 1920. Serial No. 363,120. 1 Claim. (Cl. 36—71.)

An arch support comprising a non-metallic base layer extending from the heel to about the ball of the foot, a non-metallic upper layer co-extensive with the base layer, a supporting member situated between said layers and extending from the inner side of the arch support to a point slightly beyond the median line, a pin extending through the bottom layer and into the arch-supporting member for holding the latter in position, said supporting member being relatively short in the direction of the length of the arch support and being situated centrally thereof, a spring steel strip extending longitudinally of the arch support and situated between the top layer and the supporting member both ends of said strip extending beyond the supporting member, and rivets extending through and connecting the top and bottom layers and said spring strip, said rivets being situated at either end of the supporting member.

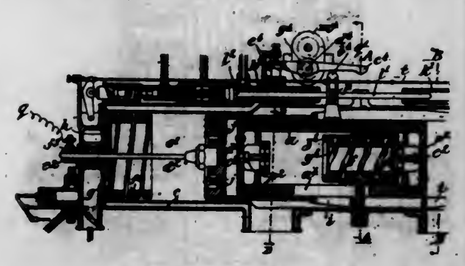
1,459,016. PORTABLE POWER WASHING MACHINE ADAPTABLE TO SET TUBS. RALPH A. CUSHING, Brockton, Mass. Filed Dec. 15, 1919, Serial No. 344,961. Renewed May 12, 1922. Serial No. 560,448. 3 Claims. (Cl. 68—18.)

1. A washing machine comprising a frame for spanning a tub and having a hollow end portion, said frame being provided with a pair of depending hangers, means for mounting the frame on the tub, a motor detachably mounted in the hollow end portion of the frame, driving mechanism from the motor also mounted in the hollow



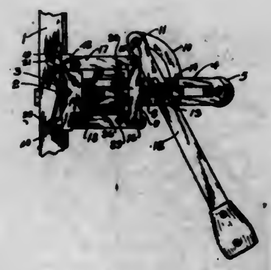
portion of the frame, and a clothes barrel journaled between the hangers and driven by said driving mechanism.

1,459,017. PACKING CASE. WALTER K. DEAN, Erie, Pa. Filed Nov. 12, 1921. Serial No. 514,537. 9 Claims. (Cl. 229—19.)



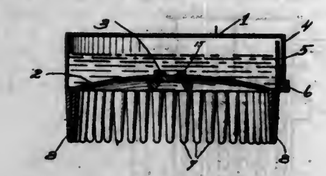
1. In a packing case, the combination of a container; and a pocket piece comprising a series of parallel zig-zag shaped partition strips extending diagonally across the container with return bends at the container walls, said strips crossing each other and being oppositely notched and interlapped at the crossings.

1,459,018. RESILIENT WHEEL AND TIRE. LEON DE WOLF, St. Nicolas, Belgium. Filed Apr. 13, 1920. Serial No. 373,568. 2 Claims. (Cl. 152—32.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A wheel of the kind comprising normally concentric tire and felloe portions with interposed resilient elements characterized by the fact that the resilient elements are formed as radial projections formed from a continuous length of resilient metal bedded in circumferential grooves in the felloe portion of the wheel, said projections being given a U shape and being provided with helical convolutions on each arm of the U.

1,459,019. MOTOR SYSTEM WITH DIRECT TRANSMISSION. ROBERT ESNAULT-PELTERIE, Paris, France. Filed July 1, 1918. Serial No. 242,856. 9 Claims. (Cl. 123—2.)

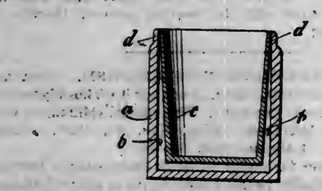


1. In a prime mover the combination of a fixed cylinder, a reciprocable cylinder in said fixed cylinder, said reciprocable cylinder being headed at both ends, a piston in said reciprocable cylinder, valves in both ends of the reciprocable cylinder to provide for the admission of explosive charges between said piston and the opposite heads of said reciprocable cylinder in alternation, and means to explode charges at the opposite ends of said piston in alternation whereby the piston and reciprocable cylinder are alternately driven in opposite directions.

1,459,020. STAPLING MACHINE. PURLY B. EYTCHISON, Mitchell, Nebr. Filed Mar. 28, 1922. Serial No. 547,411. 3 Claims. (Cl. 2—50.)

1. A stapling tool, comprising in combination, a body member, a head member secured to one end provided with an opening adapted to receive and hold a staple, a member slidable in said opening and adapted to serve as an abutment for the staple, a handle pivotally connected to said body member, a bar slidably connected with the body member, means whereby said bar may be moved at will by moving the handle, an arm pivoted to each end of said slidable bar, a wedge member secured to the free end of each arm, resilient means tending to force the free ends of said arms together, positive means for moving them apart as the slidable bar is moved rearwardly by the handle, and means for moving the slidable abutment member as the arms are moved.

1,459,021. FOUNTAIN BRUSH. PETER L. FERM, Kansas City, Mo. Filed Jan. 3, 1921. Serial No. 434,431. 3 Claims. (Cl. 132—13.)

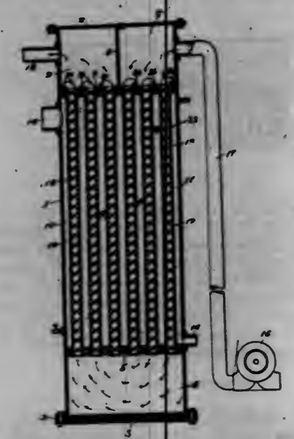


1. In a device of the character described, a liquid container provided with top and bottom portions and formed with an air passage in its side wall having its opposite ends respectively in proximity to the bottom and top portions of the container, and with its exit opening in convenient position for operation by the operator, the bottom portion being provided with a filling opening, and a series of teeth internally formed with exit openings in communication with the container.

1,459,022. RAILROAD SWITCH AND RAIL. IRVIN J. FERNEKES, Chicago, Ill. Filed Nov. 21, 1921. Serial No. 516,736. 6 Claims. (Cl. 246—435.)

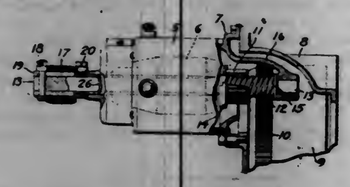
3. A switch point for railroad switches formed of a single piece made in the form of a rail of uniform section with the depression in one side of the web filled substantially flush with the head of the rail, one end of the point having the side of the head beveled to engage with the head of the through rail and having the bottom of the flange beveled to engage with the flange of the through rail, the intermediate portion of the web being adapted to project into the space between the head and flange of the through rail.

1,459,023. MATCH STAND, INKSTAND, ASH BOWL, AND THE LIKE ARTICLE. ALBERT HARRY GUEST, Stourbridge, England. Filed Jan. 10, 1921. Serial No. 436,851. 2 Claims. (Cl. 215—12.)



1. The method of decorating a receptacle having a transparent wall which consists in decorating the interior surface of said wall, and then isolating the decorated interior surface of the wall from the outside atmosphere, whereby the brilliancy of said decorated interior surface is maintained over extensive periods.

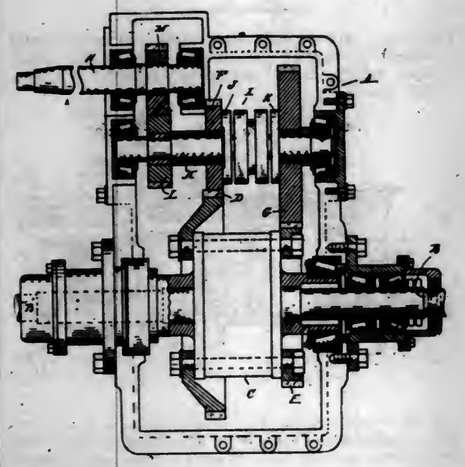
1,459,024. HEAT-EXCHANGE APPARATUS. HERMAN LOUIS HATTRUP, Denver, Colo., assignor of one-half to Roban J. Binkley. Filed May 31, 1919. Serial No. 301,058. 2 Claims. (Cl. 257—224.)



1. In an apparatus for causing thermal transfer between a liquid and a thermal medium; said apparatus

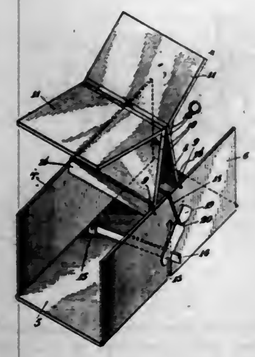
comprising a plurality of tubes, and tube plates for supporting said tubes; means for causing a stream of

liquid to flow through said tubes; removable helicoidal baffles in said tubes, and means whereby said baffles are independently anchored to one of said tube plates.



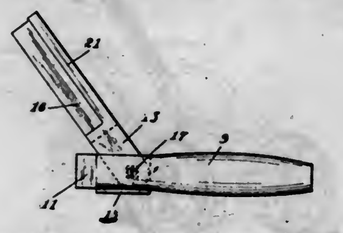
1,459,025. ENGINE STARTER. WILLIAM H. HUTCHINS, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 2, 1916. Serial No. 129,100. 7 Claims. (Cl. 290—48.)

1. In a starting motor unit, in combination, a rotor having a shaft, a casing for said rotor carrying bearings for said shaft, and a driving member for an engine connected to be driven from said shaft and mounted between said rotor and the bearing nearest thereto on one side thereof.



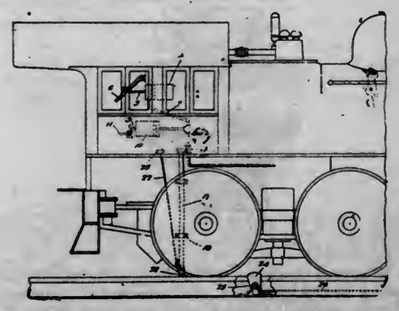
1,459,026. TRANSMISSION MECHANISM. CHARLES E. KOCHER, Detroit, Mich., assignor to The Wyandott-Morpowr Truck Company, Wyandotte, Mich., a Corporation of Michigan. Filed Nov. 21, 1921. Serial No. 516,547. 1 Claim. (Cl. 74—57.)

A transmission for motor vehicles comprising a housing having substantially parallel side walls, a pair of aligned driven shafts journaled in the side walls of said housing, a differential gearing disposed in said housing and operatively arranged between the adjacent ends of said shafts, annular gears surrounding said shafts and engaging opposite sides of said differential gearing, a common means for securing both of said gears to said differential gearing for alternately driving the same, a shaft parallel to the shafts aforesaid journaled in the side walls of said housing, a pair of spur gears sleeved upon the second-mentioned shaft and constantly in mesh with said annular gears, the ratio of said spur gears and said annular gears being different, one of said annular gears being dished, the teeth of said dished gear surrounding said differential gearing whereby the spur gear in mesh therewith is disposed substantially midway between the side walls of said housing, a clutch between said spur gears for alternately coupling the same to the second-mentioned shaft, a gear on the second-mentioned shaft between the adjacent spur gear and one side of said housing, a drive shaft parallel to the shafts aforesaid



journaled in bearings disposed within said housing, said bearings being located between one of said spur gears and a side wall of said housing, and a gear on said drive shaft in mesh with the last-mentioned gear for rotating the second-mentioned shaft.

1,459,027. ANIMAL TRAP. ANDY KROL, Uniontown, Pa. Filed Aug. 23, 1922. Serial No. 583,605. 1 Claim. (Cl. 43—61.)

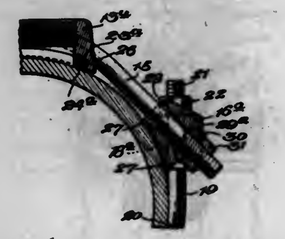


A trap comprising a structure having a floor, fixed side walls, one of said walls being vertically slotted, a bridge between said side walls, a pair of oppositely disposed cover plates pivoted between said side walls adjacent opposite ends of said bridge, cords attached to the cover plates, a ring in said bridge through which the cords pass, a lever pivoted to the floor to extend outwardly through the mentioned slot, said lever having a notch in its upper edge partially within and partially beyond the slot, and a wedge-shaped trigger to which said cords are attached, said trigger being engageable in the notch of said lever whereby the same is held in frictional contact with one side wall of the box, and said covers are normally held in a raised position.

1,459,028. SAFETY-RAZOR-BLADE HOLDER. GUSTAVE LINDELL, Pictou, Nova Scotia, Canada. Filed July 20, 1921. Serial No. 486,139. 3 Claims. (Cl. 30—25.)

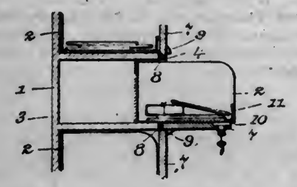
1. The herein described holder for safety razor blades and the like, comprising a handle, a locking member inserted in one end of the handle, and comprising spaced plates, a locking flange formed upon one of said plates, a gripping member pivoted at one end between the spaced plates and having its free end cooperating with the locking flange, substantially as and for the purposes set forth.

1,459,029. TRAIN STOP. WILLIAM MAXWELL and LEROY A. BARKER, Fredericktown, Ohio. Filed June 24, 1921. Serial No. 480,141. 1 Claim. (Cl. 246—188.)



In combination with a throttle and brake levers of a locomotive, a pair of cylinders, pistons therein having their rods engaging the throttle and brake levers, a compressed air tank, a pipe line connecting the same with the cylinders, a valve in the line, a vertically movable rod having its upper end engaging a part on the valve, a block hinged to the lower end of the rod, a member on the track for engaging said block for forcing the rod upwardly, the hinge permitting the block to swing without moving the rod when the locomotive is backing and manually operated means for swinging the block upon its hinge to render the device inoperative.

1,459,030. SERVICE CLAMP. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Aug. 2, 1918. Serial No. 248,001. 22 Claims. (Cl. 137—78.)

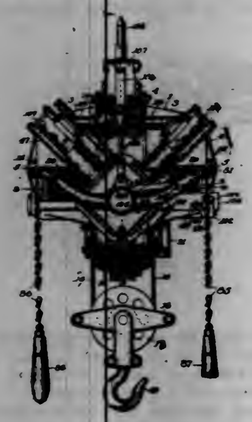


1. A service clamp comprising a saddle plate, clamping bars having curved plate-engaging portions and straight end portions, bridge pieces joining opposite ends of said bars, a strap having a curved central portion engaging the main and straight ends passing through said bridge pieces, and clamping nuts to contract said strap and bars.

12. A saddle plate for service clamps having a pipe-receiving aperture therethrough and a packing receiving recess surrounding said aperture, a packing in said recess extending below the main engaging face of said plate, and having a portion normally projecting beyond the wall of said pipe receiving aperture, said projecting portion adapted to be calked substantially flush with the wall of the pipe receiving aperture when the parts are set up.

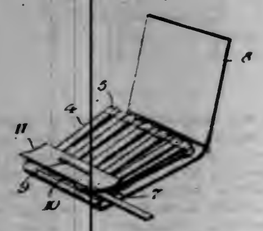
16. A saddle plate for service clamps, having an aperture therethrough flared at its end to form a bevelled packing seat thereon, a locking interstice formed in said bevelled seat, and a packing member on said seat having a section provided with substantially parallel sides adapted to be interlocked with said interstice to prevent accidental displacement of said packing.

1,459,031. MAIL BOX. THOMAS FRANCIS MURPHY, New York, N. Y., assignor to The Mail Receptacle Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 4, 1921. Serial No. 458,386. 2 Claims. (Cl. 232—25.)



1. A mail box, comprising a series of pigeon-holes and a frame or support therefor, a main door movably fixed to the frame or support, a series of openings in the main door corresponding with the pigeon-holes and coinciding with the openings therein when the main door is closed, a series of smaller doors for the openings in the main door and serving as closures for the pigeon-holes, means for locking and unlocking the main door and the individual smaller doors, a series of receptacles slidably fitted in said pigeon-holes and adapted to be withdrawn therefrom through the openings in the main door when the main door is in closed or locked condition and the smaller doors are opened, and means for supporting the smaller doors in horizontal position to afford a support for the receptacles when withdrawn from the pigeon-holes.

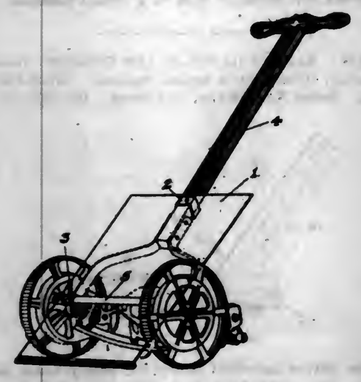
1,459,032. PORTABLE POWER HOIST. REINHOLD A. NOELING, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 11, 1919. Serial No. 316,794. 16 Claims. (Cl. 254—168.)



1. A portable power hoist, comprising a casing, two drums therein and spaced apart endwise, means in said

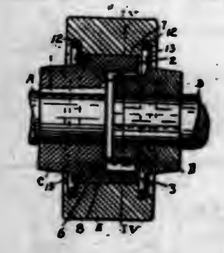
casing for supporting both drums and having the same loosely mounted thereon, a single rope or cable for said drums and having its ends secured thereto with the looped portion of said cable extending out of said cas-

ing, a shaft in said casing between the spaced ends of said drums, a motor carried by said casing and connected with said shaft for rotating the same, and power transmitting means in said casing connecting said shaft with both drums for rotating the same in unison.



1,459,033. BOOK MATCH. CLARENCE L. PFERSCH, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 22, 1920. Serial No. 375,953. 4 Claims. (Cl. 206—29.)

1. In a match package having a cover portion including an integral end fold provided with an external coating of ignition material, a flexible protective flap mounted on said fold and constituting a permanent part thereof, said flap overlying the said ignition material and having a free lower portion whereby the said flap can be flexed and the head of a match inserted between the flap and the ignition material.

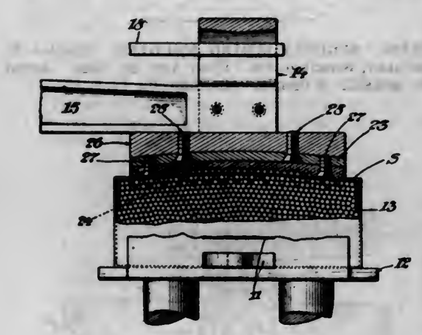


1,459,034. GUARD FOR LAWN MOWERS. WILLIAM E. QUIMBY, Orange, N. J. Filed Dec. 19, 1921. Serial No. 523,351. 2 Claims. (Cl. 56—249.)

1. A guard for lawn mowers, comprising a substantially flat plate, of a width to cover the cutter bars, which is provided with means for detachably mounting it on the machine in position to cover the cutter bars and

when the machine is in operative position to extend at a downward and forward inclination in front of the cutter bars and into proximity with the ground.

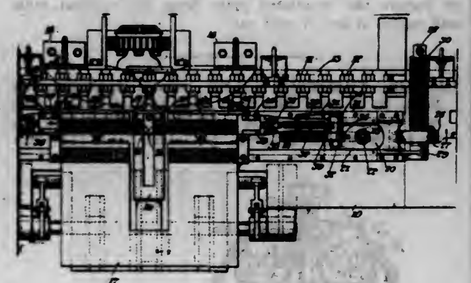
1,459,035. FLEXIBLE COUPLING. CHARLES RAISIG, Pittsburgh, Pa. Filed June 8, 1921, Serial No. 475,865. Renewed Jan. 19, 1923. 7 Claims. (Cl. 64—91.)



4. A flexible coupling for shafting and the like comprising a housing provided with two sets of opposed interior flat bearing surfaces, said sets being disposed at right angles to each other, and said bearing surfaces being tangential to a circle described from the axis of the housing, a set of exterior parallel flat bearing planes associated with each of the shaft ends, said last mentioned bearing planes being by surface contact mated with the bearing planes of the housing and clearance being provided between the sets of bearing planes of the shaft ends when assembled in the housing, whereby parallel and angular misalinement and axial movement are provided for.

1,459,036. DEODORIZING MATERIAL. OTTO F. REINHOLD, Maplewood, N. J. Filed Jan. 11, 1922. Serial No. 528,456. 4 Claims. (Cl. 167—3.)

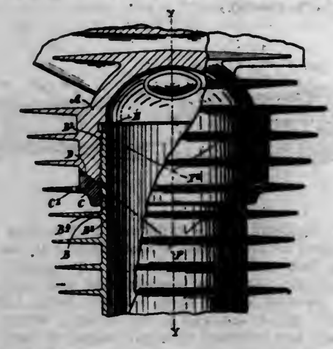
1. A deodorizing composition which comprises, a mixture of ortho dichlor benzol and a volatile solidifying agent in amount sufficient to form a substantially solid deodorizing block.



4. A deodorizing composition which comprises a mixture of the chlorination products of benzol with the exception of substantial amounts of mono-chlor-benzol and the para-dichlor benzol and in which the ortho-dichlorbenzol predominates, and naphthaline in sufficient quantity to form a substantially solid deodorizing block.

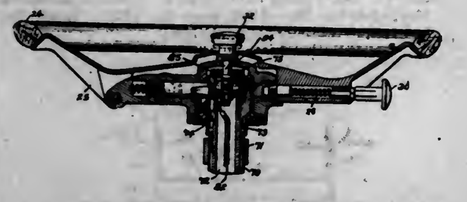
1,459,037. MACHINE FOR PACKING MATCHES. EUGENE SNYDER, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1921. Serial No. 484,964. 6 Claims. (Cl. 226—7.)

1. In a match packing machine having means for feeding filled box trays provided with protection strips, an ironing device having a concave face arranged to bear upon the protection strips of the successive trays, and means for reciprocating said device upon the strips.



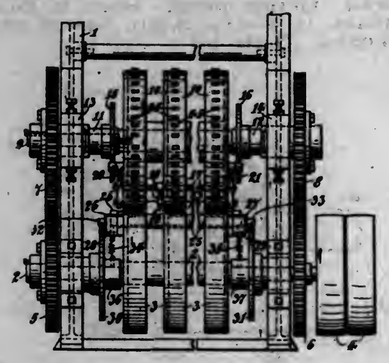
1,459,038. MACHINE FOR MAKING MATCH BOOKS. GEORGE TURNER, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed July 29, 1921. Serial No. 488,844. 3 Claims. (Cl. 164—48.)

1. In match-strip feeding mechanism for match-book machines having a cutter operable to sever successive match cards from the strips, a pusher reciprocable toward and from the cutter and operative in its forward movement to act against the end of the strips remote from the cutter, means for reciprocating said pusher, and means for raising said pusher and maintaining it raised during its return movement.



1,459,039. ENGINE CYLINDER. SPIRITO MARIO VIALE, Coventry, England, assignor to Armstrong Siddeley Motors Limited, Coventry, England. Filed Aug. 11, 1921. Serial No. 491,331. 3 Claims. (Cl. 74—108.)

1. In an engine cylinder, the combination with the barrel having screw threads thereon, and a head screwed upon said barrel, of a locking ring screwed upon the said



barrel and bearing against the inner end of the said head so as to exert a thrust thereon on expansion.

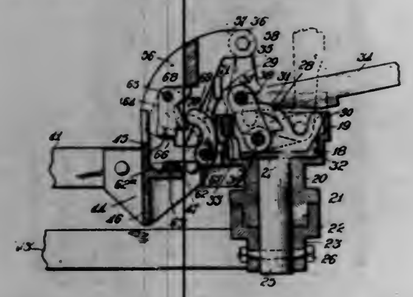
1,459,040. STEERING WHEEL. EDWARD H. VINCENT, Detroit, Mich. Filed Sept. 7, 1922. Serial No. 586,688. 21 Claims. (Cl. 74—33.)

1. In a steering wheel, a shaft, a head mounted thereon, a wheel spider carried by the head, an operating button carried by the spider, and electrical contact elements mounted within said head and arranged to be actuated by said operating button.

1,459,041. MACHINE FOR OPERATING ON PAPER. HOWARD G. WIDMER, Brooklyn, N. Y., assignor to Arkell Safety Bag Company, New York, N. Y., a Corporation of New York. Filed May 4, 1918. Serial No. 232,606. 10 Claims. (Cl. 164—68.)

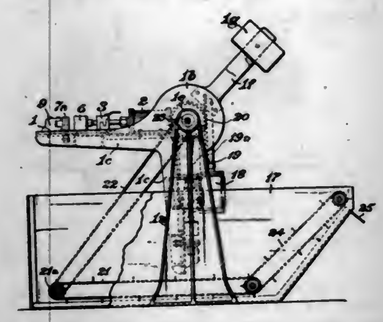
1. A cutting roll of a paper machine having a radial recess in its periphery; a knife reciprocating in said recess; and a paper holding bar carried yieldingly by said knife at its side in said recess.

1,459,042. ARTIFICIAL BAIT. JAY L. WEBER, Stearns, Ky. Filed Nov. 11, 1922. Serial No. 600,221. 2 Claims. (Cl. 43—36.)



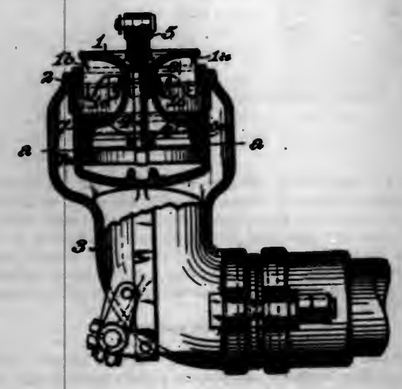
2. In an artificial bait, a head and body section slidably connected to each other, a hook secured at one end within the body and adapted to normally project outwardly thereof, a pin slidable within the body and connected at one end to said hook, said pin being notched adjacent the upper end and a rod slidable within the body section and disposed at right angles to said pin, the front end of said rod projecting outwardly of the body and secured to the head section, the opposite end of said rod adapted for engagement with the notch of said pin when the hook is extended within the body for maintaining the same therein.

1,459,043. SANITARY SOAP TRAY. JOHN G. ANDREWS, Murphysboro, Ill. Filed Aug. 21, 1922. Serial No. 583,115. 2 Claims. (Cl. 45—28.)



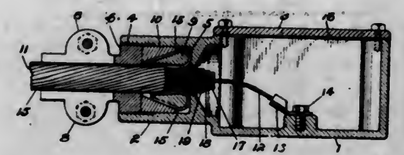
1. A soap holder comprising a rectangular container having a downwardly inclined bottom, a drain plate in said container, curved spring arms on said drain plate extending over the edges of the container, and means engaging said arms for supporting the drain plate at various heights, relative to the bottom of said container.

1,459,044. LIFTING TRUCK. ARTHUR M. BARRETT, Winnetka, Ill. Filed Dec. 21, 1917. Serial No. 208,280. 21 Claims. (Cl. 254—10.)



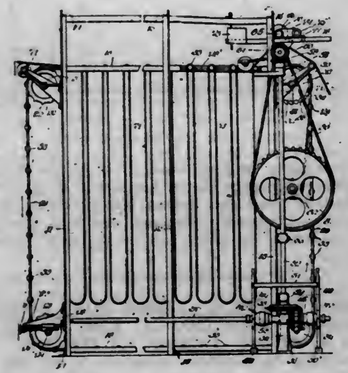
1. A lifting truck comprising main and elevating frames, a cross-head at the forward end of said frame, a centrally-disposed tubular bearing member depending from said cross-head and having an intermediate peripheral flange, a bearing block fitted upon the lower end of said bearing member and engaging said flange, wheels carried by said bearing block, a king bolt connected to said bearing block and extending up through said bearing member, and means connected with the upper end of said king bolt for raising said elevating frame and for rotating said king bolt to steer said wheels.

1,459,045. SPRING-FORMING MACHINE. THOMAS F. BUCKLEY, Scranton, Pa. Filed Aug. 20, 1921. Serial No. 493,832. 3 Claims. (Cl. 266—6.)



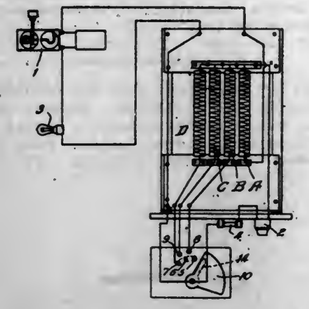
1. In a spring forming machine, the combination with an oil vat, of a plurality of tables at right angles to each other, journalled above said vat so as to swing into and out of the same, a flexible resistance member on each table, means to impart variable tension to said member, a power-actuated cross-head on each table movable towards and from said member, a formation plate of adjustable curvature carried by said cross-head, power-actuated means to oscillate said tables into horizontal position above said vat or into vertical position in the same, and a conveyor in said vat, driven by said means, to receive the completed plate from the vertical table and convey it out of said vat.

1,459,046. THROTTLE VALVE. FRANK H. CLARK, New York, N. Y., and EDWARD J. BARNETT, Chicago, Ill.; said Barnett assignor to said Clark. Filed Feb. 17, 1921. Serial No. 445,584. 5 Claims. (Cl. 277—37.)



1. The combination of a throttle valve, controlling a fluid flow passage; a stem, on which said valve is fitted, with the capacity of relative movement; a seat on which said valve is adapted to close; means, connected with said valve for first effecting a gradually increasing degree of fluid admission, in the preliminary stage of unseating the valve, then continuing admission without substantial increase in degree, and thereafter progressively increasing the degree of admission throughout the unseating traverse of the valve; and a balancing valve, fixed on the valve stem.

1,459,047. GROUNDING BOX FOR ELECTRICAL PILOTING CABLES. ALFRED CROSSLEY, Washington, D. C. Filed Feb. 5, 1921. Serial No. 442,849. 1 Claim. (Cl. 177—385.)

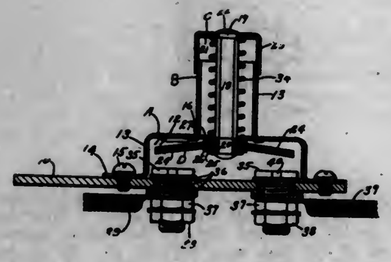


A protective grounding means for armored electrical piloting cables comprising a water-tight box of electrical conducting material fixedly secured and electrically connected to the armor of said cable at its sea end, and means for electrically connecting the conductor of said cable to the interior of said box.

1,459,048. LOOPER. HARRY A. CUMFER, Chicago, Ill., assignor to Guyton & Cumfer Mfg. Co., a Corporation of Illinois. Filed Mar. 21, 1921. Serial No. 454,248. 6 Claims. (Cl. 34—12.)

1. A device for arranging a continuous sheet of constantly moving fabric in uniform, parallel loops, comprising a frame; transversely positioned, uniformly spaced-apart, parallel supports, one for each loop; means for bodily and continuously moving said supports along a common path on said frame; means to hold the fabric on each support consecutively while moving, whereby to form a loop between adjacent supports and means to accelerate formation of subsequently formed loops.

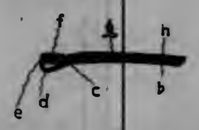
1,459,049. ELECTRIC HEATER. ACHILLES DE KHOTINSKY, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 15, 1921. Serial No. 492,224. 13 Claims. (Cl. 219—20.)



1. In a device of the character described, a plurality of heating units, one of which is of less wattage than the others, and means to cut in said smaller unit alternately with each of the larger units.

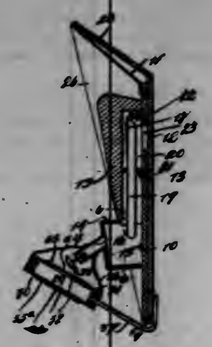
1,459,050. SKATE AND METHOD OF MAKING THE SAME. CARL B. DREVITSON, Somerville, Mass. Filed Aug. 23, 1921. Serial No. 494,513. 5 Claims. (Cl. 46—50.)

1. A skate comprising a runner having a plurality of tongues projecting from its upper edge and extending in a row longitudinally of the runner, the ends of said tongues being undercut, and a one-piece casting including an elongated base portion cast upon the upper edge portion of the runner and surrounding said tongues, and upstanding foot-supporting standards integral with said base portion.



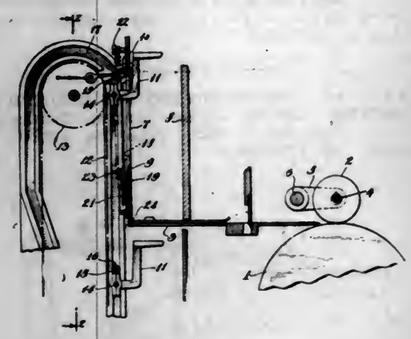
1,459,051. STARTING SWITCH. JOSEPH GALAMB, Detroit, Mich., assignor to Ford Motor Company, Detroit, Mich., a Corporation of Delaware. Filed Oct. 18, 1920. Serial No. 417,595. 11 Claims. (Cl. 200—159.)

1. In a switch comprising a base with spaced contacts thereon and a cover with a central aperture therein,



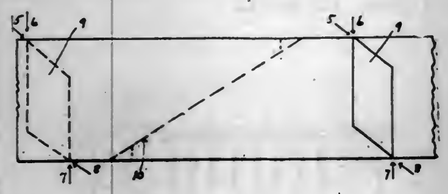
said aperture having an irregular outline, a switch member having a head adapted to to span said contacts and a shank loosely received in said aperture, and a member having portions turned down around the head and up around the shank whereby said portions may pass through and co-act with the irregular portions of the aperture thereby preventing rotary movement of the head relative to the base.

1,459,052. MOUNTING FOR ADVERTISEMENTS, CALENDARS, AND PICTURES. HENRY L. GULLINE, Montreal, Quebec, Canada, assignor of one-half to John Hyde, Westmount, Quebec, Canada. Filed May 24, 1922. Serial No. 563,464. 2 Claims. (Cl. 40—152.)



1. A picture mounting consisting of a one piece member composed of a rigid material presenting a bent back marginal flange and a middle portion embossed to rise in slight convexity through the marginal flange, a concaved portion connecting the convex portion to the outer edge of the flange, and the space between the juncture of the convex and concaved portions and the inner edge of the flange being constricted and the free edge of the flange being disposed at an angle to the said convex portion whereby the inner edge of the flange acts as a jaw in conjunction with the convex portion to grip the picture.

1,459,053. VOICE FOR DOLLS. EMANUEL HALPERN, New York, N. Y. Filed Mar. 4, 1922. Serial No. 541,020. 6 Claims. (Cl. 46—46.)



4. In combination with a wind-chest having a movable member, a reed associated with the chest, a drum supported by the wind-chest adjacent the movable member, each end of said drum being provided with an opening, means to convey air from the wind-chest to said drum, and a shutter carried by the movable member of the wind-chest arranged to pass through said openings to interrupt the sound produced by the reed.

1,459,054. WRAPPING MACHINE. RAYMOND S. HATCH, Nutley, N. J., assignor to The Hammersley Manufacturing Company, New York, N. Y., a Corporation of New Jersey. Filed June 10, 1922. Serial No. 567,253. 7 Claims. (Cl. 93—2.)

1. In a wrapping machine, a pair of plates spaced from each other to form a passageway or chute, elevating fingers for raising an article in said chute, one of said plates being provided with slots for the passage of said fingers and gates for automatically closing said slots.

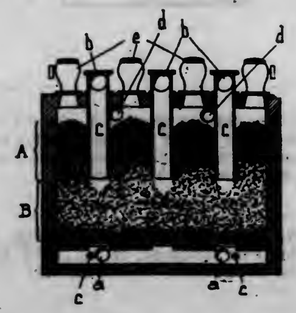
1,459,055. METHOD OF MAKING AUTOMOBILE CHOCK BLOCKS. ROBERT L. HICE, Montgomery, Ala., assignor to Forest Products Company, a Limited Partnership composed of G. D. Johnson, J. W. Hice, and said Robert L. Hice. Filed Dec. 1, 1922. Serial No. 604,295. 1 Claim. (Cl. 144—309.)

The method of making chock block blanks consisting in cutting out lozenge shaped portions from a relatively long stick of wood and leaving billets having steps at each end but diagonally disposed, and then sawing the billets diagonally to leave two chock block blanks for each billet.

1,459,056. POLISHING COMPOSITION. AUGUSTA C. HOUSWORTH, Mason City, Ill. Filed Dec. 11, 1922. Serial No. 606,292. 1 Claim. (Cl. 134—25.)

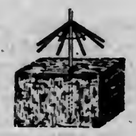
A polishing composition consisting of oil free soap, distilled water, flake graphite and turpentine and these being combined in the proportions of forty per cent soap, forty per cent water, eighteen per cent graphite and two per cent turpentine.

1,459,057. BRIDGE FOR STRINGED MUSICAL INSTRUMENTS. JESSE GEORGE JONES, East Ham, England. Filed Dec. 21, 1921. Serial No. 523,863. 2 Claims. (Cl. 84—309.)



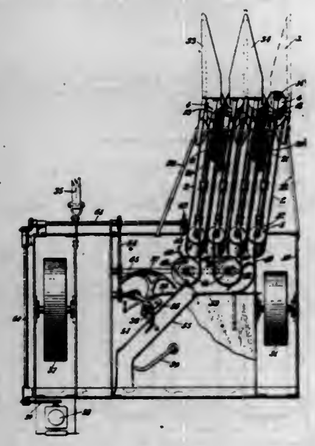
1. A bridge for violins and like stringed musical instruments formed of a single piece and comprising a

string-carrying body portion with supporting legs therefor, said supporting legs having substantially vertical



openings therethrough extending from the base into communication with atmosphere without interference with the said body portion.

1,459,058. APPARATUS FOR REMOVING BLAST GASES FROM WATER-GAS GENERATORS. HEINRICH KNÖFEL, Frankfort-on-the-Main, Germany. Filed Oct. 11, 1921. Serial No. 507,084. 1 Claim. (Cl. 48—78.)



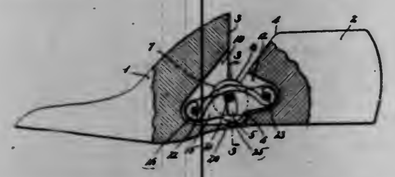
The combination with a water-gas generator of the type operating with alternate gas-making and air-blasting periods and having an upper distilling zone and a lower combustion zone during the blasting period, of means extending downwardly from the top of the generator through the distilling zone and terminating at the zone of separation between said distilling and combustion zones to provide a conduit through which the blast gases formed in the said combustion zone during the blasting period are carried directly out of the generator without passing through the upper distilling zone.

1,459,059. PROCESS FOR REFINING ORGANIC MATTER USED AS MANURE. HERMANN KRANTZ, Memmingen, Germany. Filed July 3, 1922. Serial No. 572,599. 4 Claims. Cl. 71—6.)

1. A process for refining farmyard manure, household and town refuse and the like which consists in heaping the material in loose layers to allow a rapid fermentation thereof and subjecting the material to pressure only to check the fermentation after the fermentation has been substantially completed.

1,459,060. FLAX-HARVESTING MACHINE. THEODORE KREIPE, Floral Park, N. Y., assignor to Victor E. Freeman and Louis Prevost Whitaker, both of New York, N. Y. Filed July 7, 1921. Serial No. 482,874. 9 Claims. (Cl. 55—66.)

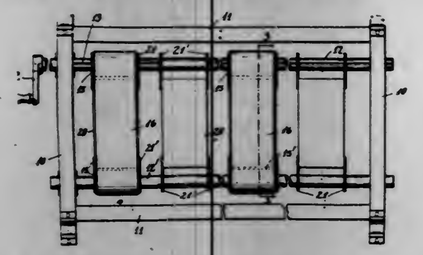
1. In a flax harvesting machine, the combination of a plurality of pulling mechanisms each comprising a pair of vertically disposed pulling belts having inclined parallel opposed portions, with a vertically disposed binding mechanism, and transferring mechanism comprising horizontally rotatable arms for sweeping the pulled stalks, in vertical parallel relation, from the pulling mechanisms into the binder, and means for rotating said arms at sufficient speed to carry the pulled stalks into the binder without permitting them to fall vertically.



7. In a flax harvesting machine, the combination with pulling units, of a transferring reel comprising among its members a vertically rotatable shaft, a rotary device carried thereby, pivotally mounted arms on said rotary device, a stationary part having a cam for controlling said arms when in operative position, and an eccentrically located stop for retracting said arms.

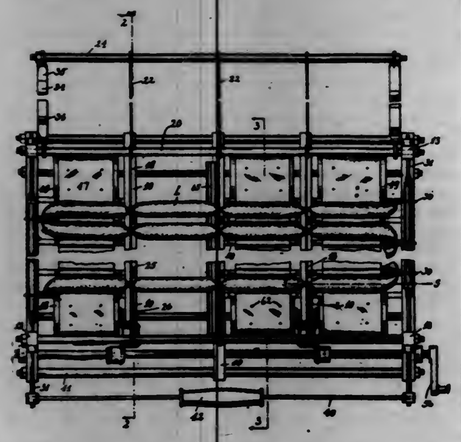
9. In a flax harvesting machine, the combination with pulling units, of a transferring reel comprising among its members a vertically rotatable shaft, a rotary device carried thereby, pivotally mounted arms on said rotary device, a stationary part having a cam for controlling said arms when in operative position, and an eccentrically located stop for retracting said arms, each of said arms being provided with a curved segmental portion for engaging said cam, an eccentrically mounted roller for engaging said cam, and a vertically disposed flange of less length than the arm for engaging said stop, and adapted to disengage the stop at the instant of engagement of said roller with said cam.

1,459,061. COMBINED LINK AND HINGE LAST. WALTER A. KRENTLER, Detroit, Mich., assignor to Krentler-Arnold Hinge Last Company, Detroit, Mich., a Corporation of Michigan. Filed June 21, 1922. Serial No. 569,983. 5 Claims. (Cl. 12—136.)



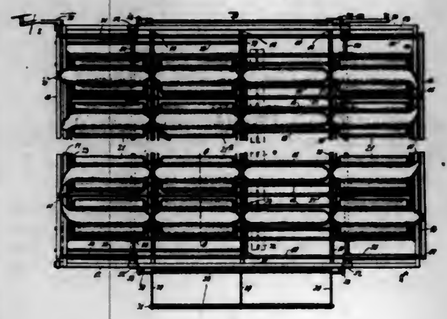
3. A two-part last having said parts constructed and arranged for relative movement, and means for uniting said parts, comprising a uniting pivotal member and a

uniting link member, the link member being united to the last parts at points distant from the said pivot, in



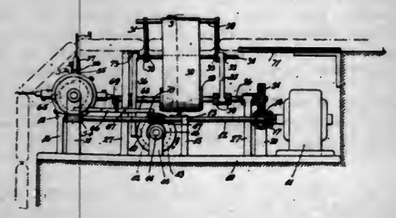
combination with a spring positioned each side of the link and extending in a line free of said pivot during the operation of flexing the last.

1,459,062. SAUSAGE-TWISTING DEVICE. FERDINAND KRUSE, Port Richmond, N. Y. Filed Apr. 16, 1921. Serial No. 461,879. 14 Claims. (Cl. 17—34.)



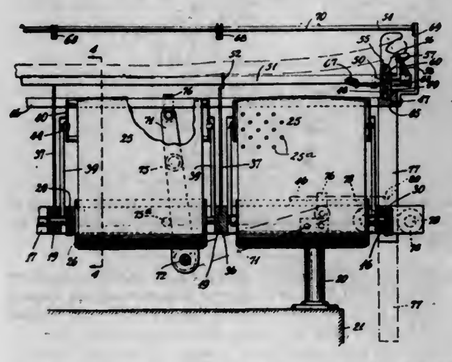
2. In a sausage forming machine, a base member, a frame removably supported thereon, a series of elements carried by said frame and adapted to contract a length of sausage at selected points, and means mounted upon said base member adapted to impart a rotary movement to said sausage at certain points.

1,459,063. SAUSAGE LINKING AND TWISTING DEVICE. FERDINAND KRUSE, Port Richmond, N. Y. Filed June 22, 1921. Serial No. 479,461. 15 Claims. (Cl. 17—34.)



1. In a sausage linking and twisting machine, a plurality of endless twisting belts, intermediate former elements arranged between said belts, and end former elements arranged transversely to said intermediate former elements.

1,459,064. SAUSAGE-TWISTING DEVICE. FERDINAND KRUSE, Port Richmond, N. Y. Filed Jan. 12, 1922. Serial No. 528,623. 17 Claims. (Cl. 17—34.)

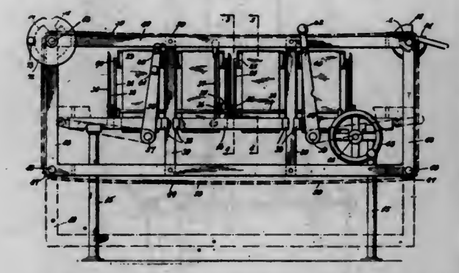


1. In a sausage twisting machine a plurality of endless belts adapted to receive a sausage casing between them and means to normally hold said belts yieldingly in frictional engagement with said casing.

1,459,065. SAUSAGE-TWISTING DEVICE. FERDINAND KRUSE, Port Richmond, N. Y. Filed July 10, 1922. Serial No. 573,990. 17 Claims. (Cl. 17—34.)

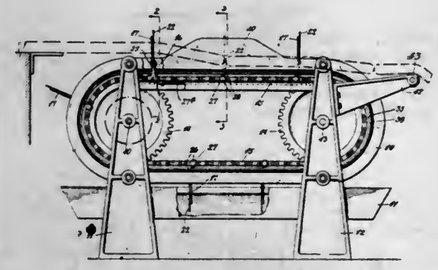
1. In a sausage twisting machine, means to squeeze the sausages to divide them into spaced links, means to twist the casings to secure them in linked condition, said twisting means comprising a pair of cooperating pivotally mounted endless belts, adapted to be moved upon their pivots into and out of engagement with the sausage casings, and said squeezing means comprising a pair of former elements pivotally mounted adjacent the side edges of said belts, and a single means for actuating said former elements and belts into and out of engagement with the sausage casings.

1,459,066. SAUSAGE-TWISTING DEVICE. FERDINAND KRUSE, Port Richmond, N. Y. Filed Oct. 21, 1922. Serial No. 595,889. 38 Claims. (Cl. 17—34.)



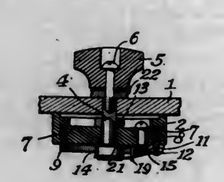
1. In a sausage twisting machine, sausage twisting means, means to operate said sausage twisting means, and means to automatically stop the operation of said twisting means after a predetermined movement thereof.

1,459,067. SAUSAGE-TWISTING MACHINE. FERDINAND KRUSE, Port Richmond, N. Y. Filed Nov. 18, 1922. Serial No. 601,794. 10 Claims. (Cl. 17—34.)



1. In a sausage twisting machine of the type wherein a plurality of endless belts and former elements are provided to twist into a plurality of links, a sausage casing which is threaded back and forth through the machine, characterized by a main removable frame upon which the sausage casings are threaded back and forth preparatory to inserting them into the machine, said frame having a detachable auxiliary frame portion upon which the twisted sausage may be removed to a smoke house.

1,459,068. SAUSAGE-TWISTING MACHINE. FERDINAND KRUSE, New York, N. Y. Filed Jan. 13, 1923. Serial No. 612,409. 11 Claims. (Cl. 17—34.)



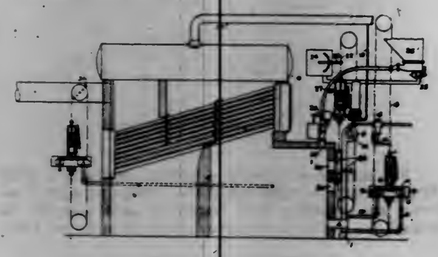
1. A sausage twisting machine having a plurality of longitudinally extending rows of vertically extending endless twisting belts having their opposed vertical reaches spaced longitudinally of the machine to form a plurality of parallel free spaces extending transversely of the machine in which a plurality of sausage casings may be received, means to rotate said belts, means to cause the vertical reaches of adjacent belts to be moved to and from each other by the travel of said belts in opposite directions and a plurality of cooperating pairs of former elements slidable longitudinally of said machine adapted to compress said plurality of casings at predetermined points, means for lifting said casings from between said belts and conveying the casings through the machine.

1,459,069. METHOD AND MACHINE FOR FORMING SAUSAGES. FERDINAND KRUSE, Port Richmond, N. Y. Filed Feb. 19, 1923. Serial No. 619,964. 21 Claims. (Cl. 17—34.)

1. The method of forming a sausage casing into links which consists in compressing the casings at spaced intervals and applying heat thereto at said intervals to contract the casing and thereby secure it in linked form.

1,459,070. RHEOSTAT. ALFRED P. MORGAN, Montclair, N. J. Filed June 28, 1921. Serial No. 480,963. 10 Claims. (Cl. 219—48.)

1. In a rheostat, a circularly grooved base of insulating material, a core of insulating material having a configuration corresponding to said groove, and a variable resistance conductor spirally disposed about said core, said core and conductor being adapted to fit removably within said groove and to project therefrom above the face of said base, and being further adapted to be removed, reversed and reinserted in said groove when it is desired to change the order of resistance-variation.



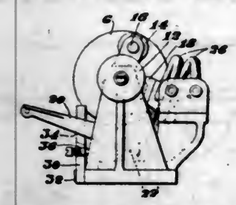
1,459,071. WINDOW CLEANER. CARL F. MUMAW, Scranton, Pa. Filed Oct. 8, 1921. Serial No. 506,484. 1 Claim. (Cl. 15—126.)

A window cleaning device including a pipe, said pipe having perforations formed therein, a length of fabric material wound around the pipe, a housing partly surrounding said pipe and fabric material, said housing being also adapted to house portions of the ends of the pipe

and fabric material, a pipe extending through the fabric material and having one end disposed within the perforated pipe to deliver fluid thereto, and the last mentioned pipe having threads to permit it to be secured to the first mentioned pipe, and said housing contacting with the cloth material.

1,459,072. REGULATION OF COMBUSTION OF GAS AND POWDERED FUEL. THOMAS A. PEEBLES, Pittsburgh, Pa., assignor to John M. Hopwood, Dormont, Pa. Filed Oct. 30, 1920. Serial No. 420,688. 3 Claims. (Cl. 236—14.)

1. The combination with the furnace of a vapor generator, means of supplying the gaseous fuel to such furnace and means controlled by and in accordance with changes in pressure of the vapor generated for supplying another rapidly combustible fuel to the furnace in proportion to the drop in pressure of the vapor generated.

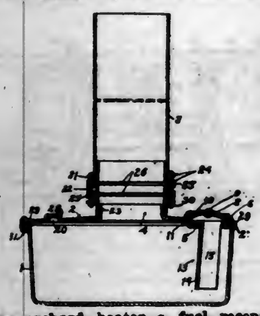


1,459,073. SELF-FILLING FOUNTAIN PEN. STANLEY E. PETERS, Chicago, Ill., assignor, by mesne assignments, to Kritikson Bros., Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 23, 1919. Serial No. 325,629. 26 Claims. (Cl. 120—46.)

13. In a self filling fountain pen the combination of a barrel, a sack arranged within the barrel and means for compressing the sack and releasing the same, said means including a lever, a rotatable member and a member operable thereby which is slidable within the barrel and which is moved outwardly to cause the lever to be depressed and inwardly to raise the same.

1,459,074. BOBBIN-WINDING MACHINE. EUGENE J. RAY, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 27, 1920. Serial No. 399,282. 5 Claims. (Cl. 242—24.)

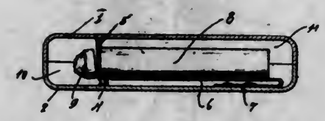
1. A bobbin winding machine having, in combination, means for rotatably supporting a bobbin, means for rotating the bobbin, a lever, a thread presser formed on the free end of said lever for engaging the thread as it



is wound on the bobbin, and a heating device carried by the thread presser in close proximity to the point of engagement with the thread.

1,459,075. FUSE FOR ARTILLERY AND AVIATION PROJECTILES. LÉON EMILE RÉMONDY, Rueil, France. Filed Sept. 2, 1921. Serial No. 497,837. 11 Claims. (Cl. 102—39.)

6. In a fuse for projectiles, the combination of a fuse body, a hollow member slidable within the said fuse body and provided with a head extending outwardly of the said fuse body, fixing means for securing the said hollow member to the said fuse body and adapted to break under the action of the inertia of the fuse body and the projectile when the said head encounters an obstacle, means for obtaining a strong braking action upon the said hollow member in its movement towards the rear of the fuse body, the said means consisting in conical narrowed portions formed in the said fuse body co-operating portions of the said hollow member and adapted to undergo deformation by being forced into the said narrowed portions, a primer and a striker disposed within the said hollow member, and means provided within the said hollow member for affording a certain resistance to the movement of these two elements towards each other.

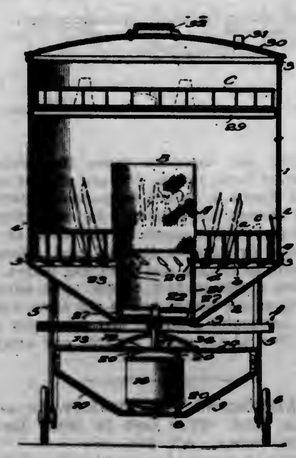


1,459,076. ORCHARD HEATER. WILLIAM C. SCHEU, Los Angeles, Calif. Filed June 10, 1920. Serial No. 387,890. 4 Claims. (Cl. 158—91.)

1. In an orchard heater a fuel receptacle, a cover mounted thereon and having an outlet stack and an air

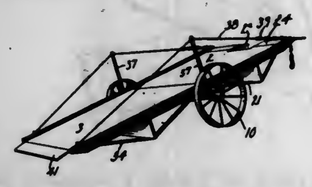
inlet opening, a deflector member at said opening and having ribs extending downwardly into the fuel receptacle, said ribs extending divergently so as to form vertical channels for receiving the air entering at said inlet opening, and acting as an obstruction to maintain a flame at the air inlet opening and prevent the draft from pulling it directly to the stack.

1,459,077. CIGARETTE-SALVAGE CASE. HAROLD J. WINANS, Nashville, Tenn. Filed Feb. 25, 1921. Serial No. 447,689. 1 Claim. (Cl. 206—41.)



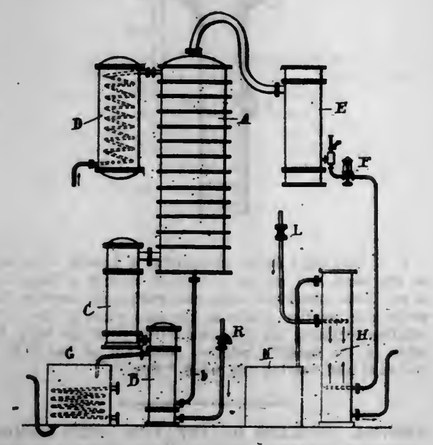
A cigarette case comprising a hollow cylindrical casing having integral ends, said casing being split longitudinally at its center forming two symmetrical sections, a relatively wide arcuate seat in one of said sections, the radius of the concave portion of said seat being equivalent to the radius of the cigarette, a light flexible plate secured in the bottom of the same section, said plate being folded upon itself to extend nearly to said seat, and a circular shear blade fixed in the other of said casing sections adapted to cooperate with the outer edge of said seat in shearing a cigarette resting partially on the seat and on said spring plate, said blade being equivalent in diameter to the interior of the casing.

1,459,078. CONFECTION AND METHOD OF MAKING THE SAME. ARMSTEAD M. ALEXANDER, Independence, Mo. Filed Sept. 21, 1922. Serial No. 589,707. 1 Claim. (Cl. 99—16.)



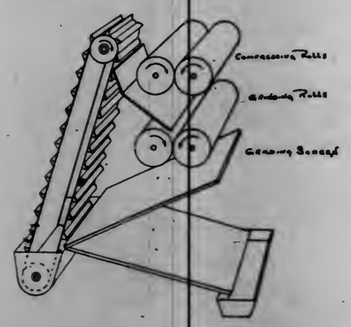
The method of preparing a confection which consists in heating chocolate to a degree of temperature above the melting point thereof and introducing the same in its heated condition into a vehicle reduced to a temperature low enough, to cause the chocolate to flake off or shatter into relatively small particles of distinct identity held in suspension within the vehicle.

1,459,079. WASHING MACHINE. JAMES T. ANTHONY, East Orange, N. J. Filed July 9, 1921. Serial No. 483,502. 3 Claims. (Cl. 141—9.)



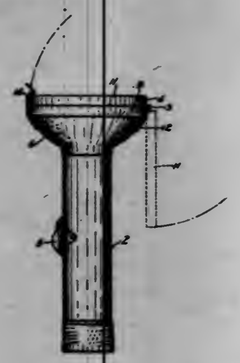
3. A washing machine comprising a container provided with a conically-shaped lower portion, a water distributor centrally located in said lower portion and provided at its bottom with ports adapted to permit ingress of water, a rotative impeller mounted in said distributor, opposite said ports, and radially extended fins connected to the outside of said distributor having their lower edges contacting the surface of the lower portion of said container, whereby to prevent circulatory motion of the water outside of and adjacent said distributor, substantially as described.

1,459,080. MOVABLE UNLOADING PLATFORM. HUGO ARNATEIN and CHARLES M. MARDEL, Oakland, Calif. Filed Mar. 21, 1921. Serial No. 453,077. 9 Claims. (Cl. 280—32.)



5. A portable unloading platform comprising transversely, hingedly connected platform sections adapted to assume different angular relations and wheeled supporting means disposed substantially in the vertical plane of the hinge.

1,459,081. PROCESS OF CONTINUOUS SULPHONATION OF BENZENE, APPLICABLE TO IMPURE BENZENES. PIERRE ALEXANDRE BARBET, Paris, France. Filed Apr. 23, 1917. Serial No. 163,898. 18 Claims. (Cl. 260—159.)

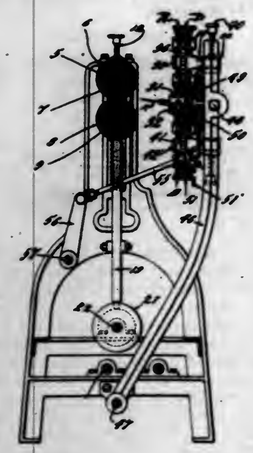


1. A process of sulfonating benzene in a continuous manner, which comprises converting the benzene into a vaporised condition and bringing such vapor into continuous, intimate and methodical contact with heated concentrated sulfuric acid, supplying the heated sulfuric acid in a continuous manner, and removing the benzene sulfonic acid continuously.

1,459,082. PROCESS FOR PREPARING SALT AND THE LIKE. HAROLD W. BARTLETT, Alvarado, Calif., assignor to Continental Salt and Chemical Company, San Francisco, Calif., a Corporation of California. Filed Apr. 8, 1922. Serial No. 550,864. 9 Claims. (Cl. 83—61.)

1. The process of treating a crystalline substance which consists in compressing a powder of said substance into relatively large masses and then reducing the said masses to the desired size.

1,459,083. ELECTRIC LAMP. ALBERT W. BECKER, Windsor, Conn. Filed Apr. 20, 1922. Serial No. 555,674. 2 Claims. (Cl. 240—8.5.)



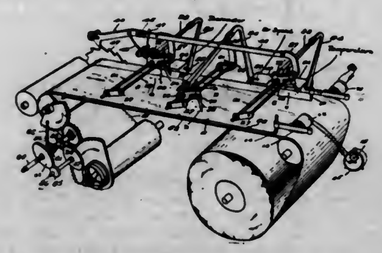
1. A flash-light device comprising a handle to be held in the hand and having a head to receive a lamp, and a red lens associated with the head and movable into active and inactive relations, the lens when in the active relation receiving the rays emanating from the lamp and when in the inactive relation being out of the path of the rays and bearing the word "Stop."

1,459,084. PROCESS OF TREATING ACID SLUDGE. OSBORNE BEZANSON, Woburn, Mass., assignor to Merrimac Chemical Company, Woburn, Mass., a Corporation of Massachusetts. Filed May 14, 1921. Serial No. 469,614. 4 Claims. (Cl. 23—1.)

1. Process of treating acid sludge from the refining of petroleum, comprising injecting or spraying the same in subdivided state together with the necessary air into a chamber maintained at a sufficient temperature to effect substantially complete decomposition of the sludge with liberation of its sulfur content as sulfur dioxid.

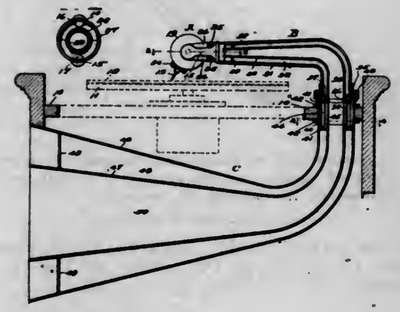
1,459,085. KNIFE-POLISHING MACHINE. JOHN S. BLACK, Olivette, Mo., assignor to Simmons Hardware Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 8, 1921. Serial No. 490,553. 19 Claims. (Cl. 51—41.)

1. A knife polishing machine comprising a flexible endless carrier, means whereby said flexible endless carrier is driven in a straight line and in lines diverging from the ends of said straight line, a knife holder adapted to interlock with said flexible endless carrier, a straight guide member cooperating with said carrier to retain the knife holder in interlocking engagement therewith, said straight guide member being separate from said carrier and parallel with said straight line, and a rotary polishing roll adapted to engage the knives held by said knife holder.



1,459,086. DINING TABLE. ISAAC COOKLIN, Liverpool, England. Filed Sept. 1, 1921. Serial No. 497,675. 4 Claims. (Cl. 45—112.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

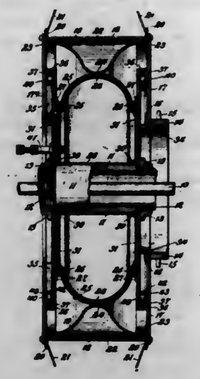
3. In a loose leaf extension table, the combination of a plurality of loose leaves, two end frames and top portions fixed thereto, a central top portion, intermediate frames fixed thereto and working in connection with the said end frames and supported one from the other, cut away parts or gaps in the end and intermediate frames adapted to receive and hold the leaves, means connected with a sliding part of the table adapted to act upon parts on the leaves, and to tilt same, and move same to the horizontal position, and means for moving the end portions of the table towards and away from one another.



1,459,087. RECORDING INSTRUMENT. CLAUDE E. COX, Detroit, Mich. Filed Sept. 23, 1918. Serial No. 255,256. 13 Claims. (Cl. 234—29.)

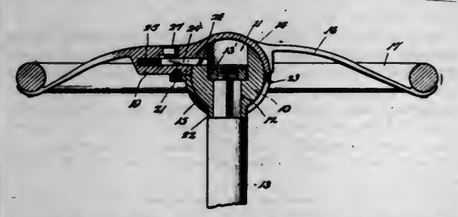
1. A recording instrument comprising means for supporting a record-receiving element, a driving train for positively driving said record-receiving element and comprising means by which it may be connected to a motor the performance of which is to be noted, a plurality of record-producing elements arranged adjacent the record-receiving-element travel-line, means by which said record-producing elements may be moved into and out of record-producing position, a corresponding plurality of variable indicators, each connected to a record-producing member by means capable of shifting said record-producing

member to vary its position relative to the record-receiving elements in accordance with the variations of conditions of said indicator, a time train, a record-producing element arranged in position to be continuously in record-producing engagement with the record-receiving element, and means controlled by the time train for causing the last-mentioned record-producing element to shift from and to its normal position at predetermined time intervals.



1,459,088. SOUND RECORDING AND REPRODUCING APPARATUS. JAMES KENDALL DELANO, New York, N. Y. Filed July 19, 1917. Serial No. 181,514. 4 Claims. (Cl. 274—23.)

1. The combination, with a sound box having a plurality of vibratory diaphragms and provided with a separate sound conduit leading from each of said diaphragms, of a tone arm embodying separate sound conduits constituting continuations of the sound box conduits, an amplifying horn also embodying separate sound conduits, and a swivel coupling between said tone arm and said horn, said coupling being arranged to permit movement of the tone arm while holding the tone arm conduits and horn conduits in proper respective registry.



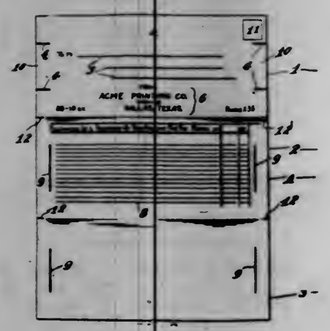
1,459,089. RESILIENT WHEEL. PAUL DE PFYFFER, Kelowna, British Columbia, Canada. Filed June 25, 1920. Serial No. 391,088. 14 Claims. (Cl. 152—41.)

1. A resilient wheel including an axle supported sleeve, a pair of inner disks mounted on said sleeve, a pair of outer disks secured together and movable relatively to the inner disks, a casing secured to the outer disks and having an inwardly projecting convex part throughout its entire circumference, a resilient cushion mounted on said sleeve between the inner disks and including a mantle

bearing against the convex part of said casing, the entire resilient action of the wheel being derived from the resilient cushion upon the sleeve.

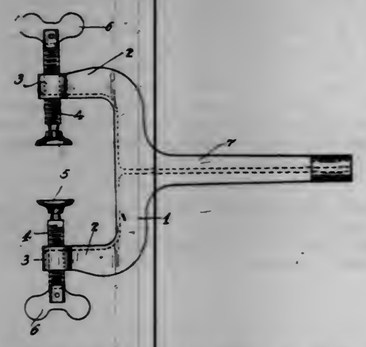
1,459,090. STEERING WHEEL. CHARLES ARTHUR DONALDSON, San Antonio, Tex. Filed Apr. 18, 1922. Serial No. 554,993. 2 Claims. (Cl. 74—33.)

1. In a steering wheel, the combination of a spherically shaped head adapted to be secured upon a steering post, a socket rotatably fitting the head and formed of an upper section and a mating lower hemispherical section slotted to accommodate the steering post whereby the socket may be rocked upon the head, spokes radiating from the upper section and formed at their inner ends with bosses reinforcing the margin of such section, a rim carried by the spokes, radial ears formed on the margin of the lower section reinforcing such section and mating with said bosses, and fastening devices extending through said ears to engage the bosses detachably connecting the sections.



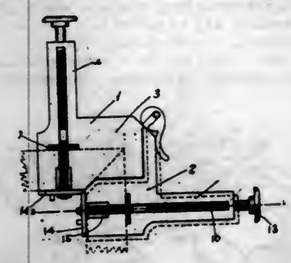
1,459,091. CHAIN-LINK SHOE. JOHN J. DOUGHERTY, Scranton, Pa., assignor of one-half to William P. Boland, Scranton, Pa. Filed Feb. 8, 1922. Serial No. 534,952. 1 Claim. (Cl. 152—14.)

As an article of manufacture a chain link shoe comprising a body portion curved in cross section, to constitute a concave housing for an anti-skid chain between



the road engaging surface of the shoe and the road; said body portion being provided at each opposite end with an opening adapted to encircle a cross chain and permit it to freely pass through the opening; said body portion being slightly bowed on its tread engaging surface between the openings; and ring members operatively associable with the cross chain and shoe to maintain the shoe in predetermined position on the cross chain.

1,459,092. ENVELOPE FOLDER. JAMES HOWARD ETHERIDGE, Dallas, Tex., assignor to Etheridge Printing Company, Dallas, Tex., a Copartnership composed of Pat Etheridge, J. H. Etheridge, T. J. Minehan, and Leon J. Clockman. Filed Apr. 22, 1922. Serial No. 556,017. 4 Claims. (Cl. 229—92.5.)

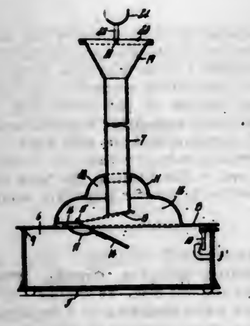


1. An envelope folder adapted to be folded transversely, having two spaced slots extending inwardly from the end edges of one part to determine oppositely disposed marginal tabs on that parts, and having tab receiving slots located parallel with the edges of the other folded parts, said tab receiving slots of one folded part being adapted to overlie those of the others and to receive the tabs to interlock said parts in their folded relation.

1,459,093. CLAMP. ELSAMUR S. FRENCH, Denver, Colo. Filed Aug. 23, 1921. Serial No. 494,659. 2 Claims. (Cl. 144—297.)

1. The combination of three screws having their axes in a common plane, a frame for supporting said screws comprising two arms of a jaw, an arm extending obliquely to said arms, and an extension at the terminal of the last-named arm disposed obliquely with respect to the arms of the jaw, said extension and the extremities of the jaw arms having screw-threaded sockets for receiving said screws.

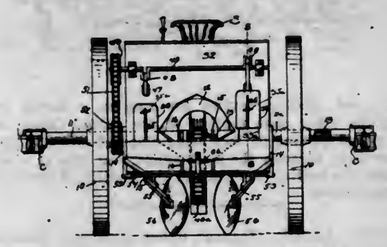
1,459,094. CLAMP. ELSAMUR S. FRENCH, Denver, Colo. Filed Jan. 28, 1922. Serial No. 532,458. 6 Claims. (Cl. 144—293.)



1. A device of the class described including two clamping members disposed at an angle to each other, means for causing said clamps to approach each other or separate along a path of movement oblique to said clamps, said means including a link connected with one of said clamps, a pivoted member connected to the other of said clamps and having pivotal connection with said link at one end and means connected to the other end of said pivoted member for imparting movement thereto, as and for the purpose set forth.

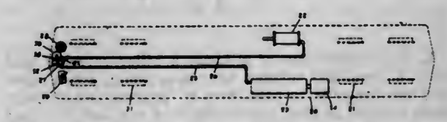
1,459,095. WINDOWPANE-FASTENING STRIP. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 9, 1922. Serial No. 580,653. 6 Claims. (Cl. 20—56.4.)

1. A window-pane retaining strip composed of a cellular, hardened, plastic material adapted to be softened by heat to permit the bending of the strip.



1,459,096. ASH RECEIVER. JAMES W. GIBBONS, Boston, Mass. Filed Mar. 29, 1921. Serial No. 456,715. 4 Claims. (Cl. 131—51.)

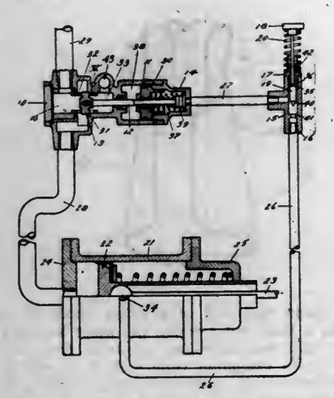
3. An ash receiver comprising a base constituting a container, a cover hinged upon said base and provided



with a raised central portion forming a recess in the under side thereof, means to lock said cover to said base, a tubular column mounted upon the raised portion of said cover and projecting into the recess upon the interior thereof to form a pocket therearound between the lower end thereof and the under surface of said cover, a gate pivotally mounted upon said cover adjacent to the lower end of said column and adapted to close the lower extremity thereof, a conical extension located at the upper extremity of said column, and constituting an inlet to the interior thereof and a rod extending across the upper extremity of said conical extension, the opposite end portions thereof being bent upwardly and constituting supports for a cigar rest and a match box or similar smoking accessories.

1,459,097. PLANTER. MORTEN FREDRICK HANSEN, New Auburn, Wis. Filed Apr. 20, 1921. Serial No. 463,084. 1 Claim. (Cl. 111—43.)

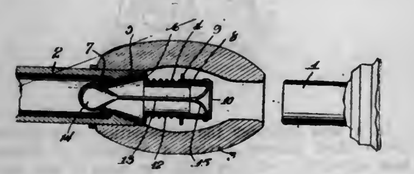
In a check row planter, the combination with a main frame carrying furrow opening and closing members, of a main axle comprising a pair of axially aligned tubular sections having their adjacent ends spaced, a checker shaft rotatably mounted in said tubular sections, means for actuating the checker shaft, a sprocket wheel rotatably mounted upon said checker shaft, a pair of idler sprockets mounted on the main frame, a seed dispensing belt trained about the idler sprockets and about the sprocket wheel, means for intermittently connecting said first mentioned sprocket to the checker shaft, whereby said belt delivers a charge of seed upon each actuation of said sprocket wheel, and means for raising and lowering the furrow opening and closing members.



1,459,098. AUTOMATIC SAFETY CONTROL FOR AIR-BRAKE SYSTEMS. LUI F. HELLMANN and WILLIAM W. BAXTER, Indianapolis, Ind., assignors to Air Brake Safety Appliance Company, Indianapolis, Ind., a Corporation. Filed May 10, 1920. Serial No. 380,234. 49 Claims. (Cl. 303—63.)

1. A power operated vehicle having a power circuit, fluid-pressure-controlled means for breaking the circuit, manually-operated means of said fluid-pressure-controlled means for restoring said circuit, a device adapted to prevent operation of said manually operated means, and a seal for said device substantially as set forth.

2. A power operated vehicle having a power circuit, fluid-pressure-controlled means for breaking the circuit, manually-operated means of said fluid-pressure-controlled means for restoring said circuit, and means to lock said manually operated means in place, substantially as set forth.



1,459,099. AUTOMATIC BRAKE LOCK. LUI F. HELLMANN and WILLIAM W. BAXTER, Indianapolis, Ind. Filed Jan. 31, 1921. Serial No. 441,392. 30 Claims. (Cl. 303—84.)

1. In a fluid pressure brake mechanism comprising braking means and means whereby the operator may control the same, the combination of means for applying the brakes and means to prevent release of the brakes in case of excessive wear of the brake-applying devices, substantially as set forth.

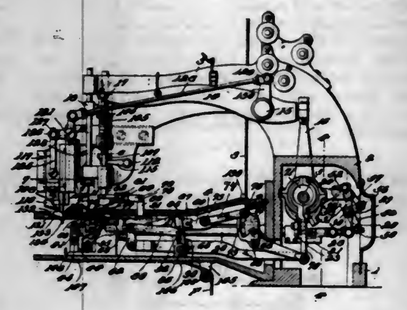
21. In a brake mechanism, embodying an operator's valve, an auxiliary reservoir and a fluid operated brake, a brake cylinder, means for transmitting fluid pressure from the operator's valve and the auxiliary reservoir respectively to the brake cylinder, an automatic control valve, means normally holding the same in position to close the second transmitting means, a conduit from the brake cylinder to the automatic control valve whereby fluid pressure is admitted to the automatic control valve to close the first pressure transmitting means and open the second whenever the travel of the brake piston exceeds a predetermined limit thereby holding the brakes in applied position, and means to release the brakes comprising a valve adapted to close said conduit and open a passage from the automatic control valve to the atmosphere to relieve said pressure, substantially as set forth.

1,459,100. SAFETY GAS HOSE. FREDRICK G. HENNING, Brooklyn, N. Y. Filed Dec. 7, 1920. Serial No. 428,959. 3 Claims. (Cl. 284—13.)

1. In combination with a gas fixture and a supply pipe therefor, and a sleeve connecting the supply pipe with the said fixture, of a valve member including a centrally located tube mounted in the sleeve and provided with a frusto-conical end portion having its restricted end open, a sliding cap mounted on the opposite end of the tube, means to normally urge the sliding cap outwardly from the frusto-conical end, and a valve connected to the said cap and operable in the restricted end of the tube to be opened and closed as the sleeve is attached and detached from the fixture.

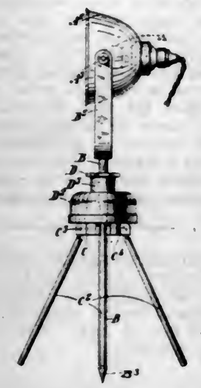
1,459,101. APRON. ANNIE M. HIFNER, Lexington, Ky., assignor to Nancy T. Hifner, Lexington, Ky. Filed Apr. 26, 1921. Serial No. 464,560. 2 Claims. (Cl. 2—54.)

1. An apron composed of a single blank of material comprising a skirt and a waist, the waist having a front narrower than and extending upwardly from the skirt, shoulder straps extending from said front and a bread back composed of two halves extending downwardly from the shoulder straps and secured together at their adjacent edges along the central vertical line of the back, the upper corner portions of the skirt extending from the front of the waist to extend around the hips, and said upper corner portions of the strip and lower corner portions of the back having means for detachably fastening them together.



1,459,102. LOAD INDICATOR. HOWARD R. HUGHES, Houston, Tex. Filed July 29, 1921. Serial No. 488,465. 1 Claim. (Cl. 265—47.)

In a load indicator the combination of a derrick, a crown block thereon having a plurality of sheaves, a load supporting cable passing over each of said sheaves, one only of said sheaves being mounted on a shaft supported by a pressure transmitting means, and a weight indicator connected with said transmitting means adjacent the lower end of said derrick.

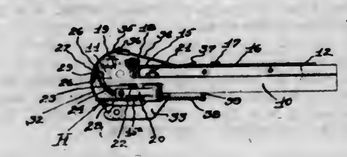


1,459,103. SEWING MACHINE. ROBERT R. HUGHES, Jr., Utica, N. Y., assignor to Union Special Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 17, 1919. Serial No. 331,312. 23 Claims. (Cl. 112—2.)

17. The combination with a sewing machine having a suspended work supporting arm for stitching tubular articles, a feeding mechanism for feeding the material lengthwise of said arm, cutting devices located in advance of the stitching mechanism for slitting the fabric, a folding device between the cutting devices and the needles of the stitching mechanism for directing a stay strip about one of the edge portions of the slitted

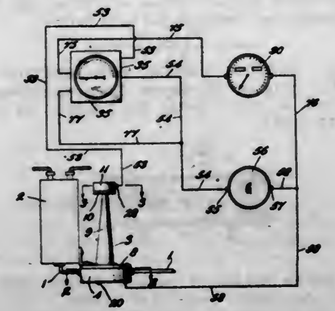
fabric, and guiding devices for guiding a facing strip along the other edge portion of the slitted fabric, said last named guiding devices being disposed so as to direct the strip up through the work supporting arm at a point between the cutting devices and the needles of the stitching mechanism.

1,459,104. LAMP. HERBERT STONE JOHNSON, Nuneaton, England. Filed Aug. 24, 1922. Serial No. 584,134. 4 Claims. (Cl. 240—7.)



1. The combination of a lamp, a pillar carrying said lamp, a head, legs pivoted thereto, a spring acting upon said legs normally to hold them in the extended position, stops adapted to limit the extension of said legs, a socket upon said head through which said pillar extends and is endwise free, and a clamping device for securing said pillar at a desired position in said socket, substantially as set forth.

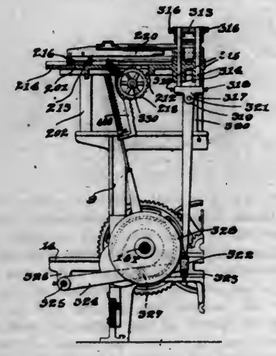
1,459,105. GAUGE FOR PRINTING PRESSES. ABEL KLUGE and ENEVAL KLUGE, St. Paul, Minn., assignors, by mesne assignments, to Brandtjen & Kluge, Incorporated, St. Paul, Minn., a Corporation of Minnesota. Filed Nov. 11, 1920. Serial No. 423,448. 7 Claims. (Cl. 101—414.)



1. The combination with a platen and gripper-bar of a printing press of a finger adapted to engage and hold

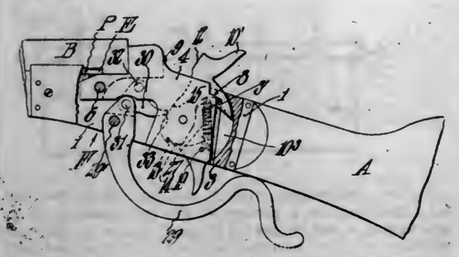
the lower edge of a sheet against the platen and a movable support for said finger yieldingly mounted on the platen,

said support being engaged with and actuated by the gripper-bar to slide the finger downward out of sheet engaging position.



1,459,106. GASOLINE-CONSUMPTION INDICATOR FOR MOTOR VEHICLES. HUGH J. KNERR, U. S. Army. Filed June 24, 1921. Serial No. 480,170. 3 Claims. (Cl. 235—1.)

1. In a device of the class described, the combination of a fluid measuring device provided with an electrical contact adapted to be closed upon the passage of each unit of fluid; means for measuring distance traveled comprising an indicator; a ratchet wheel provided with a pin coacting with said indicator; electrically actuated connections comprising an electromagnet and a pawl actuated by said magnet between said distance measuring means and said wheel adapted to turn said wheel and pin a predetermined distance for each mile traveled; a spring associated with said wheel for returning said wheel and pin to their initial or zero positions upon the closing of said contact; and additional electrically actuated connections comprising a solenoid and a bell crank actuated by said solenoid controlled by said contact governing the return of said wheel and pin to said zero positions.

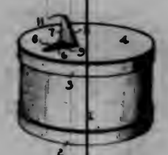


1,459,107. BINDER-BLANK-SHAPING MECHANISM. ALOYSIUS JOSEPH KUSTERER, Richmond, Va., assignor to Consolidated Paper and Box Manufacturing Company, Richmond, Va., a Corporation of Virginia. Original application filed May 29, 1920, Serial No. 385,361. Divided and this application filed Aug. 10, 1921. Serial No. 491,223. 6 Claims. (Cl. 153—21.)

1. In a tray forming mechanism, a guideway having a flat guiding surface and a grooved surface arranged in alinement, a matrix between said surfaces depressed below said flat surface, a die cooperative with the matrix for bending the blanks, the groove in the guideway registering with the matrix, a reciprocating finger having an end adapted to enter the matrix and a shoulder

projecting above the flat surface for engaging the flat blanks whereby a flat blank will be advanced simultaneously with the removal of a blank from the matrix.

1,459,108. FIREARM. GEORGE S. LEWIS, Chicopee Falls, Mass., assignor to Page-Lewis Arms Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 30, 1921. Serial No. 465,633. 5 Claims. (Cl. 42—34.)



1. In a firearm in combination, a hammer and a trigger arranged for interengagement in cocked positions, means interposed between and wholly supported by the hammer and trigger for actuating the said hammer and trigger and to limit the cocking movement of said hammer.

1,459,109. ROLLER DISTRIBUTOR. JESÚS M. LÓPEZ, San Antonio, Tex. Filed July 29, 1921. Serial No. 488,356. 2 Claims. (Cl. 200—26.)

1. In a device of the class described, a carrier; an annular member disposed about the carrier and pivoted thereto; and compression and retractile springs operating simultaneously to hold the annular member yieldingly in eccentric relation to the carrier.

1,459,110. PAPER CARTON. JOSEPH LOUFEK, Keokuk, Iowa, assignor to Iowa Can Company, Keokuk, Iowa, a Corporation of Iowa. Filed Dec. 8, 1921. Serial No. 520,999. 1 Claim. (Cl. 229—7.)

A container having a wall, provided with a restricted opening, a hinged closure or flap for said opening cut from the material of said wall and provided with an uncut portion continuous with the wall and functioning as a hinged mounting for the closure, and a seal cemented to the closure and to the inner surface of the wall of the container for closing the opening and maintaining the closure in the plane of the wall and forming when cut along lines defined by the periphery of the closure a reinforcement for the closure and the hinged mounting, said seal, wall and closure, cooperating to maintain the closure in position within the confines of the opening against internal pressure.

1,459,111. COMBINED SHIELD AND PACKAGE CARRIER. JESSE E. MCGEE, Guntown, Miss. Filed May 31, 1922. Serial No. 564,751. 3 Claims. (Cl. 296—99.)

1. The combination with a pair of clamps adapted for attachment to a portion of the top structure of an automobile, a rod supported by said clamps, a shield, a plurality of links securing said shield to said rod, and a clamp intermediate said links adjustably securing said shield to said rod.

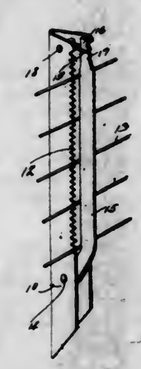
1,459,112. INVALID BED. CHARLES F. MEHL, Euclid, Ohio. Filed Feb. 23, 1922. Serial No. 538,670. 2 Claims. (Cl. 5—88.)

1. In an invalid bed, the combination with the rigid framework consisting of the head and foot thereof and side rails; of a series of transverse patient supporting straps secured at one end to one of the side rails; a shaft extending alongside the other of said side rails; a series of drums upon which the opposite ends of said straps are wound, rotatably mounted upon said shaft and arranged in pairs; a pawl and ratchet for locking each of said drums against unwinding movement; and an operating lever carried by said shaft between drums of each pair, said operating levers being engageable with either drum of the pair between which it is positioned to actuate the same.

1,459,113. BELT. EDWIN S. MIX, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., a Corporation of New York. Filed Jan. 7, 1922. Serial No. 527,767. 6 Claims. (Cl. 241—8.)

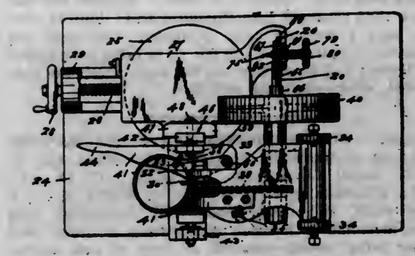
1. In combination with a belt buckle having an anchoring means and a clamping means thereon at a point removed from said anchoring means, a belt having a main portion and a portion turned inwardly on the inner face of the main portion about said anchoring means, said inwardly turned portion being free from the main portion except at its turned end and carrying a loop extending about the main portion, and reinforcing means on the inwardly turned portion between said looop and the anchoring means and free from the main portion.

1,459,114. TESTING DEVICE FOR IGNITION SYSTEMS. CHARLES WOODWARD MORGAN, Chicago, Ill. Filed Oct. 9, 1919. Serial No. 329,502. 12 Claims. (Cl. 175—183.)



1. A testing device for ignition systems comprising a testing chamber to receive and enclose a spark plug in its entirety, means for admitting gas under pressure to said chamber while said spark plug is therein, a circuit in which said spark plug is included, and a transparent window in a wall of said chamber to permit a view of the interior of the chamber.

1,459,115. CLOTHESLINE SUPPORT. JULIUS PEDERSEN, Bridgeport, Conn. Filed May 5, 1921. Serial No. 467,115. 2 Claims. (Cl. 254—194.)

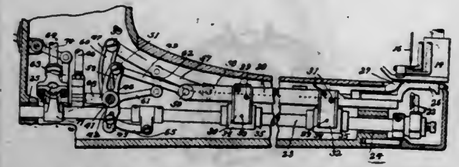


1. A clothes line support consisting of a single length of strip metal bent to provide a link and a pulley mounted therein adapted to receive one reach of a clothes line inserted in the support, said link constituting a pulley housing, a lip end extending downwardly below said housing, a pocket at the opposite end of said link adapted to receive the other reach of the clothes line, and a yieldable end portion normally engaging beneath said lip end and adapted to be pressed inwardly and away from said lip end by a clothes line inserted beneath the same, said lip end adapted to support said yieldable end against downwardly directed stresses exerted by the reach of the clothes line disposed in said pocket.

1,459,116. METAL FENCEPOST. PETER J. SCHMALZ, Howard, Mont. Filed Dec. 16, 1919. Serial No. 345,305. 1 Claim. (Cl. 256—52.)

The combination with an open-sided metal fence post having a loop pivotally mounted within the upper end thereof, of a wire holding lever comprising a strip of longitudinally folded metal having its lower end formed with legs offset in a common direction pivotally supported within the lower end of the post, the upper end of the lever being formed with its folded portions lying in contact with each other and having the outer edge portion inclined toward the post and formed with notches, said loop being arranged to embrace said notched end of the lever, and engaging its bight portion with said notches.

1,459,117. MACHINE FOR MAKING PISTON RINGS. HENRY R. SEIFERT, East Ellsworth, Wis. Filed July 23, 1921. Serial No. 487,041. 18 Claims. (Cl. 90—21.)

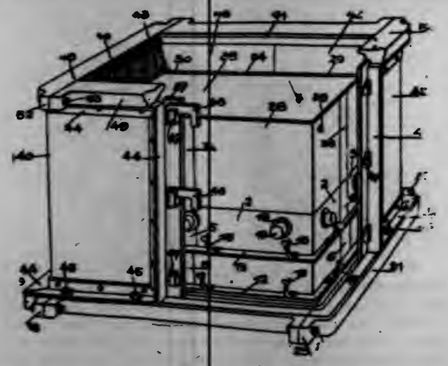


1. A machine for forming piston rings comprising a tool having a peripheral cutting surface, and a face plate for holding a piston ring with one of its ends substantially tangential to the axis of the tool.

1,459,118. FIGURE TOY. ERNEST SINCLAIR SHOWERS, Michigamme, Mich. Filed Feb. 20, 1922. Serial No. 537,962. 7 Claims. (Cl. 208—42.)

1. In combination, a frame, a supporting wheel therefor, a body, a link connecting the body and the frame to permit the body to have movement relative to the frame, a driving connection between the body and the wheel, a link pivotally connected with the body, another link pivotally connected with the frame, means for pivotally connecting the last named links, and a driving connection between the last named links and the wheel.

1,459,119. FEEDING MECHANISM FOR SEWING MACHINES. SAMUEL GEORGE TATE, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed May 6, 1918. Serial No. 232,899. 12 Claims. (Cl. 112—209.)

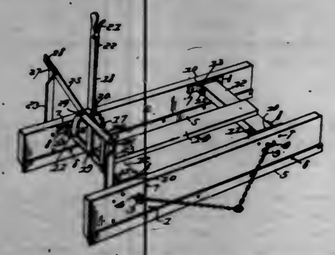


12. A sewing machine including in combination a standard, an arm projecting therefrom, a depending support carried by said arm, a work supporting arm carried by the lower end of said depending support, said depending support being inclined to the vertical, a feed dog at the free end of the work supporting arm, a feed bar carrying said feed dog, a rocking frame at the lower end of said depending support and connections therefrom to the feed bar for moving the same back and forth, an actuating shaft in said arm projecting from the standard, an eccentric thereon, a horizontal lever disposed intermediate the ends of said depending support, said horizontal lever having a vertically arranged link connection with the rocking frame for oscillating the same, means for oscillating the lever from said eccentric, a second eccentric on the actuating shaft, an oscillating shaft extending lengthwise of the work supporting arm, and an eccentric strap co-operating with the second eccentric and connected to said shaft in the work supporting arm for oscillating the same, said oscillating shaft having spaced eccentrics and devices whereby said spaced eccentrics operate to bodily raise and lower the feed bar.

1,459,120. MOLD FOR MANUFACTURING MONEY CHESTS AND THE LIKE. WERNER KONRAD THÖRIG, Zurich, Switzerland. Filed July 22, 1921. Serial No. 486,898. 7 Claims. (Cl. 25—130.)

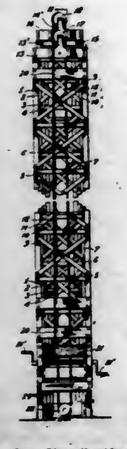
1. A mold for manufacturing concrete money-chests and the like, comprising a rigid machined cast-iron frame forming the lower portion of the mold and constructed to accurately form a door opening in the molded article, bolts for molding the locking-bolt holes in the concrete detachably supported by said frame, and means on said

frame for positioning and holding thereon metal fittings for the door opening adapted to be anchored to the



concrete during the molding operation, substantially as described.

1,459,121. STOPPER FOR CLOSING THE CONTAINERS OF ELECTRIC ACCUMULATORS. FERNAND VAN DE WIEL, Paris, France, assignor to Compagnie Generale d'Electricite, Paris, France. Filed Oct. 25, 1920, Serial No. 419,531. Renewed Mar. 30, 1923. 1 Claim. (Cl. 204—53.)



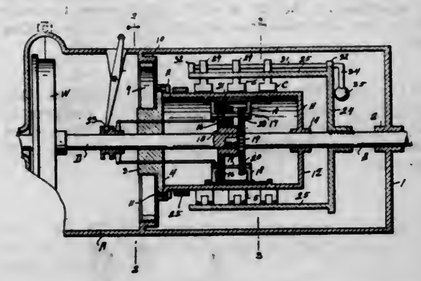
A stopper for an electric accumulator comprising a body having gas inlet ports, a separate liquid outlet port at the bottom of the body arranged at a lower level than the gas inlet ports, gas outlet ports at the upper part of the body, a liquid inlet port located at a lower level than said outlet ports, and baffles interposed between the gas inlet ports and also interposed between the gas and liquid outlet ports arranged to cause the outgoing gases to traverse a circuitous path, said baffle being also arranged to intercept the direct flow of gas from the liquid outlet port to the gas outlet port.

1,459,122. ROAD DRAG. WILLIAM HANDLEY VAN VICKLE, Mound City, Mo., assignor of one-half to Wilson Joseph Aesdale, Mound City, Mo. Filed Mar. 27, 1922. Serial No. 547,240. 1 Claim. (Cl. 37—175.)

In a road drag comprising a pair of scraping blades disposed in spaced parallel relation to each other, spaced brackets carried by the confronting faces of each blade, a beam extending between said blades and disposed within the brackets whereby said blades may move relative to the beams, a lever pivoted to one of said beams, an arm projecting from each blade, links projecting from each arm and pivotally connected at their ends to the lever, one of said links being adjustable, said links being adapted to adjust themselves according to the movement of the lever and the position of the arms of the blades.

1,459,123. HOIST TOWER FOR BUILDING OPERATIONS. ADOLPH FRED WALTHER, Cleveland, Ohio, assignor to Louis H. Heister, Jr., Cleveland, Ohio. Filed May 7, 1921. Serial No. 467,742, 9 Claims. (Cl. 214—95.)

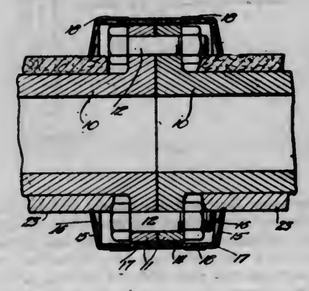
1. A hoist tower for distributing material in building operations, comprising the combination of a plurality of telescopic sections; means for actuating said sections to assume their extended position; detachable means for rigidly securing said sections in such extended position; a guideway secured to the exterior of said sections when extended; an elevator car adapted to travel upon said guideway; and means for operating said elevator car on said guideway.



1,459,124. CONTINUOUS PROCESS OF MAKING SUPERPHOSPHATE. HYLEMAN ALISON WEBSTER, Columbia, Tenn. Filed May 20, 1922. Serial No. 562,558. 6 Claims. (Cl. 71—7.)

1. The process of making superphosphate from phosphorite rock which consists in powdering said rock; suspending said rock powder in water; treating the suspension thus produced with sulphuric acid; diluting with water said suspension after treatment with acid and raising the temperature above 60° C. to bring on a hydrolytic action; and separating out the super-phosphate thus produced, substantially as described.

1,459,125. POWER-TRANSMISSION MECHANISM. WILLIAM I. WHEELER, Scottville, Ill. Filed Aug. 7, 1920. Serial No. 401,893. 13 Claims. (Cl. 74—34.)

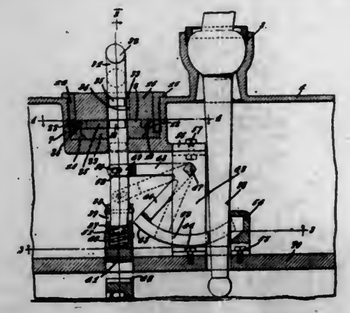


1. In a transmission mechanism, a driving shaft, a driven shaft, and means operatively connecting said shafts including a member constituting a drum, said member being loosely mounted on both of said shafts, a gear assembly carried by the member and co-acting with said shafts, a plurality of clutching units carried by one of the shafts and coacting with the member, and means operable under the influence of centrifugal force for bringing the clutching units into engagement with the member, each of said clutching units being in itself

insufficient to materially hold the member for rotation with the shafts, the centrifugally operated means for bringing the clutching units into engagement with the

member also permiting relative slip between the member and the clutching units to effect a variable speed to the shaft carrying the clutching units.

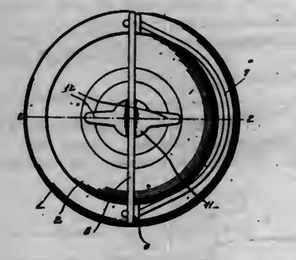
1,459,126. PIPE-FLANGE PROTECTOR. EMANUEL WIDIGER, Hammond, Ind. Filed Sept. 8, 1922. Serial No. 586,879. 3 Claims. (Cl. 154—45.)



1. A device for insulating and protecting pipe flanges comprising a pair of semi-annular halves of channel cross section, each of said halves comprising two principal elements, namely, a lining of sheet insulation having an arcuate web and inwardly bent flanges at its arcuate edges, and a sheet metal jacket lying around and against said lining, said jacket having web and flange portions corresponding to those of the lining, the edges of the flanges of the said metal jacket being rebent inwardly over the edges of the said flanges of the lining, each lining flange and its associated jacket flange being crimped together by substantially radial corrugations.

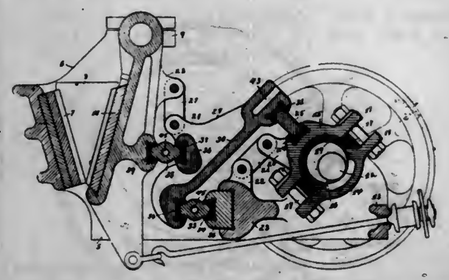
1,459,127. METHOD OF DETERMINING THE COMPOSITION OF GASES. LEO DAFT WILLIAMS and ALFRED WILLIAMS, London, England. Filed Sept. 28, 1920. Serial No. 413,322. 3 Claims. (Cl. 23—3.)

1. Method of estimating the content of a gas by measuring a permanent stoichiometric alteration of the $\frac{PV}{T}$ value of a compressed sample in a sealed chamber, the initial gas pressure being such that the forces to be measured are appreciably increased and errors due to non-saturation with moisture are rendered negligible.



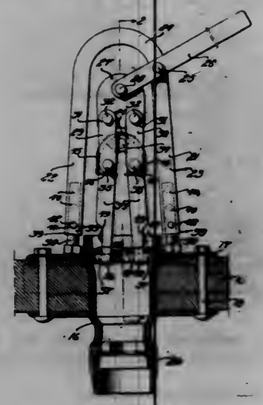
1,459,128. LOCK. THOMAS A. WISEMAN, Tullahoma, Tenn. Filed Sept. 9, 1921. Serial No. 499,377. 2 Claims. (Cl. 70—126.)

2. In a vehicle lock, the combination with a movable member, of a reciprocatory bolt under the control of an operator, a Z-shaped latch pivoted between said bolt and movable member with one arm engaged with the bolt, and the other straddling the movable member, a keeper to



receive said last mentioned arm whereby the inward movement of the bolt will operate the latch to lock said movable member.

1,459,129. ATTACHMENT FOR JARS. ALFRED E. WITTIG, Rochester, N. Y. Filed Oct. 30, 1922. Serial No. 597,739. 4 Claims. (Cl. 215—87.)

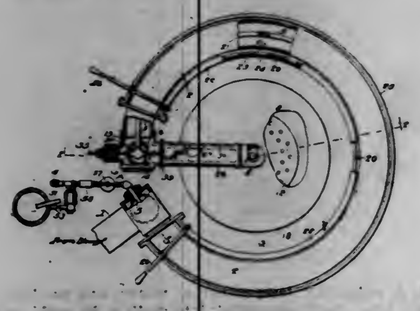


1. A jar attachment comprising a central portion provided with a transversely extending bail-receiving recess and two arms extending from said central portion and having means for interlocking with the cam portions of a jar closure.

1,459,130. ROCK CRUSHER. WILLIAM R. YOUNG, Brooklyn, N. Y., assignor to himself and Stanley K. Greene, Brooklyn, N. Y. Filed Apr. 7, 1922. Serial No. 550,346. 14 Claims. (Cl. 83—53.)

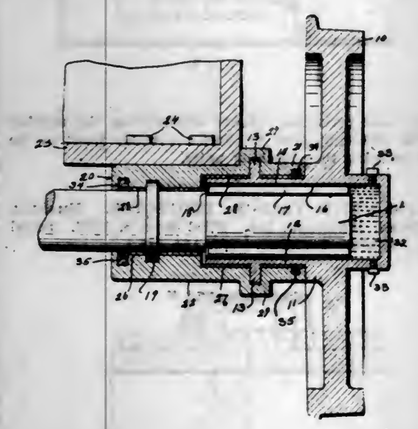
1. A swing jaw lever-actuating means, and an interposed lever freely suspended intermediate its ends and supported independently of and actuated through said lever-actuating means to oscillate the jaw.

1,459,131. DEVICE FOR PULLING BEARING CUPS, SLEEVES, AND THE LIKE. CLAUDE H. ALEXANDER, Oxford, Pa. Filed Jan. 21, 1922. Serial No. 530,789. 7 Claims. (Cl. 29—88.2.)



1. A pulling device including means providing leg portions spaced apart; pulling members in line with the space between said leg portions; and a resilient member having a portion engaging each of said pulling members for automatically moving the same apart; and means for moving said pulling members in a direction transversely to the movement imparted by said resilient means; substantially as described.

1,459,132. CRIMPER. ALICE, PRINCESS ANDREW OF GREECE, St. Cloud, France. Filed Mar. 13, 1923. Serial No. 624,793. 5 Claims. (Cl. 132—32.)



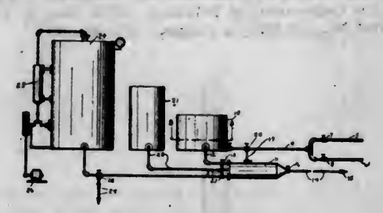
1. In a hair crimper, means to hold the hair at points in different parallel planes, devices to movably connect said means and permit said means to be moved into substantially the same plane whereby the hair between the holding points is rotated and the holding points relatively displaced.

1,459,133. OIL BURNER. ADOLPHUS M. ALLEN, Minneapolis, Minn. Filed Oct. 8, 1921. Serial No. 506,436. 15 Claims. (Cl. 158—28.)

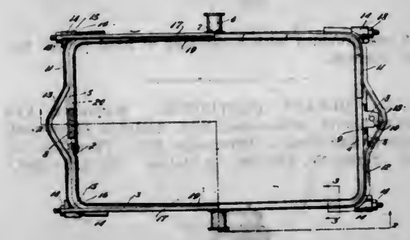
1. The combination of a mixing device for oil and air with means producing an additional air discharge adjacent said mixing device but directed away from it toward a combustion zone, and a supply conduit for air extending to the mixing device and adjacent the combustion zone for preheating the air, means for controlling the quantity of heat absorbed by the air in said conduit from the combustion zone and means for supplying oil to the mixing device.

1,459,134. MOUNTING FOR MINE-CAR WHEELS. ALFRED R. ANDERSEN, Rock Springs, Wyo., assignor of one-half to Joe F. Dominiski, Rock Springs, Wyo. Filed Mar. 14, 1923. Serial No. 625,114. 3 Claims. (Cl. 295—45.)

1. In a mounting for mine car wheels and in combination, an extension formed upon the inner face of a hub of the wheel and having a bore receiving the axle, a bearing rotatably receiving the axle and the extension, and an engagement between the axle and the bearing preventing longitudinal movement of the axle in the bearing in either direction.



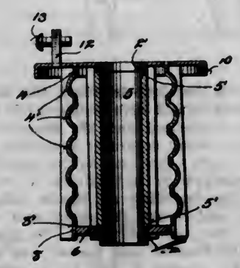
1,459,135. YARN CLEANER. ASA ASHWORTH, Salamanca, N. Y. Filed Aug. 6, 1921. Serial No. 490,251. 8 Claims. (Cl. 28—70.)



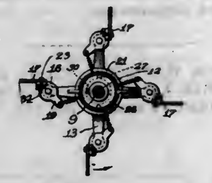
1. In combination with a rotatable member having a series of thread eyes and an inlet for each, a vitreous lining for each eye, and a rotatable lock having a thread passage movable onto and out of register with the inlets.

1,459,136. WASHING APPARATUS. CHARLES FEDELS BAMBARA, Chicago, Ill. Filed Apr. 18, 1921. Serial No. 462,360. 4 Claims. (Cl. 299—84.)

1. A washing apparatus including a mixing tank, fluid supply pipes terminating in a single pipe leading to said mixing tank, an air pressure tank, an oil tank, a main mixing tank having a valve controlled discharge, pipe lines affording communication between said tanks and said main mixing tank, and means controlling the passage through said pipe lines whereby the contents of one or more of said tanks can be discharged into said main mixing tank.

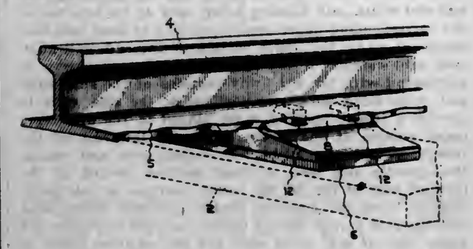


1,459,137. FOUNDRY FLASK. DONALD C. BARRICK, Canton, Ohio, assignor to The Union Metal Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 17, 1922. Serial No. 582,419. 19 Claims. (Cl. 22—96.)



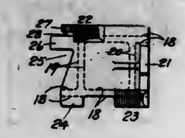
1. A foundry flask comprising a rectangular sheet metal body portion, reinforcing plates upon opposite sides of the body and tie rods connecting said reinforcing plates.

1,459,138. CHAIR IRON. HARRY W. BOLENS, Port Washington, Wis. Filed Mar. 14, 1922. Serial No. 543,626. 5 Claims. (Cl. 155—138.)



1. In a chair base hub, the combination of a spindle barrel having an annular recess adjacent its top edge, whereby a shoulder is formed on said barrel, a top plate having a central depending flange received in said recess and abutting against said shoulder, said top plate having a plurality of openings therein, a plurality of channel strips having angularly directed wings thereon and transversely extending ribs terminating in said wings, tongues on said strips secured in said openings and means at the bottom of said strips for securing said strips to said spindle barrel.

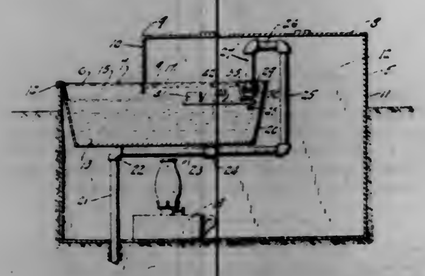
1,459,139. WEEDER. REUBEN G. BRUNER, Windsor, Ontario, Canada. Filed July 29, 1921. Serial No. 488,316. 4 Claims. (Cl. 97—213.)



1. In a weeding machine, weeding devices, a spider supporting said weeding devices, springs connected to said weeding devices and adapted to allow said weeding devices to yield relative to said spider, and means connected to said springs and movable co-axial of said spider for placing said springs under additional tension when the weeding devices encounter deeply rooted weeds.

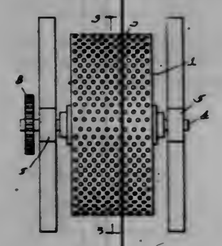
1,459,140. TRACK STRUCTURE. LOUIS P. CHICOINE, Vaudreuil, Quebec, Canada. Filed Jan. 9, 1922. Serial No. 528,112. 2 Claims. (Cl. 238—304.)

1. In a railway road bed the combination with a tie, a tie plate mounted in fixed position upon the tie and a rail supported upon the tie plate, the side edges of the base flanges of the rail presenting undulating surfaces and the tie plate having a corresponding undulating portions adapted to interlock with the undulating surfaces of the base flanges for the purpose of preventing longitudinal creeping of the rail, the underside of said tie plate having a recess therein and cushioning means located between the tie plate and tie and consisting of a fibre block adapted to extend into the recess.



1,459,141. RAILWAY BRAKE BEAM. SETH A. CRONE, East Orange, N. J. Filed June 12, 1922. Serial No. 567,577. 5 Claims. (Cl. 188—231.)

3. In a brake-beam, a flanged compression member, a strut encompassing said member and deflected angularly adjacent to the flanges thereof to form angularly disposed parallel sides for the brake lever, and a securing plate driven between said flanges and the adjacent angular portions of the strut and having on diagonally opposite portions of one face thereof wedges, one being in



advance of the other, engaging the diagonally opposite inwardly turned portions of the strut, and said plate also having its forward edge adjacent to its forward wedge a forwardly projecting tongue to be bent over against the adjacent edge of the strut for locking said plate against accidental displacement.

1,459,142. STOCK WATERER. CALVIN L. CRUZEN and CLARENCE E. GAY, Lacey, Iowa. Filed Mar. 13, 1922. Serial No. 543,330. 1 Claim. (Cl. 119—73.)

A stock waterer comprising a housing including side and end walls, said housing being open at its top, one of the corresponding upper corner portions of each side wall being cut away, the upper portion of the end wall adjacent said corners of the side walls being cut away to correspond with the cut away portions of the side walls and cooperating with said portions of the side walls to provide a trough opening, a lid hinged to the projecting upper portion of one of the side walls inwardly of the trough opening and adapted to extend over and engage the opposite side wall, a front member carried by the forward edge of the lid, the corner portions of said front member being cut away, a trough disposed within said housing, said trough having flanges adapted to engage the upper edge of said front wall and the adjacent edges of the cut away portion of the side walls, the remaining portions of the flanges of the trough being adapted to engage flanges projecting from the inner face of the side members beneath the lid, the cut away portions of the front member being adapted to engage the flanges of the trough to assist in holding said trough within the housing.

1,459,143. TESTING COKE. M DONOVAN CURRAN, Toledo, Ohio. Filed Aug. 20, 1921. Serial No. 493,822. 9 Claims. (Cl. 73—51.)

1. The method of testing coke or like material, which consists in subjecting the same to prescribed physical strains or stresses, grading the resultant particles according to size, and substituting the weight values of such particles in the several grades in an empirical formula giving a defined physical quality of such material.

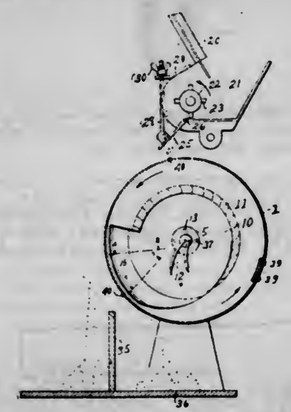
1,459,144. CUE. HARMON F. DAVENPORT, Chicago, Ill., and MICHAEL J. WHELAN, Muskegon, Mich., assignors to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 9, 1920. Serial No. 429,339. 4 Claims. (Cl. 46—9.)

4. A cue provided with a covering of hard rubber vulcanized thereon.

1,459,145. BREAST PROTECTOR. MADALINE VAN DEUSEN DAVIS, Milwaukee, Wis., assignor of one-half to Carrie Van Deusen, Milwaukee, Wis. Filed Jan. 17, 1922. Serial No. 529,869. 2 Claims. (Cl. 128—280.)

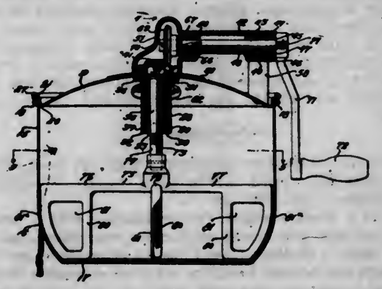
1. In a device of the class described, the combination of a pair of pockets formed with double fabric walls, the outer wall being rubberized and the inner wall being fleecy, said pockets being separably connected in juxtaposed relation to each other, means for supporting the same on a woman's body in position to receive the breasts, said means including an elastic band passing around the body underneath the arms, and adjustable straps passing over the shoulders, a binding extending around the edge of each pocket, and an elastic cord secured under tension to the lower edge of each pocket to gather the same.

1,459,146. FRAME. WILLIAM J. DECKER, Detroit, Mich. Filed Nov. 21, 1921. Serial No. 516,847. 1 Claim. (Cl. 20—92.)



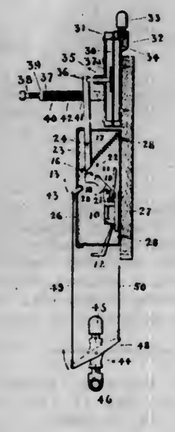
In a frame, the combination of wood side and end members having rabbets along their inner edges to receive a sheet of glass, said rabbets extending the entire length of said frame members, and a sheet metal corner member connecting the side and end members and having its ends

bent to conform to the outer surfaces of the side and end members and its middle portion of the same cross sec-



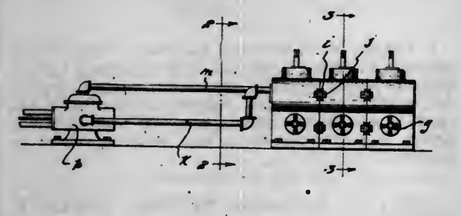
tion as its ends and curved to constitute a curved elbow, the edges of the sheet metal member being bent around the edges of the side and end members.

1,459,147. MAGNETIC SEPARATOR. ALVIN DINGS, Milwaukee, Wis., assignor to Magnetic Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 5, 1918. Serial No. 248,311. 10 Claims. (Cl. 83—71.)



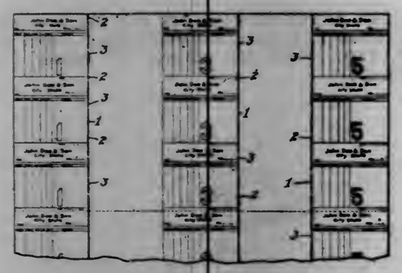
1. A magnetic separator, consisting of the combination of a revoluble drum, a magnet located therein, and having its axis substantially coinciding with the axis of the drum, and provided with a segmental pole piece disposed with its outer margin in close proximity to the interior wall of the drum on the descending side, and adjustable means for cascading material in free air along that side of the drum in the magnetic field established by said pole piece.

1,459,148. MIXING AND BEATING DEVICE. ANTHONY I. FLYNT, Philadelphia, Pa. Filed Dec. 27, 1921. Serial No. 525,060. 5 Claims. (Cl. 259—122.)



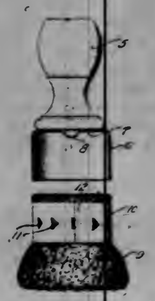
1. A device of the character described including a receptacle; a lid on the receptacle having a hole; a spindle supported by said lid; a mixer on said spindle within the receptacle; a bearing member; a shaft mounted within said bearing member, said lid having headed pins thereon, a portion of said bearing member having notches and adapted to be swung with the notches embracing said pins below their heads; and means operatively connecting said shaft with the spindle; substantially as described.

1,459,149. AUTOMATIC CUT-OFF FOR OIL BURNERS. LAURENCE E. FRENCH, Sebastopol, Calif. Filed Dec. 28, 1921. Serial No. 525,303. 12 Claims. (Cl. 158—28.)



6. In combination with an apparatus for delivering fluid under pressure through a conduit, of an electric motor for driving said apparatus, an electric circuit, for said motor, a switch in said circuit, a valve in said conduit, pressure actuated means operatively connected to said apparatus and to said valve and switch and adapted to normally maintain said switch closed and said valve open, said means also adapted to release said switch to break the circuit and to close said valve upon a drop in pressure of said fluid.

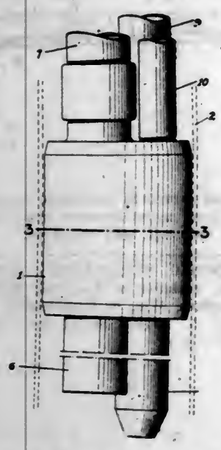
1,459,150. FLUID-DISTRIBUTING MANIFOLD. AUDLEY D. GASTON, Sarnia, Ontario, Canada. Filed Dec. 9, 1921. Serial No. 521,209. 5 Claims. (Cl. 277—59.)



1. A fluid distributing manifold, comprising a plurality of sections having intercommunicating exhaust passage sections and intake passage sections forming common intake and exhaust passages through the manifold, each section provided with a separate distributing space having ports communicating with each exhaust passage and intake passage, and means for controlling such ports.

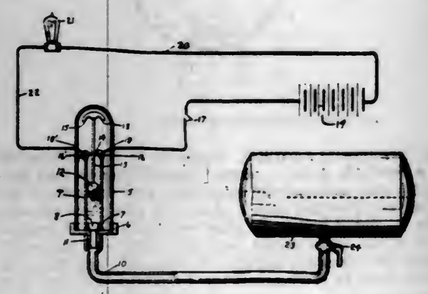
1,459,151. MANIFOLD PRINTED FORM. ARTHUR S. GILMAN, SAMUEL C. BENNETT and FRED W. KIESLING, Cleveland, Ohio, assignors to The A. S. Gilman Printing Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 11, 1920. Serial No. 380,446. 3 Claims. (Cl. 282—27.)

1. A multiple form sheet comprising a multiplicity of forms, said forms being of varying character transversely but of recurrent character longitudinally, the recurrent longitudinal forms being separated from each other laterally by means of lines of perforations and slits, each line consisting of a plurality of long slits, the material between the slits being perforated by groups of short perforations.



1,459,152. SCOURING DEVICE. LILLIAN GRAHAM, Philadelphia, Pa. Filed May 13, 1922. Serial No. 560,676. 2 Claims. (Cl. 15—209.)

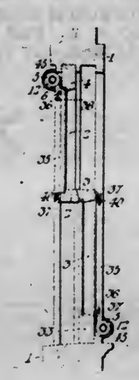
1. A device of the character described including means providing a socket; a yieldable scouring element; and a resilient member disposed about said scouring element, the scouring element and resilient member being disposed in said socket when contracted, and expanding therein to frictionally secure said scouring element in position.



1,459,153. HYDRAULIC EJECTOR. ABRAHAM R. GRIESEMER, San Francisco, Calif. Filed Aug. 9, 1922. Serial No. 580,655. 2 Claims. (Cl. 37—62.)

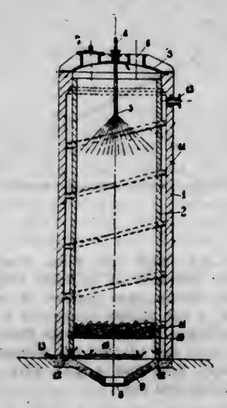
1. A hydraulic ejector comprising a body adapted to fit in a casing, a pair of vertical and spaced bores through the body, suction and pressure nozzles attached to and depending from the body in alinement with said bores, suction and pressure pipes attached to and projecting upwardly from the body in alinement with the respective bores, a third vertical bore in the body closed at the lower end, a jet from said third bore projecting into the

bore to which the suction pipe is connected, and a pressure pipe attached to and projecting upwardly from the body in alinement with said third bore.



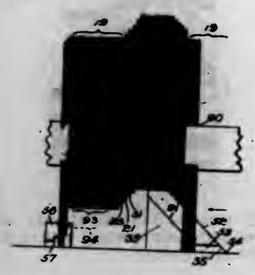
1,459,154. ELECTRIC SIGNAL FOR GASOLINE TANKS. LEOPOLT GRUZLER, Chicago, Ill. Filed Mar. 26, 1921. Serial No. 455,768. 2 Claims. (Cl. 200—84.)

1. In an electric indicator for liquid fuel tanks, a casing, a base member embracing and supporting said casing, a tube mounted in said casing upon a neck in said base member; a conduit connecting said tube through said neck with the interior of the fuel tank, a float in said tube, electric terminals mounted on said tube, insulation in opposite parts of said casing, an electric wire connected with each of said terminals and extending through said insulation, and an electric switch mounted on and actuated by said float for engaging said terminals and closing the circuit of said electric indicator.



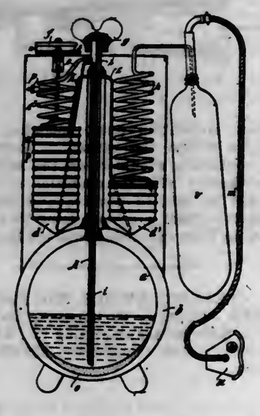
1,459,155. WINDOW SCREEN. JOHN P. IOOR, Philadelphia, Pa. Filed Jan. 8, 1921. Serial No. 435,966. 8 Claims. (Cl. 156—39.)

2. In a window screen, the combination with a flexible web; of adhesive tapes, reinforcing respective edges of said web; a hollow roller; means connecting one end of said web to said roller; a trunnion extending axially in rigid relation with said roller at one end thereof; a cap at the other end of said roller, having a clutch hooked projection, extending circumferentially in the direction in which said web is adapted to be wound upon said roller, and having an axial bearing; a spring shaft, extending in the hollow of said roller, and journaled at its outer end in said bearing; a clutch collar rigidly mounted on said spring shaft and having a clutch hooked projection extending circumferentially in the direction in which said web is arranged to be unwound from said roller; means at the outer end of said spring shaft, arranged to prevent rotation thereof; a spiral spring in



the hollow of said roller, having one end engaging said shaft and the other end engaging said roller, and adapted to wind said web and also adapted to thrust said shaft axially outward with respect to said roller, to disengage said hooked projections when they are released from each other; a bracket having a journal in which said trunnion may rotate; and a bracket having a bearing in which said shaft may be held against rotation.

1,459,156. DISTILLATION AND CRACKING OF MINERAL OILS AND OTHER HYDROCARBON-CONTAINING MATERIAL. NORMAN VICTOR SYDNEY KNIBBS, London, England. Filed Oct. 5, 1920. Serial No. 414,837. 3 Claims. (Cl. 196—25.)



1. A process of distilling and cracking mineral oils and other hydrocarbon-containing materials, which consists in causing the material to be distilled or cracked to descend in a finely divided state through an unobstructed chamber in direct contact with a current of hot gas produced by the combustion of the less volatile residues obtained in the treatment of the material.

1,459,157. KNITTING MACHINE AND METHOD OF FORMING REENFORCEMENTS. ROBERT H. LAWSON, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Jan. 20, 1923. Serial No. 613,853. 94 Claims. (Cl. 66—21.)

89. A knitting machine containing, in combination, a series of independently, reciprocable needles; means to effect initiating movement for yarn-taking reciprocation of one of said needles; and means to cause such initiating movement for the said reciprocation of that one of said needles to effect initiating movement for the yarn-taking reciprocation of a neighboring needle of the said series.

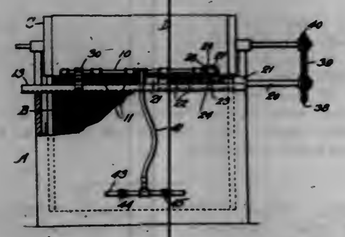
1,459,158. APPARATUS FOR GENERATING RESPIRABLE AIR FROM LIQUEFIED GASES. LEOPOLD LISSE, Berlin, Germany. Filed July 19, 1920. Serial No. 397,555. 3 Claims. (Cl. 62—92.)

1. In apparatus for generating respirable air from liquid air container with means for facilitating the evaporation, a pipe through which said liquid container communicates with the atmosphere, a throttle valve at the outlet of said pipe, an evaporation chamber, a pipe connecting said container with said chamber, said chamber being supplied with more or less liquid the more or less said valve is throttled.

1,459,159. VEHICLE BODY. HERMAN C. MAISE, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 18, 1921. Serial No. 462,084. 7 Claims. (Cl. 296—46.)

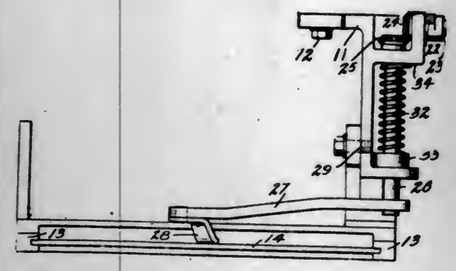
1. In a vehicle body having a compartment, a swinging closure for one side of said compartment, an aux-

iliary seat pivotally supported at one end to be turned into engagement with said closure, said closure forming a support for one end of said auxiliary seat, and means



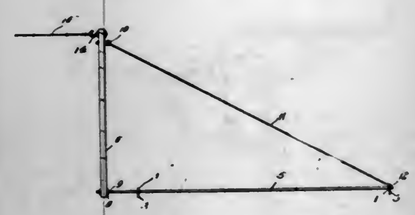
for detachably securing the end of said auxiliary seat in engagement with said closure, said seat serving to brace and hold said closure.

1,459,160. WATER CIRCULATOR FOR GAS ENGINES. FRANK B. NIMS AND VOIGT J. NIMS, Stockton, Calif. Filed Nov. 5, 1921. Serial No. 513,178. 7 Claims. (Cl. 103—103.)



1. A water circulating pump including a casing, a bearing sleeve within the casing, a shaft turnable in the sleeve, contacting shoulders on the shaft and sleeve, and means whereby with the operation of the pump the shoulders will be held in positive and continuous frictional contact to form a ground joint to seal the water against passing from the casing into the bearing sleeve.

1,459,161. CLEANING DEVICE FOR PAPER-MAKING MACHINES. CHARLES F. ROBERTS, Lockport, N. Y., assignor to Roberts Manufacturing Co., Lockport, N. Y. Filed Nov. 17, 1919. Serial No. 338,653. 5 Claims. (Cl. 92—50.)

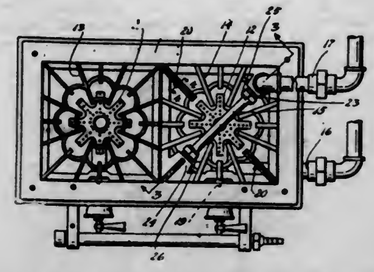


1. In a showering device for use on paper making machines, the combination of a pipe having a number of discharge nozzles through which a fluid may be ejected, and which are spaced at intervals along said pipe, a rotatable shaft, a part connected to and movable along said shaft and to which said pipe is connected, a spiral groove on said shaft, and a key connected to said part and engaging in said groove, whereby said part will slide along said shaft when said shaft is rotated and cause said pipe to reciprocate.

1,459,162. GUARD FOR PUNCH PRESSES. FRANK J. RUGGIERO, New York, N. Y. Filed Sept. 23, 1919. Serial No. 325,630. 9 Claims. (Cl. 74—105.)

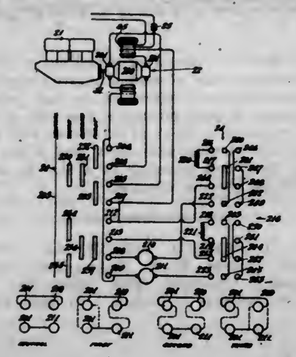
1. The combination with a press and a controller therefor, a rod connected with said controller, a base adjustably secured to the press, a movable gate for guarding the press carried by the base, guides for the gate, a treadle for operating said gate, a rod extending from the treadle to the gate mechanism, a sleeve on the controller rod encircling said treadle rod and a shoulder on the treadle rod positioned to engage said sleeve when the treadle has been operated to shift the gate into its protective position.

1,459,163. CHECKROW-WIRE SUPPORT. AUBREY M. SCHIMBERL, Moundville, Mo. Filed June 20, 1922. Serial No. 569,669. 1 Claim. (Cl. 111—49.)



In a support for check row wires comprising pairs of spaced anchor members at opposite ends of a field, a rod journaled within eyes formed in each pair of anchor members, a bar rigidly connected to one end of the rods and arranged at right angles thereto, hooks in the free ends of each bar adapted for securing a checking wire between said bars and a guy wire between the free ends of each bar and rod.

1,459,164. WATER HEATER. FRANK SCHORIK, Chicago, Ill. Filed Sept. 5, 1922. Serial No. 586,171. 14 Claims. (Cl. 126—54.)

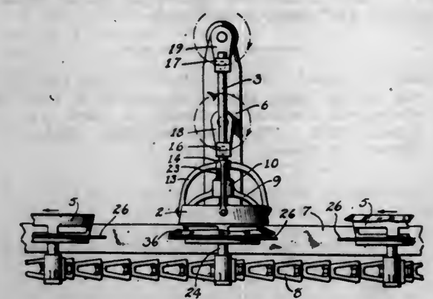


1. The combination with a burner, of a storage tank, a conduit having portions connected with said storage tank and extending adjacent to said burner; a sectional

vessel supporting member disposed over said burner and having said portions connected thereto; and a heat-

ing element communicating with said conduit portions and connected with said supporting member in such manner as to hold the same in assembled position.

1,459,165. ELECTRIC DRIVE FOR VEHICLES. JACOB SCHURCH, Los Angeles, Calif., assignor of one-half to William H. Heise, Los Angeles, Calif. Filed Jan. 4, 1921, Serial No. 435,040. Renewed Mar. 3, 1923. 4 Claims. (Cl. 290—14.)

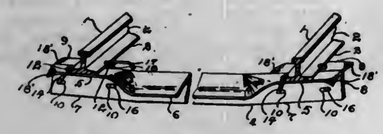


4. In a vehicle, the combination of: an internal combustion engine; a series direct current generator driven by said engine and having a single field and an armature having two windings; means for connecting said armature windings in series or in parallel; series direct current motors driving said vehicle; and means for connecting said generator to said motors.

1,459,166. PIE MACHINE. DENNIS W. SMITH, Wilmette, Ill., assignor to Colborne Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 24, 1920. Serial No. 353,829. 2 Claims. (Cl. 107—1.)

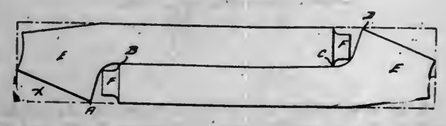
2. In a pie machine, the combination of a frame, a conveyer continuously movable along said frame, pie-plate supports carried by said conveyer, a standard mounted on said frame, a pair of cranks rotatably mounted on said standard in vertically spaced relation, a vertically disposed shaft pivotally connected to said cranks and bodily revolvable about a horizontally disposed axis while maintaining a constant vertical position, means carried by said shaft and shiftable into contact with the dough on pie plates resting on said sup-

ports during the travel of said pie plate past said standard and adapted to shape the dough around the perimeter



of the pie plates, and means for synchronizing the movement of said shaft with that of said conveyer, substantially as described.

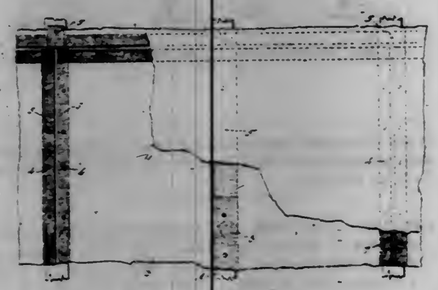
1,459,167. PROCESS OF CONCENTRATING ORES. REINOLD V. SMITH, Salt Lake City, Utah, assignor to Eureka Metallurgical Company, Salt Lake City, Utah, a Corporation of Utah. Filed Mar. 4, 1922. Serial No. 541,205. 7 Claims. (Cl. 83—85.)



1. The process which comprises oiling and sulfidizing oxidized ore in an aqueous pulp, substantially removing the water of the pulp after such oiling and sulfidizing, diluting said pulp with uncontaminated water, and subjecting the same to flotation.

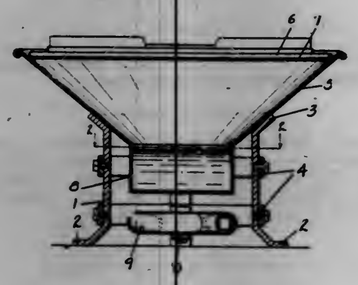
1,459,168. CROSSTIE. HENRY C. TULLY, Toledo, Ohio. Filed Apr. 30, 1921. Serial No. 465,730. 9 Claims. (Cl. 238—58.)

4. A cross-tie including an angle member having an intermediate portion thereof depressed.



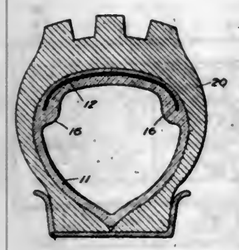
1,459,169. METHOD OF MAKING SPOKES. JAMES H. WAGENHORST, Jackson, Mich. Original application filed Nov. 15, 1918, Serial No. 262,649. Divided and this application filed July 28, 1921. Serial No. 488,155. 2 Claims. (Cl. 144—309.)

1. The herein described method of making spokes which consists in providing a billet substantially rectangular in shape, cutting into said billet at one side thereof at a point adjacent one end and carrying said



cut inwardly to a point in the longitudinal center of said billet and then continuing said cut along said longitudinal line for the greater portion of the billet and then carrying said cut to the opposite side of the billet at a point adjacent the opposite end thereof, thereby providing two similar spoke blanks.

1,459,170. WALL CONSTRUCTION. CURRY ORA WALPER, Detroit, Mich., assignor of one-third to Frank A. Maslen and one-third to Bernard E. Clark, both of Detroit, Mich. Filed July 20, 1922. Serial No. 576,262. 8 Claims. (Cl. 72—17.)



1. A wall structure comprising a composition board, a substantially unyielding member with which the central portion of the board is in contact on one surface, a surface coating on the opposite surface of said board, and a reinforcing fabric embedded in said surface coating opposite the point of contact of the board with said member.

1,459,171. APPARATUS FOR REMOVING ABRASIVE DISKS FROM GRINDING WHEELS. FREDERICK A. WILLARD and MATHEW D. WILLARD, Jackson, Mich. Filed May 8, 1922. Serial No. 559,500. 4 Claims. (Cl. 126—350.)

1. In a structure of the class described, the combination of a supporting base, an inverted frusto conical grinding disk holder adapted to receive and support grinding disks of varying sizes mounted on said base, a steam generating pan secured to the lower edge of said disk holder to deliver thereto, and a heating burner mounted on said base below said pan.

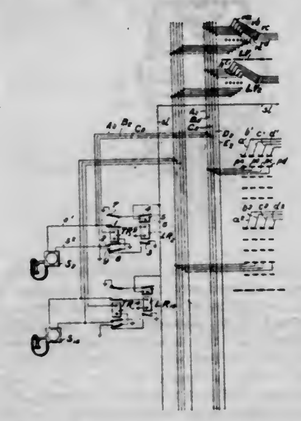
1,459,172. INNER TUBE. JOSEPH C. WISE, Los Angeles, Calif. Filed Jan. 5, 1922. Serial No. 527,088. 2 Claims. (Cl. 152—13.)

1. An inner tube comprising: a hollow ring of elastic rubber; and a series of nonelastic members extending across the periphery thereof and terminating in thickened shoulders formed in the body of said ring.

1,459,173. DOUBLE WINDOW SHADE AND CURTAIN SUPPORT. JOHN WLOSZEK, Donora, Pa. Filed May 5, 1922. Serial No. 558,561. 2 Claims. (Cl. 156—23.)

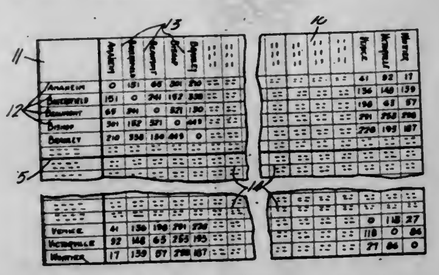
2. In a device of the class described, a curtain supporting bracket, a pair of hooked fingers projecting therefrom, a forked lever fulcrumed to and between said hooked fingers, a block pivoted in the fork of said lever eccentric to the pivot point of the latter, and a clamping screw threaded through said block, and a pin projecting from said block and engaging in a slot in one of said fingers, for the purpose specified.

1,459,174. OVERHEAD ELECTRICAL CONDUCTOR SYSTEM. HENRY B. P. WRENN and ALOYSIUS S. O'DONOGHUE, Cleveland, Ohio. Filed Nov. 11, 1922. Serial No. 600,458. 7 Claims. (Cl. 191—40.)



1. An electrical system of the character set forth comprising a main feeder wire and a plurality of contact wires connected to said feeder wire, said contact wires being arranged in a series of overlapping loops.

1,459,175. TELEPHONE-EXCHANGE SYSTEM. FRITZ ALDENDORFF, Berlin-Wilmersdorf, Germany. Filed Dec. 31, 1914. Serial No. 879,950. 11 Claims. (Cl. 179—27.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

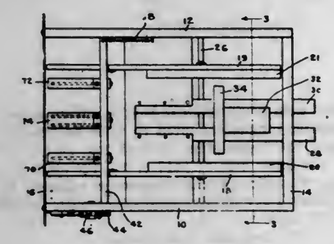


1. In a telephone exchange system, a calling subscriber's telephone line, two line finders having movable

and stationary contacts, said line terminating at the exchange in stationary contacts of both line finders, an operator's position, a direct connection between the movable contacts of one line finder and said position, a trunk selecting switch individual to said position, a selector switch, stationary and movable contacts for said switches, direct connections between the stationary contacts of said trunk selecting switch and the movable

contacts of said selector and the second line finder, a called line terminating in the stationary contacts of said selector switch, means jointly controlled by the calling subscriber and the operator for establishing a temporary connection including only said two line finders and said trunk selecting switch, and means controlled by the operator for establishing a direct connection between the called line and the movable contacts of the second finder.

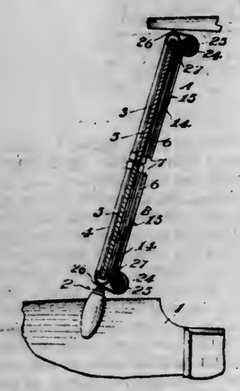
1,459,176. DISTANCE FARE OR WAGE CHART. CHARLES C. BENNETT, Los Angeles, Calif. Filed Oct. 6, 1921. Serial No. 505,717. 5 Claims. (Cl. 283—32.)



1. A distance chart comprising a sheet of thin flexible material having a portion adjacent to one edge folded over on the face of the sheet, the face of the folder-over portion of the sheet bearing a vertically disposed column composed of the names of stations, the upper portion of the face of the sheet to the right of the folded-over portion bearing a horizontally disposed column composed of the names of stations, the arrangement of the names in the two columns being identical, the face of the sheet below the horizontally disposed column and to the right of the folded-over portion bearing the vertically disposed column being printed with distance indicating numerals arranged in vertical and horizontal columns, and the arrangement of the numerals in the respective vertical and horizontal columns being identical.

1,459,177. PROCESS OF PRODUCING NORMAL AND MIXED ETHERS. CARNIE B. CARTER, Pittsburgh, Pa., and ALBERT E. COXE, Chicago, Ill., assignors, by mesne assignments, to S. Karpen & Bros., a Corporation of West Virginia. Filed Nov. 26, 1920. Serial No. 426,641. 7 Claims. (Cl. 260—151.)

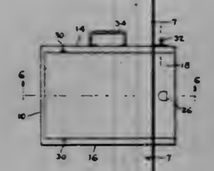
1. The process of producing ether, which comprises causing a reaction between a halogenated aliphatic hydrocarbon and an alkali and an alcohol of the aliphatic series, such reaction being effected in a closed vessel under pressure.



1,459,178. [WITHDRAWN.]

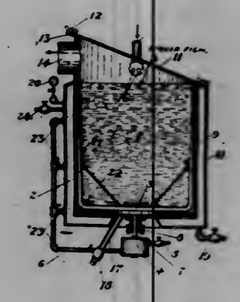
1,459,179. ENVELOPE-FEEDING ATTACHMENT. JOSEPH C. GUNDERSON, Grand Forks, N. Dak. Filed June 4, 1921. Serial No. 475,157. 3 Claims. (Cl. 271—2.)

1. An envelope-feeding attachment comprising a magazine, means for supporting a bunch of envelopes standing on edge in said magazine, a shaft mounted near one end of said magazine, a suction device secured to said shaft, said suction device being adapted to engage the end envelope of said bunch, a curved member forming a continuation of the bottom of said magazine and having said shaft as its center of curvature, and means for oscillating said shaft to lift the engaged envelope from vertical to horizontal position.



1,459,180. SUN AND GLARE SHADE FOR VEHICLES. GEORGE N. HEIN, San Francisco, Calif. Filed Oct. 17, 1921. Serial No. 508,368. 3 Claims. (Cl. 296—97.)

1. In combination with a support, a pair of parallel spaced rollers carried thereby, a window associated with

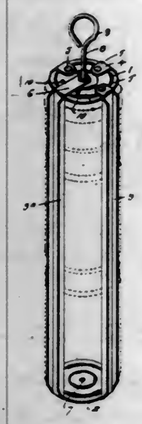


said support, a flexible curtain carried by each of said rollers, the free edges of said curtains adapted for independent free movement in the same plane to and from each other to provide a sight opening through said window between said curtain edges variable as to width and position, and means carried by the free edge of each curtain for releasably retaining said edge in its adjusted position.

1,459,181. TOILET CASE. EILEEN M. KLEBBA, Minneapolis, Minn. Filed June 20, 1921. Serial No. 479,093. 5 Claims. (Cl. 132—79.)

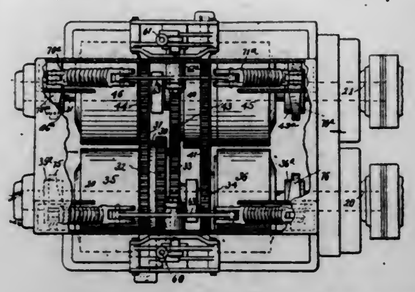
1. A toilet case comprising a box, a sliding cover for said box having tongues adapted to slide in grooves extending along the upper sides of said box, and a mirror secured on the inner side of said cover, the sides of said box having upwardly extending grooves adapted to receive said tongues for holding said cover with its mirror positioned for use.

1,459,182. DEVICE FOR HEATING, PASTEURIZING, AND EVAPORATING LIQUIDS. MAY C. MABEE, Toledo, Ohio. Filed Feb. 4, 1915, Serial No. 6,073. Renewed Nov. 20, 1920. Serial No. 425,560. 18 Claims. (Cl. 127—9.)



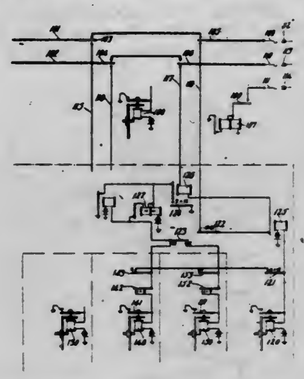
1. In an apparatus for treating liquids to change the condition or consistency thereof, the combination of a tubular container having an inlet adjacent one end for the material to be treated and an outlet at the opposite end for the escape of the treated material, and also having at one end a relatively large outlet for the escape of vapors and gases, means for exteriorly heating the container whereby the inner surface thereof constitutes a treating surface, and conveyor means within the container adapted to apply the material in cylindrical layer formation on the treating surface and for causing said layer of material to rapidly move over said surface, said conveyor means extending longitudinally of and adjacent to the treating surface and supported wholly at one end whereby to offer no obstruction centrally of the container, and whereby to provide a quiet zone for the escape of vapors and gases from the layer and through said relatively large outlet.

1,459,183. HUMIDIFIER FOR INTERNAL-COMBUSTION ENGINES. WILLIAM H. MARSHALL, Denver, Colo., assignor, by mesne assignments, to Louis F. Raymond, Chicago, Ill. Filed July 2, 1917. Serial No. 178,218. 8 Claims. (Cl. 183—43.)



1. A humidifier for internal combustion engines, comprising a casing whose lower portion is adapted to be connected with a source of moisture and whose upper portion is adapted to be connected with the engine cylinders, the casing below the moisture inlet being equipped with a water trap provided with a siphon for automatic discharge, and means arranged within the casing between the moisture inlet and the moisture outlet, for preventing water in liquid form from reaching the moisture outlet, said means comprising a baffle plate, a mesh diaphragm and a suspended hood said moisture inlet being situated below said baffle plate and said plate being below said mesh diaphragm.

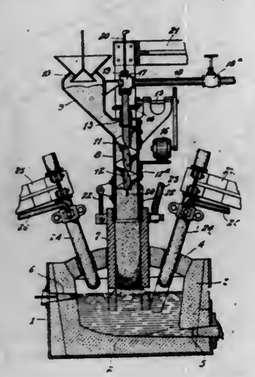
1,459,184. SANITARY MILK AND BUTTER COOLER. JOHN A. MORTON, Williston, Tenn. Filed Aug. 11, 1921. Serial No. 491,635. 1 Claim. (Cl. 220—1.)



A device of the class described including a plurality of strips to enclose and support an article, a disk from which said strips depend, one of said strips having an end member overlapping said disk, a suspending means for the device rising from the disk, said suspending means passing through said end member whereby the last mentioned strip is pivoted to the disk in order that it may function as a closure, and bits pressed out from said disk between which said end member is normally disposed and by which the last mentioned strip is fastened in closed position.

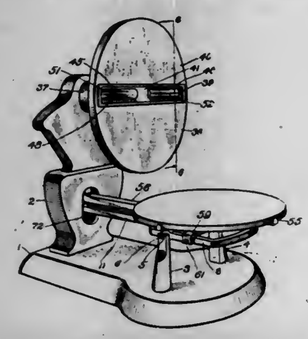
1,459,185. SLIDE-OPERATING MECHANISM. GORDON R. PENNINGTON, Cleveland, and SAMUEL K. WELLMAN, Cleveland Heights, Ohio. Filed Dec. 5, 1919. Serial No. 342,626. 6 Claims. (Cl. 180—17.)

1. In variable speed transmission mechanism, the combination of a driven shaft, two gear sleeves which are rotatably mounted thereon, means for turning said sleeves in the same direction but at different rates, two clutches which are respectively associated with said gear sleeves for connecting them to the shaft, a single lever, and means operated by movements of the lever in opposite directions for selectively closing either clutch without affecting the other.



1,459,186. TELEPHONE-EXCHANGE SYSTEM. LIPA POLINKOWAKY, Antwerp, Belgium, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1920. Serial No. 377,980. 10 Claims. (Cl. 179—18.)

1. In a telephone exchange system, a telephone line, a selective switch, a second selective switch, a plurality of switch-controlling registers, means controlled in accordance with the setting of one of said controlling registers for operating said first switch to extend the telephone line to said second switch, and means operated in accordance with the extent of operation of said first switch for controlling the operation of said second switch to further extend the telephone line.

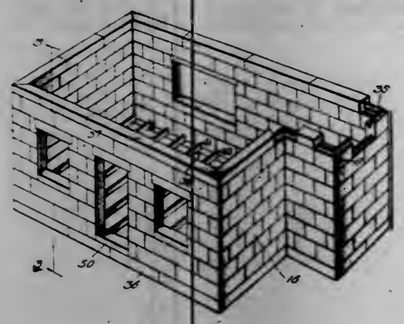


1,459,187. PROCESS OF REDUCING METALLIC OXIDES. EMIL BRUCE PRATT, East Cleveland, Ohio. Filed Nov. 2, 1920. Serial No. 421,319. 6 Claims. (Cl. 204—63.)

1. The process of reducing metallic oxides, such as iron ores and the like, to the metallic state, which consists in charging materials comprising the oxides and a hydrocarbon reducing agent into a refractory container so as to substantially fill the same and with the oxides and reducing agent mixed, heating the said container and the mixed oxides and hydrocarbon therein until said hydrocarbon is decomposed into carbon and hydrogen and meanwhile maintaining the reducing agent, whether

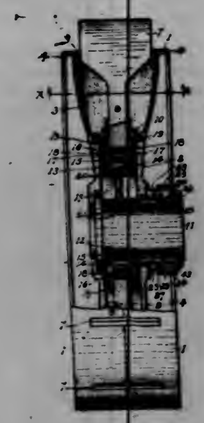
it is in a solid, liquid, vapor or gaseous state, in intimate contact with the metallic oxides throughout the mass thereof, and continuing to heat the said mixture while still in said container and while the hydrogen and carbon are in intimate mixture and contact with the metallic oxides until the metallic oxides are reduced to the metallic state by the action of the decomposed hydrocarbon.

1,459,188. SCALE. CHARLES D. SCOTT, Topeka, Kans., assignor to The Scott Weighing Machine Co., Topeka, Kans., a Corporation of Kansas. Filed May 31, 1921. Serial No. 473,829. 2 Claims. (Cl. 265—37.)



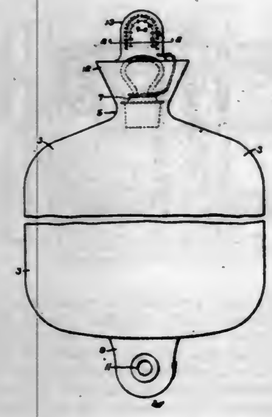
1. In a scale, a base, a lever pivoted on the base, a segmental counterbalance, a flexible connection between the counterbalance and the nose of the lever, a rotatable shaft, a pulley thereon, oppositely wound tapes around the pulley and connected to the segmental counterbalance, and a chart carried by said shaft.

1,459,189. BUILDING BLOCK. GUSS A. SWANSON, Chicago, Ill. Filed Mar. 13, 1919. Serial No. 282,316. 17 Claims. (Cl. 72—38.)



1. A building block formed with two parallel sides and two suitable ends, the upper and lower edges of said

sides being formed of oppositely disposed symmetrical configurations each of said edges including an angular



channel having vertical walls and a bead adapted to enter and engage the corresponding channel of the vertically adjacent block.

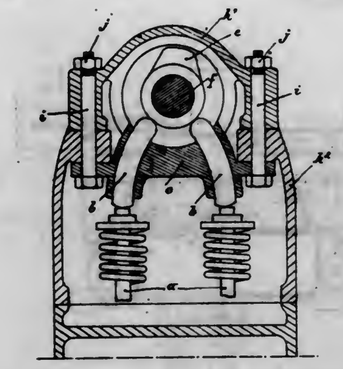
1,459,190. TRACTOR WHEEL. GLENN J. WALKER, Detroit, Mich., assignor to Midwestern Tractor Wheel Co., Detroit, Mich., a Corporation of Delaware. Filed Mar. 18, 1921. Serial No. 453,444. 13 Claims. (Cl. 301—48.)

13. In a traction wheel, the combination of a body divided vertically on a central plane of the rim of the body into two parts, said body comprising a rim portion and a central casing with hollow spokes connecting said rim and casing, a plurality of traction blades slidable radially within the spokes through openings in the rim with their inner ends within the casing, said spokes providing bearings for said blades to guide the same radially of the wheel and prevent lateral movement of the blades, an eccentric within the casing providing an eccentric guideway, a plurality of blocks slidable in the guideway and pivotally connected to the inner ends of the blades, and means for adjusting the position of the eccentric relative to the wheel and holding the same in adjusted position.

1,459,191. LIQUID CONTAINER. FRED O. WILLIAMS, Brookline, Mass. Filed Feb. 2, 1918. Serial No. 215,152. 2 Claims. (Cl. 128—258.)

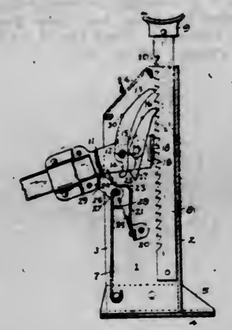
1. A liquid container of flexible waterproof material having an extended portion projecting at the mouth thereof constituting a tab for handling the container, said portion having raised characters molded thereon whereby to permit providing a time registration and to afford a gripping surface.

1,459,192. CARRIER FOR CONTAINERS AND THE LIKE. HORACE BELL, Erie, Pa. Filed Aug. 16, 1922. Serial No. 582,270. 7 Claims. (Cl. 215—100.)



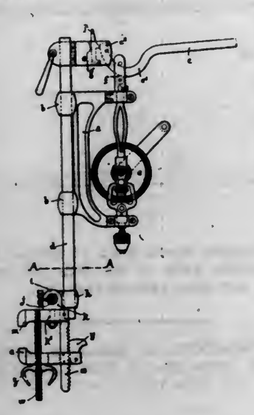
1. A carrier formed of a spiral coil of wire having a restricted coil at the bottom forming the bottom of the carrier.

1,459,193. VALVE MECHANISM. ETTORE BUGATTI, Molsheim, France. Filed Oct. 27, 1920. Serial No. 419,944. 2 Claims. (Cl. 123—90.)



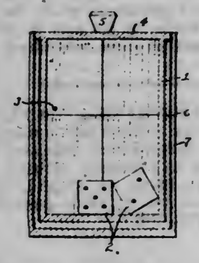
1. Valve control for internal combustion engines comprising a cam shaft, a solid member having guides formed

therein, a curved tappet slidable in each of said guides and co-operating with the end of the respective valve



stem, whereby the cam shaft is enabled to control the valves which are co-axial with the said curved tappets.

1,459,194. PAWL AND RATCHET JACK. JOHN H. BURKHOLDER, Ashland, Ohio, assignor to Elite Manufacturing Company, Ashland, Ohio, a Partnership composed of John F. Burkholder, Guy A. Countryman, and E. L. Kilhefner. Filed May 17, 1922. Serial No. 561,580. 3 Claims. (Cl. 254—111.)



1. In a pawl and ratchet jack having a standard and a rack bar movable vertically in said standard, the combination with the pivoted lifting and check pawls spring pressed toward said rack and engageable with the teeth thereof, said lifting pawl being mounted upon the vertically movable operating member, said check pawl being mounted on a fixed pivot and both said pawls having tail portions extending below their pivots; of a shiftable pawl tripper having a portion engageable with the tail of said check pawl to move said pawl out of rack engaging position; means for shifting said tripper into engaging position; and yielding means interposed between said moving means and tripper; said tripper having a portion engageable by the tail of said lifting pawl during the downward movement thereof to move said tripper against the action of said yielding means to release said check pawl.

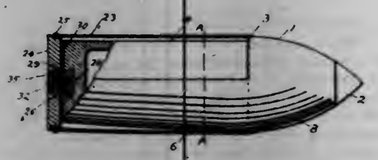
1,459,195. PORTABLE DRILLING MACHINE. HENRI COLOMBELLE, Le Raincy, France. Filed July 2, 1920. Serial No. 393,761. 4 Claims. (Cl. 77—19.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A portable drilling machine, comprising a supporting rod, a frame mounted to slide and swing upon said rod, collars provided upon the frame for supporting a breast drill, a feed lever having a curved end portion, a fulcrum mounted to slide and swing upon the rod and in which the end of the lever is mounted, and a roller mounted in the frame in a line with the axis of the drill with which the curved portion of the lever contacts when the lever is swung to feed the drill.

1,459,196. DICE-CASTING CONTAINER. HAROLD R. COSSITT, Alameda, and JOSEPH SINEL, San Francisco, Calif., assignors, by direct and mesne assignments, to Ninety Nine Publishing Company, Incorporated, Carson City, Nev., a Corporation of Nevada. Filed May 24, 1922. Serial No. 563,252. 2 Claims. (Cl. 46—56.)

1. A dice-casting container comprising an open-top casting cup; and a storage cage for casting-elements, adapted to be nested in the cup, said cage having its lower portion peripherally closed, its upper portion having peripheral openings, and its top having a cover adapted to rest upon and form a closure for the open top of the cup.

1,459,197. FOUNDRY FLASK. HERBERT C. DRUMM, Canton, Ohio, assignor to The Union Metal Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 17, 1922. Serial No. 582,417. 17 Claims. (Cl. 22—96.)

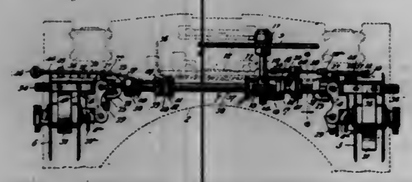


1. A foundry flask comprising a sheet metal body portion, reinforcing sheets connected to the side walls thereof

and reinforcing sheets connected to the end walls of the body portion and to said side reinforcing sheets, certain

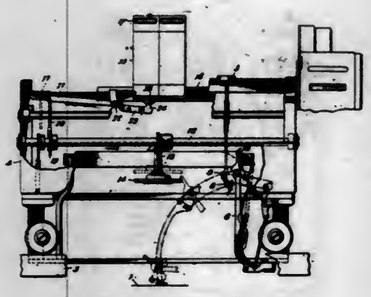
of said reinforcing sheets being of greater length than the corresponding walls of the flask and extended outward beyond said flask walls at each end.

1,459,198. PROJECTILE. LEONID A. DUNAJEFF, New York, N. Y. Filed May 2, 1921. Serial No. 466,034. 8 Claims. (Cl. 102—26.)



1. In a projectile, the combination with a shell, a shoulder on the upper side of said shell near its forward portion, and a longitudinally extending recess back of said shoulder.

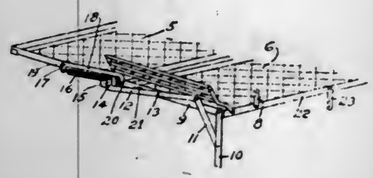
6. In a projectile, a protective casing for said projectile, means to admit the air under compression in flight inside of said protective casing, a valve adapted to release said compressed air back of said projectile, and inertia operated means to control said valve.



7. In a projectile, a gyroscopic wheel, the axis of said wheel being perpendicular to the axis of said projectile, and a spring adapted to press said wheel against the bore of the gun.

1,459,199. RIBBON MECHANISM FOR TYPEWRITING MACHINES. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, Harrisburg, Pa., a Corporation of Delaware. Original application filed Dec. 14, 1914, Serial No. 877,216. Divided and this application filed Aug. 17, 1918. Serial No. 250,314. 17 Claims. (Cl. 297—100.)

4. In a typewriter, the combination with a movable carriage, of a pair of ribbon spools, ribbon feeding mechanism operated by the movement of the carriage and ribbon controlled ribbon reversing mechanism also operated by the movement of the carriage.

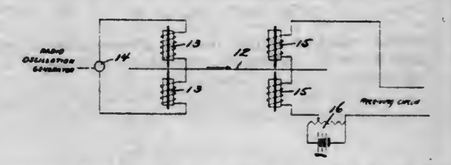


1,459,200. SPACING MECHANISM. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, Harrisburg, Pa., a Corporation of Delaware. Filed June 23, 1919. Serial No. 306,102. 14 Claims. (Cl. 235—59.)

1. The combination with a platen and printing mechanism relatively movable to space the printed characters, of automatic means for varying the relation between the spacing of the printed characters and the spacing movement of the platen and printing mechanism.

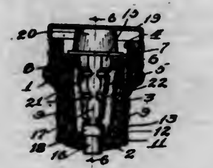
14. In a writing adding machine, a series of denominational members, a platen and printing mechanism having relative step by step spacing movement, such relative spacing movement being uniform and corresponding to the spacing of the denominational members, and means whereby the characters printed will be nonuniformly spaced.

1,459,201. CONVERTIBLE FURNITURE. JOHN FREEMAN, New York, N. Y., assignor to Save-A-Room Furniture Manufacturing Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 7, 1921. Serial No. 520,556. 1 Claim. (Cl. 5—22.)



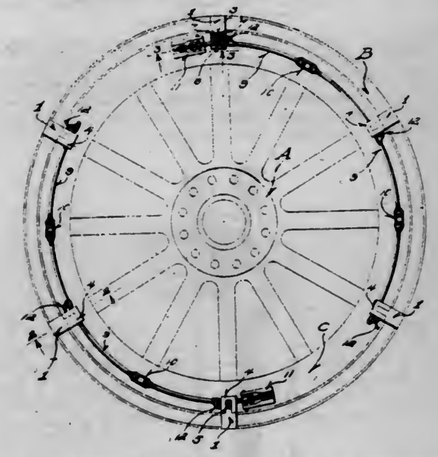
In a couch bed, a spring-supporting section, a relatively collapsible section adapted to be superposed upon and opened out in juxtaposition to and in substantially the same plane with the first mentioned spring-supporting section, pairs of bell crank levers connected to pivotal points of the respective ends of said sections to guide said collapsible section, relatively to the other section, in movements of substantial parallel translation when the position of said collapsible section is changed, and retractible legs connected to the collapsible section and actuated by said bell crank levers.

1,459,202. METHOD OF SENSITIZING THE TELEGRAPHONE. LEONARD F. FULLER, Palo Alto, Calif., assignor to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Aug. 26, 1918. Serial No. 251,372. 4 Claims. (Cl. 179—100.2.)



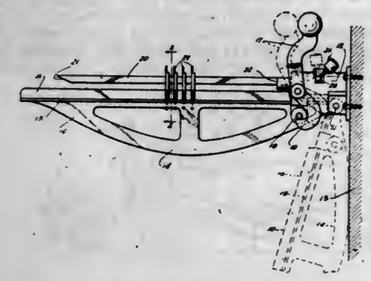
3. The method of recording signals on a magnetizable

body which consists in first bringing the body to its neutral state and then passing the body through a



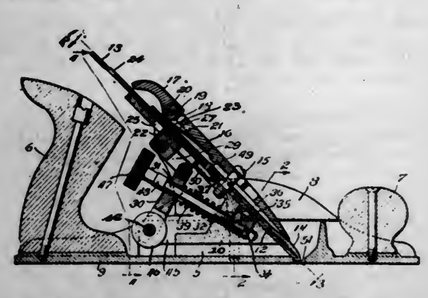
magnetic field produced by a direct current and a signaling current.

1,459,203. FUSE PLUG. JOHN B. GLOWACKI, Chicago, Ill. Filed July 21, 1919. Serial No. 312,330. 9 Claims. (Cl. 200—128.)



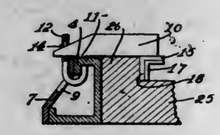
1. A fuse plug comprising a substantially conical member of insulating material having a metallic tip at one end and a conical metallic ring adjacent the other end, a support for the conical member, a conical metal seat in the support for engagement with the ring, a fuse strip having one end gripped between the said seat and ring, and means for detachably securing the other end of the fuse strip to the metallic tip.

1,459,204. DEMOUNTABLE-RIM FASTENER. NICHOLAS GREISCH, Milwaukee, Wis. Filed July 15, 1922. Serial No. 575,147. 2 Claims. (Cl. 301—25.)



1. In a wheel having a detachable rim; the combination of means for locking the rim to the wheel including radially disposed apertured lugs depending from one face of the rim, companion apertured lugs extending from one face of the wheel for meshed engagement with the rim lugs, a series of connected plungers carried by the wheel for locking engagement with the rim and wheel lugs, and manually controlled means associated with a series of the plungers, whereby groups of the same are simultaneously actuated.

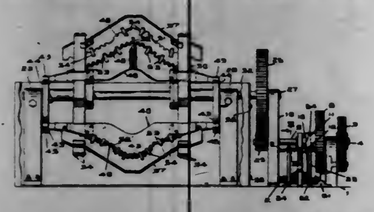
1,459,205. LAUNDRY-SORTING APPLIANCE. ANGUS F. HANNEY, Chicago, Ill., assignor to Eureka Rough Dry Pin System Co., Chicago, Ill. Filed May 19, 1922. Serial No. 562,247. 28 Claims. (Cl. 40—19.5.)



1. A laundry sorting rack comprising supporting means for receiving garments thereon; and auxiliary supporting means disposed beneath said first mentioned supporting means and offset with respect thereto.

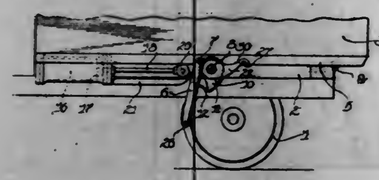
1,459,206. PLANE. HENRY H. HARDINGE, Chicago, Ill. Filed June 14, 1920. Serial No. 388,771. 2 Claims. (Cl. 145—13.)

1. A plane comprising a body, a frog having an inclined upper wall provided with a longitudinal slot therein, a longitudinally slotted blade resting on said inclined wall, an adjustable block projecting through the slot in said frog and secured to said blade, an adjustable member pivoted at one end to said frog, links connecting the free end of said adjusting member to said block, and means for moving said adjusting member to effect longitudinal and lateral adjustment of said blade.



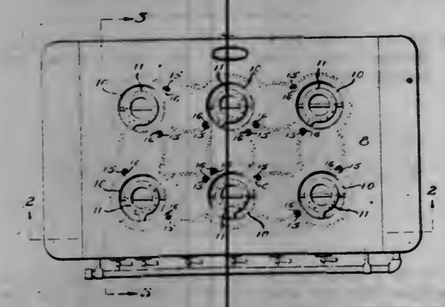
1,459,207. CONCRETE FORM. JOHN N. HELTZEL, Warren, Ohio. Filed Mar. 24, 1922. Serial No. 546,387. 4 Claims. (Cl. 25—118.)

1. In a device of the class described, a side rail; a support fulcrumed intermediate its ends on the side rail for vertical swinging adjustment and extended transversely of the rail; a curb former carried by the outer end of the support; and a connecting member engaging



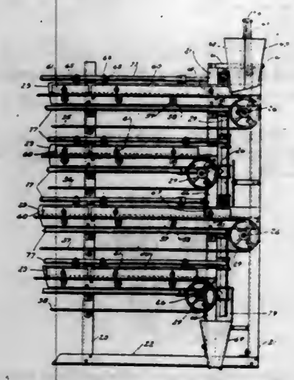
the inner end of the support and the rail, the connecting member comprising relatively adjustable parts constituting means for imparting vertical swinging adjustment to the support and the curb former.

1,459,208. SPRING MANUFACTURE. NIELS E. HENDRICKSON, Toledo, Ohio, assignor to The Mather Spring Co., Toledo, Ohio, a Corporation of Ohio. Filed Aug. 2, 1919. Serial No. 314,870. 7 Claims. (Cl. 266—6.)



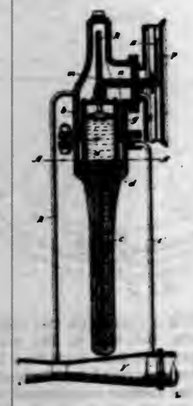
1. A spring forming machine comprising a first annular series of dies, an opposing second concentric annular series of dies, disposed in radial relation as to the first series each die of an inner series being radially opposed by a die of an outer series, a carrier for the dies, a vat, driving means for shifting the carrier to successively submerge the dies in the vat, and fixed means coacting with the dies of one series during said travel of the carrier for effecting movement thereof toward the opposing dies in forming a spring therebetween.

1,459,209. DUMPING GEAR. EARL B. HOUGH, Chicago, Ill., assignor to Guy M. Peters, trustee, Chicago, Ill. Filed Oct. 4, 1920. Serial No. 414,432. 19 Claims. (Cl. 298—22.)



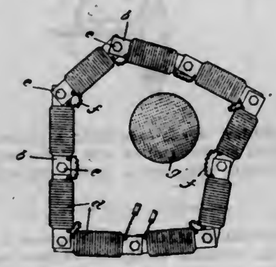
1. In combination, a frame, a cross shaft on the frame, a load pivoted to the frame, a drum on the shaft, an arm pivoted to the load and lying tangential to the drum, and a cable connected to the drum and to the arm, said drum and arm having a registering groove for receiving the cable between them.

1,459,210. STOVE TOP. CHARLES E. JOHNSON, Philadelphia, Pa. Filed Mar. 1, 1921. Serial No. 448,910. 4 Claims. (Cl. 126—214.)



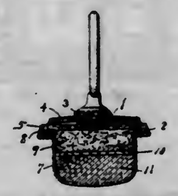
1. A stove top comprising a top plate having holes; flanges surrounding the holes and provided with outlets, and a gate at one side of each outlet adapted to close the outlet and, when opened, to act as a side wall of a passage from outlet to outlet.

1,459,211. DRIER. STEVE KALISZ, Chicago, Ill. Filed Apr. 30, 1921. Serial No. 465,664. 34 Claims. (Cl. 34—12.)



12. A device of the class described comprising a supply hopper having a discharge opening and a slidable door for the opening for regulating the passage of matter therethrough; reciprocatory means for forcing matter through the opening; continuous perforated belt conveyors arranged to receive the matter from the hopper; means for drying the matter carried by the conveyors; a receiving receptacle arranged to receive the matter from said conveyors; brush members engaging said conveyors adapted to remove the matter therefrom; and means for cooling the matter before received by the receiving receptacle, substantially as described.

1,459,212. RATE OF FLOW INDICATOR FOR VENTURI METERS. WILLY KATH, Berlin-Friedenau, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Aug. 24, 1921. Serial No. 494,966. 1 Claim. (Cl. 73—31.)

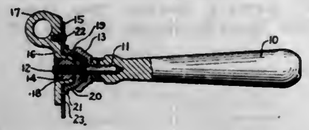


Rate of flow indicator for Venturi meters comprising two mercury vessels arranged one inside the other, a float, supported by the mercury in the inner vessel, and an indicator mechanism connected to said float, the outer vessel being shaped nearly up to the zero-line in such a way that the mercury level in the inner vessel changes in proportion to the quantity of fluid passing through the Venturi tube, and the interior vessel having at its upper portion down to a point slightly beneath the zero-line a larger sectional area and consisting at its lower portion of a small tube extending substantially to the bottom of the outer vessel, both vessels being so dimensioned adjacent to the zero-line that about this line the two mercury columns are of equal or of approximately equal sectional area.

1,459,213. ELECTRIC MEASURING APPLIANCE. GEORG KEINATH, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Nov. 2, 1920. Serial No. 421,395. 2 Claims. (Cl. 175—358.)

1. In a measuring transformer of the character described the combination of a closed chain of individual short cores suitably linked together to form a continuous magnetic path, completely surrounding the primary conductor, a secondary winding distributed over each core and electrical connection between all of said core windings, constituting a substantially uniformly distributed secondary winding on said chain.

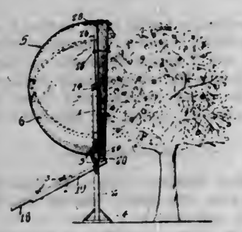
1,459,214. HARNESS SADDLE. JAMES D. KELLER, Detroit, Mich. Filed Oct. 30, 1922. Serial No. 597,790. 3 Claims. (Cl. 54—41.)



2. A harness saddle comprising a metal frame, a layer of leather upon which the frame is mounted, and a pad on the inner side of said leather layer consisting of a layer of wool felt next the leather, a layer of sponge rubber outside the felt, and a covering of porous leather enclosing the padding and having its edges secured to the layer of leather.

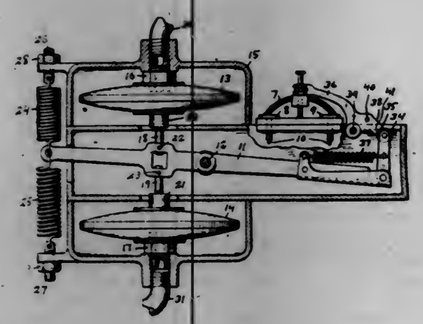
1,459,215. WHEEL-PRINTING MACHINE. MAXIMILIAN H. KERN, Ridgewood, N. Y., assignor to Roberts Numbering Machine Company, a Corporation of New York. Filed Nov. 6, 1920. Serial No. 422,236. 8 Claims. (Cl. 101—83.)

1. A wheel printing machine embodying therein a frame having elongated guide slots in the side walls thereof, and a bearing opening, the axis of which is parallel with said slots, in the top thereof, a reciprocatory yoke, a non-rotary bearing shaft carried by, and having the ends thereof projected beyond, said yoke, and slidably mounted in said slots, a plurality of character wheels, rotatably mounted upon said shaft, ratchet wheels carried by and rotatable with said character wheels respectively, a detent pawl co-operating with each ratchet wheel, a spring operative upon each pawl, a swing frame pivotally mounted in said first named frame, an ink pad carried thereby and adapted to co-operate with said character wheels, oppositely disposed, vertically extending racks carried by and movable with said yoke, segmental gears carried by and concentric with the axis of said swing frame and meshing with said racks respectively, whereby reciprocatory movement of said yoke will impart an oscillatory movement to said swing frame, actuating means for said yoke embodying therein a stem secured thereto and passing through the bearing opening in the top of said frame, and a spring adapted to raise said yoke and actuate said swing frame so as to engage the ink pad thereon with the printing wheels carried by said yoke.



1,459,216. FLOOR SCRAPER. FRANK I. KIMBALL, West Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Filed May 2, 1921. Serial No. 466,018. 19 Claims. (Cl. 145—47.)

1. A floor scraper including a handle, a stem thereon, a blade and a blade mounting comprising a pair of members between which the blade is clamped and through which the stem passes, and means on the stem upon both sides of the blade mounting to attach the latter to the stem for universal movement thereon.



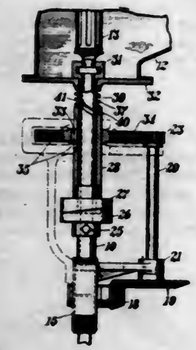
1,459,217. FUMIGATION TENT. EMIL A. KLEIN, Los Angeles, Calif. Filed Mar. 29, 1922. Serial No. 547,831. 5 Claims. (Cl. 43—126.)

1. In a fumigation tent the combination including relatively spaced vertical supports, a permanently ex-

tended top member horizontally pivoted to the upper portions of said supports, a fabric skirt member attached to the top member and extending to the ground to form the side walls of the tent, and means for manipulating the skirt member.

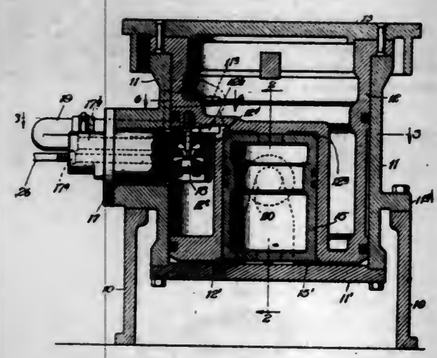
1,459,218. CONTROLLING APPARATUS. GEORGE A. KNAAK, Milwaukee, Wis. Filed Dec. 1, 1919. Serial No. 341,701. 3 Claims. (Cl. 137—156.)

3. The combination, in controlling apparatus, of a lever pivoted upon a fixed pivot, oppositely acting fluid-pressure operable members to move said lever in opposite directions upon its pivot, and adjustable springs acting in opposed relation to determine movements of said lever according to predetermined differences between the pressures exerted by the fluid-pressure operable members.



1,459,219. BURIAL-VAULT TEMPORARY-HANDLE LOCK. HENRY K. KNUTSON, Thor, Iowa. Filed Oct. 17, 1922. Serial No. 595,086. 3 Claims. (Cl. 293—37.)

1. In combination, a burial vault having a base member and a cover member, a series of handle members for said cover member and a series of handle members for said base member, means for automatically locking the handle members of the cover member and those of the base member together, and means for unlocking said locking means.

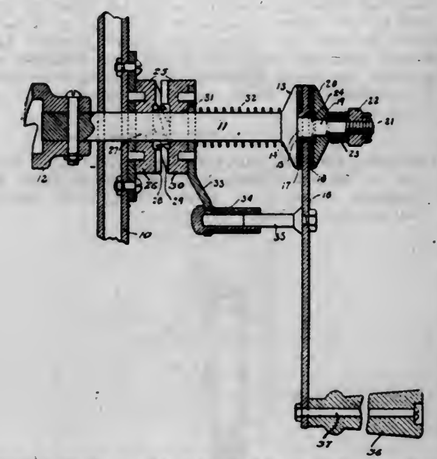


1,459,220. SHIP SIREN. JOHN J. KRAUSE, Portage, Pa. Filed June 19, 1922. Serial No. 569,318. 3 Claims. (Cl. 116—147.)

2. A siren for ships comprising a revolubly mounted horn, a sounding device therein, a cylindrical member fixed to and extending axially of said horn and having a spiral slot in the side thereof, a sleeve surrounding said member and having a pin engaging in said slot, means for rotating said sleeve, and means for moving

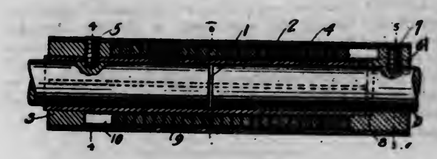
it axially, said last means comprising a stationary cam, a cam mounted on one end of said sleeve and bearing on said stationary cam, and a spring pressing against said sleeve.

1,459,221. MOLDING MACHINE. WILLIAM P. KRAUSE, Chicago, Ill., assignor to Hanna Engineering Works, Chicago, Ill., a Corporation of Illinois. Filed Feb. 12, 1921. Serial No. 444,340. 9 Claims. (Cl. 22—45.)



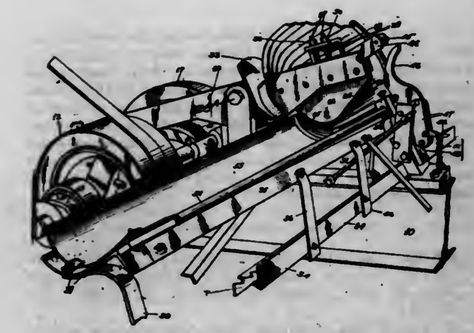
1. A machine of the class described, comprising a main cylinder, a plunger reciprocable therein, said plunger being recessed to provide a subordinate cylinder, a post reciprocable in said latter cylinder, means to supply actuating fluid beneath said plunger and post to raise them together, and means to supply actuating fluid to said subordinate cylinder to raise said plunger relative to said post.

1,459,222. CRANKING DEVICE. ALEXANDER KUZMANN, Philadelphia, Pa. Filed Jan. 17, 1922. Serial No. 529,863. 7 Claims. (Cl. 74—33.)



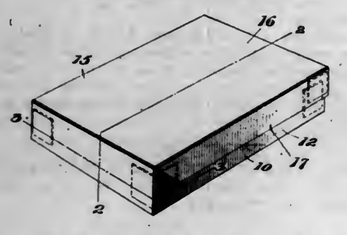
1. A device of the character described including a spindle shaft; a relatively fixed supporting structure; a lever; friction connecting means between said lever and said spindle shaft; and a locking clutch having parts respectively connected to said supporting structure and to said lever, and means disposed between said lever and

the adjacent clutch part to move said clutch parts relatively to each other out of locking engagement when the



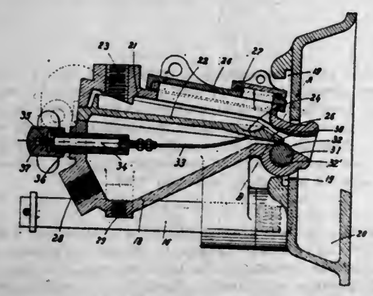
lever is moved in one direction and to move said parts into locking engagement when said lever moves in an opposite direction; substantially as described.

1,459,223. ELASTIC SHAFT CONNECTION. GEORGE LANZIUS, late of New York, N. Y.; Evelyn Elizabeth Fairbanks Lanzius executrix of said George Lanzius, deceased. Filed June 26, 1920. Serial No. 391,986. 10 Claims. (Cl. 64—89.)



1. In combination with a driving and a driven element, means operated by the driving member for keeping the elements in alignment and means for compressing the alignment keeping means on the elements.

1,459,224. MACHINE FOR FORMING SHEET-METAL BASKETS. TALBOT LENNOX, Marshalltown, Iowa. Filed Dec. 6, 1920. Serial No. 428,715. 9 Claims. (Cl. 153—75.)

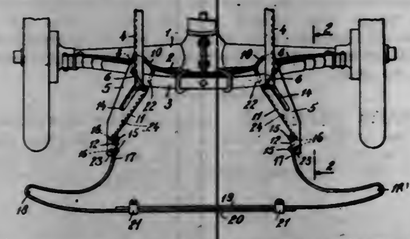


1. In a rib forming mechanism for sheet metal articles, the combination of two rib forming devices, one being capable of movement toward the other, one of said rib forming devices comprising a single rib forming plate, and the other comprising two rib forming plates spaced apart, and a third plate between them, and a spring device applied to the said third plate to yieldingly hold it projected beyond the other two plates and to permit it to be forced back between the other two plates, all of said rib forming plates also being curved longitudinally with one end portion thereof substantially at right angles to the other.

1,459,225. PAPER BOX. HAROLD M. LEVY, New Orleans, La., assignor to Crescent Paper Box Factory, New Orleans, La., a Corporation of Louisiana. Filed Sept. 7, 1920. Serial No. 408,420. 9 Claims. (Cl. 229—44.)

1. A paper box comprising a body or tray section having an end flange, a cover section having a hinge flap secured to one side of said end flange, and a covering for said cover section secured to the opposite side of said end flange.

1,459,226. BURNER FOR LIQUID COMBUSTIBLES. CHARLES LINKÉ, Paris, France, assignor of one-half to Joseph Gemayel, Paris, France. Filed June 23, 1921. Serial No. 479,899. 3 Claims. (Cl. 158—78.)

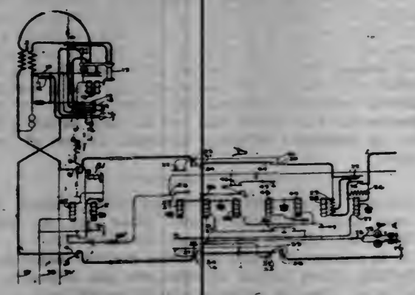


2. In a fluid fuel burner a transversely extending plate adapted to sustain a stream of fluid fuel and to allow the fuel to escape by gravity over its edge, a nozzle wall arranged beneath and opposite the edge of said plate and forming therewith a nozzle, such nozzle forming the orifice of a conduit for compressed gas, and a movable member arranged adjacent the orifice formed by and between the said nozzle wall and the edge of said plate and by movement effecting variation in size of such orifice.

1,459,227. REAR ATTACHING DEVICE. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Mar. 27, 1922. Serial No. 547,326. 8 Claims. (Cl. 293—55.)

4. In automobile buffer attaching devices, forged steel attaching plates having adjacent one end substantially flat upper clamping surfaces adapted to fit beneath the rear ends of the frame channels of a Ford automobile and formed with aligning retaining members adapted to

engage said frame members and align the plate with respect thereto, U-bolts extending around said frame members and passing through holes in said attaching plates to securely connect them to the frame members said attaching plates having outwardly diverging gradu-



ally narrowing rear ends and having stiffening bent portions comprising edges stiffening flanges forming substantially vertical clamping faces at the free rear ends of the plates adjacent the upper aligning face thereof to which the attaching members of the buffer may be connected.

1,459,228. HAIR CURLER. ORA D. MCCLINTOCK, Chicago, Ill. Filed June 3, 1922. Serial No. 565,699. 1 Claim. (Cl. 132—43.)

A hair curler comprising a rubber tube, and a flexible hairpin member formed of soft wire and provided with a rubber covering, the said hairpin member provided with a loop at one end larger than the diameter of said tube, and a clasp member surrounding the marginal wall of said tube and adapted to releasably engage a strand of hair between said clasp and said tube.

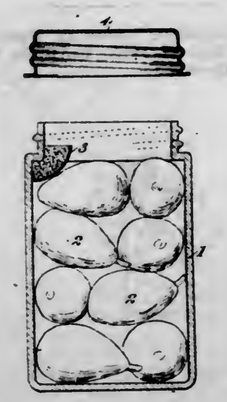
1,459,229. MEASURED-SERVICE AUTOMATIC TELEPHONE SYSTEM. TALBOT G. MARTIN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1919. Serial No. 297,332. 22 Claims. (Cl. 179—6.3.)

1. In a telephone system, a line, a pay-station for said line, automatic switches for establishing a connection from said line to another line, a battery of one voltage for controlling said switches, said pay-station non-responsive to current from said battery in either direction, two other batteries, automatic means for preparing circuits of two different characters from said other batteries for said pay station, the circuit prepared depending upon the completion or the non-completion of the call, and means controlled by a calling subscriber for completing the circuit prepared to either collect or refund the coin.

1,459,230. POCKET HOLY-WATER FOUNTAIN. VICTOR G. MATRE, Chicago, Ill., assignor to Matre & Company, Chicago, Ill. Filed Nov. 1, 1921. Serial No. 512,002. 1 Claim. (Cl. 215—1.)

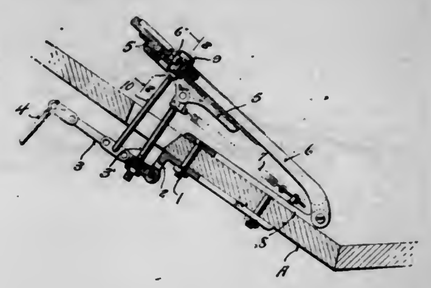
A pocket fountain comprising an elongated, cylindrical receptacle, having an open end, a thimble threaded therein and having a plurality of apertures therethrough, an elongated, cylindrical cap threaded to said receptacle at a point spaced considerably from the end of said receptacle and a yieldable pad in said cap at the closed end thereof, contacting with said thimble and closing said aperture.

1,459,231. LOOSE-LEAF BOOK. LILIAN HENRIETTA MIDDLETON, Wellington, New Zealand. Filed May 16, 1921. Serial No. 469,766. 1 Claim. (Cl. 129—18.)



In loose leaf account and like books, the combination with leaves formed with tongues made integrally to extend longitudinally along each of their inner edges from both ends thereof, of a binder formed by three members bound together in book form and the central of which members is made at its free edge with slots extending longitudinally, one from each end, at a short distance in from such edge, and corresponding in width and length with the tongues formed upon the said leaves, substantially as specified.

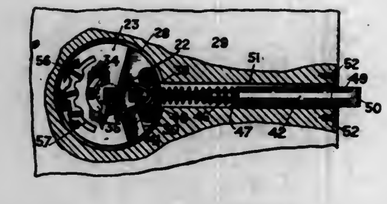
1,459,232. METHOD OF PRESERVING FOOD PRODUCTS. EDWARD MILANI, San Francisco, Calif. Filed Sept. 6, 1921. Serial No. 498,714. 2 Claims. (Cl. 99—8.)



2. The method of storing fresh food products against deterioration for a predetermined period of time, which consists in packing the said product within a container,

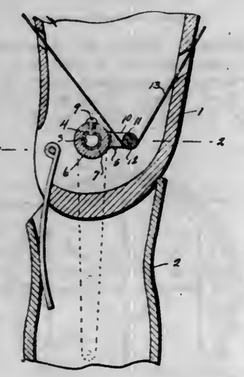
then consuming the oxygen of the air within the container by burning alcohol within the container to form therein

an inert gas, then during the consuming of the oxygen applying and hermetically sealing a cover to said container.



1,459,233. FOOT ACCELERATOR. OTTO A. MOLDENHAUER, Milwaukee, Wis. Filed Sept. 6, 1922. Serial No. 586,500. 3 Claims. (Cl. 74—81.)

1. A foot controlled accelerator comprising a pivoted treadle, a throttle valve actuating spring controlled lever pivoted thereunder, a shoe in slidable union with the treadle, a pressure link carried by the shoe and connected to the lever, the pressure link being extended above the plane of the treadle for initial control of the lever.

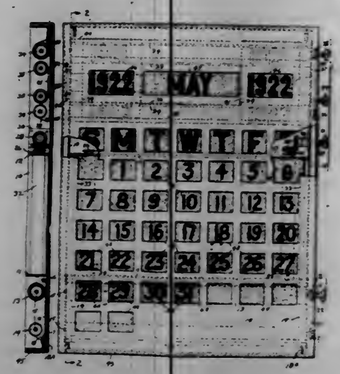


1,459,234. LOCK. ARCHIBALD WILLIAM MORRIS, Russel Pocket, Kuiara, via Cairns, Queensland, Australia. Filed July 10, 1922. Serial No. 573,841. 5 Claims. (Cl. 70—29.)

1. In a lock, a rotatable spindle, a rocking plate fixed thereon, a bolt retracted by the turning of the rocking plate, said rocking plate having means to operate said bolt, and a plurality of locking pins arranged in arcuate formation parallel to the spindle, each of said pins having a cut away portion or waist which is wider in one direction than in the other, and said pins being rotatable by means of a key to present either the nar-

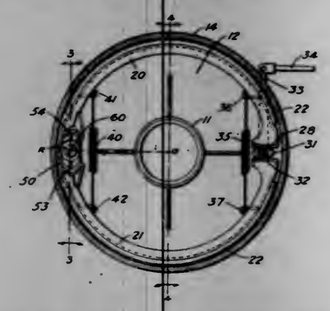
rower or the greater width of their waists to the direction of rotation of the rocking plate to either permit or prevent movement of the latter.

1,459,235. ARTIFICIAL LEG. WILLIAM E. MORRISON and KALLE KORPELAINEN, Harrisburg, Pa., assignors to Harry W. Cooper, Harrisburg, Pa. Filed Jan. 13, 1923. Serial No. 612,498. 2 Claims. (Cl. 8—2.)



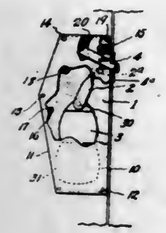
2. In an artificial leg, the combination with a knee bolt pivotally connecting the thigh section and the lower leg section, a lever provided at one end with a sleeve through which the knee bolt extends, a member threaded through the wall of the sleeve, said bolt being provided with an opening to receive said member whereby the lever is positively held at a fixed position upon the knee bolt, and integral arms extending outwardly from the sleeve and spaced in a direction lengthwise of the knee bolt, and a roller supported by and between the arms, said roller being adapted to have operative engagement with a suspender.

1,459,236. PERPETUAL CALENDAR. FRED W. ORTH, Ocean Park, Wash. Filed Aug. 17, 1922. Serial No. 582,507. 2 Claims. (Cl. 40—117.)



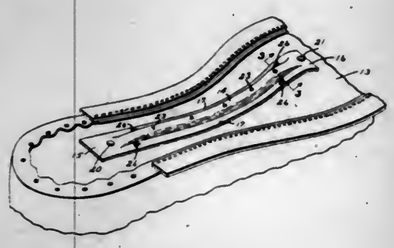
1. A calendar having in combination a moveable web bearing year dates, a second moveable web bearing month names, a third web adapted to be moved horizontally and bearing the four upper tiers of dates in extended lines, a fourth web vertically moveable and of uniform width bearing the dates which would fall in the lower two tiers of dates in all of the possible combinations, a stationary row of characters representing the days of

the week above said date webs, means for adjusting the upper four tiers of dates to the days of the week, and means for adjusting the two lowermost tiers of dates



to the four uppermost tiers in a manner that the dates given on the upper four and the lower two tiers shall unite to form a complete month.

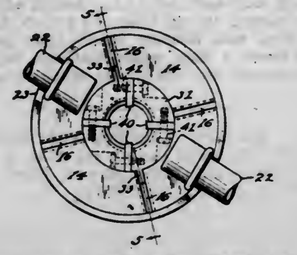
1,459,237. BRAKE. HENRY W. MUHLEISEN, Los Angeles, Calif., assignor to W. S. Rush & Co., Los Angeles, Calif., a Partnership composed of W. S. Rush, E. S. Rush, and B. C. Graves. Filed Jan. 30, 1922. Serial No. 532,851. 3 Claims. (Cl. 188—78.)



1. In a brake having a drum with an internal cylindrical surface, and an immediately adjacent stationary structure, the combination of: two brake members, each having an outer surface adapted to contact with said internal cylindrical surface of said drum, one end of each of said brake members being flattened to form a flat cam surface parallel to the axis of said drum, and the other end of each of said brake members being grooved to receive a wedge, said two members being respectively right and left handed so that when in place in the drum, the cam surface of one will lie adjacent to the cam surface of the other, the wedge surface of the one then lying adjacent to the wedge surface of the other; a working cam between said cam surfaces; a wedge between said wedge surfaces, said wedge having a central hole and two ends each of wedge shaped form, the apex of each of said wedges being inside a tangent at right angles to a radius of the brake which passes through the center of the cam and which passes through said hole; elastic means for holding said members against said cam and said wedge and away from said inner surface of said drum; and a bolt passing through said hole about which said wedge may pivot, said bolt being also adapted to move said wedge axially to force the wedge ends of said members apart to compensate for wear on the external surface of said members or the internal surface of said drum.

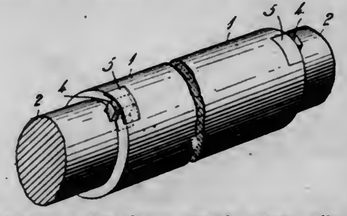
1,459,238. DOORCHECK. JOHN O. NASLIN, Seattle, Wash. Filed Sept. 22, 1919. Serial No. 325,378. 7 Claims. (Cl. 16—83.)

1. In a door check, a pivoted suspender having a fixed striker so shaped and positioned as to be easily engaged by a swinging door, and a bumper fixed to the swinging end of a support jointed to the swinging end of said suspender, whereby said bumper is positioned outside of the swinging path of said door and adapted to swing into its path and check by recoil its closing movement.



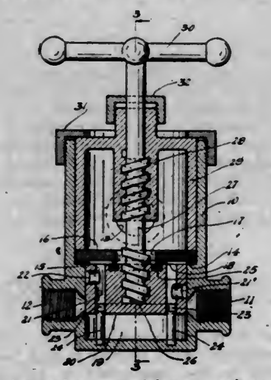
1,459,239. SHANK STIFFENER. WILLIAM H. NICKERSON, Brookline, Mass. Filed Nov. 16, 1922. Serial No. 601,208. 2 Claims. (Cl. 36—76.)

1. A shoe-shank stiffener comprising a sheet metal plate longitudinally arched to conform to the curvature of the shank portions of an outer and an inner sole, and provided with a longitudinal rib projecting from its under side, said stiffener being characterized by spurs projecting downward from the outer surface of the rib, and adapted to engage the outer sole and prevent movement of the stiffener relative to the outer sole.



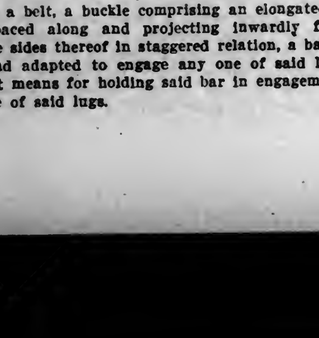
2. A shoe-shank stiffener comprising a sheet metal plate longitudinally arched to conform to the curvature of the shank portions of an outer and an inner sole, and provided with a longitudinal rib projecting from its under side, said stiffener being characterized by spurs projecting downward from the outer surface of the rib, and adapted to engage the outer sole and prevent movement of the stiffener relative to the outer sole and by spurs projecting upward from the upper surface of the stiffener beside the rib, and adapted to engage the inner sole and prevent movement of the stiffener relative to the inner sole.

1,459,240. ADAPTER FOR DIESTOCKS. IRA W. NONNEMAN, Warren, Ohio, assignor to The Borden Company, Warren, Ohio, a Corporation of Ohio. Filed Sept. 29, 1921. Serial No. 504,151. 22 Claims. (Cl. 10—120.)



1. In combination, an exterior frame, an interior frame, each adapted to hold separate sets of chasers, and means for holding said frames in engagement with each other, whereby rotation of one frame causes simultaneous rotation of the other.

1,459,241. SLEEVE ADAPTED TO SERVE AS CORE FOR PAPER ROLLS. KARL FREDRIK LENNART NORSTRÖM, Skonvik, Sweden. Filed Mar. 31, 1922. Serial No. 548,472. 2 Claims. (Cl. 242—68.)

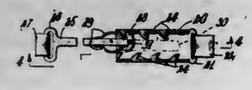


1. A sleeve or sleeve-shaped core for paper rolls having recesses in its ends adapted to engage with projections on the shaft on which the roll is carried, the edges of said recesses being provided with fittings or reinforcements of sheet metal consisting of two U-shaped portions adapted to fit on the edges of the recesses and a strip overlaying said recesses at the circumference of the sleeve and connected with the branches of the U-shaped portions.

1,459,242. VALVE. LEO F. O'FLAHERTY and WILLIAM L. KIRKPATRICK, Elgin, Ill. Filed Mar. 31, 1922. Serial No. 548,333. 5 Claims. (Cl. 277—18.)

1. A mixing valve comprising a casing; a partition dividing said casing into mixing and discharge chambers, said partition having an aperture therein; inlet ducts for said mixing chamber; a mixing valve slidably mounted in said mixing chamber; opposite ports in the periphery of said valve; a circumferential recess in said valve communicating with said ports and said mixing chamber; and means on said valve within said recess and adapted in operative position of the valve to close said aperture.

1,459,243. VALVE. LEO F. O'FLAHERTY and WILLIAM L. KIRKPATRICK, Elgin, Ill. Filed Mar. 31, 1922. Serial No. 548,334. 10 Claims. (Cl. 277—18.)

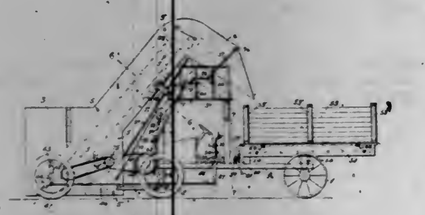


1. A mixing device comprising a casing; a partition dividing said casing into communicating mixing and discharge chambers; a mixing valve in said mixing chamber having an angular socket therein; a stem mounted for sliding movement in said socket, and adapted to import rotation thereto; and a sealing valve in said discharge chamber mounted on and movable with said stem.

1,459,244. MEANS FOR MAKING PNEUMATIC TIRES. JOHN F. PALMER, St. Joseph, Mich. Filed Apr. 8, 1920. Serial No. 372,126. 6 Claims. (Cl. 154—9.)

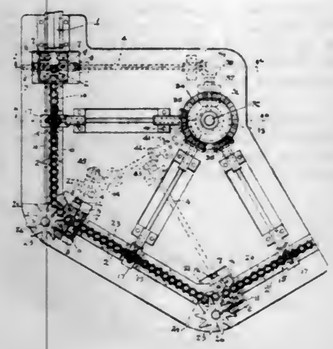
1. In combination, a mandrel over which a tube may be placed, and a freely rollable ring member for compacting tube structures on said mandrel.

1,459,245. LIFE-SAVING BELT. WAWZYNIEC PARADOWSKI, Toledo, Ohio. Filed Nov. 2, 1922. Serial No. 598,485. 2 Claims. (Cl. 24—206.)



1. In a belt, a buckle comprising an elongated casing, lugs spaced along and projecting inwardly from the opposite sides thereof in staggered relation, a bar having a T-head adapted to engage any one of said lugs, and resilient means for holding said bar in engagement with any one of said lugs.

1,459,246. VERTICAL-ELEVATING APPARATUS. GEORGE D. PARKER, Riverside, Calif., assignor to Stebler Parker Co., Riverside, Calif., a Corporation of California. Filed May 8, 1922. Serial No. 559,244. 16 Claims. (Cl. 198—156.)



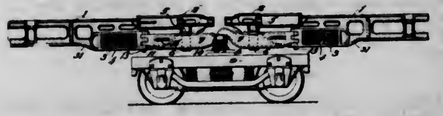
1. An elevating and dumping apparatus comprising a material receiving station consisting of a plurality of substantially horizontally disposed parallel spaced material receiving and supporting fingers, means for yieldably mounting the same and providing a stop at one end for arresting the movement of the material thereon, means in advance of the free ends of said fingers for delivering material to be elevated thereonto, a tray for removing material from said station and for elevating the same, said tray comprising a plurality of parallel spaced arms, adapted to pass upwardly between said supporting fingers, said arms being upwardly extended at their rear ends to provide a stop, means for mounting said arms, and means for elevating said tray and for tilting the same forwardly to discharge the material therefrom.

1,459,247. MACHINE FOR CUTTING CANE AND SIMILAR PLANTS. JOSÉ VILAR Y PAZOS, Trinidad, Cuba. Filed Feb. 18, 1922. Serial No. 537,465. 3 Claims. (Cl. 56—17.)

3. A machine for cutting cane and similar plants, comprising a motor truck, a frame swingingly mounted in front of said truck, horizontal circular indented knives mounted in said frame and adapted to cut the cane, triangular indented knives fixed to each side of the frame and arranged in front of the horizontal knives, two wheels mounted in short shafts at each side of the swinging frame, levers on said shafts and each having one end articulated to a side of the frame, bars connected to the said levers, a horizontal shaft rotatably mounted at the front part of the truck and having arms to which said bars are connected to turn said shaft, means to secure said shaft and arms at any desired adjustment, a knife for topping the cut cane, and a knife for severing the cut cane, both mounted on the upper part of the swinging frame, a chute which discharges the cut cane, and a receptacle into which said chute discharges.

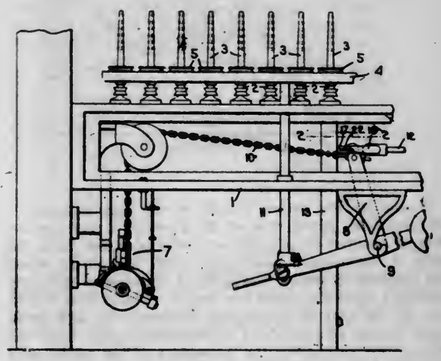
1,459,248. MILLING MACHINE FOR CONTINUOUS MILLING. JAMES F. PATTON and JOHN E. MCALLISTER, Cleveland, Ohio. Filed May 12, 1919. Serial No. 296,390. 40 Claims. (Cl. 10—72.)

1. A chute containing nuts, a feed wheel receiving the nuts from the chute, removable teeth in the wheel to engage the nuts, a guide plate extending over the wheel and between the teeth, a channel supporting the guide plate through which the nuts are forced by the feed wheel, retaining plates loosely holding the nuts in the channel, pressure bars supported adjacent the channel to hold a nut, a cutter projecting between the pressure bars to cut the nuts, a spacing bar in the end of the channel, a transfer wheel adjacent the spacing bar engaging the nuts to turn them, a second channel at an angle to the first channel, a second feed wheel in line with the second channel to receive the nuts from the transfer wheel and feed them through the second channel, retaining plates loosely holding nuts in the second channel, pressure bars supported adjacent the second channel to hold a nut, a cutter projecting between the pressure bars to cut the nuts, a spacing bar in the end of the second channel, a transfer wheel adjacent the last mentioned spacing bar engaging the nuts to turn them, a third channel at an angle to the first two channels, a third feed wheel in line with the third channel to receive the nuts from the transfer wheel and feed them through the third channel, retaining plates loosely holding nuts in the third channel, pressure bars supported adjacent the third channel to hold a nut and a cutter projecting between the pressure bars to cut the nuts.



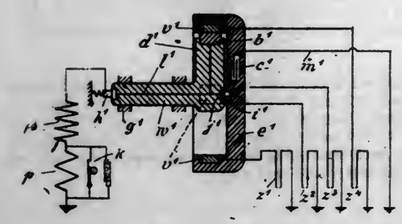
1,459,249. LAMP STAND. EARL G. PERKINS, Youngstown, Ohio. Filed July 12, 1921. Serial No. 484,022. 7 Claims. (Cl. 248—6.)

1. A device of the character described, comprising a base, two standards rigidly secured to said base, a yoke rigidly secured to the upper ends of said standards, sheaves mounted in said yoke, a movable standard slidably mounted through a central opening in said yoke and carrying a head-block at its lower end, a sheave mounted in said head-block, a counter-weight slidably



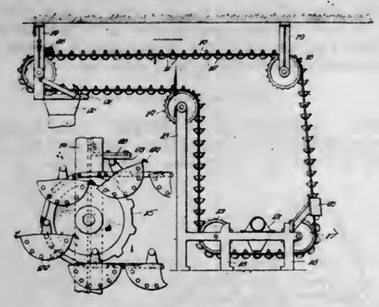
mounted upon said first mentioned standards, and flexible connections between said counter-weight and said head-block.

1,459,250. ARTICULATED CAR. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 28, 1922. Serial No. 609,521. 11 Claims. (Cl. 105—4.)



5. In combination with a car truck provided with an upwardly facing center plate, a car body, a slidable draw bar mounted on said car body and extending beyond the same and provided with a downwardly facing center plate adapted to fit and rest upon said truck center plate.

1,459,251. SPINNING FRAME. CLARENCE A. PIERCE, Lowell, Mass. Filed June 3, 1921. Serial No. 474 605. 4 Claims. (Cl. 242—43.5.)



1. In a spinning frame, the combination with spindles adapted to support bobbins, of a ring rail carrying spinning rings, a stop device having a pivoted stop arm which in one position is operative to limit the downward movement of the ring rail during the spinning operation and in another position permits the ring rail to drop lower during the doffing of the bobbins.

1,459,252. IGNITION SYSTEM FOR INTERNAL-COMBUSTION ENGINES. GOTTFRIED PLUMM, Berlin-Lichterfelde, Germany, assignor to Moritz Polak, Groningen, Netherlands. Filed July 22, 1920. Serial No. 398,305. 1 Claim. (Cl. 123—148.)

In an ignition apparatus for internal combustion engines, the combination, with a source of electric energy, the spark plugs, and a distributer having a body carrying terminals connected with the spark plug and a brush connected with the source of electric energy, of a condenser embedded within said body and connected in shunt around said source of electric energy and with one terminal to a part intermediate said source and distributer, the capacity of the condenser being such that it is adapted to increase the intensity of the discharge at the plugs.

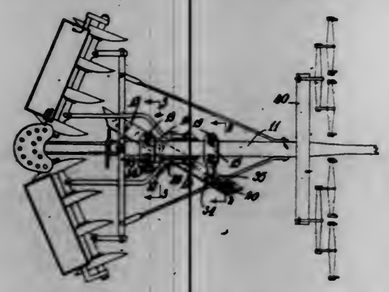
1,459,253. CONVEYING APPARATUS. CLARENCE H. PLUMMER, Kewaunee, Wis. Filed Nov. 15, 1920. Serial No. 424,030. 6 Claims. (Cl. 198—149.)

1. In a conveyor system, an endless chain, overlapping buckets carried thereby, a sprocket-like member for propelling said chain, said buckets travelling in unlocked relation toward said member, means for tilting said buckets, and means on said member to hold said buckets in tilted position during their travel thereabout whereby they are positively locked in overlapping relation upon leaving said member.

1,459,254. DRIER. WILLIAM E. PRINDLE, Columbus, Ohio. Filed Sept. 18, 1919. Serial No. 324,492. 3 Claims. (Cl. 34—6.)

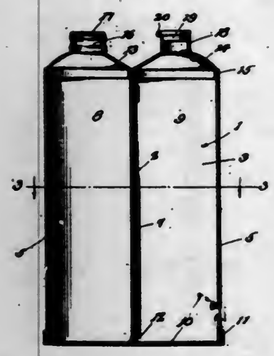
1. A rotary drier comprising an outer cylinder, means for supporting and rotating said cylinder, delivery and

discharge mechanisms cooperative with the ends of said cylinder for effecting the passage of material to be dried therethrough, a longitudinally extending inner cylinder situated axially within said outer cylinder and formed to pass completely through and beyond the latter, a furnace for introducing heat into said inner cylinder and a



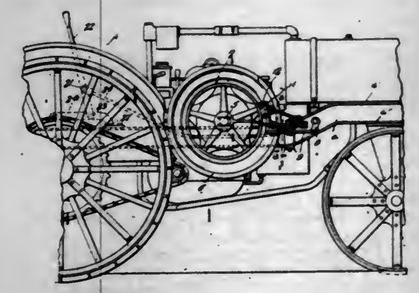
tube situated within one end of said inner cylinder and in spaced relation from the latter, said tube being in free communication with said furnace and with the interior of said inner cylinder and means for introducing air into said inner cylinder so as to reduce the heat between the latter and said tube.

1,459,255. WINDOW CLEANER. HAROLD AUGUSTUS PYKE, Grafton, Auckland, New Zealand. Filed Mar. 29, 1920. Serial No. 369,937. 1 Claim. (Cl. 15—232.)



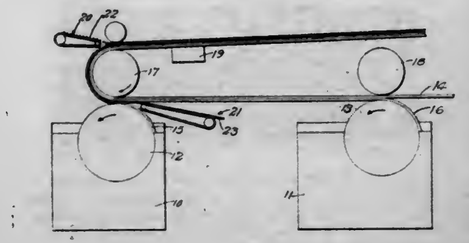
A cleaner for windows and the like, comprising a back, a pivot rod extending across the back, in spaced relation thereto and having its ends connected thereto, clamps pivotally mounted on said rod, a spring on said rod and active on said clamps to cause fabric to be held between said back and clamps, and a handle having spaced elements detachably mounted on said pivot rod.

1,459,256. COMBINATION COTTON CULTIVATOR. ANDRES RAMIREZ, Guadalupe, Tex. Filed May 15, 1922. Serial No. 561,083. 3 Claims. (Cl. 55—60.)



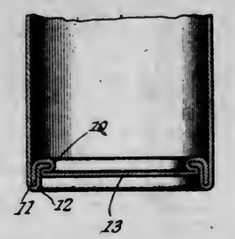
2. An agricultural implement of the type set forth comprising a centre pole, a pair of transverse arms fixed to said pole and spaced longitudinally thereof, rods carried by the outer ends of said arms and adapted for vertical adjustment, and an obliquely arranged knife supported by said rods.

1,459,257. MULTIPLE-COMPARTMENT CONTAINER. SCOTT N. REGER, Berryburg, W. Va., assignor of one-half to Robert V. Reger, Clarksburg, W. Va. Filed Jan. 11, 1921. Serial No. 436,540. 3 Claims. (Cl. 220—20.)



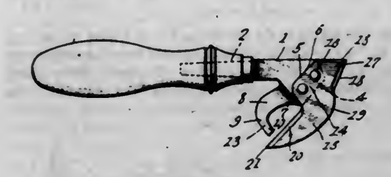
3. A multiple compartment container including a body comprising as an integral component part, a partition wall and enclosing wall sections integrally formed with the vertical edges of the partition wall and each extending from the edge with which it forms a juncture to the opposite edge of the said partition wall and being there provided with a flange united to the respective face of the said partition wall, a bottom united to the lower edges of the enclosing and partition walls, and a top for the body.

1,459,258. COMBINED CLUTCH ACTUATOR AND BRAKE. WILLIAM F. REINEKE, Lakefield, Minn. Filed Nov. 14, 1922. Serial No. 600,802. 1 Claim. (Cl. 192—13.)



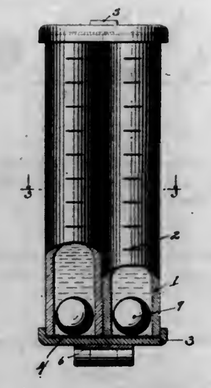
In combination with a tractor of the type including a side projecting power take off shaft having a pulley wheel thereon adapted to be clutched and unclutched from the shaft, a brake drum associated with the pulley wheel and adapted to rotate therewith, a brake shoe pivotally supported upon the outer free end of an arm that is carried by the tractor frame and adjacent the said brake drum, means positioned at a convenient point upon the tractor for controlling the movement of the brake shoe and means operable simultaneously with the operation of the brake shoe for clutching and unclutching the said pulley from the said power take off shaft.

1,459,259. COMPOSITE SHEET MATERIAL. ORLO D. RICHARDSON, Chicago, Ill. Filed Jan. 30, 1922. Serial No. 532,642. 7 Claims. (Cl. 92—40.)



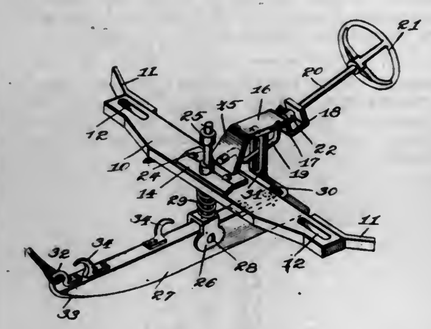
1. An apparatus for forming a composite sheet comprising means for continuously forming a plastic film of pulp, means for applying fibre to said plastic film substantially crosswise thereof, and means for applying fibre to said plastic film substantially lengthwise thereof.

1,459,260. PAPER CAN. LEWIS D. ROBERTS, Washington, D. C. Filed July 27, 1921. Serial No. 488,000. 2 Claims. (Cl. 229—5.6.)



1. A paper can or container including a wall having an inturned end forming an annular channel, a head insertable into said inturned end portion, a wall extending from the periphery of the head, an annular flange integral with the wall and spaced therefrom, said flange extending into and filling the channel and part of the inturned portion extending into and filling the space between the wall of the head and its flange, the inturned portion and the flange and wall being inturned and constituting an annular rib lapping one face of the head at the periphery thereof.

1,459,261. CAN OPENER. LEWIS D. ROBERTS, Washington, D. C. Filed June 30, 1922. Serial No. 571,021. 5 Claims. (Cl. 30—3.)



1. A can opener including a body, a handle and a blade extending from the body, the cutting edge of the blade being disposed at an acute angle to the longitudinal axis of the handle, a finger extending from the body and into the angle between the handle and cutting edge, said finger having a transverse fulcrum edge at its free end, and side lugs extending from the ends of said fulcrum edge at angles thereto.

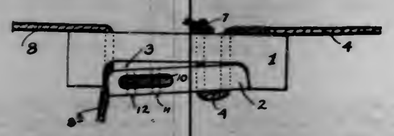
1,459,262. VISCOSIMETER. CHARLES R. RODE, Lima, Ohio. Filed Nov. 22, 1920. Serial No. 425,697. 3 Claims. (Cl. 265—11.)

1. In a meter of the class described, the combination of a pair of like tubes arranged in a common holder with their axes parallel, one containing a fluid of a given standard viscosity, the other adapted to contain the fluid to be tested, and an identical non-buoyant object in each tube, whereby the relative viscosity of the fluids may be determined by the relative times of transit of said objects through said tubes.

1,459,263. STEERING ATTACHMENT FOR SLEDS. WILBUR I. ROGERS, Boston, Mass. Filed Aug. 12, 1922. Serial No. 581,467. 5 Claims. (Cl. 280—21.)

2. In a steering attachment for sleds, a cross bar having longitudinally extending slots at opposite ends, angular bolts disposed in said slots, the outer ends of the bolts being adapted to be passed through the runners of a sled, a steering runner mounted beneath the cross bar and upon the same for movement in a vertical plane and oscillation in a horizotnal plane, and manually operable means mounted upon the cross bar and engaging the runner rearward of its pivot whereby the runner may be oscillated in a horizontal plane.

1,459,264. PROCESS OF MAKING WALL BOARD. ORVILLE L. ROUTT, Los Angeles, Calif. Filed June 12, 1920. Serial No. 388,640. 5 Claims. (Cl. 154—2.)

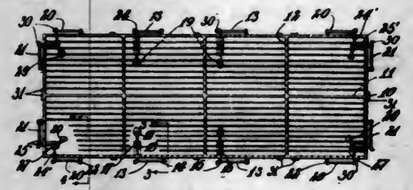


5. The herein described process of forming wall board which consists in advancing two sheets of paper in close proximity to each other one of said sheets having folded portions at opposite sides to form the opposite edges of

the wall board, supplying a coating of dry powdered adhesive matter to the inner surface of each sheet, and

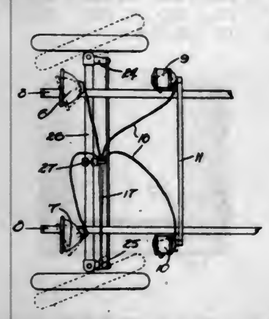
then rolling therebetween a mass of plastic substance to which said sheets are secured by said adhesive matter, substantially as described.

1,459,265. ROPE-JOINING CLAMP. EDWARD SAUNDRY, New Haven, Conn. Filed Oct. 6, 1922. Serial No. 592,699. 4 Claims. (Cl. 24—115.)



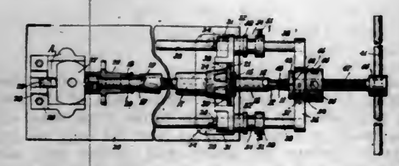
1. In a rope-joining clamp, the combination of the following elements, to-wit: two clamping members of unequal length—the longer member being provided with a recess in its side, which is adapted to receive the shorter member—said shorter member being adapted to clamp one end of a rope against one end of said recess; a perforation in the longer member which is adapted to receive said rope to guide it into clamping position; a hinge and clamping element formed by the other rope to be joined—said rope passing twice through both of said clamping members whereby, on putting said rope under tension, said shorter member is firmly drawn into said recess to clamp the opposite end of said rope.

1,459,266. COVER FOR CRACKER CANS AND SIMILAR CONTAINERS. HARRY SEBELL, Somerville, Mass., assignor of one-half to Frank G. Davison, Cambridge, Mass. Filed July 3, 1922. Serial No. 572,728. 3 Claims. (Cl. 220—82.)



1. A hinged cover for cans and the like having a sight opening surrounded by a glass-receiving ledge and having an annular depending flange surrounding the ledge, a piece of glass resting on the ledge and a U-shaped glass-retaining wire having the ends of its legs detachably secured to the cover adjacent its hinged edge, the bridge portion of the U having a part extending through the depending flange on the opposite side of the cover and furnishing a thumb piece by which the cover may be raised.

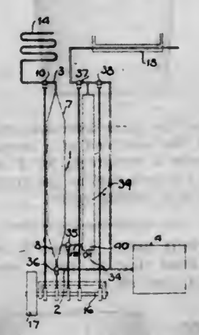
1,459,267. ANIMAL TRAP. MICHAEL SHUTOFF, Freehold, N. J. Filed Feb. 6, 1922. Serial No. 534,288. 4 Claims. (Cl. 43—61.)



1. In a trap, a pair of separate doors, a rod having a bait holding device at one end, a ball and socket joint mounting for said rod between its ends, and door holding members adapted to press against the other end of said rod longitudinally of the latter.

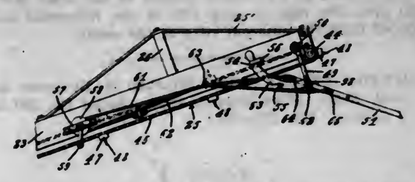
1,459,268. DIRIGIBLE HEADLIGHT. CECIL CHARLES SMITH, Sydney, New South Wales, Australia. Filed Mar. 21, 1921. Serial No. 454,187. 1 Claim. (Cl. 240—62.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In a dirigible headlight, a casing having means to attach the same to a member of an automobile, a lamp-carrying shaft mounted in the said casing for rotation and provided with a pulley, a Bowden wire having its inner member extended through an opening in the casing and attached at one end to said pulley, the outer member of said Bowden wire near said end, bearing against said casing, means to attach the opposite end of the inner member of the Bowden wire to a steering arm, and a clamp for attachment to a front axle and forming a guide for the inner member of the Bowden wire, the outer member of the Bowden wire bearing against said clamp, and a spring attached to the pulley and to the casing to turn the pulley and shaft in one direction.



1,459,269. METHOD OF AND APPARATUS FOR REMOVING AND REPLACING BEARING SLEEVES OF PROPELLER SHAFTS. LOUIS ULLMAN, New York, N. Y. Filed Dec. 1, 1921. Serial No. 519,039. 14 Claims. (Cl. 29—88.2.)

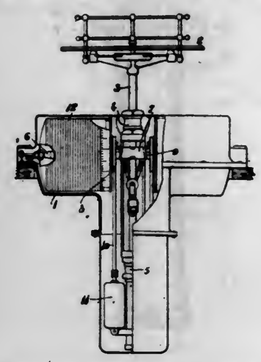
1. The herein described method of freeing a bearing sleeve and a propeller shaft encased in a torque tube of



the Ford type, which method consists in driving the shaft through a space between the shaft and tube, the movement of said shaft being relative to the sleeve and torque tube.

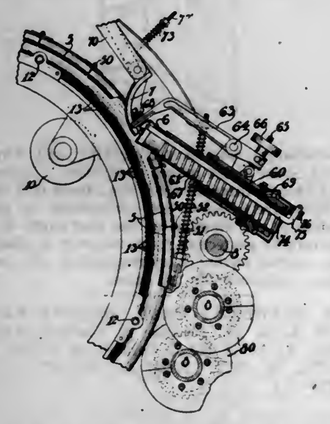
1,459,270. METHOD OF AND APPARATUS FOR HEAT DIFFERENTIATION. RUDOLPH VUILLEUMIER, New Rochelle, N. Y., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Original application filed May 14, 1914, Serial No. 838,475. Divided and this application filed Sept. 30, 1919. Serial No. 327,413. 19 Claims. (Cl. 62—170.)

1. Apparatus of the character described, comprising, in combination, a chamber, a regenerator, a source of fluid, means for admitting fluid from said source through said regenerator into said chamber, means for admitting fluid directly from said source into said chamber, means for abstracting fluid from said chamber, and means for abstracting the remaining fluid from said chamber through said regenerator.



1,459,271. WHEAT STACKER. HARRY F. VON ENGELN, Ludell, Kans. Original application filed June 1, 1918, Serial No. 237,741. Divided and this application filed Mar. 8, 1920. Serial No. 363,958. 1 Claim. (Cl. 198—73.)

In a device of the class described, a support, a keeper on the side of the support, a hanger pivoted to the side of the support, a rigid brace detachably interengaged with the keeper, a chute, a pivot member uniting one end of the brace and the intermediate portion of the chute with the hanger, a drum journaled on the side of the support, flexible elements trained in opposite directions about the drum and connected with the chute on opposite sides of the pivot member, and a fair leader on the side of the support, the flexible elements passing through the fair leader, and the fair leader serving to hold the flexible elements clear of the brace.

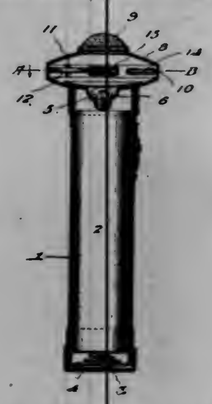


1,459,272. AUTOMATIC BALANCE-WEIGHING APPARATUS. GUSTAF VON POST, New York, N. Y. Filed Aug. 28, 1920. Serial No. 406,599. 3 Claims. (Cl. 265—70.)

1. In automatic balance weighing apparatus, a rotatable shaft, a pair of flexible strips connected to the shaft and extending in oblique directions that approach to be wound around the shaft obliquely in different direction to prevent the parts of the strips from touching each other, a vertical shaft, bearings to guide the shaft for vertical movement, means connecting said shaft with

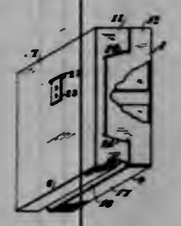
adjacent convergent portions of said strips, a goods receiver on said shaft, another flexible strip, a cam on the shaft receiving said strip and having a surface of continuing excentricity to prevent said other strip from winding on itself, and a weight carried thereby.

1,459,273. FISH SLITTING AND CLEANING MACHINE. EDWARD HUGH WAUGH, Seattle, Wash., assignor to Smith Cannery Machines Co., Seattle, Wash., a Corporation of Washington. Filed Oct. 18, 1921. Serial No. 508,517. 44 Claims. (Cl. 17—10.)



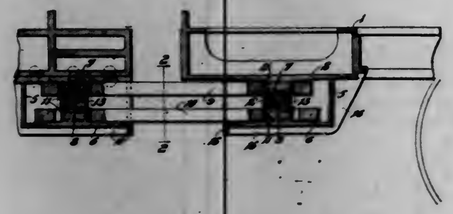
1. In a fish dressing machine, a movable carrier, fish holding means comprising pairs of alined pins mounted for longitudinal reciprocation towards and from each other to engage the fish, means for automatically reciprocating said pins and a spring between one pin of the pair and its reciprocating member.

1,459,274. ELECTRIC POCKET LAMP WITH SIGNAL PANE AND COMPASS. FUKUTARO YOKOYAMA, Tokyo, Japan. Filed Dec. 19, 1919. Serial No. 346,001. 1 Claim. (Cl. 240—8.4.)



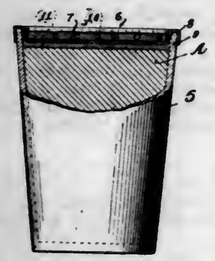
In an electric flashlight having a casing, a lens, and a bulb spaced from the lens, a signaling element and adjustable supporting means for said signaling element, said supporting means enabling said signaling element to

be arranged between the bulb and lens or removed from between the bulb and lens at will, and comprising a



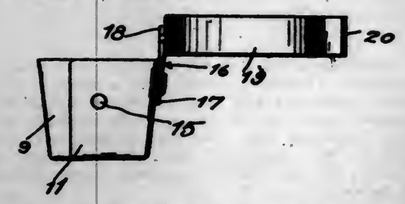
spring having an arcuate portion, and a finger piece shiftably mounted on the casing and having a member having sliding contact with the inner side of said arcuate portion of said spring.

1,459,275. CARTON FOR FOLDED TISSUE PAPER. LELAND J. ARMS, Berkeley, Calif. Filed Feb. 20, 1922. Serial No. 537,945. 1 Claim. (Cl. 229—17.)



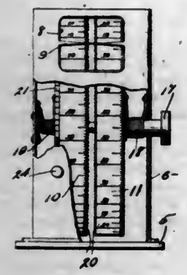
In combination, means for packing and dispensing interfolded tissue toilet papers comprising a carton having a slot therein through which the papers may be withdrawn successively, transverse extensions of the slot for facilitating the starting of the first strip of paper, and a permanent protective frame adapted to slidably receive the carton having a corresponding slot and corresponding extensions for the same.

1,459,276. DRAWBAR POCKET. EDMUND S. BECKETTE, East St. Louis, Ill., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Aug. 21, 1922. Serial No. 583,233. 9 Claims. (Cl. 213—3.)



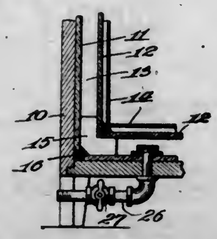
2. In a drawbar pocket, an upper wall, a lower wall, opposed bosses on said walls, each adapted to be engaged by a drawbar, and means for maintaining engagement of said bosses by drawbars positioned in said pocket.

1,459,277. CLOSURE FOR CONTAINERS. DAVID BLOOM, Berkeley, Calif., assignor of one-fourth to William M. Allen, San Francisco, Calif. Filed June 12, 1922. Serial No. 567,669. 5 Claims. (Cl. 215—38.)



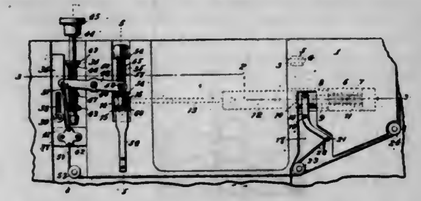
1. A closure of the class described, embodying a perforated insert for the open end of a container, said insert adapted to provide a receptacle for a paraffin like sealing agent with the perforations permitting the insert to be embedded in said sealing agent.

1,459,278. MATCH BOX. ALBERT Z. BROOK, Mountain Grove, Mo. Filed Mar. 14, 1921. Serial No. 452,009. 2 Claims. (Cl. 206—30.)



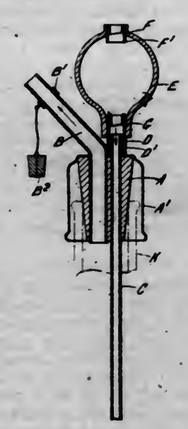
1. A match box embodying a resilient U-shaped clamp adapted to embrace and frictionally engage a support, an arm secured to the bight portion of the clamp and extending beyond the lower edge of the clamp, and an elongated receptacle, one side portion of the receptacle being secured at its central portion to the outer face of the arm, the edge of said side of the receptacle being spaced from the adjacent edge of the clamp.

1,459,279. CALCULATOR. WILFRED H. BUTCHER, Burwell, Nebr. Filed June 7, 1920. Serial No. 387,007. 3 Claims. (Cl. 235—86.)



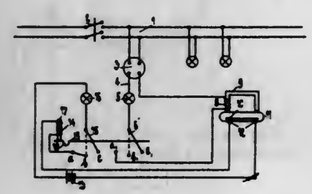
1. A calculator comprising spring controlled rotatable count and tally wheels, clutch means between the wheels whereby they may be rotated in unison, means for releasably retaining the tally wheels in a set position, and means for causing disengagement of the count wheel and independent return movement thereof.

1,459,280. REFRIGERATOR. CALVIN G. CARD, Los Angeles, Calif. Filed Mar. 6, 1922. Serial No. 541,575. 3 Claims. (Cl. 217—5.)



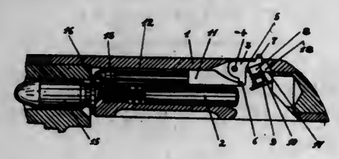
1. A refrigerator having vacuum chambers formed in its walls, sections of glass lining said vacuum chambers and L-shaped spacing members arranged between said sections of glass in the corners of said vacuum chambers.

1,459,281. AUTOMOBILE DOOR. JACOB UTLEY CARTER, Cardston, Alberta, Canada. Filed Aug. 10, 1920. Serial No. 402,720. 18 Claims. (Cl. 292—164.)



1. In combination with an automobile body having a door hinged thereto, a lock for securing the door, means adjacent the door for releasing the lock, means for releasing the lock from a distant point, and means for holding the lock in released position.

1,459,282. APPARATUS FOR EJECTING, ACCELERATING, OR CONTROLLING LIQUID DISCHARGE FROM BOTTLES AND THE LIKE. GILBERT CLARK, Morpeth, England. Filed Dec. 8, 1920. Serial No. 429,282. 5 Claims. (Cl. 215—3.)



1. Means for accelerating delivery of viscous liquid from a bottle or the like, comprising in one fitting or unit for attachment to the bottle, a cork or stopper to fit the bottle having fitted therethrough two tubes, one for the delivery of liquid from the bottle, and the other extending below the surface of the liquid at one end, and means for delivery of air under pressure to the bottom of the bottle by the longer tube.

1,459,283. ELECTRIC EMERGENCY-LIGHTING INSTALLATION. PIETER DAS, Delft, Netherlands. Filed Aug. 2, 1921. Serial No. 489,212. 11 Claims. (Cl. 171—97.)

1. In an emergency lighting installation, a main circuit, an emergency circuit, circuit controlling means operating to close the emergency circuit in advance of the closure of the main circuit, and means responsive to the electrical energization of the main circuit to automatically open the emergency circuit.

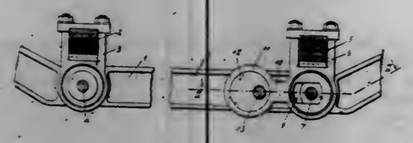
1,459,284. SIGHT FOR FIREARMS. JOSEPH DECLAYE, Liege, Belgium. Filed Mar. 25, 1921. Serial No. 455,566. 3 Claims. (Cl. 42—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

3. The combination with a fire-arm having a movable breech, of a bell-crank lever pivotally mounted in a slot in said breech, one arm of said lever extending substantially parallel to the axis of the barrel and carrying a sighting point, the other arm of said lever extending into the interior of the breech in a direction substantially at right angles to the axis of the barrel, a rod slidably mounted in said breech and having one end in contact with the second-mentioned arm of said lever and the other end normally projecting from the front face of the breech, and a spring operatively connected with the lever and maintaining the sighting point withdrawn within the breech when the cartridge chamber of the fire-arm is empty.

1,459,285. MEANS FOR SECURING THE BARRELS OF AUTOMATIC PISTOLS HAVING REMOVABLE BARRELS. JOSEPH DECLAYE, Liege, Belgium. Filed Mar. 25, 1921. Serial No. 455,567. 3 Claims. (Cl. 42—3.)

1. An automatic pistol having a fixed barrel provided with segmental ribs adapted to engage with and disen-

gage from the frame by a rotary movement and comprising means controlled by the trigger for preventing



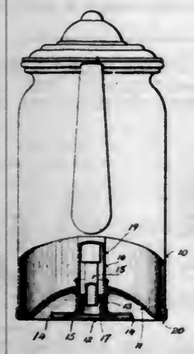
the barrel from turning during the recoil as long as the trigger is acted upon for firing.

1,459,286. MOVABLE BREECH FOR AUTOMATIC PISTOLS. JOSEPH DECLAYE, Liege, Belgium. Filed June 16, 1921. Serial No. 478,068. 4 Claims. (Cl. 42—3.)

2. A movable breech slide for automatic pistols in which the return spring surrounds the barrel comprising a sleeve provided with a flange on which the end of the return spring bears, means for fastening said sleeve to the front part of the breech slide, and two facets provided on the exterior of the sleeve and permitting of an angular movement being readily given to it.

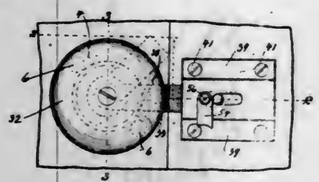
1,459,287. SUSPENSION OF MOTOR CARS AND OTHER VEHICLES. ANTONIO DIAZ, Barcelona, Spain, assignor to José F. Del Castillo, Barcelona, Spain. Filed Feb. 10, 1922. Serial No. 535,666. 3 Claims. (Cl. 280—112.)

1. In the spring suspension of motor cars and other vehicles, clamps for receiving springs, said clamps being rotatably mounted on the axle, by means of pins, one of the clamps on an axle being provided with a slot for receiving its pin, whereby the clamp is simultaneously rotatable and slidable on the pin.



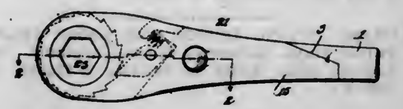
1,459,288. FIRE GRATE FOR LOCOMOTIVES. JAMES G. ELLIS, St. Lambert, and GEORGE WALTER MINGIE, Montreal, Quebec, Canada. Filed Mar. 15, 1920. Serial No. 366,064. 8 Claims. (Cl. 126—176.)

3. A grate bar adapted to be shaken, provided with a plurality of spaced-apart identically formed holes extending therethrough from the top to the bottom of the bar, said holes constituting draft openings and shaker arm



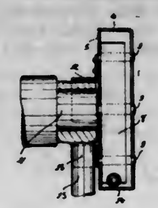
receiving openings, in combination with a shaker arm comprising a head portion adapted to fit within any one of said holes.

1,459,289. PERCOLATOR. JOSEPH KOENIG and WILLIAM H. ELLIS, Two Rivers, Wis. Filed Apr. 4, 1922. Serial No. 549,427. 1 Claim. (Cl. 53—3.)



In a coffee percolator the combination of a bottom having a raised center, a tube of small diameter rigidly affixed to said center, and an enlarged section at the base of said tube, said bottom having a portion flush with said base, a second tube secured to and extending upwardly from said first mentioned tube and having an opening therein spaced above said first mentioned tube, and a third tube positioned within and spaced from the wall of said second tube and projecting downwardly into said first tube.

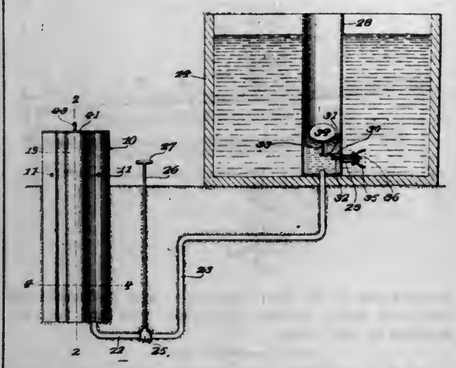
1,459,290. LOCK. CHARLES A. HABENICHT, Modesto, Calif. Filed May 29, 1922. Serial. No. 564,424. 6 Claims. (Cl. 20—14.)



1. A combination latch and lock for a door or the like, comprising a cylindrical housing adapted to be inserted in the door, a plug rotatable therein having a threaded radial recess therein, a latch comprising a threaded base adapted to engage said recess and a stem extending through the housing for preventing longitudinal motion of the plug relative to the housing, a slot in the housing allowing of limited revolving motion of the latch relative to the housing, a nut threadedly engaging the inner end of the plug bearing against the housing and means for locking the plug to the housing adapted to be actuated by a key from the outside of the door.

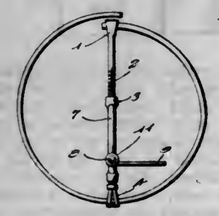
1,459,291. WRENCH. LEWIS L. HALL, Clendenin, W. Va. Filed June 28, 1922. Serial No. 571,396. 1 Claim. (Cl. 81—60.)

A wrench comprising a handle, an offset apertured head disposed at the forward end of the handle, the handle being reduced in thickness between the head at a point short of the rear end thereof, defining a transversely extending shoulder and a diagonally extending shoulder, an upstanding lug formed on the inner surface of the head extending beyond the outer face of the reduced portion, an elongated cover plate arranged to engage the reduced portion and having its rear end provided with a transverse and a diagonally extending edge for engaging the shoulders, an offset apertured head formed on the forward end of the plate arranged to the overlie the first-mentioned head, a socket wrench head rotatably carried by the heads, a pivoted pawl disposed between the heads, a spring engaging the pawl and lug for normally urging the pawl in engagement with the wrench head, means securing the cover plate on the handle, and an inwardly extending finger formed on the cover plate for engagement with the lug, as and for the purpose specified.



1,459,292. SPEED INDICATOR. ALFRED MÉLOTTE, Remicourt, Belgium. Filed June 26, 1922. Serial No. 570,900. 4 Claims. (Cl. 116—74.)

4. An apparatus for indicating speed by means of sound, comprising a rotary shaft; a hollow resonant body mounted thereon; a hollow non-resonant body within the interior of the resonant body fixed to said shaft to rotate therewith and having at least one blade and one outlet opening; and an impact body freely-rotatable within the non-resonant body and adapted to be lifted up by said blade and then to be dropped therefrom when the blade reaches a certain angular position, and to escape through said opening and fall against the resonant body when said shaft and said non-resonant body are rotating at speeds lower than a predetermined speed.

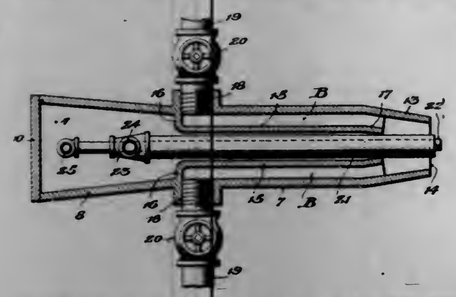


1,459,293. STOCK-WATERING DEVICE. ERNEST A. POWELL, Rawson, Ohio. Filed Feb. 24, 1922. Serial No. 538,933. 2 Claims. (Cl. 119—73.)

1. A stock watering device comprising a casing partially sunken in the ground with vent openings in the portion above the surface of the ground, the casing having a longitudinal offset chamber in one side with a longitudinal opening establishing communication with the casing, a water receptacle seated within the upper end of the casing and having its walls spaced from the walls of the casing, a water conduit extending longitudinally through the casing and into the bottom of the receptacle, a casing disposed in and filling the said chamber and having open-

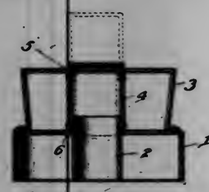
ings in the upper and lower portions of its inner wall leading into the casing, and a heating means in the bottom of the second casing.

1,459,294. AUTOMOBILE RIM TOOL. JAMES REED and GEORGE WASHINGTON, New Orleans, La. Filed Oct. 26, 1922. Serial No. 597,107. 1 Claim. (Cl. 157—1.)



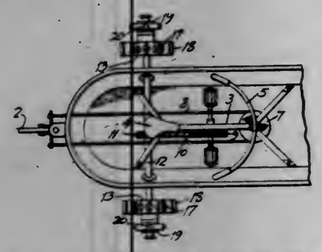
A rim tool comprising a turn buckle having a threaded opening in one end, a rim-engaging hook having swiveled connection with the other end of said turn buckle, a rim-engaging hook having a threaded stem passing through the threaded opening of said turn buckle, the side arms of the turn buckle being provided with alined openings adjacent the end portions of the turn buckle having the hook swiveled thereto, a turning lever formed of a flat strip of a width for fitting between the side bars of the turn buckle, said strip having one end portion bent upon itself to form an offset bearing eye for fitting between the side bars of the turn buckle, and a pivot pin passing through the alined openings of the turn buckle and through said eye to pivotally mount the lever for swinging movement longitudinally of the turn buckle from an operative position to an inoperative position on an axis just sufficiently offset to permit the lever to fit within the turnbuckle parallel to the threaded stem.

1,459,295. BURNER. THOMAS F. SMITH, Tulsa, Okla. Filed Mar. 24, 1922. Serial No. 546,483. 4 Claims. (Cl. 158—75.)



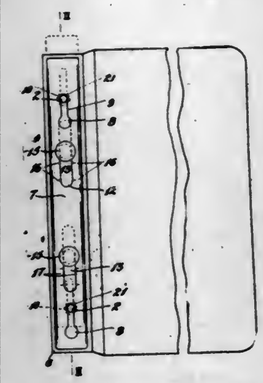
1. A burner comprising an elongated casing having a nozzle portion with a converging wall and a chamber in its opposite end portion and containing oppositely-disposed gas-chambers having supply-ports and arranged to discharge into the nozzle portion, a tube extending from said end chamber through the space between said gas-

chambers to and arranged to discharge at the nozzle end of the burner, another tube extending from said chamber



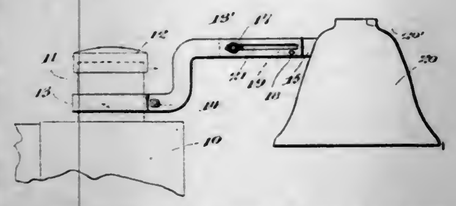
through and to the discharge end of said first-mentioned tube, and means whereby propellant fluid and fuel are supplied to said tubes.

1,459,296. CUTTER. RUSSELL H. STAMBAUGH, Galesburg, Ill. Filed Feb. 2, 1922. Serial No. 533,639. 1 Claim. (Cl. 107—51.)



In a device for cutting articles into various configurations comprising an outer cutter member and an inner cutter member arranged concentrically therewith, a top formed with said outer cutter member, a handle, said handle being secured to said top and having a horizontal portion parallel to said top, said top having a centrally located opening therein adapted to receive said inner cutter member, a handle secured to the upper end of said inner cutter member, the handle of the inner cutter member being provided with vertical side members, the horizontal portion of the handle of said outer cutter member having openings therein through which are adapted to pass the vertical portions of the inner cutter member handle, and said top and horizontal portion of the handle of said outer cutter member being adapted to form guides for the inner cutter member whereby said inner cutter member will be stabilized during its cutting operation.

1,459,297. BICYCLE BOAT. GUSTAVE SWAN, Sioux Falls, S. Dak. Filed Sept. 28, 1921. Serial No. 503,768. 2 Claims. (Cl. 115—40.)

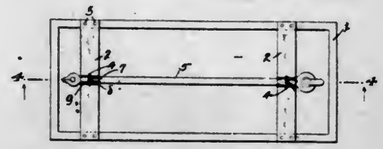


1. In a bicyle boat, a transverse shaft extending through the sides of the boat hull, paddle wheels, and means for releasably securing said paddle wheels to said transverse shaft, the paddles of said paddle wheels being adapted for rotation independently thereof when said paddle wheels and transverse shaft are disconnected and and said transverse shaft is rotating.

1,459,298. FILING DEVICE FOR LOOSE LEAVES. PHILIP TEARE, Melbourne, Victoria, Australia. Filed July 25, 1921. Serial No. 487,513. 6 Claims. (Cl. 129—8.)

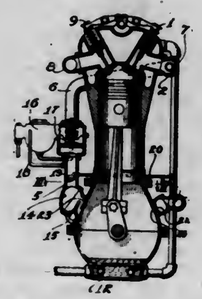
1. A loose sheet filing device comprising a backing member, posts projecting therefrom, a metallic strip detachably connected to the posts, a cover slidable on the latter between the backing member and strip, and clamping screws rotatably mounted in the strip in threaded engagement with the cover.

1,459,299. FUNNEL FOR AUTOMOBILES. MILTON THOMPSON, Roland, Iowa. Filed Aug. 1, 1921. Serial No. 488,956. 2 Claims. (Cl. 220—86.)



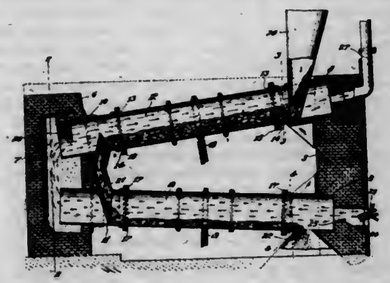
2. The combination with the filling tube of an automobile radiator, of pair of forwardly extending arms clamped on the said tube and formed with longitudinal aligning slots, a pivot disposed through the slots, an arm on the pivot for swinging movement to extend toward and away from the filling tube, a lateral pin on the outer end of the pair of arms, said pivoted arm being disposed between said pair of arms, a funnel carried by the free end of the pivoted arm and arranged to move with the arm to lie in filling position with respect to the filling tube and in inverted position away from the tube and forwardly of the bracket arms, and a clamping means on the said pivot for maintaining the pivoted arm in engagement with the said pin and against pivotal movement when the funnel is inverted.

1,459,300. PACKING DEVICE. STANWOOD E. FLITNER, Englewood, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Mar. 5, 1920. Serial No. 363,546. 4 Claims. (Cl. 206—46.)



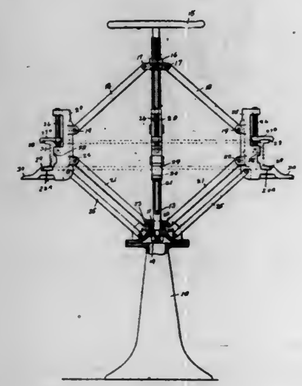
1. In a shipping crate, a support for fragile materials comprising a frame, a fabric material extending across

the opening between the sides of said frame and separate adhesive covered means attached to said fabric material



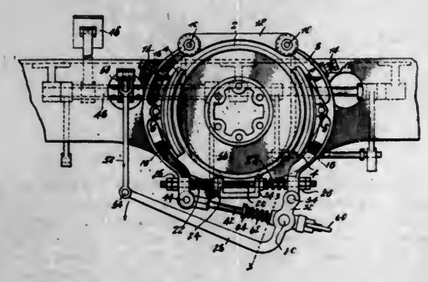
and adhesively attached to said fragile materials for holding the fragile material in place.

1,459,301. COMBUSTION-ENGINE OIL PURIFIER. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed Feb. 20, 1917. Serial No. 149,839. 16 Claims. (Cl. 123—196.)



1. In an internal combustion engine, means for eliminating liquid fuel contamination from the lubricating oil thereof, comprising a collecting space for said oil, an entrance means into said space distributed along a wall thereof, and engine-operated means for maintaining a flow of gaseous medium through said distributed entrance in evaporative relation to the oil in said space and a condition of continuous relative vacuum therein during the engine operation.

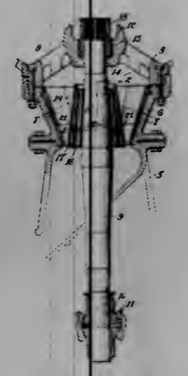
1,459,302. ROTARY LIME-BURNING KILN. MAX HERMANN, New York, N. Y. Filed Aug. 11, 1921. Serial No. 491,342. 3 Claims. (Cl. 222—7.)



1. In a rotary lime burning kiln, the combination of kiln sections disposed one over the other and convergingly inclined towards each other, the kiln section being composed of fixed members and intermediate rotary members, a chambered header forming a flue connection between the near fixed members of said converging sections and provided with a bridge wall partially closing the upper portion of the lower end of the upper kiln section which projects inside said chambered header, and a tube independent of the header connecting the fixed members of said kiln sections for conducting limestone from the upper section to the lower section.

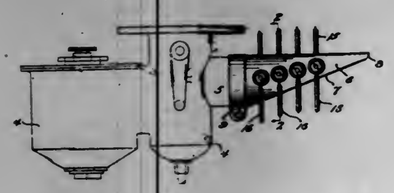
1,459,303. TIRE CHANGER. GEORGE R. HUDSON, Portland, and FRANKLIN M. CULP, Corvallis, Oreg. Filed Sept. 20, 1921. Serial No. 502,019. 2 Claims. (Cl. 157—1.)

1. In a frame for tire changers, the combination of a vertical frame member shaped to fit the inside of a rim and having a fixed outwardly projecting hook formed on the lower end of said frame, with a vertical rod supported at both ends by said frame, a hook slidably and rotatably mounted on said rod between said supports above said fixed hook, and means for moving said frame inwardly and outwardly with relation to the rim.



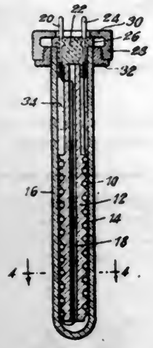
1,459,304. SERVICE BRAKE. RUSSELL HUFF, Detroit, Mich., assignor to Dodge Brothers, Detroit, Mich., a Corporation of Michigan. Filed Jan. 16, 1920. Serial No. 351,813. 8 Claims. (Cl. 188—75.)

1. In a device of the character described, in combination, a brake drum, a frame adjacent thereto, brake



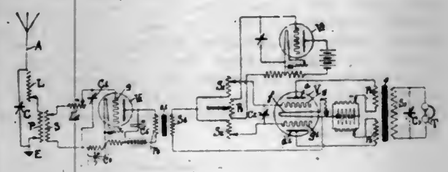
levers pivoted at one end in said frame, a brake shoe carried by each lever for cooperating with said drum, and a rod fixed relatively to said frame and passing through an opening in the other end of each of said levers and along which each is independently adjustable.

1,459,305. CRUSHING APPARATUS. JOSEPH E. KENNEDY, New York, N. Y. Filed Dec. 27, 1919. Serial No. 347,827. 9 Claims. (Cl. 83—10.)



1. In a gyratory crusher, a rotatable support, a crushing member comprising tubular sections mounted upon the support in axial abutting relation and arranged with segmental recesses in the abutting ends adapted to be brought into opposed relation when the sections are in abutting relation, and common means to engage in said recesses to hold the sections against rotative movement, one relative to and independent of the other on the support.

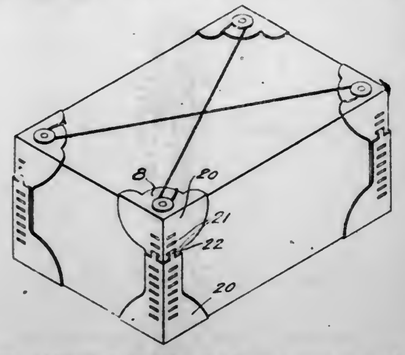
1,459,306. FUEL DEVICE FOR INTERNAL-COMBUSTION ENGINES. ISAMI KODAMA, Philadelphia, Pa. Filed Aug. 18, 1920. Serial No. 404,473. 8 Claims. (Cl. 123—119.)



1. A device of the character described including an intake passage; means providing a chamber directly open to the atmosphere and communicating with said passage; and means for creating electric sparks directly in said chamber whereby oxygen can be drawn directly into said chamber, from a zone of said atmosphere of greater volume than is capable of passing through said passage, and collect around said sparking means to be conveyed through said intake passage; substantially as described.

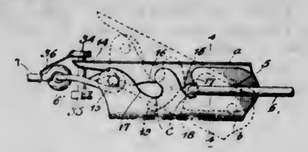
1,459,307. ELECTRIC HEATING UNIT. CLEMENS A. LAISE, Weehawken, and ALBERT J. GALLAGER, West Orange, N. J. Filed Apr. 8, 1922. Serial No. 550,579. 11 Claims. (Cl. 219—41.)

1. A heater of the kind described having a casing of insulating material, a core having a resistance wire mounted thereon and positioned in said casing, said casing also provided with an inert atmosphere therein.



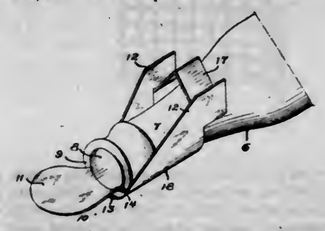
1,459,308. SIGNALING APPARATUS. DAVID G. MCCAA, Lancaster, Pa., assignor of one-third to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Apr. 6, 1920, Serial No, 371,674. Renewed Nov. 3, 1921. Serial No. 512,572. 23 Claims. (Cl. 250—8.)

1. Apparatus for receiving signals represented by undamped waves of radio frequency and for reducing the disturbing effects of simultaneously received energy comprising a receiving structure, signal translating means, detecting circuits differentially affecting said signal translating means, a local source producing oscillations reacting with the received oscillations representing the desired signal and the simultaneously received energy to produce opposing beats cumulatively affecting said signal translating means, and means for adjusting the amplitude of said locally produced oscillations in their reaction with said oscillationss for relatively increasing the effect upon said signal translating means of the beats representing the desired signal.



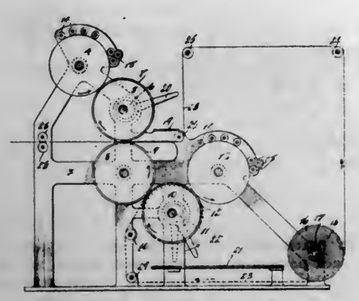
1,459,309. BOX REENFORCEMENT. ELIZABETH MILLER, New York, N. Y. Filed Feb. 5, 1921. Serial No. 442,615. 11 Claims. (Cl. 229—49.)

1. In a box reenforcement, corner braces applicable over the corners of a box and having angularly related sides to fit such corners, said corner braces being arranged in pairs and having angular extensions to embrace the



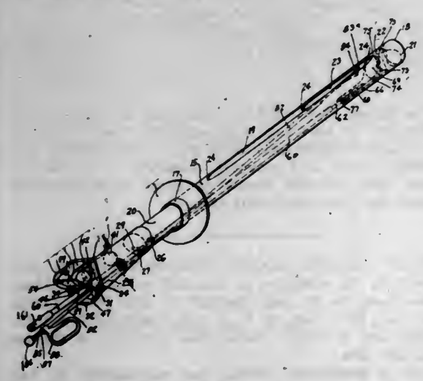
corner edges of the box and means for securing the braces over the box in such paired relation.

1,459,310. CLASP OR CONNECTING DEVICE. CHARLES MOSS, New York, N. Y. Original application filed Mar. 5, 1920, Serial No. 363,471. Divided and this application filed Aug. 30, 1920. Serial No. 406,883. 1 Claim. (Cl. 24—69.)



A clasp device comprising a pair of channel members adapted to interfit, said members being pivoted together at one end, said lower member having a diagonal recess opening upwardly and being directed as to length from the upper edge of the member downwardly toward the pivot point, the upper member similarly having a diagonal recess disposed as to length in a line intersecting said first named recess, said upper member also having an extension piece projecting below the recesses and adapted to lie forwardly of the bottom portions of the recess in the lower member when such members are closed, a stop carried by the free end of said lower member and extending across the channel, said upper member having an extension piece adapted to engage with said stop and projecting beyond the free end of the lower member, a link pivoted on the stop member and projecting below the extension piece, and locking means engaged with said link and extension piece.

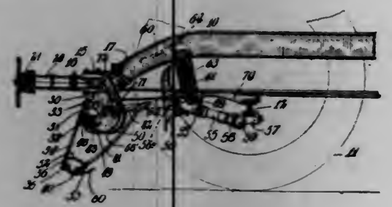
1,459,311. SANITARY DRINKING DEVICE. HERMAN OZLEK, Philadelphia, Pa. Filed May 21, 1921. Serial No. 471,452. 2 Claims. (Cl. 215—100.)



1. A device of the character described including a body portion having a split so as to provide a part adapted to be bent out of the plane of the adjacent portion through which a part of the container can be inserted, said body portion having a projecting mouth piece; substantially as described.

1,459,312. PRINTING PRESS. CARL G. PRITCHARD, Warren, Ohio, assignor to The Harris Automatic Press Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 22, 1919. Serial No. 325,335. 10 Claims. (Cl. 101—137.)

1. In a combination perfecting and two color printing-press, the combination of two form-cylinders, two coacting transfer-cylinders, each form cylinder imparting its design to its respective transfer-cylinder, an impression cylinder provided with a transfer surface in printing relation with both said transfer-cylinders whereby one of said transfer-cylinders may re-transfer its design to said impression-cylinder, means for feeding an impression-receiving material between the other of said transfer-cylinders and the impression-cylinder to perfect such material passing there-between, and separate means for feeding an impression-receiving material between the first transfer-cylinder and the impression-cylinder to receive on the same side the respective designs of each transfer-cylinder.



1,459,313. OPERATING URETHROSCOPE. SIMON REISLER, Indianapolis, Ind., and HERRMANN B. TOBIAS, Philadelphia, Pa. Filed June 28, 1921. Serial No. 481,030. 6 Claims. (Cl. 128—7.)

1. In an instrument of the character described, the combination with two telescoping urethroscopic tubes having rear end windows; an operating front; and an

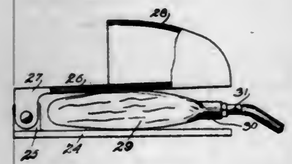
adjustable illuminated optical system for reflecting the field of operation to the operator at right angles to the axis of the instruments, of a long lateral window in both tubes and a "Folliculotome" operating through said lateral windows.

1,459,314. AUTOMATIC LIFE PROTECTOR FOR AUTOMOBILES. MICHELL RESK, New York, N. Y. Filed Nov. 19, 1921. Serial No. 516,383. 4 Claims. (Cl. 180—83.)

4. In an automobile, in combination, a fender comprising a back portion and an extensible apron, a hinged element on which said back portion is hingedly mounted in turn, and means carried by said hinged element and adapted to cause said extensible portion to extend, said part comprising a gear engaging a fixed rack.

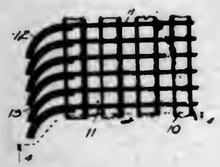
1,459,315. DUMPING CARGO CARRIER. HOWARD VAN SCOY, Chicago, Ill., assignor to Goodwin Car & Mfg. Company, Inc., Wilmington, Del., a Corporation of Delaware. Filed Oct. 21, 1921. Serial No. 509,264. 7 Claims. (Cl. 105—240.)

1. A hopper cargo carrier comprising movable valves, a plurality of releasing and replacing means therefor, and a power means associated with said releasing and replacing means and movably mounted to be directed toward each of said means to exert a substantially straight line operating effort thereon.



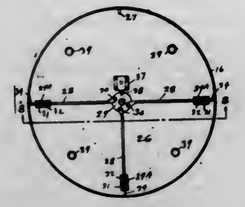
1,459,316. CORSET CLASP. WILLIAM WEINSTEIN, New York, N. Y., assignor of one-half to Albert Malsin, New York, N. Y., and one-half to Rite Form Corset Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 4, 1922. Serial No. 592,342. 9 Claims. (Cl. 24—204.)

1. In a corset-clasp device, the combination of two superposed strips adapted for use with the usual stud-carrying steel, one of said strips being slidable longitudinally of the other, the relatively stationary strip being provided with eye-members and the relatively movable strip with keepers co-operating with said eye-members; and common means for securing said keepers to said



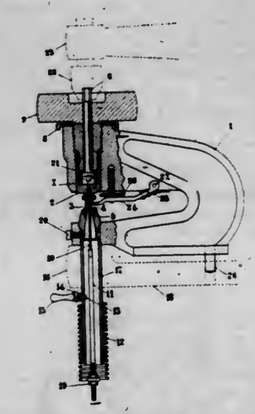
relatively movable strip and for securing said strips against separation and for guiding said relatively movable strip in its longitudinal movement.

1,459,317. FOOT ACCELERATOR. EDWIN HAROLD BIRDSALL, Thornton, Iowa. Filed Apr. 13, 1922. Serial No. 552,126. 6 Claims. (Cl. 74—81.)



1. A device of the class described comprising a throttle actuating rod, a freely movable base, a foot pedal pivotally connected with said base, a flexible receptacle carried by said base adapted to be compressed by the foot pedal, and means whereby the compression of the receptacle and the consequent movement of the contents thereof actuates said rod.

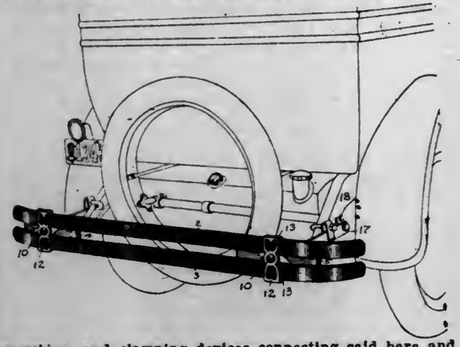
1,459,318. RADIATOR AIR-CIRCULATION-CONTROL DEVICE. EDWIN H. BIRDSALL, Thornton, Iowa. Filed May 1, 1922. Serial No. 557,579. 4 Claims. (Cl. 236—35.)



1. In a radiator having water conducting tubes, pairs of plates projecting forwardly from the tubes, said pairs being fixed together at their forward and rearward ends, and being connected against spreading between their ends and being made of material having different coefficients of expansion.

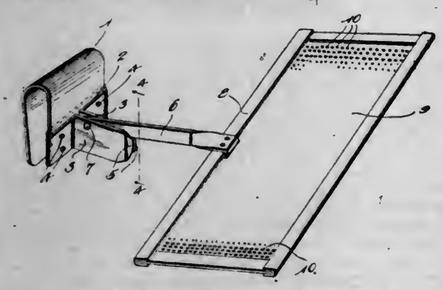
1,459,319. TIRE CASE. GUY E. BLOSS, Portland, Oreg. Filed Sept. 14, 1921. Serial No. 500,493. 1 Claim. (Cl. 224—29.)

In a tire case, the combination of a cylindrical body member arranged to be attached to an automobile and to support automobile tires internally, a metallic cover adapted to seat closely on said body, said cover having on the center of its inner side a disk rotatable from the outside of said cover, a lock for controlling the rotation of said disk, a plurality of plungers loosely connected to said disk, a U-shaped guide at the outer end of each of said plungers secured to the inner side of said cover, a spring on each of said plungers between the parallel sides of each guide adapted to urge said plungers outwardly, catches secured on the inner side of said body opposite said plungers, a dowel pin on the upper side of said cover adapted to engage a corresponding hole in said body, and a set of legs removably attached to the under side of said cover.



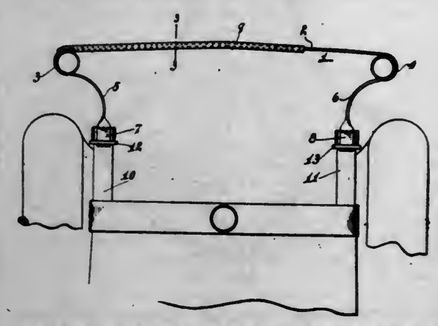
1,459,320. PUNCHING MACHINE. LUCIEN ALFRED MAURICE CORSET, Paris, France. Filed Aug. 26, 1921. Serial No. 495,664. 11 Claims. (Cl. 164—86.)

1. A machine for cutting metal plates by successive punching operations, comprising in combination a cylindrical punch, a die arranged opposite the punch, a pin passing through the opening in the die and adapted to come into contact with the punch during the whole movement or a portion of the movement of the punch, said pin limiting the advance of the sheet during each movement of the punch.



1,459,321. END SHIELD FOR MOTOR VEHICLES. WILLIAM G. COX, Cleveland, Ohio. Filed Mar. 21, 1923. Serial No. 626,505. 12 Claims. (Cl. 293—55.)

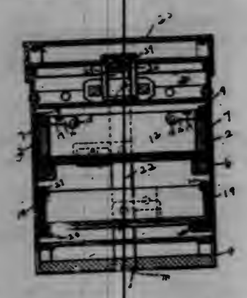
7. An end shield for a motor vehicle, comprising a pair of resilient bow-shaped members each having free ends in the same vertical plane extending in opposite directions beyond each other in different horizontal planes, a pair of buffer bars horizontally arranged one above the other opposite the respective ends of said supporting



members, and clamping devices connecting said bars and the respective ends of each supporting member together.

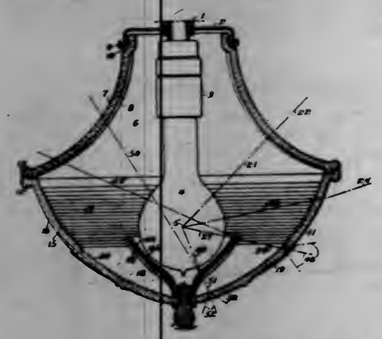
1,459,322. EYE-SHIELDING ATTACHMENT FOR WINDSHIELDS. JAMES E. DAVITT, Groton, N. Y. Filed Oct. 2, 1922. Serial No. 591,924. 2 Claims. (Cl. 296—97.)

1. An eye shading attachment for windshields comprising a support, a pair of horizontally yieldable spring arms extending rearwardly from said support and having their free ends turned inwardly into contact with each other to form vertically disposed stops, said stops having beveled upper and lower ends, a vertically swinging arm pivoted between said spring arms and normally resting on the upper ends of said stops, and an eyeshield carried by said swinging arm.



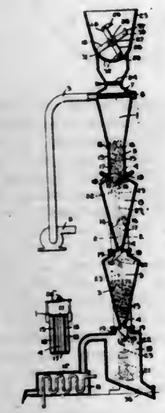
1,459,323. AUTOMOBILE BUMPER. JOSEPH S. DE MARTINI and JOHN W. DE MARTINI, San Francisco, Calif. Filed Apr. 3, 1922. Serial No. 549,105. 1 Claim. (Cl. 293—55.)

A bumper for a motor vehicle comprising a single bar of spring metal, said bar being curved forwardly and bent



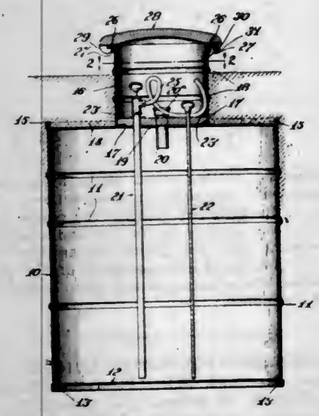
into a spring coil at each side of the bumper, and connecting members extending from the coils to the ends of the bar, said connecting members being twisted approximately 90° near their ends forming securing members, said connecting members being curved from the coils to the securing members and a strip of resilient material extending throughout the length of the front portion of the bumper and nearly enclosing said portion.

1,459,324. SLIDING DRAWER AND LOCK. LEO J. DIEBOLD, Mount Vernon, Ind. Filed June 29, 1922. Serial No. 571,818. 1 Claim. (Cl. 45—77.)



In an extension drawer support, a casing, cleats secured to the sides of the casing, drawer guides of angle shape comprising vertical and horizontal portions, the horizontal portions adapted to slide upon the cleats and being provided at their rear ends with L-shaped extensions to engage around and under the cleats, the vertical portions being of equal dimensions as the sides of the drawer and provided with inturned members formed by bending the metal of the guide inwardly and downwardly, a drawer slidably received upon the horizontal portions of the guides and being provided with longitudinal slots in the top of each side thereof, the aforementioned downwardly bent portion of the inturned members being slidably received in the slots and pivoted members secured to the back of the drawer adapted to be swung but normally in position within the slots to abut the inturned members acting as a stop to further outward movement of the drawer unless swung to inoperative position.

1,459,325. ILLUMINATING APPLIANCE. WILLIAM A. DOSEY, Newark, Ohio, assignor to Holophane Glass Co. Inc., New York, N. Y., a Corporation of New Jersey. Filed July 6, 1921. Serial No. 482,794. 5 Claims. (Cl. 240—93.)

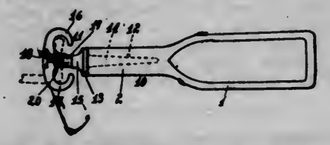


1. An illuminating appliance consisting of a light source and an enclosing glass bowl completely surrounding the same, such bowl being horizontally divided into three zones, an upper and a lower light transmitting zone, and an intermediate zone provided with light refracting prisms adapted to receive light rays directly from the source and to refract such rays outwardly and upwardly.

1,459,326. APPARATUS FOR AND METHOD OF DRYING OR OTHERWISE TREATING MATERIAL. FRED T. DOW, Bangor, Me. Filed Nov. 1, 1919. Serial No. 335,157. 7 Claims. (Cl. 34—34.)

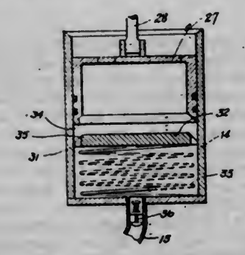
1. In an apparatus for treating material, the combination with a plurality of connected chambers, each adapted to contain material to be treated and having a progressively-increasing cross-sectional area from the bottom toward the top, said chambers being arranged in series and communicating with each other, means to cause a current of treating medium to pass through said chambers successively and at such a velocity as to hold the material in suspension in each chamber, and means to cause the material to be transferred periodically from chamber to chamber.

1,459,327. STORAGE TANK. OTTO S. FLATH, Chicago, Ill. Filed Nov. 30, 1921. Serial No. 518,778. 7 Claims. (Cl. 220—85.)



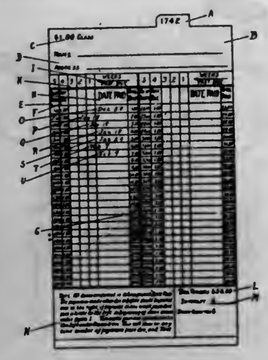
1. As an article of manufacture, a tank comprising a self-supporting fluid-holding metallic shell or wall provided with a neck portion, a horizontally disposed shoulder or flange at the inner orifice thereof, an inner cover member seated on said shoulder and provided with a filling tube, a measuring gauge and a pump communicating with the lower end of said tank, means whereby the inner cover member is locked in place, and an outer cap or cover member adapted to be locked to the outer end of said neck portion.

1,459,328. GILSONITIC PRODUCTS. CHARLES N. FORREST, Rahway, HAROLD P. HAYDEN, Raritan Township, Middlesex County, N. J., and ORIN R. DOUTHETT, Beaver Falls, Pa., assignors to The Barber Asphalt Paving Company, Philadelphia, Pa., a Corporation of West Virginia. Original application filed Aug. 28, 1919, Serial No. 320,514. Divided and this application filed Apr. 3, 1922. Serial No. 549,186. 3 Claims. (Cl. 134—56.)



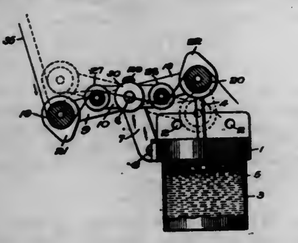
1. A semi-drying, viscous, gilsonitic sulphonation sludge oil.

1,459,329. ROPE FASTENER. LEO A. GIROT, Oakland, Calif. Filed May 16, 1921. Serial No. 469,840. 2 Claims. (Cl. 24—130.)



1. A rope fastener including two members, one member comprising an eye and an arm extending from said eye and provided with a longitudinal threaded bore in its forward end, the other member comprising a disk, a screw extending rearwardly from said disk and adapted to screw into said threaded bore until said disk engages the front end of said arm, an arm extending forwardly from said disk, a pair of hooks extending from the forward end of said arm at the respective sides thereof, and a pair of upstanding lugs on said arm forming between them a crotch extending transversely of the arm in alignment with said hooks.

1,459,330. PUMP FOR BOAT-PROPELLING DEVICES. GOTTFRIED GUSTAFSON, Brooklyn, N. Y. Filed Dec. 22, 1921. Serial No. 524,097. 1 Claim. (Cl. 230—27.)

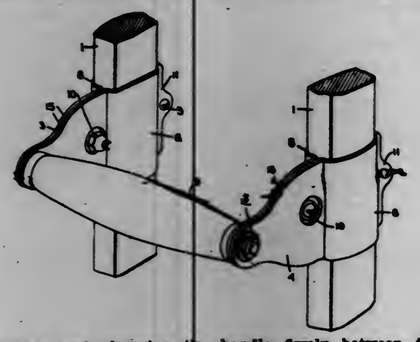


In a device of the class described, a vertical cylinder open at the top, a piston head having intake holes therein and being adapted to slide in said cylinder, an annular wall encircling said piston head and having its lower internal edge beveled, an annular disk floating in said cylinder, a beveled peripheral edge on said disk engageable with the corresponding edge of the piston head, a coil spring supporting said disk, said disk having notches on its periphery, said notches being normally closed when in contact with the piston head, and means for actuating said piston head.

1,459,331. MEANS EMPLOYED IN BOOKKEEPING. EMIL R. HERING, Cleveland, Ohio. Filed Aug. 9, 1919. Serial No. 316,283. 1 Claim. (Cl. 283—48.)

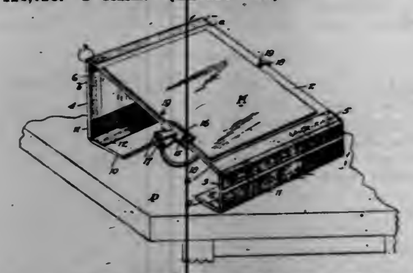
A credit card, an appropriately designated column thereon to receive a mark to indicate a timely payment, a plurality of columns adjacent thereto each appropriately designated to receive a portion of the mark to indicate a tardy payment and its degree of tardiness.

1,459,332. MEANS FOR MAINTAINING UNIFORM THE TENSION UPON YARN OR THREAD. EDSON S. HINELINE, Providence, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Dec. 19, 1921. Serial No. 523,464. 8 Claims. (Cl. 242—154.)



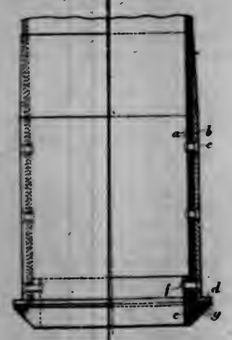
4. Means for maintaining uniform the tension upon yarn or thread comprising in combination, a pair of yoke-like members, each having a plurality of yarn guiding means, said guiding members being co-axially pivoted, means whereby one of said members may be held rigidly, and a liquid-resistance container having therein a plunger operatively connected to the other of said members.

1,459,333. CRUTCH. GEORGE HIPWOOD, New York, N. Y. Filed Mar. 11, 1919, Serial No. 281,941. Renewed Nov. 15, 1922. Serial No. 601,167. 2 Claims. (Cl. 135—51.)



1. In a crutch, the combination with a crutch body having two side members, of two separate handle-supporting brackets, one secured to each side member, each bracket comprising a pair of plates which are wider at one end than at the other, each plate having a groove at its wider end to receive a side member of the crutch and having a peripheral stiffening flange at the other end, the flanges of the plates of each pair having an abutting relation, clamping screws for clamping together the plates of each pair, the screws for each bracket being situated on opposite sides of the side member of the crutch, a handle member interposed between

the brackets at the narrow ends thereof, and a rod extending through both brackets and through said handle

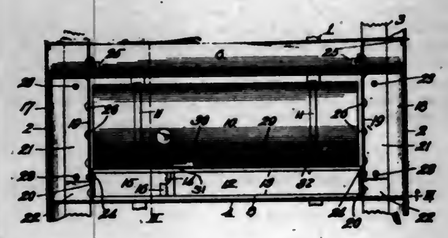


member and clamping the handle firmly between the brackets.

1,459,334. COPYHOLDER. ROSA I. KELLEHER, San Francisco, Calif. Filed Oct. 5, 1920. Serial No. 414,718. 1 Claim. (Cl. 120—28.)

A copy holder comprising a stiff table member, end flaps, continuous double hinge means connecting said flaps to the ends of the said member, and foot members hinged to the free edges of the end flaps, said flaps and foot members having unfolding movement limited by the hinge means.

1,459,335. METAL PROPELLER. HENRY LEITNER, London, England. Filed Feb. 18, 1921, Serial No. 446,047. Renewed Apr. 24, 1923. 6 Claims. (Cl. 170—159.)

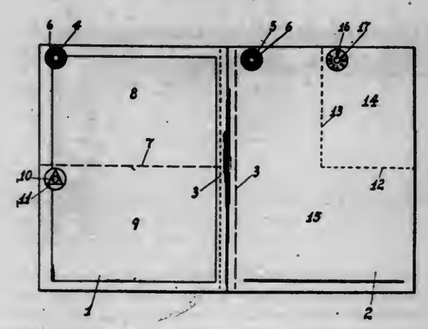


1. A metal propeller comprising a laminated stalk, an outer sleeve and an inner sleeve, and means for securing said laminations to and between said sleeves.

1,459,336. TESTING DEVICE FOR FLASH-LIGHT BATTERIES AND LAMPS. WALTER LINK, Ajo, Ariz. Filed Oct. 21, 1921. Serial No. 509,350. 6 Claims. (Cl. 175—183.)

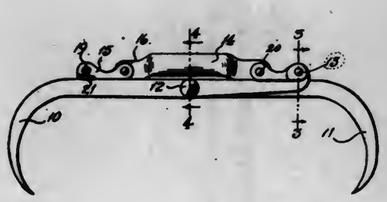
1. A testing device for flashlight batteries and lamps comprising a base member having an upwardly extending member thereon provided with means for supporting an electric lamp, and for connecting one terminal of said lamp to said base member, a clamping member slidingly mounted on said base member and adapted to engage a battery or cell to hold the same between said clamping member and said upwardly extending portion of the base member in such position that a terminal of the battery or cell will contact with a terminal of the said electric lamp, and manually controlled means on said clamping member for closing electric connection from the other terminal of the battery to said base member.

1,459,337. TOOL-BOX ATTACHMENT FOR MOTOR CARS. ANDREW W. LOVEJOY, Kansas City, Mo. Filed Mar. 8, 1920, Serial No. 364,010. Renewed Sept. 7, 1922. Serial No. 586,798. 5 Claims. (Cl. 296—37.)



4. The combination in a motor car of a tool box forming attachments comprising a pair of vertical partitions adjacent the sides of the car and between the front and back walls of a seat thereof, each partition comprising a plurality of members arranged in overlapping relation and secured together and to the car structure, and each member having a foot flange extending outwardly and engaging the adjacent side wall of the body of said structure, a trough fitting against the inner side of the front wall of said seat and secured at its ends to the said partitions, a brace hinged to said trough and adapted to hold the top of the seat of the car in open position or to extend horizontally against the rear wall of said trough, and a spring clip carried by said trough for engagement with the free end of said brace to hold the same from rattling against said trough.

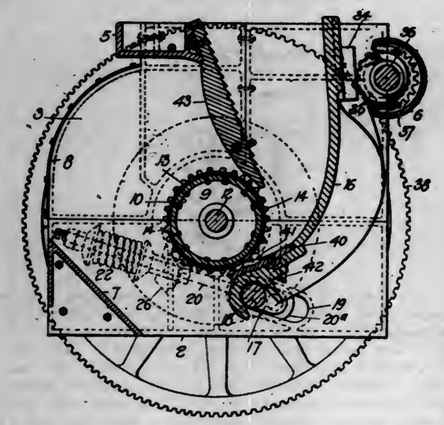
1,459,338. DETACHABLE BOOK LEAF. CHARLES W. MCCALL, Oakland, Calif. Filed Dec. 15, 1920. Serial No. 430,910. 1 Claim. (Cl. 281—38.)



A book leaf having two holes near the upper margin thereof and provided with a line of perforations extending transversely inwardly from its outer side edge, with a line of perforations extending from another edge to the

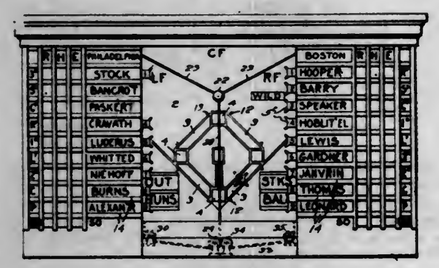
inner end of said first line, and with a line of perforations extending along its binding whereby when its leaf is severed along the line of perforation two sheets will be

formed, each sheet having one of the holes in the upper corner thereof, whereby the same may be hung on a projection.



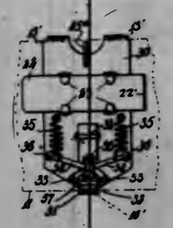
1,459,339. ICE TONGS. OTTO R. MEINHOLDT, Dallas, Tex., assignor of one-half to Erich Meyhoefer, Dallas, Tex. Filed Dec. 27, 1921. Serial No. 524,855. 1 Claim. (Cl. 294—118.)

In a pair of ice tongs, the combination of a pair of intersecting grappling arms pivoted together intermediate their ends, said arms having substantially straight shanks merging into inwardly curved lower ends, a pivotal ear integral with the upper end of each shank and offset laterally, a tubular handle having both ends flattened to provide pivotal elements, a pair of links pivotally receiving said elements in their upper ends and the said ears in their lower ends, whereby the said handle is pivotally connected to the said arms, the said links being adapted to lie contiguous to the said shanks when the latter are disposed in parallel relation by the open position of said arms, whereby the tongs may be grasped around the middle and the handle and shanks held together, and stop lugs integral with said links and projecting laterally therefrom to prevent the lower ends of the arms from moving above the pivotal point of the latter.



1,459,340. CRUSHER. DAVID J. NEVILL, Denver, Colo., assignor to The Stearns-Roger Manufacturing Company, a Corporation of Colorado. Filed June 8, 1920. Serial No. 387,452. 5 Claims. (Cl. 83—53.)

1. In a crusher, the combination of a rotary crushing roll, a jaw cooperating therewith, a rotary and laterally movable shaft upon which the jaw is movably supported, and a resilient element having crank-connections with



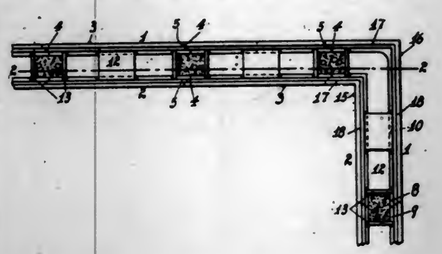
the shaft and adapted to hold it in either its normal position with relation to the roll or in an adjusted position in which it is further separated therefrom.

1,459,341. SCORE OR BULLETIN BOARD. PAUL C. OSCANYAN, Bogota, N. J., assignor to Star Ball Player Company, New York, N. Y. Filed Sept. 27, 1921, Serial No. 503,498. Renewed Oct. 19, 1922. Serial No. 595,679. 11 Claims. (Cl. 116—120.)

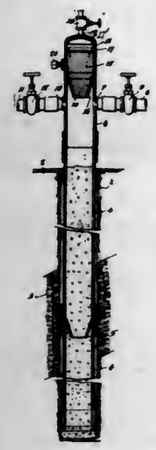
5. The combination with a game board representing a base ball field, of cross bars near each side portion of the board and spaced apart one above another, vertical guide rods connecting the superimposed cross bars of the respective pairs, a ball member in front of the board, a ball control member behind the board, pulleys at respective ends of each cross-bar, a weight at each side portion of the board, each weight provided with an arm guided by the vertical rods, cords attached to said ball member and extending in opposite directions therefrom, said cords passing over pulleys of the respective upper cross bars, the free end of said cords attached to the weight arms, cords attached to the ball control member and extending in opposite directions therefrom and over pulleys on the upper cross bars, said last mentioned cords extending downwardly from said last mentioned pulleys and connected with said weights, and means whereby said control ball member may be moved manually to effect movements of the ball member.

1,459,342. SUPPORT FOR WINDOW SHADES AND CURTAINS. PAUL PIOTROWSKI, Newport, N. H. Filed May 6, 1922. Serial No. 558,855. 5 Claims. (Cl. 156—24.)

4. A device of the class described comprising a main plate, a bar vertically guided thereon, back-turned hooks formed respectively on the upper and lower ends of said plate and bar, a pair of levers fulcrumed on said plate one on each side thereof, said levers crossing over said bar in opposite directions and having operative engagement therewith at points between their ends, and coiled tension springs attached at one end to said plate and at opposite ends to said levers adjacent the free ends of the latter.



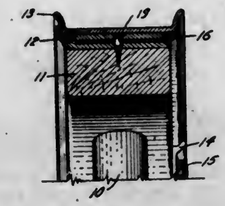
1,459,343. SELF-CONTAINED REMOVABLE POWER UNIT FOR CLOCK MOVEMENTS. WILSON E. PORTER, New Haven, Conn., assignor to The New Haven Clock Company, New Haven, Conn., a Corporation. Filed Aug. 22, 1921. Serial No. 494,060. 1 Claim. (Cl. 58—52.)



The combination with the movement-plates and connecting pillars of a clock-movement, one of the plates having a supporting-notch, of a removable, self-contained power-unit, providing a bearing for the spring-arbor of the unit, and having a fixed stud for the anchorage for the outer end of the spring of the unit, the said slot in one of the movement-plates being positioned to receive the outer end of the stud when the power-unit is located between the movement-plates, whereby the said removable self-contained power-unit may be installed in and removed from the clock-movement without spreading the movement-plates or removing any of the pillars thereof.

1,459,344. BUILDING-WALL CONSTRUCTION. ERNEST A. RASMUSSEN, Oakland, Calif. Filed Feb. 8, 1922. Serial No. 535,051. 4 Claims. (Cl. 72—29.)

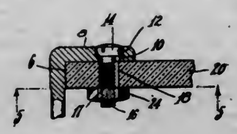
1. A wall construction including an inner unit, an outer unit, each unit comprising slabs laid end to end in horizontal rows superimposed upon each other, the end joints of each row being staggered with relation to the end joints of adjacent rows, the ends of the slabs being rabbeted to interengage each other, the lower and upper edges of the slabs being rabbeted to interengage each other, recesses formed on the inside of the slabs at the upper corners thereof so that the corner recess of each slab registers with the corner recess of the adjacent slab, the lower edges of said corner recesses being undercut, the slabs being also formed on their inside at their upper edges with plate supporting recesses directly below the registering corner recesses, plates placed between the outer and inner wall units upon the lower edges of opposite plate supporting recesses, keys formed with undercut shoulders arranged in pairs spaced a short distance apart and placed so that each pair rests upon a plate and the undercut shoulders thereof engage the undercut lower edges of the corner recesses above said plate, and a cement filling between each pair of keys.



1,459,345. WELL-CEMENTING APPARATUS. WILLIAM J. ROBERTSON and HARRY E. BECKER, Fullerton, Calif. Filed July 18, 1922. Serial No. 575,785. 3 Claims. (Cl. 166—1.)

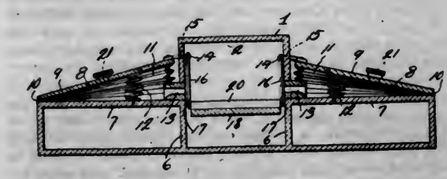
1. A well-cementing apparatus comprising a casing through which cement may be forced into a well-bore, means for injecting cement into the casing, a plunger element slidable within the casing above the cement, means creating a pressure within the casing above the plunger to move the plunger downwardly and force the cement from the lower end of the casing, and a stationary abutment carried by the casing and functioning to positively arrest the plunger at a fixed distance from the lower end of the casing.

1,459,346. SHIM PLATE FOR DEMOUNTABLE RIMS. ARTHUR E. SHEA, Eckley, Colo. Filed June 13, 1922. Serial No. 567,984. 1 Claim. (Cl. 301—24.)



The combination of a wheel felloe; a demountable tire containing rim slidably mounted on said felloe; bolts equally spaced in the side of said felloe; a clip on each of said bolts adapted to hold said rim on said felloe and shim plates detachably secured to said felloe between said felloe and said rim, said shim plates being spaced between each pair of said bolts and being adjustable in thickness so that they may be made to completely close the space between said felloe and said rim.

1,459,347. PHARMACEUTICAL PRODUCT. EMIL STARKENSTEIN, Prague, Czechoslovakia. Filed Jan. 22, 1921. Serial No. 439,250. 5 Claims. (Cl. 260—33.)

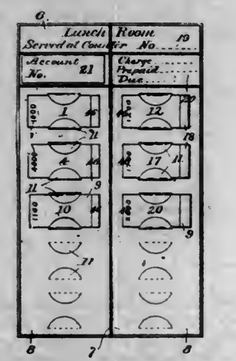


1. The reaction product of the combination of diethylbarbituric acid and 4-dimethylamino-1-phenyl-2, 3-dimethyl-5-pyrazolon.

1,459,348. OPHTHALMIC MOUNTING. FREDERICK A. STEVENS, Providence, R. I., assignor to Stevens and Company, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Dec. 10, 1919. Serial No. 343,921. 10 Claims. (Cl. 88—42.)

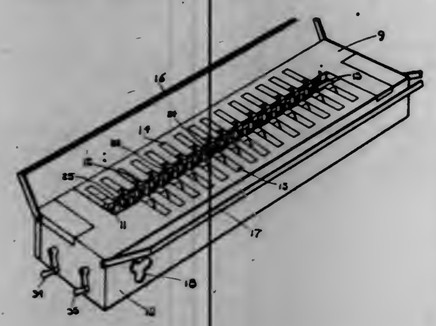
1. An ophthalmic mounting having, in combination, a lens strap having a lens seat and a single ear provided with a perforation having an enlarged portion at the outer face of the ear to constitute a seat, the wall of the enlarged portion being of circular cross section, a perforated lens, a simple post having an enlarged head of circular cross section seated within the enlarged portion of the ear perforation and a body portion eccentrically disposed to the head within the lens perforation, whereby, upon rotatable adjustment of the post, the edge of the lens may be adjusted into firm engagement with the lens seat, and means independent of the strap engaging a face of the lens and co-operating with the post and the ear to secure the lens in adjusted position upon the strap.

1,459,349. FOWL POWDERER. FRED VAN ACKEREN, Cedar Rapids, Nebr. Filed Nov. 3, 1922. Serial No. 598,812. 3 Claims. (Cl. 119—159.)



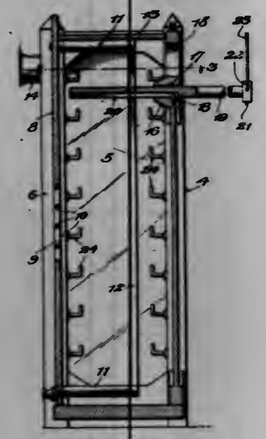
1. A fowl powdering device, said device comprising a casing having a chamber extending longitudinally therethrough, a pivoted platform disposed within said chamber and adapted to be depressed by the weight of the fowl thereon at one of its ends, oppositely disposed bellows carried by the casing and located outside thereof and having discharge ports in communication with the chamber at opposite sides thereof and above the platform, and connections between said platform and said bellows whereby they will be actuated by a downward movement of the platform.

1,459,350. LADDER. FRANK VENIERO, Moreno Stage, Calif. Filed Dec. 7, 1920. Serial No. 428,894. 2 Claims. (Cl. 228—58.)



1. A ladder comprising a pair of side bars connected together at their upper ends and having the remaining portion of their length spaced apart, spaced cylindrical superposed rungs spanning the space between said bars and secured to the latter, an arch shaped brace rectangular in cross section interposed between and secured to the lower end terminal portions of said bars, said brace having its central portion abutting against the lowermost one of said rungs and projecting beyond each side thereof.

1,459,351. ADVANCE ORDER DEVICE. DIONYSIE WORONZOFF, New York, N. Y. Filed Nov. 7, 1921. Serial No. 513,581. 7 Claims. (Cl. 283—60.)



1. In an advance order device, the combination with a menu having different foods listed thereon and different indicia designating each of said foods, of order checks each bearing the indicia used on the menu for designating one of the foods listed thereon.

1,459,352. KNITTING MACHINE. CHARLES APPEL, Cincinnati, Ohio. Filed Apr. 21, 1922. Serial No. 555,810. 2 Claims. (Cl. 66—31.)

1. A knitting machine comprising a frame having a slot extending longitudinally thereof, pins extending along each side of the slot, and a mechanism for each pin, adapted to remove looped yarn from the pin, said mechanism consisting of a finger having a loop-engaging detent thereon, a pitman having the finger pivotally mounted thereon, and a crank adapted to transmit substantially circular movement to the lower end of the pitman, whereby the finger will be caused to move upwardly, away from and then toward the pin during its upward movement.

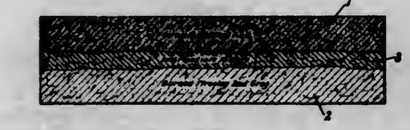
1,459,353. EYE-TESTING DEVICE. ERNEST G. BENDER and LOUIS F. GRAF, Independence, Iowa, assignors to Roy A. Cook, Independence, Iowa. Filed Sept. 22, 1919. Serial No. 325,324. 2 Claims. (Cl. 88—20.)

1. A carrying member for spectacles and the like comprising a wall having two vertically disposed separated openings therein, each of the opposite edges of the openings having a series of seats to receive spectacle-bows, oppositely-disposed posts extending rearwardly from upper and lower portions of said wall, and upright bars carried by said posts, each of said bars being located substantially in alinement with a series of said seats and being arranged to be engaged by curved ear portions of bows engaged in said seats.

1,459,354. MEDICINE DROPPER. CONRAD BERENS, Jr., New York, N. Y. Filed Dec. 5, 1922. Serial No. 605,088. 6 Claims. (Cl. 128—232.)

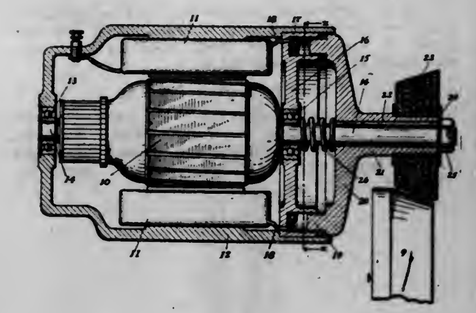
1. A medicine dropper comprising a generally cylindrical reservoir having a laterally directed discharge nipple at one end, a hollow stem communicating with and extending to one side of said reservoir, and a compression bulb on said stem.

1,459,355. TRACKER BOARD FOR PLAYER PIANOS AND ORGANS. PAUL H. BILHUBER, Douglaston, N. Y. Filed Mar. 3, 1922. Serial No. 540,722. 2 Claims. (Cl. 84—151.)



1. A tracker board having the usual perforations therein connected to the pneumatic action and provided further with slots extending lengthwise of the board and substantially parallel with the row of perforations, said slots being remote from the side edges of the tracker board and close to the row of perforations whereby to reduce the area of suction pressure contact of the web with the tracker surface, said slots being continuously in communication with the atmosphere whereby to break the vacuum pressure upon the web throughout the greater area of the tracker surface at the outer sides of said slots.

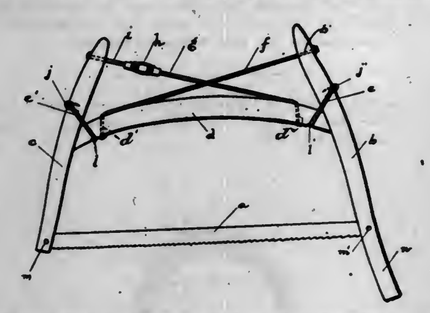
1,459,356. VALVE-GRINDING TOOL. FRANK M. BIRD, Oakland, Calif. Filed Aug. 17, 1921. Serial No. 492,915. 1 Claim. (Cl. 51—29.)



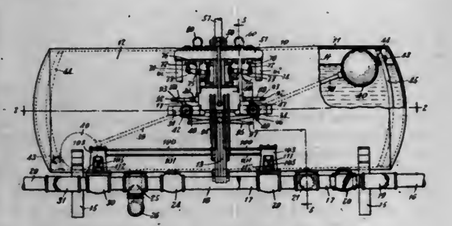
In a valve grinding tool, a handle formed with a knob at each end for operating said tool, a stem projecting from said handle, a vacuum cup member constructed of soft rubber or similar material and adapted to grip the top of a poppet valve, said vacuum cup member being formed with a hollow cylindrical portion, a screw threaded stud adapted to be screwed into the hollowed out portion of the vacuum cup member, said stud being screw threaded about its lower portion above said screw threaded portion, a collar on the upper part of said stud constituting a flange, a cylindrical socket member in the form of a shell adapted to fit around said stud between said collar and the upper part of the cylindrical portion of said vacuum cup member and a universal joint connection between said stud and said stem.

1,459,357. CERAMIC ARTICLE AND METHOD OF MAKING THE SAME. MACDONALD C. BOOSE, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 17, 1921, Serial No. 445,833. Renewed Dec. 8, 1921. Serial No. 520,991. 18 Claims. (Cl. 25—156.)

1. The method of making a multilayer ceramic article having a facing of bonded granular material, comprising the steps of incorporating with said granular material a ceramic bond containing an ingredient capable of producing high drying shrinkage, adding water thereto to make a plastic mass, adding a backing of ceramic material, shaping the article, drying the same, and subsequently firing the mass to bond the granules together and unite the backing therewith.



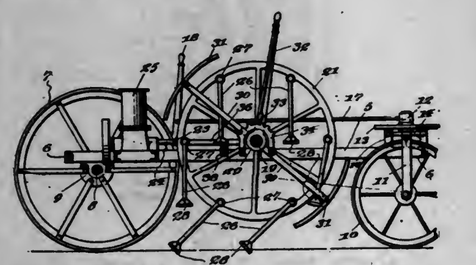
1,459,358. ENGINE STARTER. ALVIN E. BUCHENBERG, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Apr. 14, 1919. Serial No. 289,950. 8 Claims. (Cl. 172—239.)



1. In combination with a motor shaft, a non-rotatable electro-magnet, a drive wheel adapted to engage and ride a driven element slidable upon said shaft and arranged to be positively rotated thereby, an armature for said magnet surrounding and slidable upon said shaft, said armature and drive wheel being rigidly connected, and means for energizing said electro-magnet and thereby moving said drive wheel longitudinally upon said shaft.

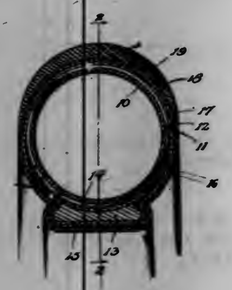
1,459,359. SAW FRAME. DANIEL P. BUCKLEY, Fitchburg, Mass., assignor, by mesne assignments, to Simonds Saw and Steel Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed Aug. 5, 1922. Serial No. 579,904. 10 Claims. (Cl. 145—32.)

1. A saw frame comprising two end members and a cross-piece, the ends of the cross-piece being constructed and arranged to abut said members, and means connecting both ends of the cross-piece to each end member to form a rigid structure.



1,459,360. PUMP. FRANK H. COLE, Chelsea, Mass. Filed Feb. 28, 1921. Serial No. 448,308. 17 Claims. (Cl. 103—246.)

1. A pump comprising a tank provided with a plurality of chambers adapted to contain liquid, means to direct the flow of liquid into and out of said chambers, valves adapted to admit pressure fluid into said chambers alternately and thereby force said liquid therefrom, means to operate said valves, a float located in each chamber adapted to be raised and lowered by said liquid and thereby control the operation of said valve operating means, means to lock each float in its lowered position while the liquid is entering the chamber in which said lowered float is located and means to release said lowered float by the float of the other chamber when all of the liquid has been discharged from the latter chamber.

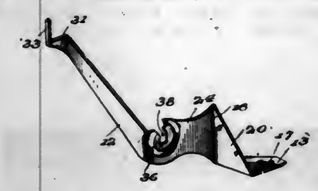


1,459,361. TRACTOR. EUGENE S. COLE, Covington, Pa. Filed Apr. 14, 1922. Serial No. 552,819. 6 Claims. (Cl. 180—8.)

1. A tractor comprising a wheeled frame, a rotatable element carried by said frame, rotatable pendant arms

carried by said rotatable element, reversible and adjustable guides rigidly connected and simultaneously movable, the one to and the other from operative position for angularly directing said arms into the ground, and a driving means for said rotatable element.

1,459,362. TIRE. MICHAEL T. CONROY, Akron, Ohio. Filed Dec. 2, 1921. Serial No. 519,499. 1 Claim. (Cl. 152—18.)

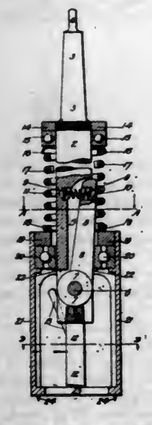


In a tire, the combination of a double edged bead, a tube encircling the bead, a fabric strip interposed between the bead and tube and having feathered side margins terminating at the sides of the tube, a second fabric strip enclosing the bead in contact therewith and having feathered side margins overlying the side margins of said first mentioned strip terminating coincident therewith, lines of stitching uniting the margins of said strips, a cord ply surrounding the tube and bead and having its margins overlapped against the latter strip at the inner circumference of the bead, and a tread encircling said ply.

1,459,363. SPRING WHEEL. FRANK L. CULVER and GEORGE W. HORJES, Los Angeles, Calif.; said Horjes assignor to said Culver. Filed Nov. 27, 1920. Serial No. 426,834. 9 Claims. (Cl. 152—28.)

2. A spring wheel comprising a plurality of annuli of graduating diameters arranged between the rim and hub, and springs secured to certain of the annuli and having sliding contact with the other annuli.

1,459,364. BRACKET. BOLESLAW V. CZARNECKI, Schenectady, N. Y. Filed Dec. 15, 1921. Serial No. 522,559. 2 Claims. (Cl. 156—24.)



1. A stamped metal article of manufacture comprising a single length of metal having diverging bends extending from the same point adjacent one end of the metal to form a triangular striking head, adapted to flatly contact with the front of the window frame, and an attaching blade adapted to enter the front of the frame, the other end portion of the metal being extended outwardly to form article supporting means, said attaching blade being formed with a series of indentations forming irregularities on opposite sides of the blade by means of which the blade may be securely anchored in position.

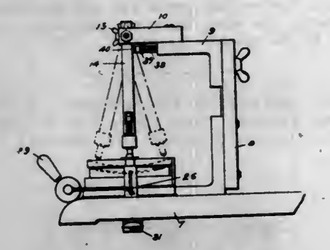
1,459,365. AUTOMOBILE BUMPER. FRANK JOSIAH DAINS, Cedar Rapids, Iowa. Filed Apr. 11, 1923. Serial No. 631,421. 6 Claims. (Cl. 293—55.)

4. In a bumper for automobiles, heads having an upper and lower bar secured to them, piston rods connected to the heads and shock absorbing mechanism with which the piston rods coact.

1,459,366. EXPANDING AUGER. AMOS GOSPER, Banksia, near Sydney, New South Wales, Australia, assignor to Henry Petrie Fletcher, Sydney, New South Wales, Australia. Filed Aug. 31, 1921. Serial No. 497,252. 2 Claims. (Cl. 145—124.)

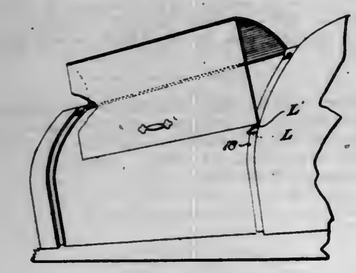
1. A tool for boring reverse taper holes comprising a spindle, a pivoted cutter control member carried by the spindle, a cutting element carried by the member, a work holder slidably mounted in relation to the spindle, a bearing in the holder including a member through which the spindle and control member extend and arranged for actuating the control member and hence the cutter, a second bearing for the spindle, and a spring between the bearings for returning the holder to initial position upon completion of boring, and for also returning the control member and the cutter to initial position synchronously with the holder.

1,459,367. ARTICLE-FEEDING DEVICE. NEWELL H. HAWES, Arlington, Mass., assignor to Wm. F. Schrafft & Sons, Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 13, 1920. Serial No. 358,483. 25 Claims. (Cl. 198—30.)



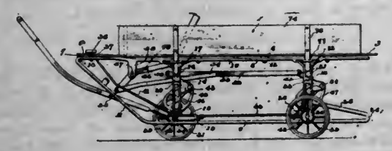
1. An article feeding device comprising a conveyor belt adapted to support a plurality of articles, a grid arranged for combined lateral and longitudinal reciprocatory movement above said belt and arranged to engage the articles on the belt and displace them on said belt and also rotate them into orderly rows on the belt, and means to reciprocate said grid both laterally and at the same time longitudinally above said belt.

1,459,368. AUTOMATIC PACKER, FLOWHEAD, AND PUMPING DEVICE. GEORGE C. HENSHAW and WILLIAM H. MYERS, Ranger, Tex. Filed Aug. 27, 1921. Serial No. 496,058. 6 Claims. (Cl. 166—3.)



1. A device of the character described comprising a flow head provided with a chamber having a liquid inlet and a liquid outlet, a plurality of ejector nozzles in the chamber around the liquid inlet, and discharging in the direction of the outlet, and a packer on the flowhead for preventing the passage of gas past the outside thereof, said packer also having an internal gas passage and the flow head having a continuation of said gas passage leading to the ejector nozzles.

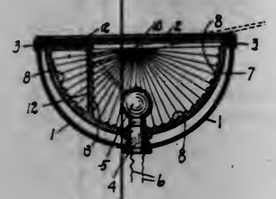
1,459,369. GLASS CUTTER. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 2, 1920. Serial No. 370,723. 9 Claims. (Cl. 33—28.)



1. A device of the character described, a supporting bracket, a cutting point, a swinging support therefor carried by the bracket, means for varying the distance between the cutter and bracket to adjust the radius of the arc through which the cutter swings, and means for limiting the swinging movement of the cutter in one direction.

1,459,370. AUTOMOBILE HOOD REST. GARNET B. HOLMES, Los Angeles, Calif., assignor of one-half to Perry M. Grant, Venice, Calif. Filed Mar. 1, 1922. Serial No. 540,360. 5 Claims. (Cl. 180—69.)

2. A hood rest comprising an attaching leaf, a supporting leaf movably sustained on the attaching leaf and formed with spaced longitudinally extending ridges and a transverse ridge, said longitudinally extending ridges being inclined upwardly to a point intermediate the ends of the leaf, and a transverse ridge connecting the first ridges at the upper ends of the latter.



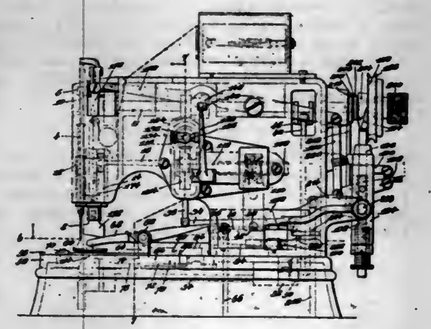
1,459,371. CONVERTIBLE VEHICLE. ANDREW J. KELLY, Baltimore, Md., assignor of one-half to John Ira Kelly, Baltimore, Md. Filed Apr. 18, 1922. Serial No. 554,900. 8 Claims. (Cl. 280—11.)

3. In a vehicle of the class described, a body, side frames supporting the body and including runners, front

and rear axles mounted for up and down adjustment in the frames, wheels supporting the axles, shafts mounted in the frames above the axles, cams carried by the shafts and coacting with the axles to depress the latter when the shafts are rotated in one direction, means operable to rotatably adjust the shafts, and operative connection between the shafts and the respective axles for elevating the axles when the shafts are rotatably adjusted in the opposite direction.

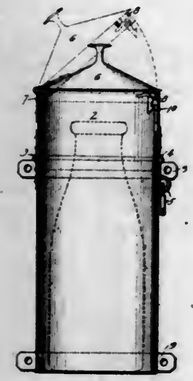
1,459,372. REFLECTOR FOR LIGHTS. CHARLES E. KISTNER, Cincinnati, Ohio. Filed Nov. 28, 1921. Serial No. 518,449. 3 Claims. (Cl. 240—41.)

1. A headlight including a reflector provided with substantially parallel vertical reflecting corrugations, a source of light arranged within said reflector, a lens, and a substantially vertical reflecting wall extending from a position at one side of the source of light and from the reflector surface to said lens, said wall being constructed and positioned so as to bend and diffuse some of the light rays out of their forwardly extending course.



1,459,373. LENS. MAX ALFRED LAABS, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Jan. 12, 1921. Serial No. 436,669. 5 Claims. (Cl. 88—54.)

1. A multifocal lens including a major blank and a separate segment secured to the major blank, one of the parts having a concave curve and the other part having a portion fitting said curve, the segment and major portion being of glasses of different index of refraction, and the segment having a curve on its exposed face neutralizing the addition produced in the lens due to difference in index of refraction of the parts.



1,459,374. BUTTONHOLE-SEWING MACHINE. BERNARD T. LEVEQUE, Wenham, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 28, 1917. Serial No. 165,105. 21 Claims. (Cl. 112—73.)

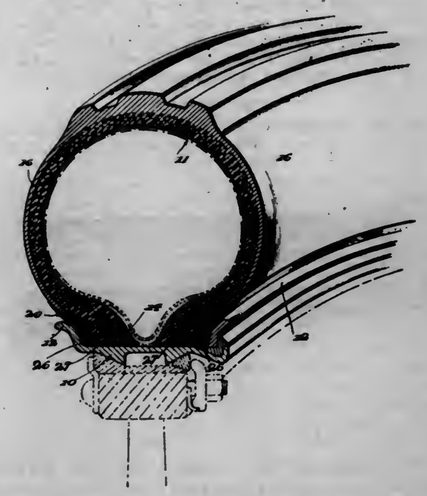
1. A buttonhole sewing machine, having, in combination, stitch forming mechanism, a work holder, feed mechanism for relatively feeding the stitch forming mechanism and work holder, a clutch rotating in a

uniform direction for actuating the feed mechanism, and mechanism for engaging the clutch for an interval during each stitch forming cycle.

1,459,375. SAFETY RECEPTACLE FOR BOTTLES AND THE LIKE. CHRISTOPHER BLOM OLSEN, Jr., Honolulu, Territory of Hawaii. Filed July 24, 1922. Serial No. 577,085. 4 Claims. (Cl. 232—41.)

1. A safety receptacle for bottles and the like, comprising a main section, a supplementary section hinged thereto and forming an extension thereof, means for locking said sections together, a cover closing the top of the supplementary section, and means accessible only from within the receptacle for locking the cover to the supplementary section.

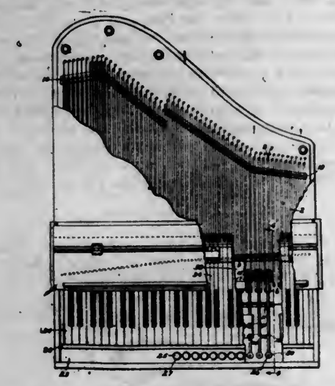
1,459,376. DETACHABLE TIRE TREAD. EDWIN A. PARKER and HARRY G. EVITT, Baltimore, Md. Filed Aug. 23, 1921. Serial No. 494,457. 2 Claims (Cl. 152—16.)



1. The combination with a tire having recesses in the periphery thereof, of a detachable tread having beads

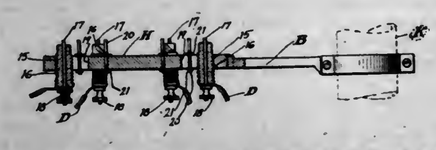
on its inner surface adapted to fit into the recesses of the tire, and a number of suction apertures in its inner

surface to prevent said detachable tread from creeping on the tire casing.



1,459,377. REENFORCING STRIP FOR TIRES. MARK B. PEEPLES, Scotia, S. C. Filed Dec. 29, 1922. Serial No. 609,722. 2 Claims. (Cl. 152—20.)

2. A protecting and reenforcing strip for tires comprising a yieldable annular rubber body adapted to be applied to the side of the bead of a tire, and having its upper edge tapered to overlap and protect the edge of the rubber covering of the tire, said annular rubber body being yieldable and constituting a means to space the flange of the rim from engagement with the fabric bead of the tire and to exclude foreign matter from between the flange of the rim and the tire bead, the lower edge of the strip being provided with a wide inwardly directed base flange to underlie the bead of the tire, the inner surface of the rubber body being bulged substantially.

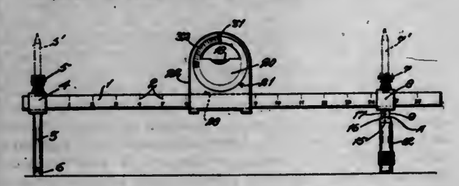


1,459,378. TREMOLO FOR PIANOS. HENRY F. SCHENUIT, Pasadena, Calif. Filed Feb. 24, 1919, Serial No. 278,759. Renewed May 3, 1923. 1 Claim. (Cl. 84—313.)

In a piano including piano keys, a bridge, strings and hitch pins, levers connected to the strings between the bridge and hitch pins for bending the strings, and keys mounted in front of the piano keys and connected to

the levers for operating the levers to produce the tremolo effect.

1,459,379. TESTING DEVICE FOR SPARK PLUGS. ADAM S. SHIMA, Pasadena, Calif. Filed Mar. 9, 1922. Serial No. 542,329. 4 Claims. (Cl. 175—183.)



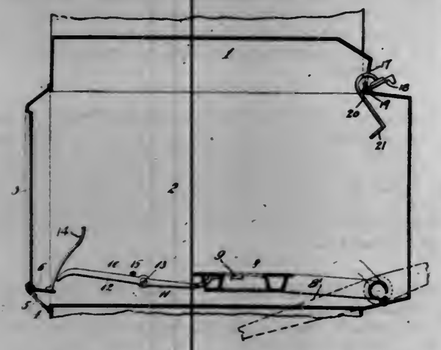
2. A spark plug tester comprising a head formed with openings and slots, with each slot disposed adjacent an opening, plugs of insulating materinl threadedly fitted within said openings, electrodes mounted in said plugs, other electrodes adjustable within said slots and cooperating with the first electrodes to provide spark gaps, and means for locking the second electrodes in any adjusted position.

1,459,380. LENS-PROTECTING COMPOSITION. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 27, 1920. Serial No. 426,747. 5 Claims. (Cl. 134—14.)

3. A composition for application to a lens surface comprising substantially 88 parts benzol, 10 parts resin, and 2 parts tar oil.

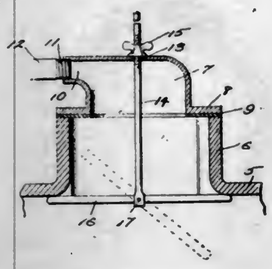
1,459,381. SPIRIT LEVEL. JOSEPH VON SERKEY, San Francisco, Calif. Filed Feb. 24, 1921. Serial No. 447,509. 1 Claim. (Cl. 33—207.)

In a spirit level, the combination of a graduated bar, two supports slidable thereon in parallel relation to each other, one of the supports having a spindle threaded at its lower end, an internally threaded sleeve oper-



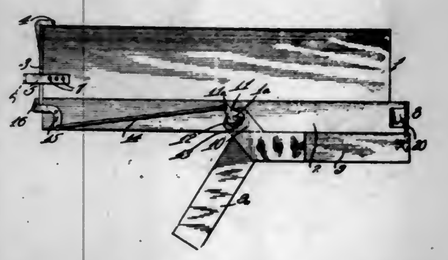
atively engaging the spindle whereby the latter may be raised and lowered, and indicating means on the spindle and sleeve for indicating the rise or fall of the spindle relative to a zero point in full and fractional revolutions, and level finding means comprising a frame slidably mounted on the graduated bar, and having a circular aperture, a circular frame mounted in the aperture with freedom of limited rotary motion, and having a spring associated therewith for offering frictional resistance to the rotary motion, a spirit tube attached wihin the circular frame, and indicating means on the two frames disclosing the relative angle between the spirit level and the bar, all substantially as set forth.

1,459,382. LINGERIE CLASP. ARTHUR J. WAGNER, Rochester, N. Y. Filed July 12, 1922. Serial No. 574,423. 5 Claims. (Cl. 24—259.)



1. In a clasp, the combination of a loop, hooked shaped ends formed on one side of said loop, said hook shaped ends being adapted to overlap each other to close said loop, a spring member suspended in said loop, one end of said spring member being adapted to pass through one of the hook shaped ends into the other of said hook shaped ends of said loop and lock said ends into their overlapping position.

1,459,383. AIR-INLET CONTROL FOR COMBINATION COAL AND GAS RANGES. CLARENCE F. WILEY, Taunton, Mass., assignor to Magee Furnace Company, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Oct. 1, 1919. Serial No. 327,723. 6 Claims. (Cl. 126—36.)

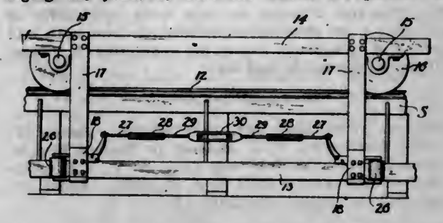


1. A combination coal and gas range provided with an oven having an air inlet, a gravity-actuated damper normally closing said inlet, said damper having a member fixed to and projecting from it by which the damper may be moved to and maintained in an open position, a burner arranged within the oven and movable to assume therein either an upturned or downturned position, and a pivoted lever adapted and arranged whereby it will normally assume an out-of-the-way position with relation to said member and whereby also said lever will be turned to engage said member and open said damper and maintain it in an open position by the movement of the burner to its downturned position and the assumption by the burner of such position.

1,459,384. FLUSHING ATTACHMENT FOR AUTOMOBILE RADIATORS. ROBERT H. WILKINSON, Ponca City, Okla. Filed July 24, 1920. Serial No. 398,675. 1 Claim. (Cl. 285—29.)

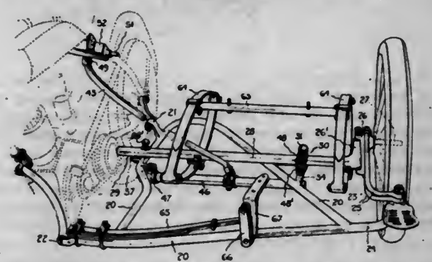
In a flushing device, the combination with an automobile radiator having a filling inlet, of a coupling casing to fit over the upper end of the inlet and having a radial extension for connection with a water supply conduit, an up-standing rod extending through an opening in the top of the casing and having its upper portion threaded, a radial bar pivoted to said rod and being of greater length than the diameter of said inlet, said bar being capable of angular adjustment to permit its insertion in the inlet, and a nut carried by the threaded portion of the rod whereby the rod may be drawn upwardly so the ends of said bar will engage beneath the lower end of the inlet clamping the casing to the inlet.

1,459,385. DUMP BODY. ERNEST C. WILLS and ERNEST S. WILLS, Clinton, Iowa. Filed Apr. 19, 1922. Serial No. 555,605. 1 Claim. (Cl. 298—23.)



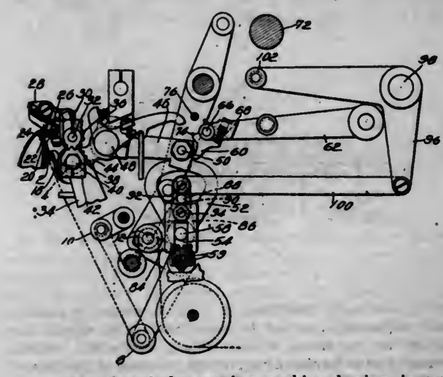
The combination with a vehicle frame; of brackets extending obliquely and rearwardly upward from opposite sides thereof, a tilting body mounted between said brackets and pivotally connected therewith at a point in advance of the center of said body, plates mounted on the pivots of said body having arcuate slots therein concentric with said pivot, a set screw extending through each of said slots to secure said plates in adjusted position, an arm extending radially from each plate, a rod pivoted at one end to the free end of each arm, means for limiting the tilting movement of the body, said body having an outwardly swinging end gate, a bell crank lever pivoted on said body adjacent said gate and having a lip for engaging the gate to lock it in closed position, said rod being connected with said bell crank whereby tilting of the body will exert a pull on the rod to release the bell crank.

1,459,386. MONORAIL CAR. THOMAS H. WRIGHT, Los Angeles, Calif. Filed Feb. 15, 1923. Serial No. 619,114. 6 Claims. (Cl. 105—145.)



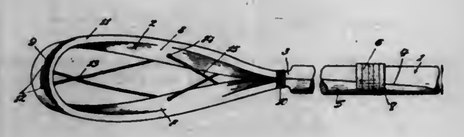
1. A monorail car comprising a chassis, yokes mounted for rocking movement on and at opposite sides of the

chassis, wheels carried by the yokes, and means for urging the yokes so that the wheels are pressed in-



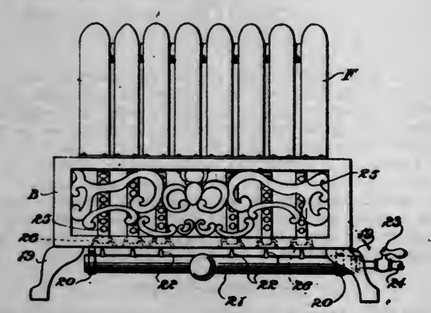
wardly, the means at either side of the chassis being common to all of the yokes at the respective side of the chassis.

1,459,387. SIDE CAR OF MOTOR CYCLES. JOHN ALBERT YEATS, Richmond, and ALBERT SAMUEL SWAN, Coburg, Victoria, Australia. Filed Mar. 28, 1921. Serial No. 456,366. 12 Claims. (Cl. 208—45.)



1. A chassis for side cars of motor cycles comprising a frame having a pivotal connection with a cycle frame, a transverse axle movably mounted on the chassis frame and having a spindle pivotally mounted on the outer end thereof for carrying the side car wheel, and means for connecting the pivot part of the said spindle to a forward part of the chassis frame whereby the side car wheel will be free to turn in conformity with the front wheel of the cycle.

1,459,388. WAX-THREAD SEWING MACHINE. FREDERIC E. BEATRAND, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 8, 1917, Serial No. 173,555. Renewed June 26, 1920. Serial No. 392,044. 9 Claims. (Cl. 112—60.)

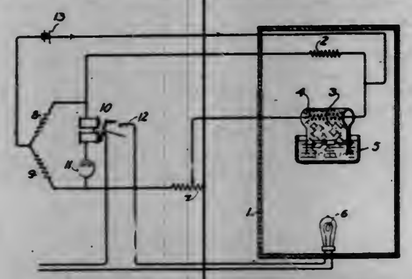


1. A wax-thread shoe sewing machine, having, in combination, stitch forming devices, a work support, a presser-foot, means for lifting the presser foot during each cycle of operations, an oscillating pull-off, means for actuating the pull-off to draw thread from the supply during each cycle of operations, connections controlled by the position of the presser-foot as determined by the thickness of the work for varying the active throw of the pull-off, and means for rendering said connections ineffective upon the pull-off during the lifting of the presser-foot.

1,459,389. GAME APPLIANCE. LOUIS C. BROWN, Sasakwa, Okla. Filed Dec. 30, 1921. Serial No. 525,992. 3 Claims. (Cl. 46—4.)

1. A game appliance comprising a handle formed from wood or similar material thinned for a portion of its length and having its thinned portion looped back upon itself with its terminal part resting against one side of the handle and thereby providing an open substantially elliptical head, and a thong secured about the handle and about the said terminal part.

1,459,390. GAS RADIATOR. WILLIAM H. CAIN, Los Angeles, Calif. Filed Feb. 9, 1922. Serial No. 535,140. 3 Claims. (Cl. 126—91.)

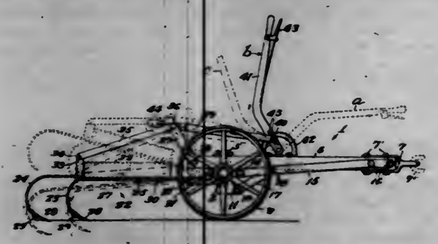


1. A gas radiator comprising a hollow body divided along its length into a front compartment and a rear compartment with the front wall of the front compartment formed with openings, radiant heating elements arranged within the front compartment, flues superimposed on the body and communicating with said compartments, and a discharge opening in the rear compartment.

1,459,391. HUMIDITY INDICATING AND REGULATING DEVICE. HENRY P. CLAUSEN, Mamaroneck, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 3, 1920. Serial No. 356,053. 2 Claims. (Cl. 236—44.)

1. A humidity responsive device comprising parallel electrical circuits, a dry resistance element in one of said circuits, a wet resistance element in the other of said circuits, each of said elements having a resistance coef-

ficient varying with temperature, means for supplying current to said circuits, an electrical indicating instrument and a switch device both responsive to current ratio fluctuations in said circuits, and an electrical heater, controlled by said switch device.



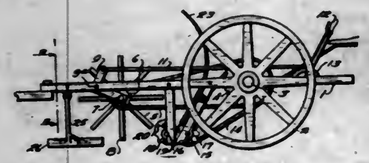
1,459,392. CLEAR-VISION WINDSHIELD. WILLIAM DE F. CROWELL, St. Louis, Mo. Filed Apr. 19, 1920. Serial No. 374,995. 8 Claims. (Cl. 296—84.)

3. A wind shield of the updraft type provided with a combined sunshade and flue member, an adjustable supporting structure that carries said member and which is adapted to be arranged in different positions so as to change the angle of said member when it is used to form a sun-shade, a pivotal connection between said member and supporting structure that permits said member to be moved relatively to said supporting structure into an upright position, wherein it forms one wall of an updraft flue, and means for retaining said member in said upright position.

1,459,393. INTERCHANGEABLE CULTIVATING AND TRENCH-FORMING APPARATUS. JOHN REEDER GARDINER, Fullerton, Calif. Filed June 30, 1919. Serial No. 307,794. 4 Claims. (Cl. 97—157.)

1. In a cultivating apparatus comprising a truck having an axle, draw-bar connections secured to the axle, and cultivator implements adapted to be pivotally connected to said draw-bar connections; means to elevate and lower said cultivator implements; said means having a lever mounted on said truck in advance of the axle, a strut pivotally mounted on said truck rearwardly of said axle; a bar pivotally connecting the lever with said strut, and detachable means for connecting a ground working implement to said strut.

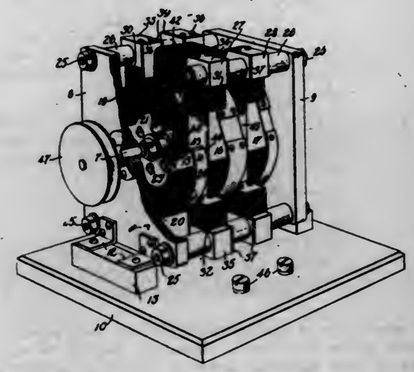
1,459,394. CENTRIFUGAL GOVERNOR. EDGAR W. GENT, Morristown, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 21, 1921. Serial No. 502,247. 9 Claims. (Cl. 188—185.)



1. In a centrifugal governor, a stationary member having an annular surface, a rotatable member having a socket therein, an arm pivoted on the rotatable member and in frictional engagement with the annular surface of said stationary member, a ball fitting in the socket of the rotatable member and adapted to press against the arm and to cause it to bear upon the annular surface of the stationary member under the influence of centrifugal force.

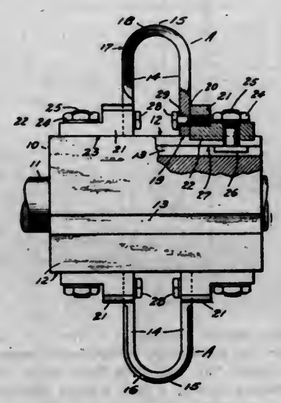
1,459,395. PROCESS OF PURIFYING LACTIC ACID. TONI HAMBURGER, Berlin-Dahlem, Germany, assignor to Chemische Fabrik vorm. Goldenberg Geromont & Cie., Wiesbaden, Germany. Filed Sept. 23, 1921. Serial No. 502,782. 10 Claims. (Cl. 260—122.)

8. The process of producing pure lactic acid which consists in treating substances adapted for lactic-acid fermentation, so as to produce fermentation, generating lactic acid thereby, neutralizing the excess of lactic acid which is injurious to fermentation, with a suitable magnesium salt, thereby forming magnesium lactate, decomposing said magnesium lactate, separating the resulting lactic acid, dissolving said lactic acid in a solvent, and removing said solvent.



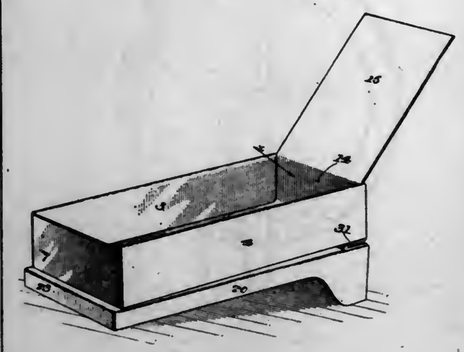
1,459,396. INSECT DESTROYER. RAGNAR O. HEGGELUND, Lake Preston, S. Dak. Filed Feb. 11, 1922. Serial No. 535,925. 2 Claims. (Cl. 43—142.)

1. In an insect destroyer, a wheeled frame, a paddle wheel adjustably carried in said frame and driven by rotation of the frame wheels, rotary contacting rollers carried by said frame and driven by rotation of the frame wheels, a shield arranged in the frame and having one end disposed immediately above said rollers, angular



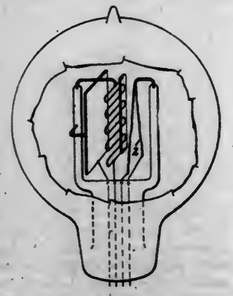
arms suspended pivotally from said frame, and shoes carried by said arms and normally in yielding engagement with each other.

1,459,397. SELF-INDUCTION COIL. RAYMOND R. HERRMAN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 2, 1919. Serial No. 294,217. 13 Claims. (Cl. 171—242.)



6. A magneto-electric device comprising a rotor, a stator framework, a shaft for said rotor, and a coil surrounding said framework and positioned at one side of said shaft, said rotor comprising a plurality of separated discs on said shaft located on opposite sides of a portion of said stator.

1,459,398. PLANER KNIFE. JOSEPH HIMES, Seattle, Wash., assignor to Henry Disston & Sons, Seattle, Wash., a Corporation of Washington. Filed Apr. 1, 1922. Serial No. 548,730. 4 Claims. (Cl. 144—235.)

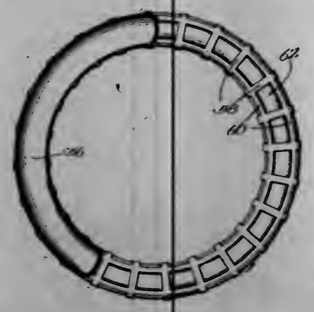


1. The combination with a planer head, and a knife formed of a single piece which is formed to provide two substantially parallel side elements and a curved element connecting the outer ends of said side element, of a block disposed at each side of the knife, said blocks being respectively provided with recesses to receive the adjacent side elements of the knife, a tongue protruding from each block to engage in the head, means to secure the knife to the blocks, and means to secure the blocks to the head.

1,459,399. COLLAPSIBLE DISPLAY BOX. HERBERT SACHS HIRSCH, Newark, N. J. Filed Jan. 13, 1922. Serial No. 528,973. 13 Claims. (Cl. 206—44.)

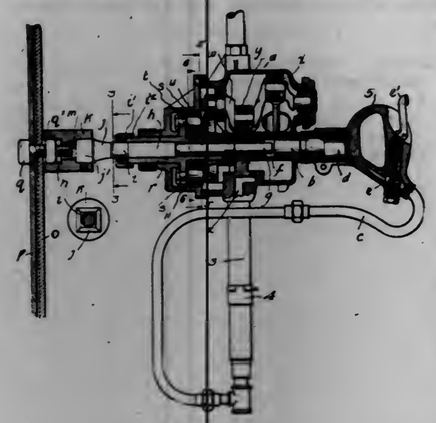
1. A box having a cover and a hinge panel connecting the cover to the bottom of the box and adapted to lie along the end of the cover when the cover is closed.

1,459,400. ELECTRON-EMITTING CATHODE AND PROCESS OF MAKING THE SAME. CARL D. HOCKER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 17, 1916. Serial No. 131,858. 28 Claims. (Cl. 250—27.)



23. The process of manufacturing an electron emitting filament which comprises coating a metallic core with an alkaline earth oxide, treating said filament with silver at a temperature below the volatilization point of silver, and then heating said filament to a temperature above the volatilization point of silver.

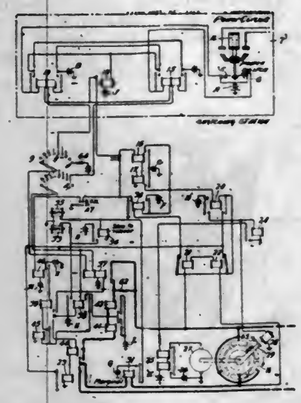
1,459,401. REENFORCED RIBBED PNEUMATIC TUBE. LOUIS W. HOTTEL, Chicago, Ill. Filed Jan. 12, 1920. Serial No. 350,974. 2 Claims. (Cl. 152—13.)



1. An inner tube for pneumatic tires provided with a plurality of reinforcing ribs each completely circumscrib-

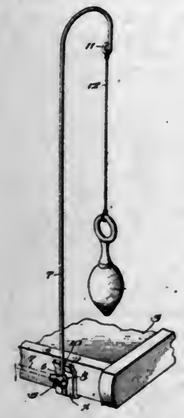
ing one of the surfaces of the tube transversely of the latter, and a plurality of reinforcing ribs each completely

circumscribing the same surface of the tube lengthwise of the latter and intersecting the transversely disposed ribs.



1,459,402. SCREW-BOLT-NUT-TIGHTENING MEANS. PETER A. JOHNSON, Portland, Oreg., assignor to Thomas V. Standifer, Portland, Oreg. Filed May 19, 1921. Serial No. 470,927. 4 Claims. (Cl. 81—55.)

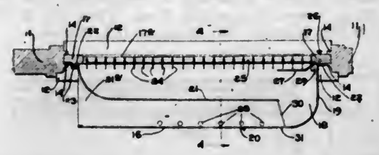
1. In a device of the character described the combination of a power driven reciprocating hammer, a device actuated by the hammer, said device having a head adapted to be slidingly engaged with the nut on a screw-bolt and in one position projecting beyond the bearing face of the nut, thereby to strike a blow on the piece on which said nut bears, and power driven means for rotating said device, the rotating means being adapted to permit the movement of said device by the impact of said hammer.



1,459,403. SIGNALING SYSTEM. CHARLES W. KECKLER, Newark, and WALTER B. STRICKLER, East Orange, N. J., assignors to Western Electric Company Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1919. Serial No. 325,403. 9 Claims. (Cl. 177—353.)

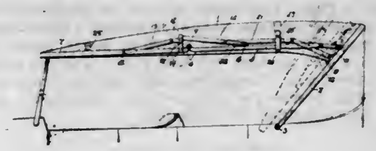
1. A signaling system comprising a first and a second station, a plurality of switches located at said first station, a rotary interrupter operative upon the actuation of one of said switches, a loop circuit, an automatic selector switch at each of said stations, means in the loop circuit operated by said interrupter for driving the automatic selector switches in synchronism, a signal device at the second station individual to each of the switches at the first station, and means responsive upon

the connection of the automatic selector switch with a desired one of the contacts thereof for causing the operation of said signaling device to furnish a distinctive signal.



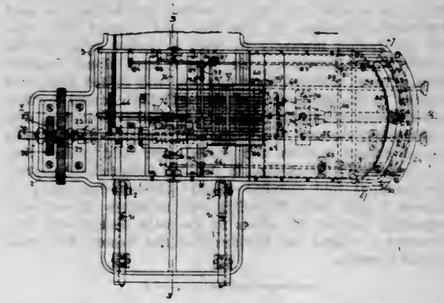
1,459,404. SUPPORTING DEVICE. RAY C. KLEFFMAN, Chicago, Ill., assignor of one-third to John Kleffman, Hibbing, Minn. Filed July 5, 1921. Serial No. 482,293. 1 Claim. (Cl. 248—20.)

A supporting device including a rod; a mounting bracket for the rod having an upright side whose upper end is bent toward the rod, this bent upper end portion of the bracket having a slot formed therein to receive the rod adjacent its mounted end to prevent the rod from being swung upon its mounting; a bolt struck from and carried by the upright side of the bracket; and a nut upon the bolt for clamping the rod between it and the bracket.



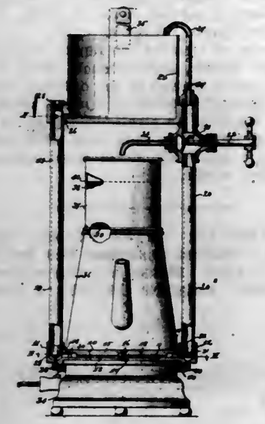
1,459,405. CAR VENTILATOR. HOSMER W. LEEDS, Seligman, Ariz. Filed Mar. 31, 1920. Serial No. 370,236. 6 Claims. (Cl. 98—22.)

1. In a ventilating device, a frame adapted for insertion in a vehicle window, and a hood engaged with the frame for end for end reversal thereon and forming with the opening in the frame an air passage having its



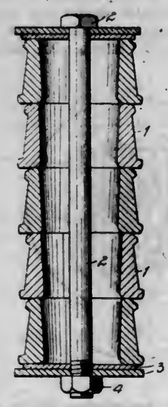
inlet and outlet at a substantial angle to each other, whereby to adapt the one device for the intake or exhaust ventilation of a vehicle moving in either direction.

1,459,406. TOP FOR VEHICLES AND THE LIKE. FRED K. LEWIS, Ashtabula, Ohio. Filed Oct. 29, 1921. Serial No. 511,304. 5 Claims. (Cl. 296—116.)



1. In a top for vehicles and the like, the combination of a support pivotally attached to the body of the vehicle; a rigid brace pivotally attached to said support and inclining forwardly therefrom in the open position of the top; a forwardly extending articulated auxiliary bow pivotally attached to said brace and extending to the rear of the same; a link connecting such bow extension with said support; and two links lying above said auxiliary bow, said links being pivotally connected together at their inner ends and pivotally connected at their outer ends to the parts of said bow on either side of the joint therein, said links being operatively connected with said brace.

1,459,407. MACHINE FOR EFFECTING SLOTS IN CARDS FOR STATISTIC OR SIMILAR PURPOSES. KARL EMIL LEONARD LIEDSTRAND, Stockholm, Sweden. Filed July 16, 1919. Serial No. 311,300. 8 Claims. (Cl. 164—94.)



1. In a machine for slotting cards for statistical or similar purposes, a plurality of pairs of dies of different lengths, the dies of the said pairs extending from points with the same position in respect to an imaginary plane in the machine and the total effective length of the dies by pairs being unvariable, and means for actuating the dies.

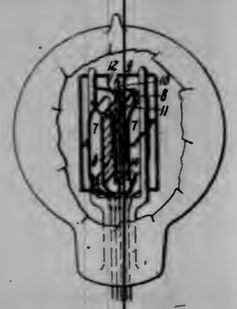
1,459,408. WATER HEATER WITH PERCOLATOR. ANDREW M. LOCKETT, New Orleans, La. Filed June 26, 1922. Serial No. 570,994. 8 Claims. (Cl. 53—3.)

1. A water heater comprising a lower heating plate, an upper plate arranged in proximity to said lower plate and forming therewith a shallow water-space between said lower and upper plates, a reservoir above said lower heating plate, a tube having one end communicating with said reservoir and its other end with the space between said lower and upper plates, a second tube having one end communicating with the space between the lower and upper plates and its other end provided with a feed pipe having its opening situated between said reservoir and upper plate.

1,459,409. PROCESS OF CARBURIZING HOLLOW ARTICLES. HARRY W. MCQUAID, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Jan. 9, 1922. Serial No. 527,971. 6 Claims. (Cl. 148—19.)

1. The improvement in the process of carburizing the inner or outer surface of hollow articles without carburizing the other surface thereof which consists in assembling such articles axially and clamping the same together in assembled relation by means that will exclude carburizing agent from such other surface without inert packing.

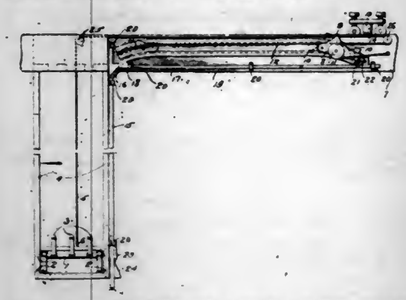
1,459,410. RECOVERY OF BY-PRODUCTS IN MERCURY FULMINATE MANUFACTURE. ROBERT C. MORAN, Ridley Park, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 17, 1920. Serial No. 389,729. 10 Claims. (Cl. 260—156.)



9. The process of treating the liquor, containing ethyl formate, ethyl nitrite, and alcohol, obtained by condensation of vapors evolved in the ordinary manufacture of mercury fulminate, which comprises subjecting said liquor to the action of an alkali-forming metal hydroxide until the ethyl formate is saponified, while maintaining the temperature below 20° C. to avoid substantial hydrolysis of ethyl nitrite.

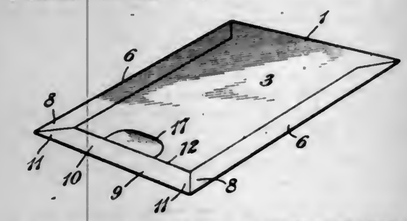
1,459,411. VEHICLE. GEORGE FRANCIS MYERS, New York, N. Y. Original application filed Aug. 23, 1909, Serial No. 514,165. Divided and this application filed Nov. 20, 1916. Serial No. 132,359. 4 Claims. (Cl. 244—14.)

1. A flying machine of the heavier-than-air type comprising a main body normally having its longitudinal axis substantially horizontal and extending in the direction of travel, a supporting plane attached to said body at a point intermediate its ends but well forward of its rear end, a second plane also attached to said body and at a point adjacent its rear end, one of said planes normally having its anterior portion higher than its posterior portion and curved from front to rear and one of said planes being pivotally attached, and a stabilizer for transverse equilibrium trailing in the rear of the first mentioned plane.



1,459,412. THERMIONIC TRANSLATING DEVICE. ALEXANDER MCL. NICHOLSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Continuation of application Serial No. 21,918, filed Apr. 16, 1915. This application filed Sept. 10, 1919. Serial No. 322,944. 27 Claims. (Cl. 250—27.)

1. In a thermionic translating device, means for producing a thermionic discharge therethrough substantially independent of gas ionization, said means comprising a solid equipotential cathode surface and a heat radiating body in close proximity to said surface.

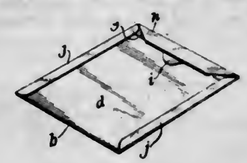


26. A thermionic translating device comprising a cathode surface, an electric heater, and heat conducting means connecting said surface and said heater, said means being a non-conductor of electricity.

1,459,413. CONVEYER FOR TICKET-DISTRIBUTING SYSTEMS. HENRY M. OTTO, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1920. Serial No. 429,256. 30 Claims. (Cl. 214—1.)

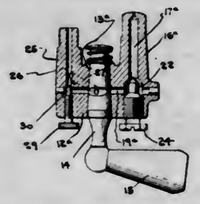
1. In a ticket distributing system, in combination, a ticket hoisting carriage, means for holding a ticket therein, a continuously operating source of power, means for connecting said carriage with said source of power, means for automatically disengaging said carriage from said power and means for automatically disengaging said ticket in a condition for collection.

1,459,414. ENVELOPE. FREDERICK J. PARKS, New York, N. Y. Filed Apr. 16, 1917. Serial No. 162,247. 3 Claims. (Cl. 229—76.)



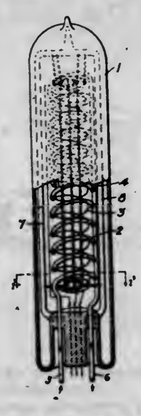
1. An envelope formed from a blank, said blank consisting of a rectangular portion whose free end is to be double-folded, said rectangular portion being connected to a wider second portion having side edges to be creased and folded and whose free end is to be triple-creased and folded, said envelope having said two portions folded upon one another, a two-ply pocket flap formed on said first-named portion on the free end thereof with the end ply facing inwardly to form a pocket adjacent the mouth of the envelope, side flaps formed along opposite sides of said second named portion and folded back and secured to the side edges of the said first named portion and the corresponding edges of the said pocket flap, and a three-fold closure flap formed on the free end of said second named portion and folded over said pocket flap and detachably interlocked in doubled form in said pocket, the terminal fold member of said closure flap being of greater length than the other fold members thereof and extending beyond the edges of the said pocket and constituting a tongue for withdrawing the closure flap from the said pocket.

1,459,415. PROCESS OF AUTOMATICALLY MANUFACTURING ENVELOPES. FREDERICK JAMES PARKS, New York, N. Y. Original application filed Apr. 11, 1917, Serial No. 161,166. Patent No. 1,316,737, dated Sept. 23, 1919. Divided and this application filed Aug. 23, 1918. Serial No. 251,174. 4 Claims. (Cl. 229—76.)



1. In a process of automatically manufacturing envelopes, the steps which consist, in conjointly folding

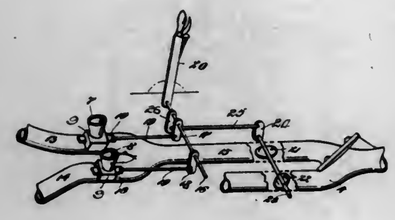
the superposed ends of a doubled blank transversely at points adjacent to each other to form a separable closure



member in interlocked relation with a retaining pocket; closing the lateral edges of the blank and fastening said pocket.

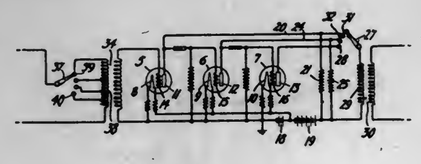
1,459,416. GAS COCK. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed July 5, 1921. Serial No. 482,387. 9 Claims. (Cl. 158—115.)

4. In combination with a manifold and a gas cock mounted in superposed relation, said cock comprising a body having a passage adapted to discharge into a burner, a valve chamber parallel with and located laterally to one side of said passage, a port connecting said chamber with said passage, a port connecting the underside of said manifold with said chamber, a valve member operable in said chamber and adapted to control the flow of gas from the manifold to said discharge passage, and supplemental means for adjustably controlling the flow of gas through said passage.



1,459,417. ELECTRON-DISCHARGE DEVICE. PAUL SCHWERIN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 1, 1916. Serial No. 128,876. 30 Claims. (Cl. 250—27.)

1. An electron discharge device comprising a gas-tight vessel containing a filament, an anode, and an auxiliary electrode, said anode being composed of a metallic conduit, said conduit being in the form of a helix in the interior of said vessel, and having its ends projecting outside the vessel so that a cooling liquid may be caused to flow therethrough.

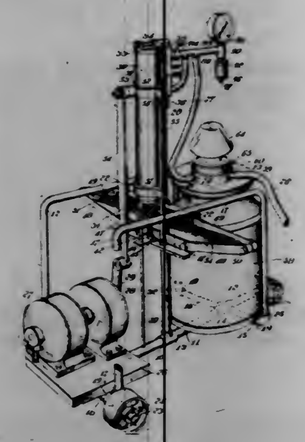


25. A thermionic device comprising a cathode and a hollow anode, said anode being in the form of a helix.

1,459,418. ANTISKIDDING DEVICE FOR MOTOR VEHICLES. JAMES R. SCOTT, St. Louis, Mo. Filed July 17, 1922. Serial No. 575,480. 2 Claims. (Cl. 291—3.)

1. In combination, an exhaust pipe, a fluid pressure pipe, a valve for each pipe, a rocker shaft, a connection between said rocker shaft and the valves, a pair of sand distributing pipes communicating at one end with the fluid pressure pipe, a sand discharge hopper mounted upon each sand distributing pipe, a slide valve for each hopper, a connection between the rocker shaft and each slide valve and an operating lever fixed to said rocker shaft for actuating the aforesaid first mentioned valves and the slide valves simultaneously.

1,459,419. MULTISTAGE AMPLIFIER CIRCUITS. EDWARD O. SCRIVEN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1919. Serial No. 293,672. 17 Claims. (Cl. 179—171.)

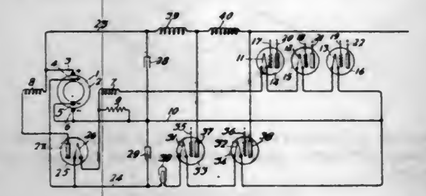


1. A multi-stage amplifier set comprising a plurality of electric discharge amplifiers and switching means for providing a unified control of said amplifiers whereby the number of effective stages of amplification of said set may be varied.

1,459,420. MILKING MACHINE. WARREN A. SHIPPERT, Chicago, Ill., assignor to The Burton Page Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 6, 1920. Serial No. 363,733. 22 Claims. (Cl. 31—98.)

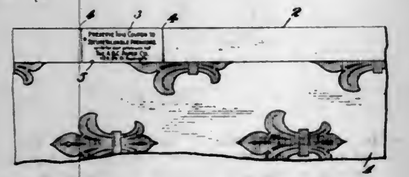
1. In a cow milking machine, the combination of a milk chamber comprising an inverted vessel and means for supporting the same, a conduit leading from the cow to the milk chamber, means for alternately exhausting air from and introducing air into the milk chamber, comprising an exhaust conduit which extends into the upper part of the milk chamber; the latter being conformed so as to have a relatively small cross sectional

area at the top and a greater cross sectional area at a distance below the upper extremity of said last mentioned conduit.



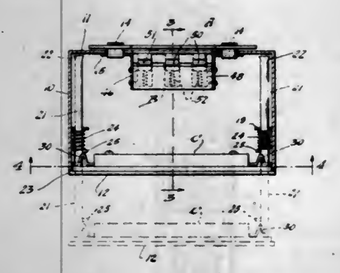
19. In a milking machine, the combination of means providing a milk receiving space, a milk-conduit leading to said space, a reciprocating pump for exhausting the air from said space intermittently at alternate strokes, a motor for driving said pump, and a spring which is stressed on each return stroke of the pump.

1,459,421. TARGET-THROWING DEVICE FOR TRAP SHOOTING. CLYDE HAROLD SLUSHER, Lexington, Mo. Filed Aug. 10, 1922. Serial No. 581,024. 1 Claim. (Cl. 124—6.)



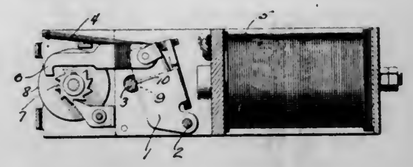
The combination with a target throwing machine for trap shooters, including a throwing arm, of a target carrier adapted to hold targets in singles, doubles or triples, and including a substantially rectangular plate having spaced blocks upon the inner edge thereof, a longitudinal bar rigidly supported upon the blocks, and being of a width slightly greater than the width of the blocks, the said throwing arm being rigidly secured at its outer end to the target carrier by a bolt and nut connection carried by the target carrier and the said bar and securing one of the blocks, and the throwing arm being further secured to the target carrier by a two-piece clamp secured to the inner end of the carrier and adjacent portion of the throwing arm.

1,459,422. ELECTRICAL SYSTEM. HUGH M. STOLLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 4, 1919. Serial No. 321,654. 14 Claims. (Cl. 178—44.)



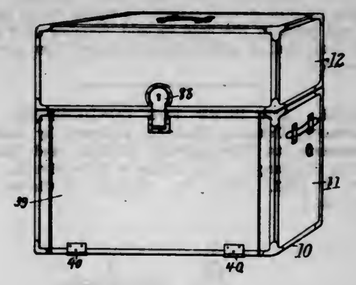
1. A direct current dynamo having a winding, a filter associated therewith for suppressing current variations, said filter comprising said winding of said generator.

1,459,423. COUPON SYSTEM FOR COMMODITIES. ALEXANDER G. UPTEGRAFF, New York, N. Y. Filed Apr. 7, 1921. Serial No. 459,236. 4 Claims. (Cl. 283—60.)



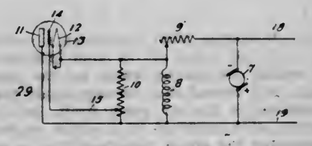
1. A roll of wall paper or the like having a selvage to be removed when the paper is to be used, said selvage being formed at intervals with integral coupons, each coupon extending substantially the entire width of the selvage and being connected to the adjoining portions of the selvage by weakened areas, said coupons bearing indications of exchange value, whereby the portions of the selvage formed as coupons will be effective to protect the corresponding portion of the wall paper edge, and whereby the coupon will be protected by the adjacent turns of the roll, thereby leaving the coupons intact to be severed and returned to the manufacturer by the contractor or other user.

1,459,424. SAVINGS BANK. DUANE H. WAGAR, Ocean Park, Calif. Filed July 21, 1922. Serial No. 576,446. 19 Claims. (Cl. 232—4.)



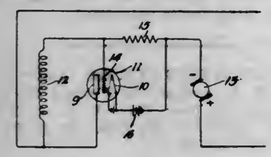
1. A bank comprising side and top walls; a bottom wall mounted for slidable movement laterally from said top wall; members having registering openings on said side walls; and guide means carried by said bottom wall and passing through said openings.

1,459,425. ARMATURE BACKSTOP. CLYDE H. WHEELER, Midland Park Borough, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1921. Serial No. 434,874. 3 Claims. (Cl. 175—336.)



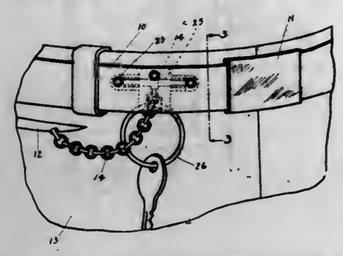
1. In an electromagnetic device, an armature, an electromagnet for actuating said armature and a loosely mounted back-stop for said armature which is adapted to rotate through a small angle when engaged by said armature.

1,459,426. COMBINED PHONOGRAPH AND SOUND-CHARACTER-EXHIBITING DEVICE. EUGENE A. WIDMANN, Brooklyn, N. Y., and Frank D. Lewis, West Orange, N. J., assignors to Pathe Freres Phonograph Company, New York, N. Y., a Corporation of Delaware. Filed June 20, 1918. Serial No. 241,027. 8 Claims. (Cl. 40—28.)



1. In combination a phonograph, a shaft universally connected thereto and rotated therefrom, said shaft projecting beyond the phonograph cabinet, a ribbon feeding device detachably carried by the phonograph cabinet and adapted for exhibiting to view visible symbols corresponding with sounds reproduced by the phonograph, and a universal driving connection for said ribbon feeding device adapted to be detachably connected with said projecting shaft.

1,459,427. THERMIONIC REGULATOR. PETER IRVING WOLD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 29, 1918. Serial No. 247,275. 2 Claims. (Cl. 171—312.)

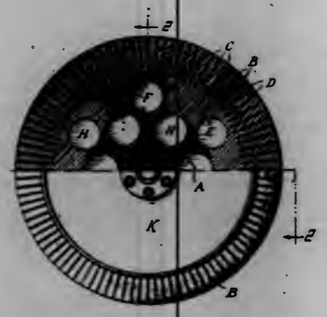


1. An electric generator having a field winding, and means for holding substantially constant a characteristic of said generator, said means comprising a vacuum tube having an anode, a cathode and a control electrode, a by-path around said field winding comprising said anode and said cathode, said anode being connected to the positive terminal of said winding, said cathode being connected to the negative terminal of said winding whereby a portion of the current supplied to said winding is shunted through said tube varying in amount with variations in the effective impedance of the space current path between said anode and said cathode, and a resistance in circuit with said generator, and traversed with current from said generator varying with variations in a characteristic of said generator, at least a portion of said resistance being directly included between said cathode and said control electrode whereby the potential drop in said resistance controls the potential of said control electrode to produce amplified variations in the effective impedance between said anode and said cathode.

1,459,428. THERMIONIC REGULATOR. PETER IRVING WOLD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 29, 1918. Serial No. 247,276. 2 Claims. (Cl. 171—312.)

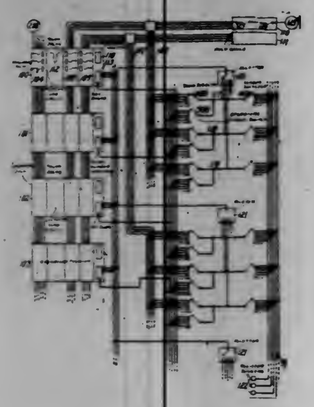
1. The combination of an electrical machine having a series winding, a vacuum tube device comprising an anode and cathode connected in circuit with said winding, said device also comprising a controlling electrode, and an impedance device connected between the negative terminal of said machine and said controlling electrode.

1,459,429. SAFETY HOLDER. MARKS ABRAHAMS, Chicago, Ill. Filed May 25, 1922. Serial No. 563,715. 10 Claims. (Cl. 24—3.)



1. The combination with a belt, of a safety holder secured thereto; and a plurality of spaced resilient catches formed on said holder, each of which consists of oppositely disposed side members curved outwardly, then inwardly and then outwardly; and a bar adapted to be pressed in said catches and resiliently and detachably held therein.

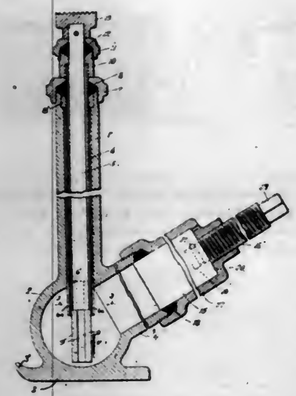
1,459,430. RUBBER-CUSHION WHEEL. ERIC HENRY AITKENS, Sydney, New South Wales, Australia. Filed Sept. 13, 1922. Serial No. 587,924. 5 Claims. (Cl. 152—29.)



1. A road wheel body adapted to be demountably fixed between dished metal disc cheeks, said body having a resilient rubberized core portion splayed laterally towards

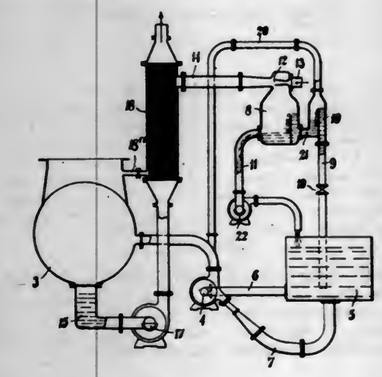
the peripheral edge, a tread portion of the rubber moulded integrally with rubber contained in the core

structure, and fabric reinforcing inlays disposed transversely in a radial direction in said tread, the complete structure being finally vulcanized.



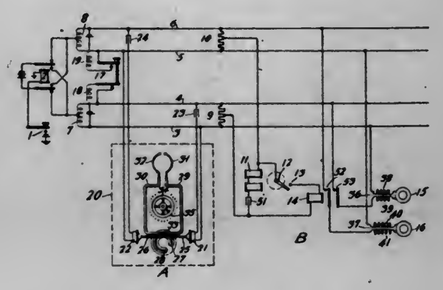
1,459,431. CONTROLLING SYSTEM. LOUIS M. ALLEN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 25, 1919. Serial No. 340,451. 9 Claims. (Cl. 179—27.)

1. In a telephone exchange system, a plurality of registering devices, a key set, a two-conductor control line extending from said key set to said registering devices, and means to adjust said registering devices by means of electrical impulses of varying characteristics over said control line, each of said registering devices being under the control of any key in said key set.



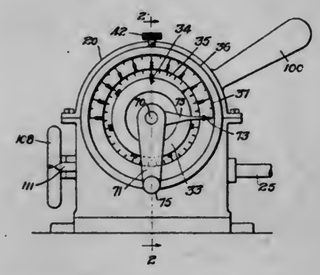
1,459,432. HYDRAULIC JACK. HENRY W. ARMSTRONG, New Haven, Conn., assignor of one-half to Harold Wyman, Plantsville, Conn. Filed July 9, 1920. Serial No. 394,887. 5 Claims. (Cl. 138—9.)

1. In a hydraulic jack, a body member in which a fluid chamber is formed, a portion of which chamber forms an actuating piston cylinder entirely open at one end in said chamber, an actuating piston in said cylinder, means for actuating said piston from the exterior of the jack, a second cylinder of less cross-sectional area than said first named actuating piston cylinder opening



into and extending from said fluid chamber, and a plunger in said second cylinder adapted to be operated fast and quick by the fluid in said chamber at a greater speed than that of said actuating piston when the latter is operated.

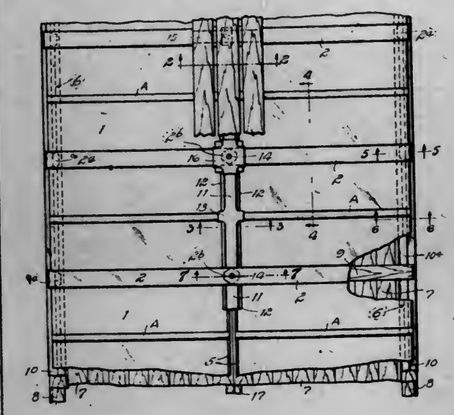
1,459,433. AIR PUMP FOR CONDENSERS. KARL BAUMANN, Urmston, England, assignor, by mesne assignments, to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 2, 1917. Serial No. 146,135. 5 Claims. (Cl. 257—24.)



1. A steam condensing plant comprising a steam condenser and a jet air pump of the kind indicated, and means for cooling the sealing water for the pump by evaporating a part thereof in a vacuum higher than the vacuum obtaining in the air pump itself, said evaporating vacuum being produced by a steam ejector, and means discharging the steam therefrom into a suitable part of the plant operating under vacuum, substantially as described.

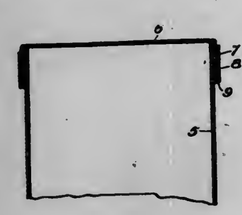
1,459,434. TRANSMISSION SYSTEM. DAVID G. BLATTNER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 24, 1919. Serial No. 306,324. 6 Claims. (Cl. 178—44.)

1. In a transmission line, a pair of conductors, one of which has a capacitance to a grounded connection, a transmitter electrically connected to said conductors, and means connected in the line immediately adjacent the transmitter for preventing packing of the transmitter due to surges on the other of said conductors.



1,459,435. STOP MECHANISM. HELMER J. BOE, Chicago, and BENJAMIN J. EGERT, Brookfield, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 16, 1920. Serial No. 374,397. 12 Claims. (Cl. 235—132.)

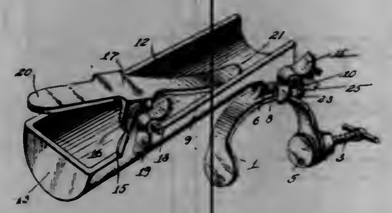
1. In a mechanism for controlling the operation of a machine at the completion of a predetermined number of revolutions or reciprocations, the combination with the machine of a registering mechanism adapted to be operated thereby, including a rotatable member and a rotatable and reciprocable member adapted to be successively rotated from a set to a zero or let-off position to register in units or fractions thereof the number of revolutions or reciprocations of the machine, a differential driving means for said rotatable member and rotatable and reciprocable member, means for moving said rotatable and reciprocable member longitudinally at the zero position thereof, and stop mechanism for the machine controlled by the longitudinal movement of said rotatable and reciprocable member.



1,459,436. METAL CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Mar. 11, 1922. Serial No. 542,858. 8 Claims. (Cl. 108—5.)

1. A car roof comprising a support having battens arranged transversely thereof and roofing sheets having hollow ribs astraddle said battens, said sheets having

portions at both sides of the respective battens that rest flatwise on said support.



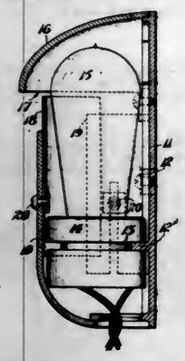
1,459,437. RECEPTACLE CLOSURE AND SEAL. GEORGE S. BOWMAN, James Post Office, Md., assignor to Mary H. Bowman, James Post Office, Md. Filed Oct. 25, 1921. Serial No. 510,333. 3 Claims. (Cl. 220—45.)

1. The combination of a receptacle of like internal diameter throughout and the vertical body walls of which are disposed in a single continuous vertical plane, said receptacle having at its top a pair of vertical walls, one of which is in the plane of and continuous with its body walls; and a horizontal wall connecting the same and forming a sealing chamber closed at its bottom and open at its top, one of said receptacle walls having its rim edge extending to a horizontal plane above the top of the chamber and slightly above the rim edge of the other vertical wall, said walls of the chamber being straight and parallel and in close relation so as to form a chamber of restricted width and minimum lateral displacement with respect to the plane of the body walls of the receptacle, a cover having a top wall to rest upon the rim edge of the higher vertical wall of the receptacle, and a depending apron to depend within said sealing chamber, said apron having its lower edge terminating above the horizontal bottom wall of the sealing chamber and its upper edge exposed above the rim edge of the shorter vertical wall, said top wall and upper edge of the apron of the cover being united so as to form a corner angle annularly continuous for gripping engagement and arranged to more or less substantially bridge or cover the gap between the rim edges of the

long and short walls of the sealing chamber, and a sealing medium in said chamber in sealing contact with the vertical walls and the apron.

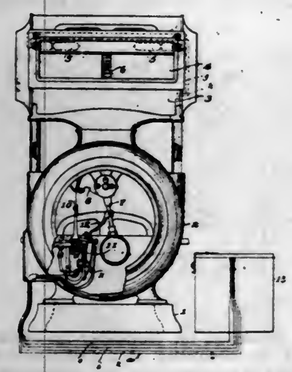
1,459,438. POLE SUPPORT. JOHN MATHIAS BRAND, Columbus, Ohio. Filed Oct. 12, 1921. Serial No. 507,299. 1 Claim. (Cl. 248—37.)

A fishing pole support comprising a rod holder formed to include a longitudinally extending socket, a pair of upstanding ears provided upon the holder, a bolt supported by the ears and disposed transversely of the socket, a tongue pivotally connected to the said bolt, spring means engaged with the tongue to hold the same in yielding engagement with a rod positioned within the socket of said holder, said bolt also serving to limit the tilting movement of the rod in one direction.



1,459,439. MUSIC-ROLL CONTAINER. CHARLES S. BURTON, Oak Park, Ill. Filed Sept. 22, 1922. Serial No. 589,808. 7 Claims. (Cl. 206—52.)

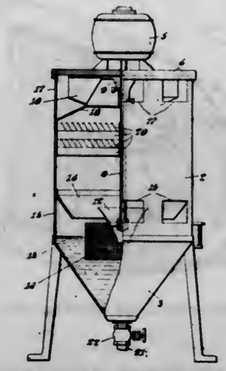
1. A container for music rolls and the like comprising an outer tubular box member and an open-topped inner box member telescoped into the outer member, said inner member having its opposite sides severed at a transverse plane intermediate the ends, and the bottom provided with a hinge at a distance forward from the plane of severance of the sides whereby said inner member comprises a drop-end portion adapted to be dropped for insertion and withdrawal of the roll when the bottom hinge arrives at the forward end of the tubular member; the outer tubular member having an abutment which projects within the tubular cavity of said member presenting an abrupt end rearward for encounter of the forward end of the rear part of one of the severed sides of the inner member, positioned for such encounter at the withdrawn position of the drop-end.



1,459,440. AISLE LIGHT. CHARLES FELIX BUTTE, San Francisco, Calif. Filed Nov. 2, 1921. Serial No. 512,258. 5 Claims. (Cl. 240—11.)

1. An aisle light comprising a housing including means for supporting a light globe therein, the upper end of said housing being open, a canopy supported by the upper end of said housing and vertically adjustable in relation thereto and adapted to project the rays of

said light outwardly and downwardly from the housing, and vertically adjustable means co-operating with the canopy for regulating the width of said light ray.

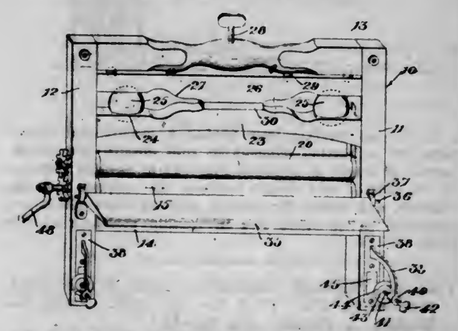


1,459,441. ILLUMINATING WEIGHING SCALE. SAMUEL G. CRANE, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Mar. 29, 1918. Serial No. 225,387. 17 Claims. (Cl. 161—1.)

1. The combination in a self-illuminating scale of load-offsetting mechanism, illuminating means and timing mechanism connected to said illuminating means for controlling the period of illumination actuated by the movement of the load-offsetting mechanism of the scale.

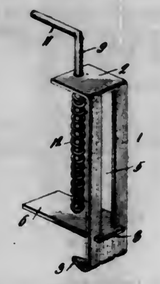
12. The combination with a self-illuminating scale, of a timing device for controlling the period of illumination, an operating and a re-setting circuit each having a normally open and a normally closed switch therein, means operated by movement of the scale from zero position to close the open switch of the operating circuit and open the closed switch of the resetting circuit, means actuated upon the closing of the operating circuit to initiate operation of the timing device, close the normally open switch of the re-setting circuit, and open the normally closed switch of the operating circuit, and means operative by means of the re-setting circuit to return the parts to their initial positions upon return of the scale to zero position.

1,459,442. AIR-WASHING APPARATUS. SAMUEL C. CUTLER, Brookline, Mass. Filed Nov. 1, 1919. Serial No. 334,973. 5 Claims. (Cl. 183—24.)



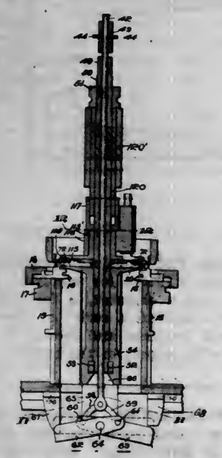
1. The method of washing gas comprising the creating of a laterally directed spray of liquid, a downwardly extending curtain of liquid through which spray and curtain the gas to be washed is passed, creating a flow of gas through said curtain and said laterally directed spray and separating the liquid from the gas above said laterally directed spray.

1,459,443. CLOSURE FOR MILK BOTTLES. IDA DAVIS, San Antonio, Tex. Filed May 6, 1922. Serial No. 558,925. 2 Claims. (Cl. 215—51.)



1. A device of the class described formed from layers of material, the bottommost layer being provided with an opening, the other layer being provided with a socket registering with the opening in the bottom layer, and a foldable spout disposed when folded in the socket and having one end thereof in registry with the opening and fixed to the bottom layer.

1,459,444. WASH WRINGER. TAKANOSHIN DOMOTO, San Francisco, Calif. Filed June 29, 1921. Serial No. 481,256. 3 Claims. (Cl. 68—33.)

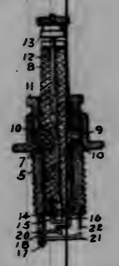


1. A wash wringer comprising a frame; a relatively fixed wringer roll rotatably supported thereby; a movable wringer roll disposed above said fixed roll; a pressure beam acting against the trunnions of said movable roll; a transversely extending bar parallel to said beam; resilient means interposed between the bar and beam; an adjustable pressure screw carried by the frame and acting against the center of said bar to force it downwardly; said pressure beam and parallel bar being formed with recesses of different sizes along their adjacent faces for accommodating the resilient means.

1,459,445. CLAMP. ROBERT ELDERTON and CLARENCE D. BALDWIN, Independence, Iowa. Filed Sept. 9, 1922. Serial No. 587,245. 2 Claims. (Cl. 24—263.)

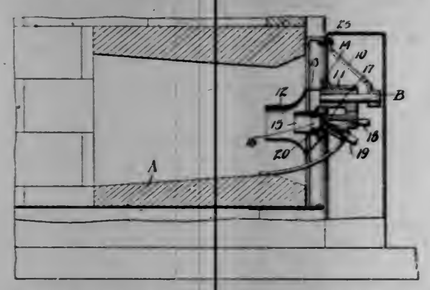
1. A clamp of the class described including a longitudinally slotted body formed with a right angularly extending apertured lip at one end and a fixed bifurcated jaw at its other end and a tongue disposed between the bifurcations of the fixed jaw, and a movable jaw provided with a T-shaped extension at one end projecting through the slotted body, a rod attached at one end to the movable jaw and projecting through the aperture of the lip on the body, a spring disposed about the rod between the apertured lip and the movable jaw so as to normally hold the movable jaw adjacent the fixed jaw, and the other end of said rod being curved at substantially right angles thereto for forming a handle portion.

1,459,446. INTURNED-WELT-KNITTING MACHINE. RAY FENN, Providence, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Aug. 27, 1919. Serial No. 320,311. 31 Claims. (Cl. 66—[illegible].)



10. A thin, flat sinker or web holder the body whereof lies wholly in one plane, and having a needle-truing formation.

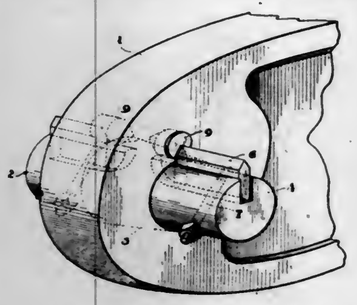
15. A loop or bight detaining implement consisting of a body or shank folded upon itself to bring the members of the body or shank substantially into face contact, said implement having a pair of terminal hooks in substantially face contact.



27. A weft knitting machine comprising in combination, a circular series of needles, a needle cylinder therefor, a circular series of jacks having loops receiving ends, a supporting dial for the jacks, and means fixed circumferentially with respect to the needle cylinder and dial respectively to effect a slight turning movement of the dial and its jacks relative to the needle cylinder and its needles.

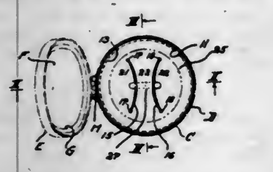
1,459,447. SPARK PLUG. JOSEPH G. GAVLAK, Monongahela, Pa. Filed July 21, 1920. Serial No. 397,844. 3 Claims. (Cl. 123—169.)

1. A spark plug comprising a shell of conducting material, a non-conducting element secured in the shell, a non-conducting support at the inner end of the shell at one side thereof, means depending from the shell for detachably connecting said support to the shell, and electrodes carried by the support, element and shell and associated with each other.



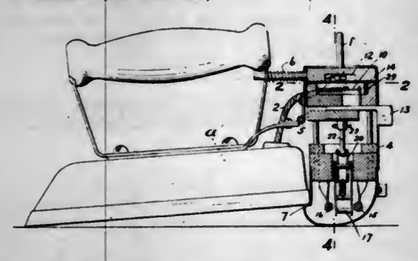
1,459,448. OIL ATOMIZER. PERRY H. GENTZEL, Newton, Mass. Filed Oct. 25, 1919. Serial No. 333,298. 13 Claims. (Cl. 158—74.)

5. A hydro-carbon fuel atomizer comprising an atomizer burner having a throat for supplying steam, said throat expanding into a chamber, a fuel supply nozzle extending into the chamber, a series of concentric bell-mouth tubes joined together and means for adjusting the tubes axially with respect to the burner.



1,459,449. PIVOT RETAINER. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Apr. 12, 1920. Serial No. 373,433. 9 Claims. (Cl. 74—104.)

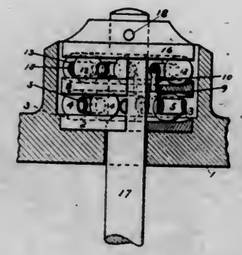
1. In a device of the class described, in combination, a lever having a round bore therethrough, a round pivot retainer snugly fitting in said bore, said pivot retainer having a groove therein, a pivot bar seated in said



groove, and wedging means for securing said pivot bar in said groove.

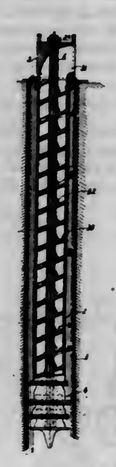
1,459,450. DISPENSING RECEPTACLE. EMIL SCHMIDT, Elmhurst, N. Y. Filed June 27, 1922. Serial No. 571,207. 16 Claims. (Cl. 132—82.)

4. A dispensing receptacle of the character described, including a head provided with slits for the passage of material therethru and extending transversely of its surface, and a bridge formed intermediate of said slits substantially central of said surface so as to afford a manipulating grip for said head.



1,459,451. ELECTRIC IRON. JOSEPH M. SECHS, Philadelphia, Pa. Filed Feb. 6, 1923. Serial No. 617,252. 4 Claims. (Cl. 219—25.)

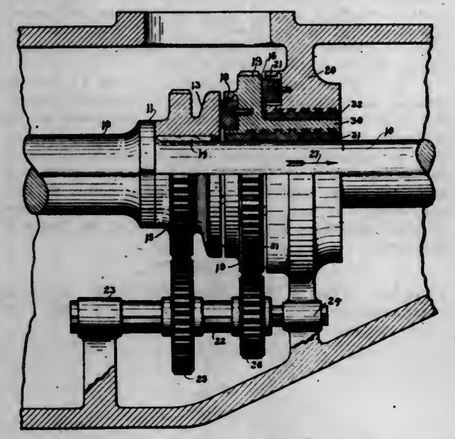
1. For an electric iron having a circuit and terminals and a heating element in said circuit, the combination of a pair of switches disposed in parallel relation in one side of said circuit between one terminal and the element, and means for closing said switches which are operative in up-ended and in ironing positions of the iron.



1,459,452. THRUST BEARING. ELISA M. SOUVIELLE, Jacksonville, Fla. Filed Jan. 25, 1922. Serial No. 531,522. 2 Claims. (Cl. 64—57.)

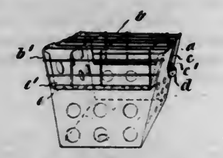
2. In a thrust bearing of the class described; a plurality of ferrous metal ball races; non-ferrous metal balls operating between these ball races; a plurality of ferrous metal rollers interposed between the balls; a plurality of non-ferrous metal studs upon which the rollers rotate; a plurality of supports, formed on one or

more of the ball races, extending alternately to opposite sides; the studs secured to these supports; and non-ferrous metal washers placed on the studs between the rollers and the supports.



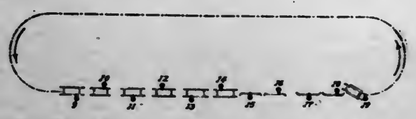
1,459,453. PUMP. ALFRED J. TRIGWELL, San Jose, Calif. Filed July 5, 1921. Serial No. 482,424. 6 Claims. (Cl. 103—90.)

1. In combination, a pump bowl, a shaft supporting rod mounted therein, a tubular driving shaft encompassing said rod, a thrust bearing inserted between said rod and shaft, a packing gland element fixedly mounted on said shaft, packing gland element slidably mounted in said bowl to engage said first named element, and a resilient support for the second named element normally holding the same in close engagement with said first element.



1,459,454. THRUST BEARING. HENRY R. TROTTER, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 29, 1921. Serial No. 465,485. 6 Claims. (Cl. 64—25.)

1. In a thrust bearing structure, the combination with a rotatable shaft carrying a shaft thrust collar, of a rotatably mounted supplemental thrust collar provided with tiltably mounted thrust blocks bearing against said shaft collar, fixed thrust-receiving means provided with tiltable thrust blocks bearing against the back of said supple-

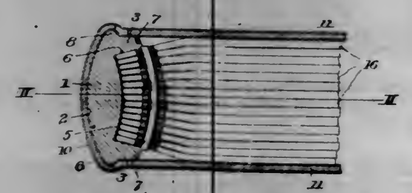


mental thrust collar, and means for rotatably driving said supplemental collar at a speed other than that of said shaft.

1,459,455. CONTAINER FOR CARDS FOR RECORDING STATISTICAL AND OTHER INFORMATION. ALFRED ERNEST VAGO, Middlesex, England, assignor to A. Boake Roberts and Company Limited, London, England. Filed May 17, 1922. Serial No. 561,710. 6 Claims. (Cl. 129—43.)

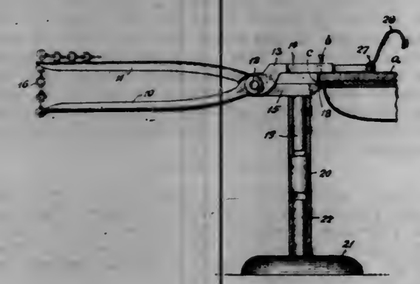
1. A container for loose cards for recording statistical and other information comprising a metal body having end members of greater height than the height of the cards and sides of less height than the height of said cards, a cover of such form as to permit the manipulation and examination of the cards without removal from the container said cover being hinged to one end of said body covering the top and open portions of the sides and means for securing said cover against unauthorized operation.

1,459,456. METHOD OF AND APPARATUS FOR UNITING THE PARTS OF VEHICLE FRAMES. HALWARD G. WESTMORE, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Sept. 26, 1921. Serial No. 503,408. 13 Claims. (Cl. 78—46.)



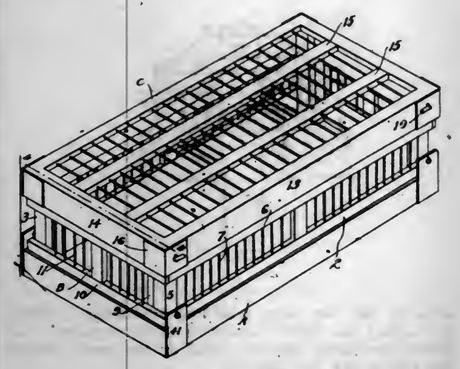
1. A method of forming vehicle frames, which consists in temporarily securing the frame elements in their re-

spective positions by means of loosely held rivets, supporting a plurality of assembled frames in a state of suspension to permit their manipulation, advancing the frames in succession along a line of travel with intermitting periods of rest for all of said frames, and permanently connecting the elements of each frame in a divided operation by progressively spreading the rivets during the successive periods of rest.



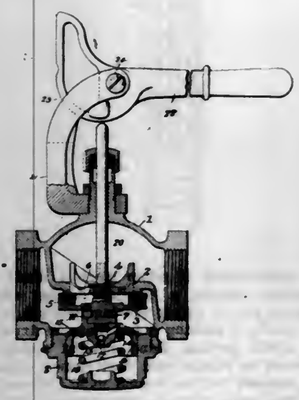
9. In a frame riveting apparatus, a line of riveting presses, an overhead trolley system, a connection depending from each trolley and a carrier supported by the said connection, the said carrier being adapted to support the assembled members of an automobile frame in position for action by the several riveting presses to unite the frame members into a rigid structure as they pass along the line, the said presses effecting different riveting operations upon different parts of the frame in succession.

1,459,457. ALBUM FOR DISK RECORDS. WILLIAM WILBERGER, Brooklyn, N. Y. Filed Feb. 7, 1922. Serial No. 534,701. 5 Claims. (Cl. 129—20.)



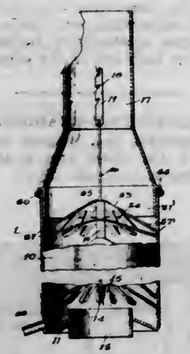
3. The combination with a back member having a groove in its inner face, the base of said groove being convex and the lateral walls thereof being flared for the purpose specified, of arched leaf-retaining members bridging said groove and arranged substantially parallel to said convex base thereof.

1,459,458. APPARATUS FOR REPAIRING SHOES. RICHARD WOJAN, Elmont, N. Y. Filed Jan. 19, 1922. Serial No. 530,314. 3 Claims. (Cl. 1—19.)



1. An apparatus for repairing shoes comprising gripping pliers having a forked upper jaw, a lower jaw adapted to project over a welt, an anvil on said lower jaw and the forks of said upper jaw being so constructed and arranged as to engage a tap sole at points so spaced along the edge of the tap sole as to permit the introduction between the forks of means for positioning nails in line with the anvil.

1,459,459. FOLDABLE AND COLLAPSIBLE CONTAINER. WILLIAM W. WOODWORTH, South Berkeley, Calif. Filed July 27, 1921. Serial No. 487,906. 7 Claims. (Cl. 217—15.)

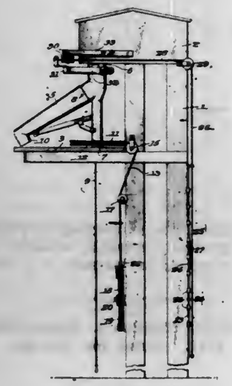


1. A device of the character described comprising a bottom section, a pair of side sections pivotally secured thereto and arranged to fold upon the upper face of the same, a pair of removable end sections, a cover section adapted to be supported by the side and end sections, and locking means extending through the side, end and cover sections respectively and removable therefrom, said bottom section being provided with means to receive the locking means when the same has been removed from the said sections.

1,459,460. VALVE. FARNHAM YARDLEY, New York, N. Y., assignor to Jenkins Brothers, New York, N. Y., a Corporation of New Jersey. Filed May 4, 1922. Serial No. 558,437. 2 Claims. (Cl. 251—143.)

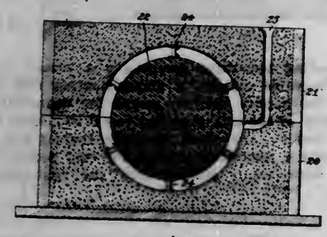
1. The combination of a valve casing, a transverse valve seat therein, a valve closing against said seat, having a T-headed lug on the rear face, a hollow screw cap forming a cylinder engaging in an opening in the bottom of the casing, a piston working in said cylinder and having a slotted neck surrounding the lug on the valve, an exhaust passage in said piston having an inwardly seating ball check therein, and a relatively small inlet passage in said piston to slowly admit the pressure to the cylinder.

1,459,461. OIL-SAVING STACK FOR GAS-FLOWING WELLS. EARLE RUTHERFORD AUSTIN, Breckenridge, Tex. Filed Sept. 1, 1921. Serial No. 497,552. 2 Claims. (Cl. 183—95.)



1. An oil trap of the character described comprising a two-part casing having a lower intake and an upper outlet and having a base forming an oil trough therein around its lower inlet, an oil outlet nipple leading from the casing above its base, an axial supporting rod within the casing, said casing parts having internal means detachably engaged by the ends of said supporting rod to normally prevent disengagement of the said parts, and a vertical series of baffle members within the casing having outwardly and downwardly inclined arms, removably mounted on the said supporting rod with their said arms in staggered relation vertically throughout the casing.

1,459,462. METER BOX. CHILTON WITHERS BLUE, Montgomery, Ala., assignor to Janney & Company, Montgomery, Ala., a Firm. Filed Feb. 25, 1921. Serial No. 447,701. 3 Claims. (Cl. 137—13.)

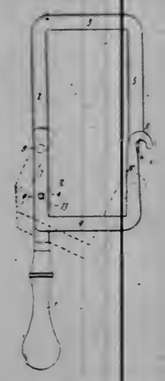


1. A meter box consisting of a cylindrical casing having an inwardly projecting annular flange at its upper end, said flange having four slots cut therethrough at points separated from each other by ninety degrees, a cover for said casing having formed on its under side two ribs intersecting centrally thereof at right angles, said ribs terminating in lugs offset from the bottom of the cover, a socket formed on the under side of the cover between said ribs, a bolt slidably mounted in said socket with its outer end adapted to enter one of said slots and having an upwardly opening notch adjacent its inner end, said cover having a hole out of registry with said notch for the insertion of a suitable key.

1,459,463. INDICATOR FOR GRAIN SPOUTS. MARINUS BOBELDYK, Armour, S. Dak. Filed Sept. 25, 1922. Serial No. 590,336. 6 Claims. (Cl. 193—23.)

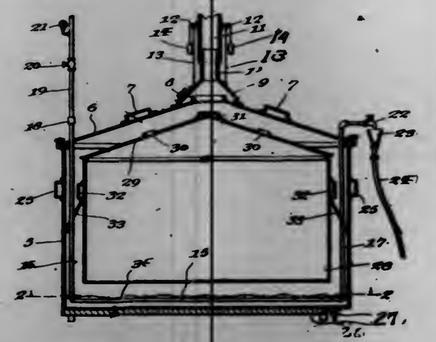
1. The combination with a grain distributing spout, of a mechanical indicator for showing the position of the spout, an operating connection between the spout and the indicator, and means for adjusting said connection.

1,459,464. MOLDER'S CHAPLET. JOHN W. BRADLEY, Buffalo, N. Y. Filed Sept. 25, 1920. Serial No. 412,838. 10 Claims. (Cl. 22—184.)



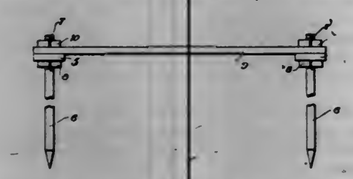
1. As an article of manufacture, a chaplet comprising two spaced imperforate bearing members, and a supporting member integral therewith and arranged centrally between said bearing members, said supporting member being spaced from all edges of said bearing member.

1,459,465. REED HOOK. FREDERICK J. HEINE, Huntington, Mass. Filed Dec. 27, 1921. Serial No. 524,875. 12 Claims. (Cl. 28—45.)



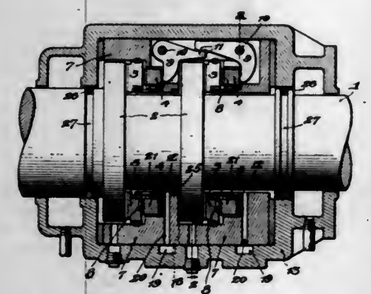
1. The combination, in a reed hook of the character described, with a shank provided with a handle, and having an arm with a depending feeding terminal, of a

part attached to said shank and having an arm with a hook terminal that rises into cooperative relation with



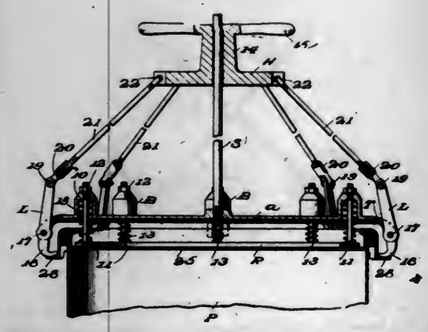
said leading terminal, the supporting members for said terminals being relatively movable, whereby said terminals can be separated for the passage of a reed rail.

1,459,466. COOKER. THOMAS A. HODGE, Franklin, Ind. Filed Oct. 6, 1921. Serial No. 505,965. 2 Claims. (Cl. 53—1.)



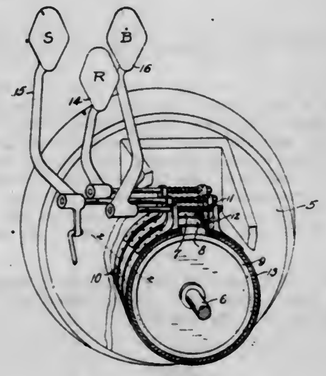
1. A cooking apparatus comprising a vessel provided with a removable closure, a steam heating coil in the vessel at the bottom thereof, means for controlling the steam supply of the coil, a second vessel supported in the aforesaid vessel spaced from the walls thereof and above the coil, and a removable closure for said second vessel provided with vapor outlets into the first-mentioned vessel.

1,459,467. GRATE. CHARLES E. HOWARD, Anaconda, Mont. Filed Aug. 10, 1920, Serial No. 402,557. Renewed Apr. 16, 1923. 3 Claims. (Cl. 126—30.)



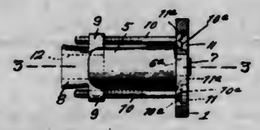
1. A grate including a pair of main supporting rods being substantially rectangular in cross section, a plurality of legs having threaded shanks, supporting nuts on said threaded shanks, retaining nuts on said threaded shanks for holding the main supporting rods in rigid engagement with the legs, said main supporting rods having apertures for receiving said shanks, a pair of grate bars having apertures at each end so as to rest between the supporting nuts and the retaining nuts on said main supporting rods, and a removable central grate rod being substantially rectangular in cross section supported at each end of the supporting rods.

1,459,468. MULTIPLE-UNIT BEARING. HARRY A. S. HOWARTH, Pittsburgh, Pa., assignor to Albert Kingsbury, Pittsburgh, Pa. Filed June 4, 1920. Serial No. 386,534. 80 Claims. (Cl. 64—25.)



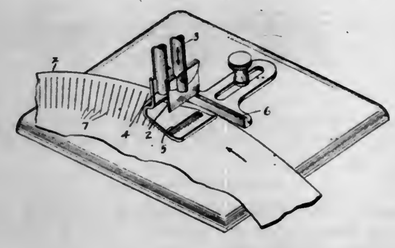
28. In a bearing, a plurality of bearing segments assembled in groups, means for equitably distributing the pressure among the segments of each group, and means utilizing the pressure on less than the whole number of segments of each group for equitably distributing the pressure among the respective groups of segments.

1,459,469. PAIL CLOSURE. SMITH MADISON JOHNSON, Middlefield, Ohio. Filed Mar. 4, 1922. Serial No. 541,095. 1 Claim. (Cl. 220—55.)



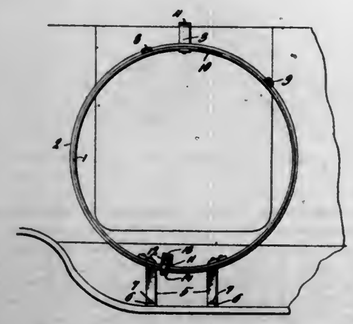
In combination, a pail having a curved flange about its free edge, a cover having a similar flange about its free edge and adapted to fit over the flange of said pail, said flange upon the pail having its free end portion turned upwardly and inwardly and said portion being slightly spaced from the inner face or inner side of said pail flange, and a plurality of extensions formed upon the cover flange and each extension turned upwardly and upon itself and disposed between the upwardly turned portion of the pail flange and the associated side wall of the pail, said upwardly turned extensions and upwardly turned portion of the pail flange being adapted to cooperate with each other to secure said cover to the pail and also adapted to serve as a brace between said secured flanges and the outer wall of the pail.

1,459,470. TRANSMISSION AND BRAKE MECHANISM. MORTON F. JUDD, Stratford, Conn., assignor to The Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 1, 1921. Serial No. 519,085. 2 Claims. (Cl. 188—259.)



2. A power transmission and brake mechanism for automobiles comprising three drums, one each for the reverse, low speed and brake, bands for the respective drums, and linings for the respective bands adapted to engage the drums, the lining for the reverse drum being adapted to resist compression and consisting of a fabric of vary hard and compact weave, the lining for the low speed drum being composed of asbestos and cotton treated with a saturant binder, and the lining for the brake drum being mainly composed of a heat resisting fibre material of a slightly compressible nature treated with a saturant binder.

1,459,471. HANGER. JACOB KOHN, New York, N. Y. Filed Mar. 13, 1922. Serial No. 543,248. 6 Claims. (Cl. 85—2.4.)



1. In a hanger for fixing auxiliary structural work to the face of a building wall, a slidably adjustable conical spreader having a radial lug, and a clamping element for engaging a recess in the wall, means engaging said lug for adjusting said spreader whereby the clamping element is actuated, and a bolt for expanding the clamping element.

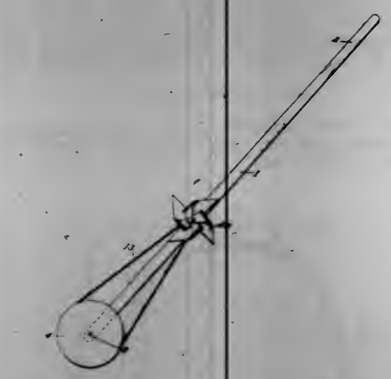
1,459,472. MEANS FOR MAKING FRINGE FOR LADIES' HATS. LOU KRAUSE, New York, N. Y., assignor to Slyt Edge Company, Inc., a Corporation of New York. Filed Mar. 29, 1922. Serial No. 547,931. 2 Claims. (Cl. 164—17.)

1. The method of producing a fringed edge upon a soft felt fabric comprising cutting close-together slits in the material adjacent and inwardly of the edge, and serving the outer portion of the material beyond said slits.

1,459,473. TIRE CARRIER. FRED A. LANE, Shelburn, Ind. Filed Apr. 27, 1921. Serial No. 464,783. 1 Claim. (Cl. 224—29.)

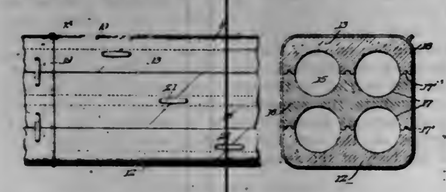
A device for carrying spare rims and tires on the running board of an automobile comprising an annular flat supporting band, means associated with the band for detachably holding a tire and rim thereon, a pair of depending supporting legs disposed on opposite sides of the vertical diametric center of the band and having right angularly extending diverging band engaging feet on their upper ends and right angularly extending attaching feet on their lower ends for engaging the running board of the automobile, an inwardly extending supporting arm carried by the upper end of the band disposed intermediate the supporting legs and arranged at the direct vertical diametric center of the band, and a hook formed on the arm for engaging over the upper edge of the body of the automobile.

1,459,474. AMUSEMENT APPLIANCE. WILFRED JOHN MACDONALD, FRANCIS R. BLANEY, and EDITH MAY MACDONALD, Winnipeg, Manitoba, Canada. Filed Mar. 29, 1920. Serial No. 369,682. 5 Claims. (Cl. 46—27.)



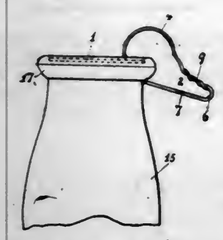
1. In an amusement appliance, a driven rotatably mounted table, a plurality of carriers mounted on the table and turning with the same, means for effecting an in and out radial movement of the carriers as they

travel with the table, means for rotating the carriers around their vertical axes at the ends of their in and



out travel and means for automatically locking the carriers against rotation around their vertical axes during their radial movement.

1,459,475. TOY. FREDERICK WILLIAM MARHEINE, Spokane, Wash. Filed Oct. 3, 1921. Serial No. 504,858. 1 Claim. (Cl. 46—38.)



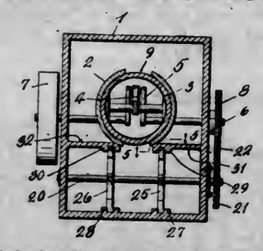
A toy comprising a stick, a bearing pin extending laterally therefrom and a ground wheel on the pin and having a peripheral groove, pin extending laterally from the stick and inclined slightly away from the ground wheel, a spool journaled thereon, a pin wheel rotatable with the spool, and an endless belt for transmitting motion from the ground wheel to the spool, said belt constituting means for holding the spool against the side of the stick and preventing its accidental removal from the pin.

1,459,476. MULTIPLE CONDUIT. WILLIAM C. MEREDITH, Atlanta, Ga. Filed Sept. 7, 1922. Serial No. 586,703. 3 Claims. (Cl. 137—75.)

1. A wooden conduit section comprising outer members having smooth outer surfaces and having on their inner surfaces longitudinal grooves, each of said members being of substantially integral construction, a filler member longitudinally grooved on its opposite faces and adapted to be positioned between said outer members with its grooves in registration with the grooves of said members thereby to form a section having a plurality of bores, cooperating tongues and grooves on the meeting faces of said members at the side of said bore grooves, and bands encircling said members to hold them together to form a portable unit.

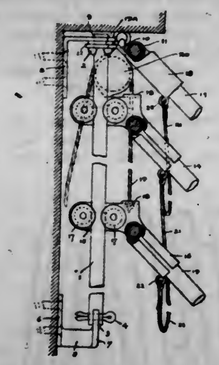
1,459,477. BOTTLE CAP. CLARENCE L. NACE, Oakland, Calif. Filed Apr. 25, 1921. Serial No. 464,407. 3 Claims. (Cl. 215—63.)

1. A bottle cap including a disk adapted to rest upon the seat in the mouth of the bottle, a clip comprising a single piece of wire bent in the middle forming a foot, then bent upwardly and backwardly over said foot, forming arms which are twisted together, and then bent upwardly under said arms at an angle, forming other arms for engaging the under side of the bead on the mouth of the bottle, said foot being secured to the upper side of said disk near the edge of the disk.



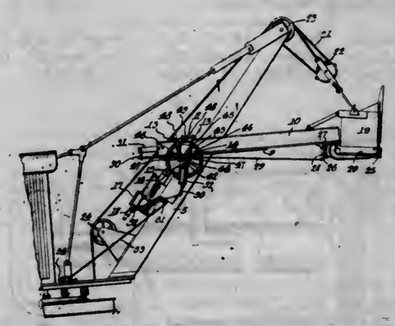
1,459,478. INHALING TUBE. WILLIAM A. PAGE, Cleveland, Ohio. Filed Dec. 4, 1919. Serial No. 342,396. 3 Claims. (Cl. 128—200.)

1. An inhaling tube having annularly reduced end portions provided with pins, caps seated over said end portions and having inclined grooves in their sides engaged on said pins and provided with axial openings, a spindle fixed in said tube having a bored hub engaged in said tube and its ends constructed to close said openings, and an absorbent belt about said hub and exposed to the bore therein.



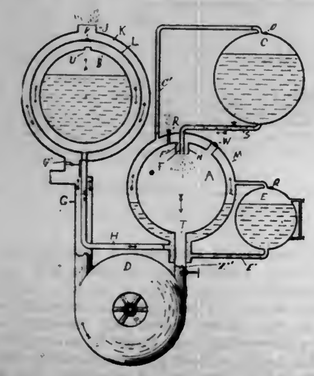
1,459,479. INTERNAL-COMBUSTION ENGINE. ADOLPH SCHAEFER, Vallejo, Calif. Filed Nov. 8, 1920. Serial No. 422,473. 1 Claim. (Cl. 123—195.)

The combination of an internal combustion engine having a crank shaft, of a base casing, a vertical cylinder, an extension on said cylinder disposed within the casing and having diametrically opposed slots, of a valve operating mechanism disposed within said casing including a pair of oppositely disposed castings extending inwardly from opposed walls of said casing parallel with said crank shaft and terminating adjacent opposite sides of one of the slots in the cylinder extension, vertically outwardly extending guide flanges formed adjacent said ends of the castings, the portion of the castings intermediate the guide flanges being perforated to permit lubrication, coacting vertical guide flanges on the opposite wall of the casing for each set of guides on the castings, yokes slidably mounted in said guides and disposed on opposite sides of the adjacent slot in the cylinder extension, a cam shaft extending through said yokes,



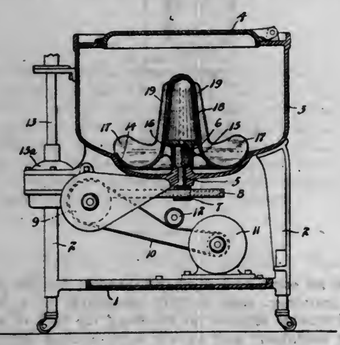
cams carried thereby and disposed within said yokes, vertical stems carried by the yokes, and vertically movable slide valves connected with the stems.

1,459,480. AWNING. THOMAS SONNE, Vancouver, British Columbia, Canada. Filed Mar. 11, 1922. Serial No. 542,939. 14 Claims. (Cl. 156—15.)



4. An awning structure comprising guide rods, retaining clips provided with guide rollers arranged to travel on said rods and awning frames detachably carried by said clips.

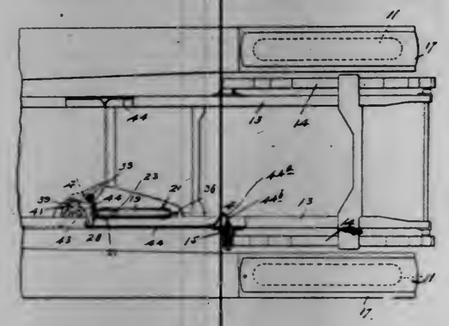
1,459,481. EXCAVATING MACHINE. WILLIAM B. TRAPNELL and JOSEPH A. EASTERWOOD, Madisonville, Ky. Filed Oct. 16, 1922. Serial No. 594,904. 4 Claims. (Cl. 214—146.)



1. In an excavating machine, a crane, a boom, a transverse shaft rigidly secured to the crane and supporting the boom, means rotatably mounted upon the transverse shaft to effect the longitudinal movement of the boom, a shovel carried by the boom and having a door adapted to be moved to opened and closed positions, a latch to hold the door closed, a trip cable having connection with the latch and with the rear portion of the boom and extending longitudinally of the boom and normally being substantially straight, a support base rigidly mounted upon the transverse shaft, a cylinder carried by the lower portion of the support base, a piston within the cylinder, a piston rod secured to the piston and extending outwardly of the cylinder, a pulley secured to the piston rod and movable into engagement with the trip line in a direction transversely of the same, pulleys arranged upon the opposite side of the trip line and supported by the upper portion of the base support, and means to supply fluid pressure to the cylinder.

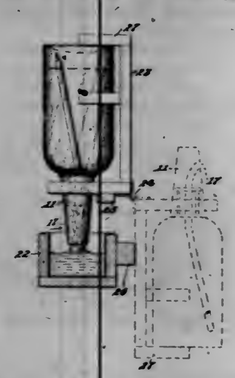
1,459,482. LIQUID-FUEL BURNER. GEORGE T. UNDERWOOD, Maxwell, Calif. Filed June 9, 1919. Serial No. 302,769. 3 Claims. (Cl. 60—42.)

1. The combination of a combustion chamber, a water jacket surrounding the same; of an oxygen vapor chamber communicating with said water jacket whereby the vapor is caused to travel through the water therein, said combustion chamber having a nozzle communicating with the upper end of the water jacket, and means for supplying liquid fuel to the nozzle whereby a combustible gas is created in the combustion chamber and which is adapted to be ignited for creating pressure in said combustion chamber, and means for converting the pressure into mechanical energy.



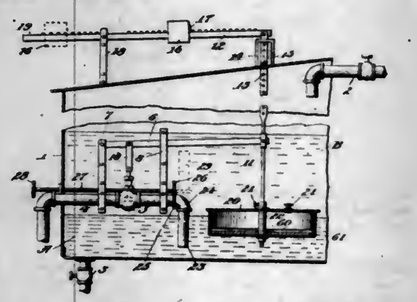
1,459,483. DOLLY FOR WASHING MACHINES. CORNELIUS C. UNRUH, Freeman, S. Dak. Filed Jan. 22, 1923. Serial No. 614,132. 9 Claims. (Cl. 259—107.)

1. A dolly for a washing machine adapted to be disposed in a liquid containing receptacle with its top por-



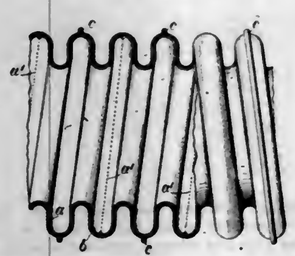
tion well below the top of said receptacle comprising a dish-shaped member and a substantially cylindrical stem rising from and merging into the central portion thereof and terminating in an upper rounded end, said stem having spaced ribs extending vertically along its sides upwardly tapered throughout the length of said stem and extending outwardly across the dish-shaped member.

1,459,484. FORCE-FEED OILING SYSTEM. GEORGE L. WAHL, Minneapolis, Minn. Filed July 14, 1921. Serial No. 484,620. 1 Claim. (Cl. 184—7.)



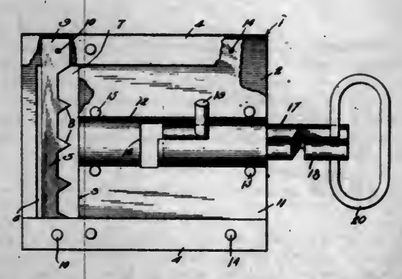
A force feed device including a cylinder and a co-operating piston, a feed screw extending into said cylinder and operative on the piston, a ratchet wheel applied to the outer end of the feed screw, a dog-equipped lever operative on the ratchet wheel, and manually actuated means for reciprocating said lever, in combination with a distributor having a feed pipe connected to the cylinder and having a plurality of individual oil delivery tubes, and a distributing valve in the distributor movable to open, at will, any one of the individual pipes while the others are closed.

1,459,485. EMPTYING DEVICE OR EMPTIER. GARY M. WHITNEY, Greybull, Wyo. Filed Mar. 7, 1922. Serial No. 541,739. 5 Claims. (Cl. 226—29.)



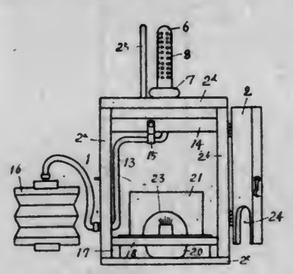
1. In an emptier, a discharge conduit for the contents of a container, said conduit consisting of a conically shaped tubular support for receiving the neck of a bottle-shaped container, and an air duct opening through the wall of the support to within the conduit and constructed to enter the discharge opening of the container and deliver air therein.

1,459,486. AUTOMATIC FLOAT VALVE FOR THE SEPARATION OF TWO IMMISCIBLE LIQUIDS. GARY M. WHITNEY and JOHN F. FLETCHER, Greybull, Wyo. Filed May 9, 1922. Serial No. 559,647. 7 Claims. (Cl. 210—54.)



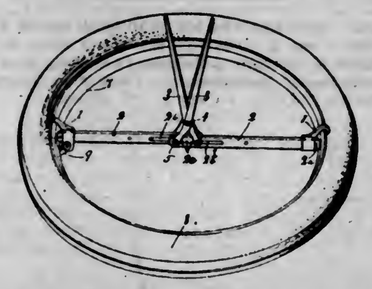
1. An automatic float controlled valve comprising the combination of a valve, a lever to operate said valve, a guide for said lever, a float, a supporting rod therefor, said rod pivoted to said valve lever, a balance arm, said rod pivoted to said balance arm, and an adjustable counterpoise on said balance arm.

1,459,487. FLEXIBLE METAL HOSE. EMIL WITZENMANN, Pforzheim, Germany. Filed Apr. 29, 1921. Serial No. 465,516. 5 Claims. (Cl. 137—75.)



1. A flexible double-walled metal hose, comprising, in combination, an inner spirally wound metal band of corrugated transverse section having the adjacent edges of its windings united by a welded seam, and an outer spirally wound metal band of corresponding transverse section having the adjacent edges of its windings merely contacting with each other.

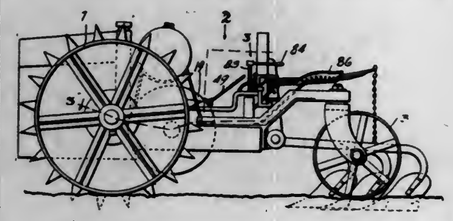
1,459,488. HOOK. GEORGE MILLER WOFFORD and JOHN ALONZO BRISTOW, Athens, Tex. Filed Nov. 30, 1921. Serial No. 518,937. 2 Claims. (Cl. 54—55.)



2. In a device of the class described, a body including a main plate having overhanging flanges; an auxiliary plate on the main plate and engaged beneath the flanges, the auxiliary plate being provided with a guide and being of less length than the main plate; means on the main plate and engaged by the flanges, for receiving a flexible element; and a bolt slidable in the guide, the bolt being provided with a hook which is closed by the guide when the bolt is retracted; and interengaging elements on the bolt and the guide, for holding the bolt retracted.

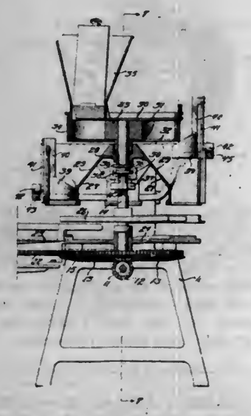
1,459,489. THERAPEUTICAL APPARATUS. KINSAKU YAMADA, Tokyo, Japan. Filed Apr. 28, 1921. Serial No. 465,314. 1 Claim. (Cl. 128—184.)

A therapeutical apparatus consisting in a combination of a heating box provided with a hinged door part of which is cut off, heat radiator provided within the heating box, a lid fitted to a hole at the top board of the heating box, a hot air tube perforated with innumerable small holes and inserted in the hole of the lid, exhaust tube provided within the hot air tube, and a pipe for leading the hot air outside of the heating box, substantially as and for the purposes hereinbefore set forth.



1,459,490. TIRE TOOL. BENGT J. YOUNG, Minneapolis, Minn. Filed Apr. 19, 1919. Serial No. 291,405. 2 Claims. (Cl. 157—1.)

1. In a tire tool, the combination of bars provided with rim-engaging hooks at their outer ends, and at their inner ends each having a hole and a slot, and crossed levers pivotally connected together and each pivoted at said hole in a bar by a bolt having a sliding connection in the slot of the other bar.

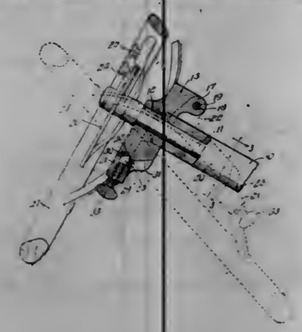


1,459,491. TRACTOR TRANSMISSION. GEORGE J. ZIEGLER, Los Angeles, Calif. Filed Jan. 16, 1922. Serial No. 529,537. 8 Claims. (Cl. 180—17.)

1. In a transmission, a transmission shaft mounted transversely, a bevel gear fixed upon one end of the transmission shaft, a spider loosely mounted upon the center of the transmission shaft, pinions mounted in the spider in mesh with the bevel gear, a second bevel gear loosely mounted upon the other end of the transmission shaft in mesh with the pinions, a transmission case in which the transmission shaft is mounted, a face gear rigid with the case, a ring slidingly splined upon the spider, a second face gear upon the ring adapted to mesh with the case gear, a third face gear upon the

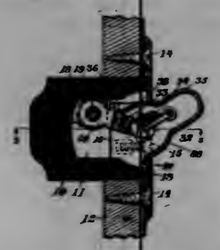
second bevel gear, a fourth face gear upon the ring adapted to mesh with the third face gear, a handle for operating the ring, a drive shaft, a bevel gear upon the drive shaft in mesh with the second bevel gear, jack shafts one at each end of the transmission shaft, clutches normally connecting the jack shafts to the transmission shaft, and means for releasing either or both clutches.

1,459,492. CAN-FILLING MACHINE. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J. Filed Apr. 18, 1922. Serial No. 554,995. 5 Claims. (Cl. 226—96.)



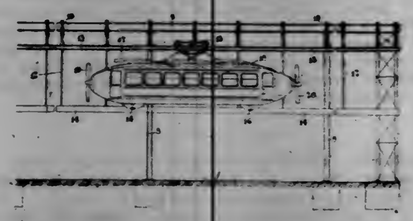
1. In a can filling machine, a bed plate having a discharge opening; a measuring wheel rotatable upon the bed plate; a shaft adapted to rotate the measuring wheel; a hub mounted on the shaft and carrying a series of funnels, each funnel having an inclined inner face, a vertical outer face and a vertically walled throat, and plungers arranged to reciprocate upon the vertical walls of the funnels and to take into the throats.

1,459,493. TILTING STEERING WHEEL. PERRY S. BAUER, Chicago, Ill. Filed Jan. 28, 1922. Serial No. 532,363. 4 Claims. (Cl. 74—33.)



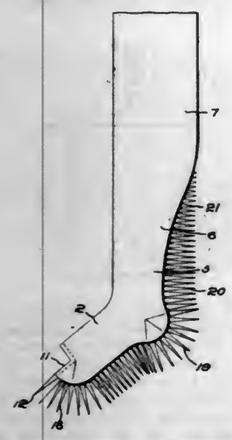
1. In an automobile, a steering column, a steering shaft rotatably mounted therein, an inner hub part of the steering wheel secured to said steering shaft, a steering wheel including a bow-shaped outer hub part embracing the inner hub part, a pivot connecting the

ends of the bow to the inner hub part in front of the steering column, the connecting portion of the bow



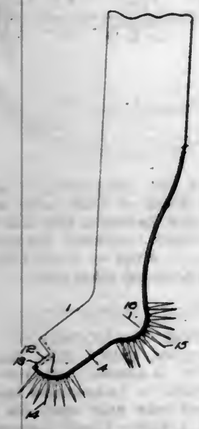
being curved upwardly and rearwardly to provide clearance for the steering column, and means for securing the wheel against tilting movement.

1,459,494. ELECTRIC SWITCH. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 19, 1919. Serial No. 298,240. 8 Claims. (Cl. 200—67.)



1. In an electric switch, a supporting member, fixed and movable contacts, snap-action mechanism comprising a part terminating in pivotal extensions positioned in recesses in the face of said supporting member, an escutcheon plate secured to the face of said supporting member to hold said extensions in place, and a hollow actuating member for said switch embracing and enclosing portions of said snap-action mechanism.

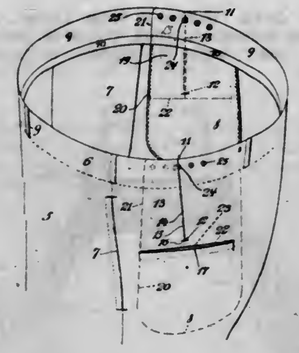
1,459,495. SYSTEM OF AERIAL TRANSPORT. GEORGE BENNIE, Bute, Scotland. Filed Apr. 9, 1923. Serial No. 630,881. 4 Claims. (Cl. 104—23.)



1. A system of aerial transport comprising in combination a vehicle, a rigid track for the suspension and a rigid track for the guiding of the said vehicle, between which tracks the vehicle is accommodated, air propellers for driving the vehicle and means capable of lifting the vehicle at a high speed of the latter, whereby the weight of the vehicle is wholly supported by the air or partly by the air and partly by the suspension track.

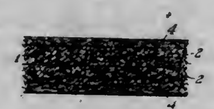
1,459,496. HOSIERY AND METHOD OF MAKING THE SAME. GEORGE P. BOSWORTH, Central Falls, R. I., assignor to Hemphill Company, Pawtucket, R. I., a Corporation of Massachusetts. Filed July 5, 1919. Serial No. 308,883. 7 Claims. (Cl. 66—4.)

1. A stocking including continuous circular knitted instep of the foot, ankle and fashioned calf portions and reciprocatingly knitted toe and heel pockets, and a seam extending from the top of the toe over the front thereof and thence along the center of the bottom of the foot and along the center of the back of the leg.



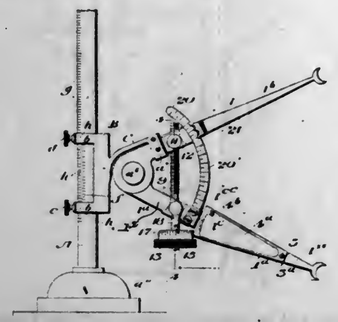
1,459,497. HOSIERY AND METHOD OF MAKING THE SAME. GEORGE P. BOSWORTH, Central Falls, R. I., assignor to Hemphill Company, Pawtucket, R. I., a Corporation of Massachusetts. Filed June 26, 1920. Serial No. 392,050. 8 Claims. (Cl. 66—4.)

1. In a stocking blank, a strip comprising foot, ankle and fashioned calf portions and an integral tubular web



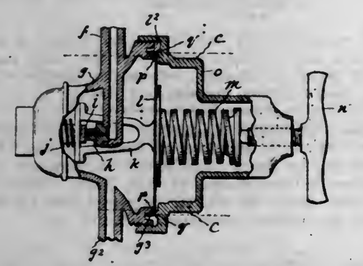
constituting the leg, said foot being characterized by a heel pocket composed of narrowed and widened courses formed in two spaced gored sections united by floating yarns, the portions of the foot and ankle adjoining said heel having oppositely selvaged edges.

1,459,498. TROUSERS. ABRAHAM H. BRICKER, Brooklyn, N. Y. Filed Jan. 30, 1922. Serial No. 532,561. 1 Claim. (Cl. 2—143.)



A pair of trousers having rear pockets provided with a slit extending through the upper part of the trousers down to a point adjacent the rear pocket opening, thereby forming a front adjustable flap, a piece of material secured to the rear edge of said slit and extending forwardly to a line flush with the forward edge of the said rear pocket, a waist lining and skirt extending flush with said rear edge of said slit and forward edge of said rear pocket, a rear pocket lining secured to the inside of said trousers, the forward edge of said lining being in alinement with and flush with the rear edge of said slit, thereby providing a heavily reinforced surface covered on the outside by said piece of material secured to the rear edge of said slit, and on the inside by three said layers of material, and means for adjusting the size of said trousers by moving the said flap in over the said piece of material and the part of the trousers adjacent the slit.

1,459,499. WATERPROOF SHEET MATERIAL AND PROCESS OF MAKING THE SAME. HERMAN E. BROWN, Kingston, N. Y., and JORDAN HOMER STOVER, Nutley, N. J., assignors, by mesne assignments, to Multi-Fabric Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 2, 1921. Serial No. 519,333. 14 Claims. (Cl. 154—2.)

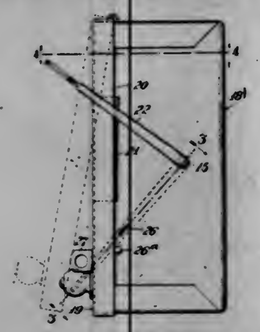


1. The herein described process of producing a waterproof fabric, which consists in coating an unwoven fibrous sheet material on opposite faces with a flexible waterproof binding material, splitting the sheet material, and uniting the coated faces thereof to produce a centrally located waterproof stratum in the resulting sheet material, and then applying a coating of waterproof material to at least one exterior face of the resulting sheet material.

1,459,500. MICROMETER CALIPER HEIGHT AND SURFACE GAUGE. FRED B. CADY, Utica, N. Y. Filed June 12, 1919. Serial No. 303,587. 2 Claims. (Cl. 33—169.)

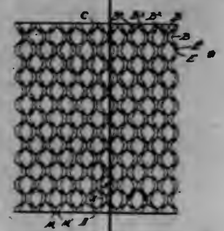
1. Calipers of the type described, comprising pivoted together leg-members, one leg-member being in sections, one section 1^x being partially housed and pivoted within the other leg section, a micrometer-member or needle pivoted within one of the leg sections, and a member 8^a forming an elongation of the pivoted end of the other leg-section, said elongated leg-section member being provided with pairs of resilient members, one pair of the latter being adapted to function with the micrometer needle and the other pair of said resilient members adapted to function with said leg-member elongation for the purpose set forth.

1,459,501. HIGH-PRESSURE REGULATOR. CHARLES HOWELL DOCKSON, Detroit, Mich. Filed Apr. 2, 1920. Serial No. 370,726. 1 Claim. (Cl. 50—23.)



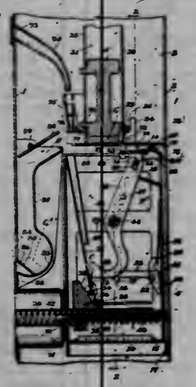
In a pressure regulator, a hollow casing comprising male and female sections adjustably secured together, such sections having opposed circumferential bearing surfaces, a removable flexible diaphragm adapted to be gripped between said surfaces to divide the interior of the casing into two compartments, an annular gasket interposed between said diaphragm and one of said bearing surfaces, the bearing surface of one section provided with an annular groove having a rounded lip, the bearing surface of the other section provided with a rounded annular bead slightly offset exteriorly of the groove of the other section to engage the diaphragm and draw the same over the rounded lip of the other section into the groove thereof.

1,459,502. SWITCH BOX. ADOLPH E. FOHN, Montgomery, Ill., assignor to Aurora Steel Products Company, Aurora, Ill., a Corporation of Illinois. Filed Mar. 28, 1921. Serial No. 456,253. 4 Claims. (Cl. 200—50.)



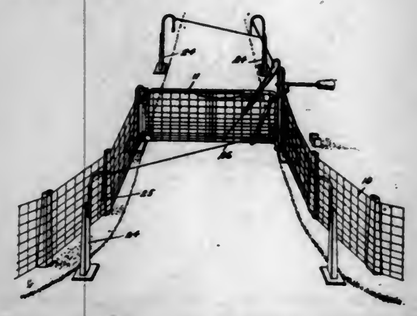
1. The combination with a box-body and a cover therefor having a flange extending alongside the said body, of

a lever pivotally connected with said body at a distance from said flange, and a spring-pressed latch carried by



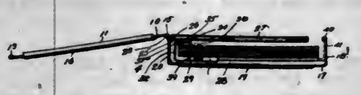
said lever and in constant contact with the flange when the cover is closed, said box having an opening adapted to receive said latch when said cover is opened.

1,459,503. RADIATOR CONSTRUCTION. REX C. GLOVER, Flint, Mich. Filed Apr. 27, 1917. Serial No. 164,831. 2 Claims. (Cl. 257—130.)



1. A radiator water unit formed by a pair of adjacent plates each having a plurality of gear tooth shaped portions nested in alternate relation to provide a continuous water passage between said plates.

1,459,504. VENDING MACHINE. ALBERT D. GROVER, New York, N. Y., and EARL E. BARBER, Boston, Mass., assignors, by mesne assignments, to Autosales Corporation, a Corporation of New York. Filed Oct. 12, 1915, Serial No. 55,271. Renewed Jan. 17, 1921. Serial No. 437,964. 10 Claims. (Cl. 211—8.)

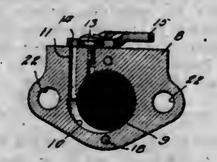


1. In a vending machine having an outer casing, a transverse shelf or partition secured in said casing, a plurality of unit frameworks mounted on said transverse shelf side by side, ejecting mechanism mounted in each of said frameworks, cooperating means on said shelf and said frameworks for rigidly securing each framework on the shelf independently of the others, a second transverse shelf secured in said casing above said frameworks, a plurality of magazines mounted on said second shelf side by side in vertical alignment with said frameworks, and cooperating means on said second shelf and said magazines for removably securing each magazine in place on said second shelf independently of the others.

1,459,505. GATE. HAROLD F. GUTH, London, Ohio, assignor to Frederick A. Guth, Columbus, Ohio. Filed Aug. 15, 1921. Serial No. 492,502. 3 Claims. (Cl. 39—44.)

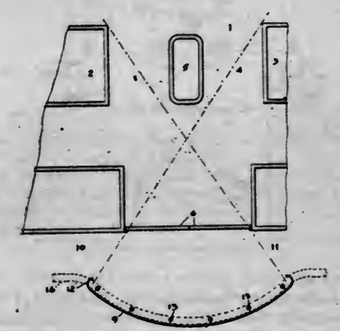
1. A gate including a gate panel, a supporting means for said gate panel, and pivoting means associated with said supporting means and attached to said panel for permitting a swinging movement of said panel through its normal plane of travel and also permitting of a limited movement of said panel in a plane transverse to said normal plane of travel.

1,459,506. SALES-BOOK COVER. FREDERICK HACHMANN, St. Louis, Mo., assignor to William H. Gregg, St. Louis, Mo. Filed Mar. 3, 1921. Serial No. 449,449. 3 Claims. (Cl. 129—1.)



1. A cover comprising a front cover having a beaded front end and inturned flanges along its side margins and a series of tongues bent into eyes formed along its rear end, a back cover having formed integral therewith a rightangular portion performing the function of a back and on its opposite end a rightangular portion, an intermediate member cmoposed of wire and sheet metal pivotally secured along the upper edge of the rightangular portion formed on the front edge of the cover, and a spring clamp secured to the end of said member opposite to the upturned rightangular portion.

1,459,507. LIQUID-FUEL VAPORIZER. SAMUEL G. HOUSE, Miami, Fla. Filed Aug. 7, 1922. Serial No. 580,354. 1 Claim. (Cl. 48—180.)



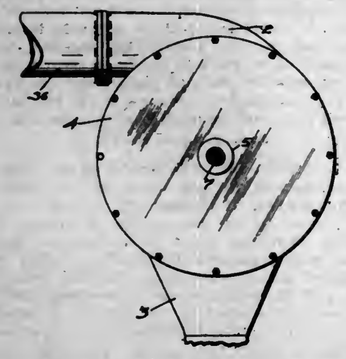
A liquid fuel vaporizer comprising a body, a central bore therein, a reticulated element covering said bore, a liquid receiving chamber positioned adjacent to said bore, said chamber and bore communicating with each other, an air passage disposed tangentially to the bore connecting the chamber with the exterior of the body,

the shape of the air passage and chamber forcing air which enters said chamber to cause liquid fuel in said chamber to readily vaporize by the whorling vortex mo-

tion imparted, a valve pivotally mounted on one face of said vaporizer and an arcuate port in the valve adapted to register with said air passage.

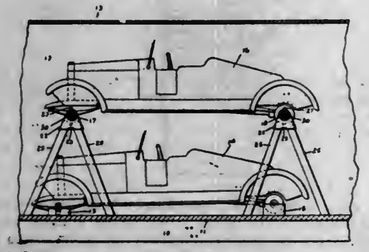
1,459,508. MEANS FOR PREVENTING DRAFTS IN DOORWAYS. UTAKICHI KAWASAKI, San Francisco, Calif. Filed Mar. 10, 1920. Serial No. 364,827. 3 Claims. (Cl. 98—27.)

1. In combination with the entrance or doorway of a building or store of a draft deflector mounted rearwardly of and spaced from the inner end of the doorway, said deflector being wider than the inner end of the doorway and exhaust means for reducing any excess atmospheric pressure entering through the doorway, which exhaust means is operatively associated with said deflector.



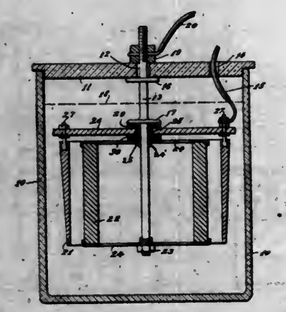
1,459,509. CUP PACKING FOR PUMPS AND THE LIKE. PAUL J. KNOTHE, Fort Wayne, Ind., assignor to Montpelier Manufacturing Company, Montpelier, Ind., a Corporation. Filed Oct. 24, 1921. Serial No. 509,829. 4 Claims. (Cl. 154—45.5.)

1. A cup packing formed of a plurality of layers of rubberized fabric and intermediate layers of fabric coated with an adhesive or viscous material other than rubber.



1,459,510. FLUID TURBINE. DELL KOEHLER, San Francisco, Calif. Filed July 30, 1921. Serial No. 488,500. 2 Claims. (Cl. 253—65.)

1. In a fluid turbine, the combination of a casing having inlet and outlet pipes, a partition therein, a plurality of nozzles carried thereby in concentric series several nozzles of each series leading to separate fluid supply chambers, a runner adjacent the nozzles, and means to gradually increase or reduce the fluid supply to each of

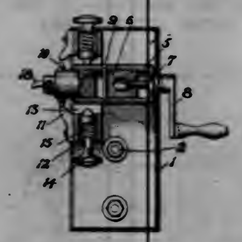


the separate nozzle chambers whereby the number of nozzles used remains constant regardless of the amount of fluid supplied to the nozzle chambers.

1,459,511. SHIPPING DECK. JESSE C. MCCOMAS, Indianapolis, Ind. Filed July 26, 1920. Serial No. 399,009. 5 Claims. (Cl. 105—368.)

1. A unitary vehicle supporting member comprising a body portion providing a hub for replacing the vehicle wheel and receiving the vehicle supporting member thereof, means secured to said body portion for transverse bracing purposes, and integral socket means adapted to receive supporting standard means.

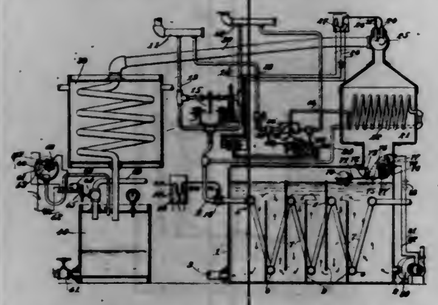
1,459,512. PRIMARY BATTERY. MARTIN L. MARTUS, Woodbury, Conn. Filed Dec. 9, 1921. Serial No. 521,076. 7 Claims. (Cl. 204—38.)



7. In a cylindrical form of assembled primary battery adapted to be removably suspended from a cover of a

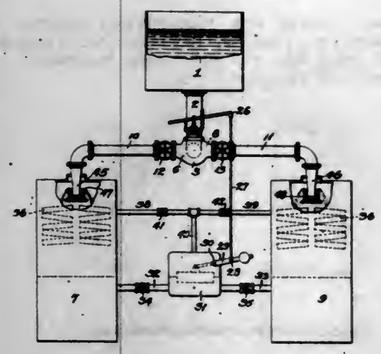
battery jar, the combination of a single supporting rod having a shoulder formed upon one end portion to engage the cover of the battery jar, and a second shoulder to support the battery elements at a fixed distance below the cover, a cylindrical positive electrode insulatively mounted upon the rod, a cylindrical negative electrode also mounted upon the rod, insulating means upon the rod and between the two said positive and negative electrodes, and a single nut for securing the two said electrodes and the insulating in position upon the said rod.

1,459,513. MANUFACTURE OF VINEGAR. JAMES D. MONROE, Birmingham, Ala. Filed Mar. 21, 1921. Serial No. 454,204. 2 Claims. (Cl. 99—17.)



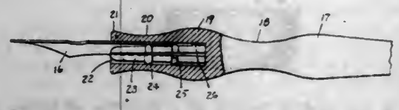
2. A process for the manufacture of vinegar, which consists in combining liquid yeast, sugar, a flavoring acid and water, allowing the batch to stand during its period of active fermentation, removing excess products of such fermentation, and accelerating the aging of the resultant product by the addition of previously aged vinegar in volume approximately ten per cent of the batch.

1,459,514. ATTACHMENT FOR LATHES. JOHN C. OLSEN, Rock Island, Ill. Filed July 7, 1922. Serial No. 573,488. 3 Claims. (Cl. 82—12.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



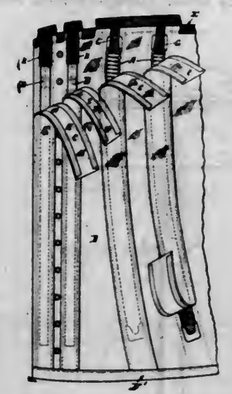
1. A lathe attachment, including a supporting plate, a casing pivoted to the plate, a tool holder slidable longitudinally within the casing, manually operable means for moving the tool holder to adjusted position within the casing, a lug on the tool holder, a cam surface connected to the plate and engageable by the lug for limiting the movement of the tool holder in one direction, resilient means tending to rock the casing on its pivot to force the lug against the cam surface and a cutting tool carried by the tool holder.

1,459,515. APPARATUS FOR CRACKING OILS. WILLIAM B. D. PENNIMAN, Baltimore, Md. Filed Mar. 10, 1917. Serial No. 153,793. 7 Claims. (Cl. 196—3.)



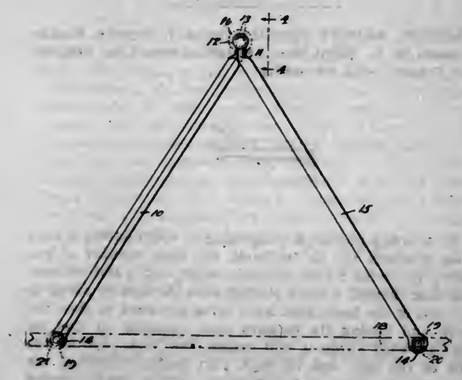
1. In an apparatus for cracking oils under pressure, a closed container for the oil, means for heating the same, a condenser, means for leading the gas and vapor from the heated oil to the condenser, means in the form of a steam coil for bringing the gases and vapors as they pass from the container to a uniform predetermined temperature, means for supplying steam, and thermostatic means actuated in correspondence to the variations in temperature of the gases which have been in heat exchanging relation with the coil to control the passage of steam to the coil.

1,459,516. COMBINATION REGULATING VALVE FOR FEED-WATER HEATERS. KARL W. ROHLIN, Philadelphia, Pa., assignor to Warren Webster & Company, Camden, N. J., a Corporation of New Jersey. Filed June 16, 1920. Serial No. 389,353. 9 Claims. (Cl. 137—68.)



1. In a device for controlling the delivery of water to a plurality of feed water heaters, the combination of a source of water supply, means for conveying the same to said heaters, a valve element in the line of said communication having independent sets of ports in different horizontal planes; the respective sets of ports of said valve element being of an area to feed equal or proportioned amounts of water to each of said feed water heaters, and means for controlling the vertical position of said valve element whereby equal or proportioned feed to a plurality of heaters may take place simultaneously when the ports of the same are opened.

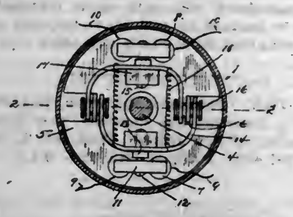
1,459,517. PEN AND PENCIL HOLDER. THOMAS C. SAWYERS, Indianapolis, Ind. Filed Nov. 20, 1922. Serial No. 602,125. 4 Claims. (Cl. 120—102.)



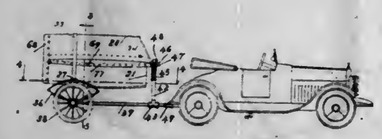
4. A penholder having a central and longitudinally extending bore in the writing end thereof, a pen-point receiving member adaptedto extend into and be secured within said bore, an annular bead formed about the periphery of said member, a shoulder formed thereon for limiting the inner movement of said pen-point when inserted in said bore, and a purchasing projection formed on the periphery of said member for engaging in the wall of said bore and locking said member therein when said pen-point is inserted between said wall and bead.

1,459,518. CORSET. CHARLES C. SELEY, Erie, Pa., assignor to George H. Barlow and J. J. Desmond, both of Corry, Pa. Filed Mar. 27, 1922. Serial No. 547,207. 2 Claims. (Cl. 2—76.)

1. In a garment of the class described, a stay having an opening therethrough adjacent to the upper end thereof, a pocket to receive said stay, a fabric loop extending through said opening and projecting beyond the extremity of said stay and adapted to be stitched to said garment.



1,459,519. SHEET-METAL RADIUS ROD. ROBERT P. SIMMONS, Cleveland, Ohio. Filed Mar. 20, 1923. Serial No. 626,249. 10 Claims. (Cl. 267—66.)



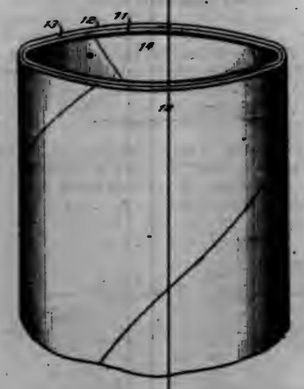
1. A sheet metal radius rod having a hemispherical enlargement at one end, and an apertured enlargement at the opposite end.

1,459,520. ELECTRIC SWITCH. CHRIS L. VOLZ, Detroit, Mich. Filed Sept. 3, 1921. Serial No. 498,291. 11 Claims. (Cl. 200—80.)

1. In an electric switch, the combination with a revoluble carrier centrally apertured to receive a driven shaft, of a plurality of contacts mounted thereon, and a plurality of contact members having a common pivotal mounting on said carrier and adapted to engage the respective contacts when said carrier reaches a predetermined speed of rotation.

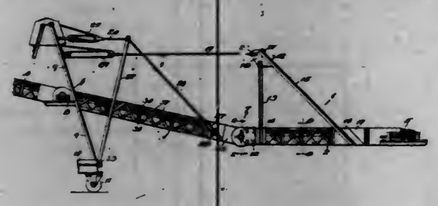
1,459,521. TRAILER. HENRY WENNEBORG, Springfield, Ill., assignor of one-half to Enos S. Spindel, Springfield, Ill. Filed Nov. 30, 1921. Serial No. 518,936. 9 Claims. (Cl. 296—23.)

1. In a trailer, the combination of running gear; a centrally depressed yoke carried by the running gear; rollers in the depressed part of the yoke; a lower boat section adapted to travel on the rollers in the depressed yoke; an upper boat section inverted on the lower boat section; means connecting both boat sections with the yoke; and a yielding support on the running gear supporting one end of the united boat sections.



1,459,522. WINDOW GUARD. CHARLES S. WOODS, Indianapolis, Ind. Filed Dec. 23, 1921. Serial No. 524,399. 3 Claims. (Cl. 20—71.)

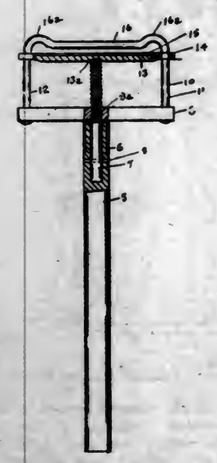
1. A window grating comprising a pair of upright members, adjustably connected cross bars mounted between said members, one of said bars having screw



threads thereon, an internally threaded sleeve mounted on said screw threaded bar so as to engage with the screw threads thereon, and a projecting member on the other bar associated with said screw threaded bar in position to be engaged by said sleeve, whereby said bars may be forced apart for laterally expanding said grating.

1,459,523. CAN. FREDERICK O. WOOD, Oak Park, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 5, 1920. Serial No. 349,483. 1 Claim. (Cl. 229—3.1.)

A grease-proof container having an outer ply of suitable fibrous material, an inner ply of parchment paper, hide glue uniting said outer and inner plies, and a grease-proof coating on the inner side of said inner ply.



1,459,524. CONVEYING MACHINE. FRED WRIGHT, Waukegan, Ill., assignor, by mesne assignments, to Standard Conveyor Company, North St. Paul, Minn., a Corporation of Minnesota. Filed June 11, 1919. Serial No. 303,366. 11 Claims. (Cl. 198—109.)

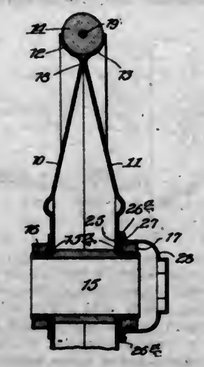
1. In combination, a plurality of hinged plate members, angle irons forming guides secured to each of the plate members, one of said members having a cylindrical bearing portion, a shaft passing thru the bearing portion, the other plate member having a bearing box embracing a portion of the cylindrical bearing portion, one of said members having a cylindrical hub portion adapted to be substantially tangent to said guides, and a conveyor web having rollers adapted to run thru said guides and over said hub or boss.

1,459,525. MOP. THOMAS J. FINTON, Springfield, Mass., assignor to Patrick J. Looley, Holyoke, Mass. Filed Apr. 6, 1922. Serial No. 550,173. 1 Claim. (Cl. 15—153.)

A mop device comprising a handle having a ferrule on one end thereof, a shank inserted in said handle end and pinned to said ferrule, said shank having a screw threaded portion projecting from said handle, a cross bar threaded on said shank, a U-shaped wire frame comprising side bars and a resilient cross bar, the ends of the side bars being fixed to the ends of the cross bar and the resilient bar having an inset portion connected to the side bars by endwise projecting spring loops presenting rounded work

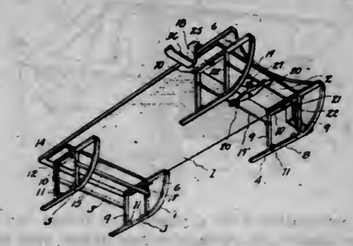
bearing surfaces, and a clamping jaw bar having sliding terminal engagement with the side bars and a central bearing on the terminal of the threaded shank, said clamping bar having a longitudinal groove facing the inset cross bar, whereby the mop fabric will be forced into said groove by said inset cross bar and said cross bar will be held under tension by said spring loops.

1,459,526. SAFETY CATCH. OSCAR T. FENTON, Hightstown, N. J. Filed Nov. 11, 1922. Serial No. 600,385. 3 Claims. (Cl. 24—157.)



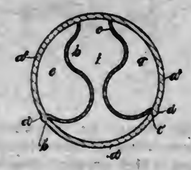
1. A safety pin catch comprising in combination a body with a safety pin on its back, the hook member of the safety pin being a rigid one-piece hook with a slot through the back thereof, a latch pivoted near the back to swing in the slot of the hook, said latch being arranged to close the hook and having its forward part extended so that on its backward swing it will engage the hook back at the end of the slot, and its back part projected beyond the slot end to form a finger catch, and a spring coiled around the pivot of the latch and operatively connected to the latch to normally close the hook.

1,459,527. WHEEL FOR COASTER WAGONS. HOWARD J. FERRIS, Harvard, Ill. Filed Oct. 16, 1922. Serial No. 594,998. 2 Claims. (Cl. 301—63.)



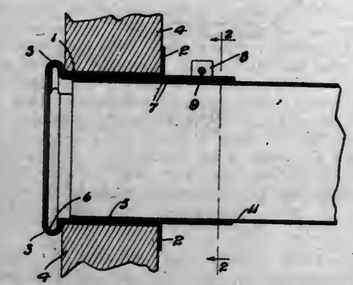
A wheel for coaster wagons comprising, in combination, a hub having spaced shoulders, disks each centrally seated on said hub, oppositely disposed peripheral flanges on said disks adapted to serve as a seat for the tire, said

disks contacting at points adjacent said peripheral flanges, means carried by said hub to force the central portions



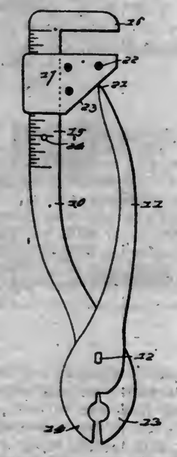
of said disks against said shoulders and to secure them and thereby to exert pressure at the meeting points of said disks.

1,459,528. SLED. SIDNEY S. GRIFFIN, Seattle, Wash., assignor to Curtis Coaster Toy Co., Seattle, Wash. Filed Feb. 16, 1920, Serial No. 359,134. Renewed Dec. 1, 1922. 1 Claim. (Cl. 280—16.)



In a sled of the character described, a sled body, a truck comprising a pair of parallel runners, each runner comprising a top and bottom rail and two vertical, apertured brace members, means pivotally attaching the runners to the body at transverse points thereof, a pair of transverse connecting rods having horizontal loops at their opposite ends extending through the apertures of corresponding vertical brace members and having vertical loops formed at their centers, a steering pin rotatably mounted and extended vertically through the body, a cross bar fixed at the lower end of said pin having its ends extended slidably through said central loops of the connecting rods and a steering bar fixed on the upper end of the pin and transversely overlying the sled body.

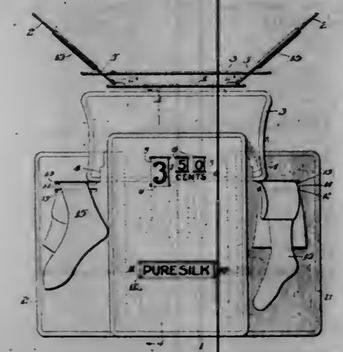
1,459,529. PNEUMATIC TIRE. THOMAS GRIFFITHS, Kensington, Liverpool, England. Filed May 16, 1922. Serial No. 561,525. 1 Claim. (Cl. 152—22.)



An inner tube for a pneumatic tire which tube has tread and base portions and is divided by means of two normally unstretched india rubber partitions into a substantially vertical middle compartment and two substantially vertical side compartments, said partitions having parallel lines of union with the base portion of the tube and with the tread portion of the tube, the spacing of the tread edges of the partitions being greater than the spacing of the base edges of the partitions, the arrangement of said partitions being such as to insure a substantial distance being provided between the lines of union of the partitions with the wall of the tube, and exterior beads opposite the lines of union of the partition edges with the tread portion of the tube.

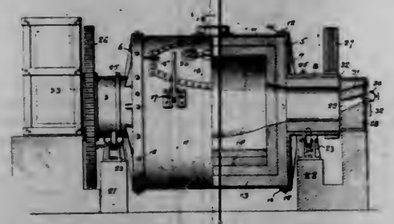
1,459,530. THIMBLE CONSTRUCTION. WALTER WILLIAM GROBE, Hamilton, Ohio. Filed May 26, 1922. Serial No. 563,957. 2 Claims. (Cl. 126—318.)

2. A thimble construction comprising an outer cylindrical sleeve having means at each end to secure it in and through an opening in a chimney wall, a cylindrical sheet metal inner member longer than the sleeve inserted in said sleeve and having overlapping edge portions whereby the member may be compressed, interengaging means on the sleeve and said inner member at their inner ends for detachably connecting the same together, and means on the inner member for compressing and reducing the size thereof to clamp the same against a smoke pipe, substantially as described.



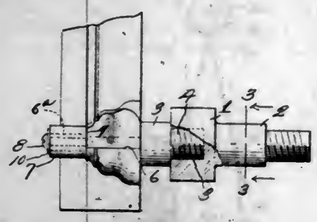
1,459,531. COMBINATION TOOL. EMIL J. HANSON, Viroqua, Wis. Filed Jan. 18, 1922. Serial No. 530,048. 4 Claims. (Cl. 7—7.)

2. A tool having pivotally connected shanks provided adjacent to their pivotal ends with complemental plier



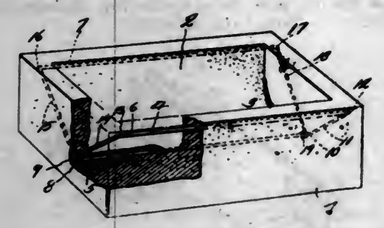
jaws and at their opposite ends respectively with a rigid wrench jaw and a tooth, and a movable wrench jaw mounted upon the shank which carries the rigid jaw and provided with an obliquely disposed ratchet face in the path of movement of the tooth on the extremity of the other shank for engaging the tooth.

1,459,532. EXHIBITOR FOR GOODS. MAC HARLAN, Des Moines, Iowa, assignor to Des Moines Hosiery Mills, Des Moines, Iowa, a Corporation of Iowa. Filed Feb. 13, 1922. Serial No. 535,970. 1 Claim. (Cl. 211—24.)



An exhibitor of the character stated consisting of a front member, side wings hinged thereto adapted to be opened-out and folded, a display head, the latter being adapted to be supported on said side wings and retain the latter in opened out position, means on said head and side wings for interlocking the same, means on said front member adapted to support a variable price list, means on said front member adapted to support a variable material list, and means on said side wings for supporting goods to be exhibited.

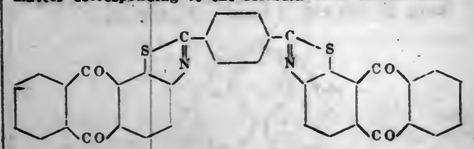
1,459,533. PUDDLING FURNACE. HENRY D. HIBBARD, Plainfield, N. J., assignor to Hibbard Process Corporation, New York, N. Y., a Corporation of New Jersey. Filed May 11, 1921. Serial No. 468,709. 21 Claims. (Cl. 263—33.)



1. A puddling furnace comprising a cylindrical reaction vessel mounted on a horizontal axis and having an interior dam extending from end to end of the reaction chamber, together with a door opening through the wall of the chamber, said opening being of greater length than width and extending in a direction substantially parallel with the length of the dam.

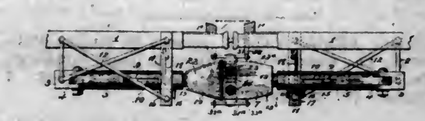
1,459,534. WOODWORKING TOOL. ANTHONY H. HILKE, Fort Wayne, Ind. Filed June 5, 1922. Serial No. 565,834. 1 Claim. (Cl. 144—253.)

The combination with a rotary molding cutter, of guide means carried by said cutter, said guide means comprising a work engaging roller, said roller being rotatably mounted on an integral axial sleeve carried by the outer end of the cutter, a washer engaging the outer end of the roller and the sleeve and a screw extending through said washer and threaded into the sleeve.



1,459,535. HOG TROUGH. WILLIAM HIRD, Cuba City, Wis. Filed Nov. 2, 1922. Serial No. 598,558. 1 Claim. (Cl. 119—61.)

The combination with a plastic hog trough having a chamber therein, of means for reinforcing said plastic trough, said means comprising a reinforcing frame, said frame being formed from a single piece of wire and comprising parallel longitudinally disposed bars, one of said bars being disposed on opposite sides of the chamber, another bar being disposed longitudinally below the bottom of the chamber and converging bars extending downwardly from the ends of the bars on the opposite sides of the chamber and connecting the bar disposed below the chamber thereto.



1,459,536. MANUFACTURE OF VAT COLORING MATTERS. FILIP KAČER, Mannheim, Germany, assignor to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-Rhine, Germany, a Corporation of Germany. Filed Jan. 4, 1923. Serial No. 610,706. 5 Claims. (Cl. 260—31.)

5. As a new article of manufacture a vat coloring matter corresponding to the formula

which product when treated in the alkali melt gives n-dihydro-anthraquinone azine (indanthrenebiue) and terephthalic acid, and which product dissolves in a pure state in concentrated sulfuric acid yellow and dyes cotton from a violet vat yellow tints.

1,459,537. COUPLING MECHANISM FOR TRAIN PIPES. LEA M. KING, Morristown, Tenn. Filed Oct. 8, 1919. Serial No. 329,258. 7 Claims. (Cl. 285—58.)

1. In coupling mechanism for train pipes, the combination with a block and a horizontal pivotal support therefor, of a tubular bar having a pivotal connection with said block at right angles to the pivotal support of the latter, springs bearing against diametrically opposite sides of said bar, a support for the forward portion of said tubular bar, springs under such forward support, a pipe coupling head, and a yielding connection between said head and tubular bar.

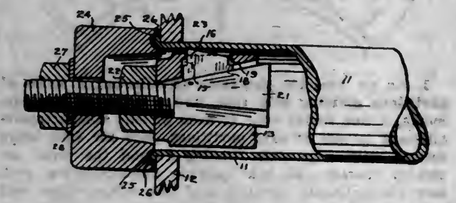
1,459,538. CARD REGISTER. JOSEPH KLATT, Chicago, Ill., assignor to W. W. Wilcox Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 20, 1922. Serial No. 530,599. 4 Claims. (Cl. 40—124.)

4. A card register of the type specified comprising in combination a frame, a vertical series of card carriers within the frame, each card carrier comprising a sheet metal plate having its upper portion folded backwardly and downwardly substantially parallel to its back surface, and having its lower portion folded forwardly and upwardly substantially parallel to its front surface, the upturned edge portion of each unit interlocking with the down turned edge portion of the next lower unit of the series, substantially as described.

1,459,539. ELECTRIC COOKING UTENSIL. HENRY KRUESHELD, New Washington, Ohio, assignor to The Perfection Electric Products Co., a Corporation of Ohio. Filed Apr. 18, 1922. Serial No. 554,703. 4 Claims. (Cl. 53—6.)

1. A leg for a cooking utensil, having a flange at the top adapted to fit against the bottom of the utensil, said bottom having a slot and said flange having a tongue engaging in said slot and also having an off-set part, and a clamping member fixed to the bottom of the utensil and having a hooked portion engaging said off-set part.

1,459,540. SECTIONAL MATTRESS. ERNST LABENS, Detroit, Mich. Filed Mar. 20, 1922. Serial No. 545,046. 1 Claim. (Cl. 5—351.)

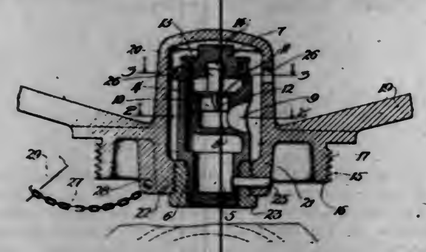


A mattress section comprising a frame, a bottom piece on said frame and provided with openings, containers on said bottom piece and provided with individual pockets, springs in the individual pockets of said containers, means connecting the end and side containers to said frame with the central containers loose on said bottom piece, a casing over said containers and connected to said frame, cushions on said casing, a cover over said cushions and connected to said frame, and a cushioning shield on the lower face of said frame and bottom piece, said shield having openings registering with the openings of said bottom piece.

1,459,541. BLOOD-ALBUMIN GLUE. ALFRED C. LINDAUER, Madison, Wis., dedicated, by mesne assignments, to the People of the United States. Filed Aug. 26, 1922. Serial No. 584,539. 3 Claims. (Cl. 87—17.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

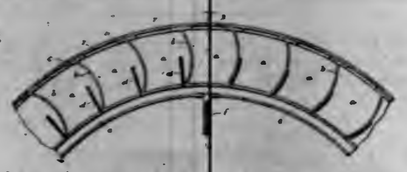
1. A glue, consisting essentially of dry blood albumin, water, ammonium hydroxide and paraformaldehyde (trioxymethylene).

1,459,542. BOILER-TUBE REPAIR PLUG. HENRY N. MCCATHRON, Bridgeport, Conn. Filed June 25, 1921. Serial No. 480,325. 4 Claims. (Cl. 137—76.)



1. In a device for sealing the end of a conduit, a body portion adapted to be slid in said conduit, lugs contained within the body portion and projecting outwardly therefrom, a bolt provided with an enlarged end, a nut engaging the body portion and bolt to draw the enlarged end thereof against said lugs and press the same outwardly for engagement with the inner walls of said conduit, a closure member provided with a packing ring and adapted to be clamped against the end of said conduit, and a nut in co-operation with said member and bolt to retain the closure member in position and seal the conduit.

1,459,543. AIR VALVE AND THE LIKE. JOHN M. MCDONALD, Dubuque, Iowa, assignor to A. Y. McDonald Mfg. Co., Dubuque, Iowa, a Corporation of Iowa. Filed June 27, 1921. Serial No. 480,856. 5 Claims. (Cl. 220—44.)

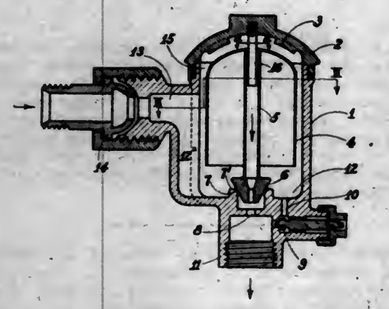


1. In a device of the class described, the combination of a cap having a downwardly depending exteriorly

threaded flange adapted to thread into the opening of a tank, an integrally formed radially extending arm for turning said cap, an upwardly extending housing in the central portion of the cap and between the arms, and having a vent opening, a downwardly depending flange in conjunction with said housing serving to provide therewith a valve chamber, an inturned interiorly threaded shoulder portion on the lower end of said flange,

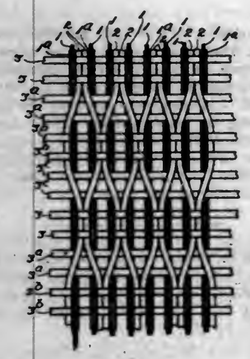
a bushing threaded into said shoulder, said bushing also being interiorly threaded, a cylindrical valve member having a downwardly depending neck adapted to thread into the bushing, said valve member being smaller in diameter than the opening in the shoulder portion of the flange of the cap, and a rivet extending through the neck of the valve, through the bushing, and through the flange of the cap, substantially as described.

1,459,544. AIR TUBE FOR PNEUMATIC TIRES. THOMAS BAKER MCLEROTH, London, England, assignor to T. B. McLeroth (Tubes) Limited, London, England, a British Company. Filed June 16, 1920. Serial No. 389,293. 6 Claims. (Cl. 152—22.)



1. An air tube for pneumatic tires having a series of partitions dividing said tube into a series of compartments, a fine rubber tube in each of said compartments adjacent to one of said partitions, said air tube being formed with a passage running around the inner periphery thereof and said passage communicating with said compartments through said fine rubber tubes and being provided with an inflation valve.

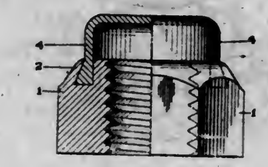
1,459,545. VEHICLE. PHILIP A. MICHELL, Fort Wadsworth, N. Y. Filed Apr. 21, 1921. Serial No. 463,303. 1 Claim. (Cl. 280—16.)



A vehicle of the type indicated having a base, front and rear supporting members provided with hangers mounted upon the base, the hanger of the front supporting member being swiveled in the base and having an upwardly extending stud, a steering member mounted on said stud, the steering member and the stud being provided with keyways, and a split collar disposed in surrounding relation to the connecting ends of the stud and steering member and having a key engaging in said keyways.

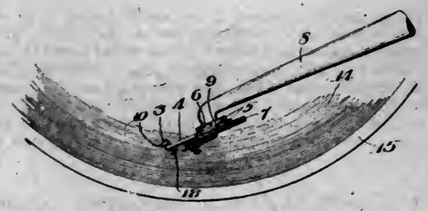
1,459,546. RELIEF VALVE. ARNOLD W. MILLER, Pittsburgh, Pa., assignor to C. Howard Hook, Pittsburgh, Pa. Filed June 23, 1921. Serial No. 479,902. 7 Claims. (Cl. 137—113.)

1. A relief valve comprising a casing, the bottom of said casing having an opening surrounded by a valve seat, a valve coacting with said valve seat, means freely and loosely mounted in said casing responsive to the level of the liquid therein for controlling said valve, said casing having an unobstructed baffleless offset portion of sufficient size at the side thereof for admitting fluids thereto whereby the admission of said fluids will not cause objectionable deflection of the said controlling means and valve.



1,459,547. ELASTIC WOVEN FABRIC. GEORGE C. MOORE and THOMAS F. MOORE, Westerly, R. I. Filed Aug. 24, 1922. Serial No. 584,044. 1 Claim. (Cl. 139—421.)

The described elastic woven fabric composed of warps and wefts or filling in sets comprising a pair of wound or covered elastic strands, a pair of warp-threads, or a pair of groups thereof, and weft or filling, said fabric having the pair of elastic strands covered at face and back of the fabric by the interwoven weft or filling and warp-threads, with the pair of warp-threads first located between the two elastic strands and bound at the under face of the fabric by one or more picks of weft or filling below the elastic strands, then crossed at the top face of the fabric above one or more picks of weft or filling overlying the elastic strands, and diverging from each other in opposite directions to the outer

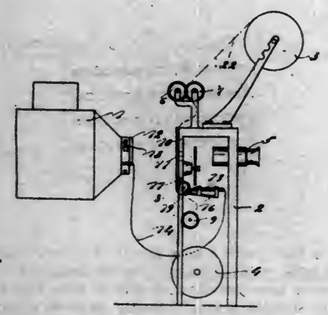


side of the two elastic strands, then bound at the under face of the fabric by weft or filling, and then crossed back toward each other at the upper surface of the fabric, converging toward each other over the pair of elastic strands and also over one or more picks of weft or filling, and then passing down together between the two elastic strands and bound by weft or filling at the under face of the fabric as before, and so on.

1,459,548. CAP NUT. DONALD BAENS MORISON, Hartlepool, England. Filed Oct. 4, 1921. Serial No. 505,442. 1 Claim. (Cl. 85—35.)

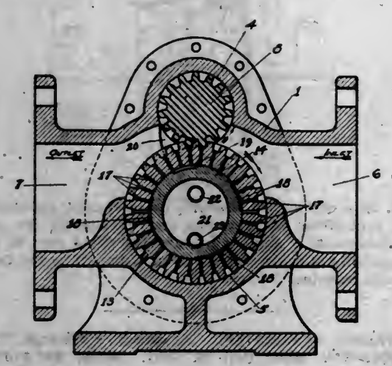
A cap nut, comprising a cap having an outwardly extending annular depending base of greater diameter than the body of the cap, a nut having an annular recess in which the depending base of the cap is positioned, said recess being bordered by a locking flange adapted to be mechanically repositioned over the extended base of the cap whereby the locking flange and the base of the cap are integrally interlocked.

1,459,549. PHONOGRAPH-RECORD CLEANER AND CLARIFIER. JOHN O'DONNELL, Jr., Philadelphia, Pa. Filed Aug. 23, 1921. Serial No. 494,544. 2 Claims. (Cl. 274—1.)



2. In a phonograph record cleaner, a brush carrier consisting of an obliquely arranged arm having one end mounted adjacent to a sound box, and its other end adapted to carry a brush head, said brush head being provided with diagonally disposed lugs between which the lower portion of said arm is engaged, and means for securing said portion to said lugs.

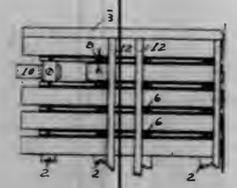
1,459,550. MATCH SCRATCHER. JAMES A. PATTERSON, Laurinburg, N. C. Filed July 20, 1922. Serial No. 576,319. 2 Claims. (Cl. 44—48.)



1. A match-scratching device for steering-wheels consisting of a main plate having a roughened scratching-surface, this plate being tapered toward one end and provided at one end with a thin flat extension-plate, for supporting a match box, the two longitudinal edges of said plate being provided with normally depending resilient clamping wings.

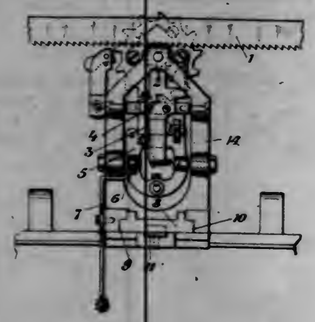
1,459,551. FIRE PROTECTOR FOR MOVING-PICTURE MACHINES. JOHAN GOTTFRID PETTERSSON, Borgholm, Sweden. Filed Oct. 25, 1921. Serial No. 510,388. 2 Claims. (Cl. 88—17.)

1. In a moving picture machine, the combination with an illuminating apparatus, a shutter therefor, mechanism for operating said shutter, and a pair of toothed feed rolls coaxially mounted to control the movement of the film, of a device connected to the shutter operating mechanism, said device comprising a holder located between said rolls and having an opening therethrough, a sleeve carried by said holder, and a spring actuated spindle mounted in said sleeve and adapted to frictionally engage the film through the opening in the holder, whereby the movement of the spindle will actuate the shutter operating mechanism.



1,459,552. ROTARY PUMP. GILBERT RATHMAN, New York, N. Y., assignor to William E. Quimby, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 14, 1921. Serial No. 451,960. 7 Claims. (Cl. 103—126.)

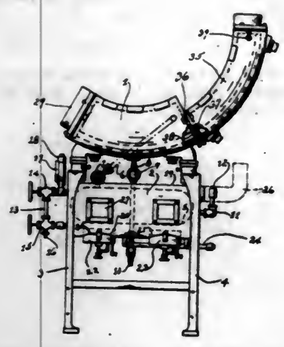
4. A rotary gear-pump comprising, in combination, a case, two intermeshing spiral gears with drive-gear of relatively small diameter adapted to be connected directly to the shaft of a high-speed motor, means providing an



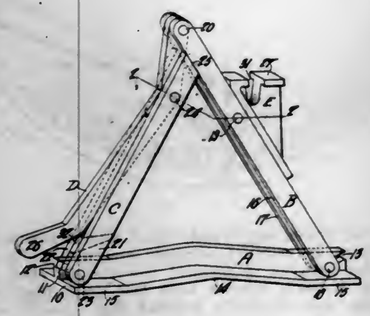
outlet to the discharge side of the pump for the fluid entrapped between the teeth of the two gears, and means for heating the larger driven gear.

1,459,553. FEED DEVICE FOR BEAN-SORTING MACHINES. ALPHONSO ROCHELEAU, Saginaw, Mich., assignor to Hart Brothers, Saginaw, Mich., a Corporation of Michigan. Filed Jan. 19, 1923. Serial No. 613,639. 2 Claims. (Cl. 130—32.)

1. In a bean sorting machine of the class described, a pair of rolls, a feed frame, bottom cross-bars on said frame, each cross-bar formed with a hole located above each pair of rolls, a longitudinally movable reciprocating trough formed with an elongated hole in the bottom thereof, said hole registering with the hole in said cross-bar, and means for imparting reciprocatory movement to said trough.



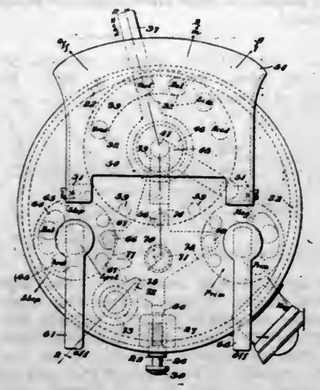
1,459,554. TYPEWRITING MACHINE. HEINRICH SCHWEITZER, Soemmerda, Germany, assignor to the Firm of Rheinische Metallwaaren- und Maschinenfabrik, Duesseldorf-Derendorf, Germany. Filed Sept. 2, 1921. Serial No. 498,038. 3 Claims. (Cl. 197—82.)



1. In a typewriting machine, an escapement mechanism for controlling the carriage feed, a support for such mechanism as a unit, and means forming a part of said support for slidably connecting said support to the frame of said machine.

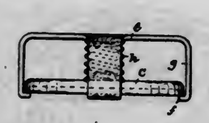
1,459,555. VULCANIZER. CLARENCE A. SHALER, Waupun, Wis. Filed Oct. 26, 1921. Serial No. 510,554. 8 Claims. (Cl. 18—18.)

1. A vulcanizer for vehicle tires comprising a chambered casing having an apertured end affording communication with the interior of the casing, a detachable cap for said end conforming in cross sectional contour to that of the casing, a steam generator connected to supply steam to the interior of the chambered casing, and a detachable casing extension adapted to be substituted for the cap to form a continuation of said casing and having an aperture adapted to register with said casing aperture.



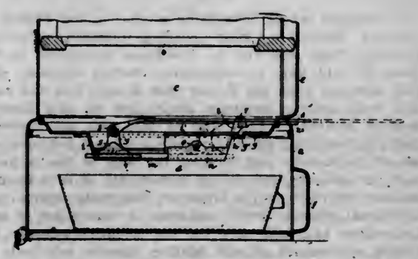
1,459,556. LIFTING APPARATUS. FRANK E. SHEPHERD, North Kingsville, Ohio. Filed June 1, 1922. Serial No. 565,252. 6 Claims. (Cl. 254—119.)

1. A lifting apparatus comprising a base, a leg pivoted to one end of said base, a second leg pivoted to the other end of said base, and the upper end thereof adapted to abut the first said leg when extended, means on one of said legs to engage an article to be lifted, and an operating lever pivoted to and connecting the other ends of both of said legs.



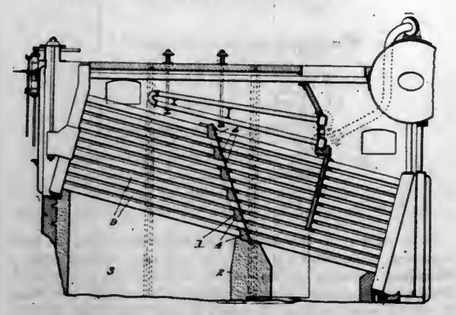
1,459,557. MULTIPLE-CONTROL SWITCH. WALTER J. SPIRO, White Plains, N. Y. Filed Sept. 16, 1920. Serial No. 410,729. 35 Claims. (Cl. 200—44.)

1. In a control switch, a frame, a fuse carrier mounted therein, a shell detachably supported upon said frame, a contact carrier secured therein, a movable conducting disk within the shell and cooperating with said carrier.



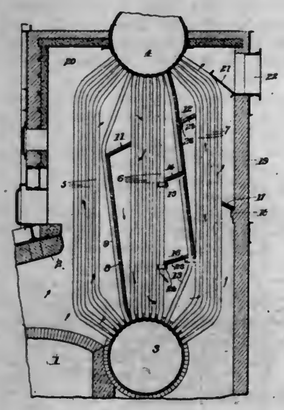
and an operating handle for said disk having a bearing in one end of the shell.

1,459,558. JAR CLOSURE. ALBERT STARK, Paterson, N. J., assignor of one-half to Harry Stark, Paterson, N. J. Filed June 6, 1922. Serial No. 566,296. 4 Claims. (Cl. 215—89.)



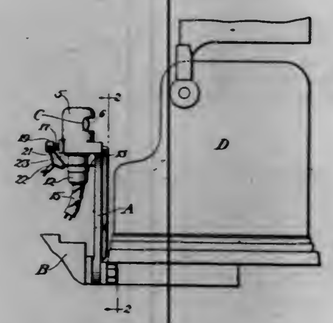
1. In a closure device for a container having spaced lateral projections around its mouth, the combination of an arched member having inward lugs to engage under said projections, a cap member contained in said arched member and seated on the lugs, and a spring interposed, and having its vertical dimension when expanded at least as great as substantially the distance, between the cap member and the top of the arched member.

1,459,559. STOVE. EARL R. STEPHENS, Dover, N. J. Filed Mar. 25, 1922. Serial No. 546,625. 6 Claims. (Cl. 126—173.)



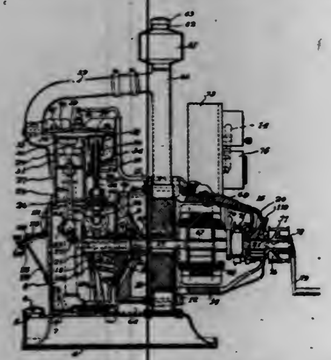
1. In combination, a supporting structure having a series of substantially parallel grate-bars forming a substantially horizontal grate surface, and a rake having a body portion arranged below the bars and slidable longitudinally thereof in said structure and also having two sets of teeth arranged in a series extending substantially at right angles to and upstanding between the several bars, the teeth in the two sets alternating with each other and those in one set having their tops approximately level with, and those in the other having their tops above, said surface.

1,459,560. BAFFLE WALL FOR HORIZONTAL WATER-TUBE BOILERS. FREDERICK C. STIMMEL, Chattanooga, Tenn., assignor to The Casey-Hedges Co., a Corporation of Ohio. Filed Apr. 5, 1922. Serial No. 549,014. 12 Claims. (Cl. 110—98.)



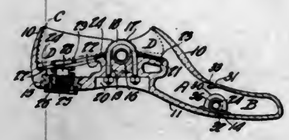
1. A baffle wall, for horizontal water tube boilers, arranged transversely of the tubes and inclined forwardly for the purpose specified, said wall being composed of interfitting tiles each having its front and rear faces inclined in a forward and upward direction but at different angles, and the base of each tile being thicker than its upper edge.

1,459,561. VERTICAL WATER-TUBE BOILER. FREDERICK C. STIMMEL, Chattanooga, Tenn., assignor to The Casey-Hedges Co., Chattanooga, Tenn., a Corporation of Ohio. Filed July 24, 1922. Serial No. 577,065. 12 Claims. (Cl. 122—336.)



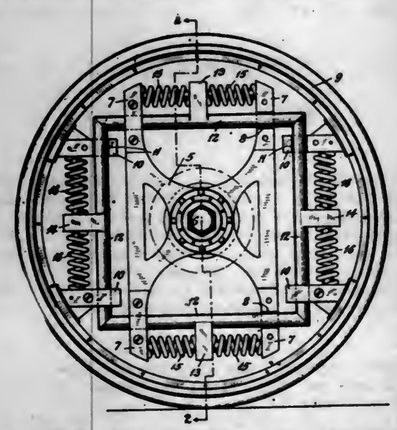
1. In a vertical water tube boiler having a central set of tubes and two other sets of tubes at opposite sides of said central set, the combination with baffle supporting means arranged between said central and other sets of tubes and having their major portions inclined in the same direction, of baffles engaging said inclined portions of said supporting means and maintained in contact therewith by their own weight.

1,459,562. LAMP LOCK. RALPH E. STOUFFER, Chicago, Ill., assignor to Yellow Cab Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 2, 1921. Serial No. 458,077. 2 Claims. (Cl. 173—356.)



1. A device of the kind described comprising, in combination, a housing open at one end and formed with a threaded opening in one side, a lamp adapted to lie within the housing, a socket adapted to receive the lamp, a collar surrounding the socket and provided on one side with an aperture and at one end with an outturned flange arranged to abut the proximate end of the housing to limit the entry of the lamp therein, a cap secured to the socket provided with a flange in which is an opening, a threaded element screwed within the threaded opening in the housing and adapted to present its inner end within the aperture in the collar to thereby lock the socket in place, there being an opening through the set-screw, a wire passing through the openings in the set-screw and cap flange, and means sealing the wire ends to prevent any but a limited movement of the parts engaged by the wire, substantially as described.

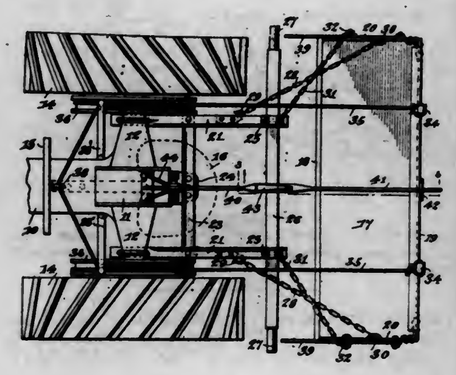
1,459,563. ELECTRIC LIGHT AND POWER PLANT. PAUL THAMM, New York, N. Y., assignor to S. Whyte Merritt Co. Inc., New York, N. Y. Renewal of application Serial No. 375,623, filed Apr. 21, 1920, and renewed Dec. 3, 1921. This application filed Dec. 27, 1922. Serial No. 609,346. 8 Claims. (Cl. 290—1.)



1. In an electric light and power plant, an engine provided with a crank shaft, a radiator surrounding said crank shaft having an annular water jacket, a water riser, a pipe connecting said water riser with the water jacket of the radiator, a cylinder casing having a water jacket, pipes connecting the radiator water jacket with the cylinder water jacket and the cylinder water jacket with the water riser and a generator and a fan mounted on said crank shaft, on opposite sides of said radiator, said fan adapted to draw air through the said generator and radiator.

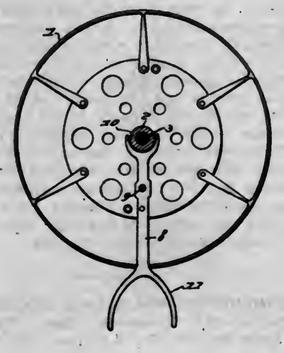
1,459,564. ARTIFICIAL FOOT. EDWARD M. TRACY, Cleveland, Ohio. Filed Mar. 9, 1922. Serial No. 542,261. 3 Claims. (Cl. 3—7.)

1. An artificial foot comprising, a foot member provided with ears on its front end, bearing means on said foot member adapted to a leg, a resilient heel member secured to said foot member, a toe member provided with ears, a hinge pin through said ears on the foot and toe members, bushings in said ears on the toe member, and a coil spring over said pin and between said ears on said to member and one end thereof acting against said foot member and the other end thereof acting against said toe member.



1,459,565. RESILIENT WHEEL. SIDNEY YANKAUER, Flushing, N. Y. Filed Nov. 13, 1920. Serial No. 423,887. 1 Claim. (Cl. 152—45.)

A resilient wheel comprising a rim, a hub forked in opposite directions, rigid bearing member extending inwardly from said rim in directions transverse to the forks of said hub, a rectangular floating member slidably mounted upon the forked ends of said hub and upon said rigid bearing members, projections on said floating member located in the forks of said hub and between said rigid bearing members, springs located between one set of projections and each of the legs of the forks of said hub whereby the sliding movements of said floating member relatively to the latter are yieldingly resisted and additional springs located between the other set of said projections and said rigid bearing members whereby the sliding movements of said floating member relatively to the latter are yieldingly resisted.



1,459,566. SCRAPER ATTACHMENT FOR TRACTORS. EDGAR J. ANDREWS, Rupert, Idaho. Filed Feb. 24, 1922. Serial No. 538,848. 18 Claims. (Cl. 37—124.)

1. The combination with a wheeled tractor, of a scraper having draft connections to the tractor, a support carried on the tractor, and a normally slack and manually controlled means operable from the wheels of the tractor for raising said scraper onto said support

and out of contact with the ground during the travel of the tractor and when not actually engaged in earth scraping operations.
